Extra shoot No. 1, 7 live birds, entrance $5: J. G. Smith 7, Budd 7, Converse 7, Perkins 7, Dorton 7, Hughes 7, Grim 6, Heikes 6, McBride 6, Bird 5, Byers 5, Hastings 5, Allen 5, McCain 5, Simpson 5, Lewis 5, Wilkins 5, Kronskop 4, Searight 4, West 4, Hicks 4, Ryman 4, Jones 4, Spencer 4, Sanford 4, Meyerle 3, Howard 3, Veile 3, Clement 3, Chase 2. Ties all divided.

Extra shoot No. 2, 5 live birds, entrance $3: Perkins 5, Grim 5, Hicks 5, Dorton 5, Heikes 5, Hastings 5, Meyerle 4, Budd 4, J. G. Smith 4, Hughes 4, Clark 4, Wilkins 3, Searight 3, Kronskop 3, Chase 2, Jones 2, McBride 2, Howard 1. Ties all divided.

Shoot No. 11, postponed from the second day, was at 9 single targets, entrance $1.50, and resulted as follows:

Hastings	9	Hughes	5
Budd	8	Brewer	7
Perkins	7	Howard	5
Rochelle	7	Clark	5
Simpson	7	McBride	5
Spencer	5	Grim	6
Dorton	7	Shelton	2
Leonard	5		

All ties divided.

Shoot No. 12, 9 single targets, entrance $1.25, closed with 20 entries and the following score:

Sanford	9	Leonard	5
Dorton	8	Anderson	5
Hastings	8	Perkins	2
Clark	7	Bird	8
McBride	7	Brewer	8
Budd	7	Hughes	7
Simpson	5	Howard	7
Rochelle	7	Frisbie	6
Grim	5	Spencer	5
Shelton	3		
Walters	1		

Shoot No. 13 was one of the interesting events of the day, being a team shoot, any two men to constitute a team, at 12 single targets per man, entrance $4 per team. The following score shows the result:

Dorton	101111111111—11	Yearnshaw	101111011010—8
Hughes	111111111111—12—23	Rochelle	110011101011—8—16
Grim	011111111111—11	Chase	101101101101—8
Heikes	111110110111—10 21	Bruce	001011101011—7—15
Burnett	011101101111— 9	Read	110100110011—7
Sanford	111111111101—11—20	Brewer	111100001011—7—14
Budd	010111111011— 9	Roy	011000100110—5
Bird	010111011111— 9—18	Dimple	100001110101—6—11
Simpson	011010111111— 9	Leonard	001100011001—5
McBride	111001001101— 8—17	Hicks	110001011010—6—11

Dorton and Hughes, of Fonda, Ia., winning first; Grim and Heikes, of Clear Lake, Ia., and Dayton, O., second; Burnett and Sanford, of Des Moines, third; Budd, of Des Moines, and Bird, of Fairmont, Minn., fourth; Simpson and McBride, of Victor, Ia., fifth.

Shoot No. 14, 7 live birds, entrance $2:

Spencer	2212221—7	Perkins	0120110—4
Sanford	1120221—6	Grim	0210012—4
Dennis	1202112—6	Morgan	1002011—4
Dunsmore	1121201—6	Tucker	0012120—4
McBride	2220120—5	Hughes	0200110—3
Bird	0221022—5	Kronskop	1102000—3
Dorton	0102221—5	Heikes	0120200—3
Clark	1101101—5	Read	0200100—2
Budd	1200121—5		

Shoot No. 16, 12 single targets, entrance $2.50:

Hughes	11	Veile	7
Budd	11	Rochelle	6
Sanford	10	Dennis	5
Bird	9	McBride	11
Hastings	9	Read	11
Howard	8	Dorton	9
Clark	7	Burnett	9
Grim	8		
Simpson	6	Brewer	7
Spencer	6		
Leonard	4		

Extra live bird shoot No. 1 was for $5, at 7 birds: Hughes 7, Perkins 7, Converse 6, Morgan 5, Heikes 5, Howard 5, Tucker 5, Leonard 4, Yearnshaw 3, McBride 7, Grim 6, Spencer 5, Clark 5, Budd 5, Sanford 5, Bird 5, Simpson 4. All ties div.

Extra No. 2, same conditions, resulted thus: Budd 7, Heikes 7, Hicks 6, Perkins 6, Corrie 5, McBride 5, Jennings 4, Simpson 3, Bruce 3, Roy 7, Hughes 6, Converse 5, Johnson 5, Grim 5, Dorton 5, Yearnshaw 4, Kronskop 3, Kircher 3. All ties div.

Extra No. 3, at 5 live birds, $3 entrance: Kronskop 5, Roy 4,

Dimple 4, Hicks 4, Hughes 4, Grim 4, Jennings 4, Converse 3, McBride 3, Heikes 3, Simpson 3, Perkins 2, Corrie 2, Lewis 2, Clark 2, Viele 1.

Extra No. 1, at 15 single targets, entrance $3, closed the sport and resulted as follows: Heikes 14, Budd 14, Sanford 13, Franklin 12, Burnett 12, Searight 11, Lewis 10, Garrett 7, Bird 14, Hughes 14, Dorton 12, Grim 12, Corrie 12, McBride 10, Viele 8, Watters 5. All ties div. except those of 12, which provoked a shooting match at the wind up. Burnett broke 12 straight and won.

MAPLEWOOD.

MAPLEWOOD, N. J., Oct. 26.—The second annual tournament of the Maplewood Gun Club was held on Thursday, Oct. 23. The day could hardly have been worse. It began raining at 10 o'clock, and kept it up all day. A driving northeast wind came right in the face of the shooters. Notwithstanding the rain and mud, about fifteen shooting cranks turned out and kept the traps going until dark. Ties divided unless otherwise noted. Five bluerocks, 50 cents entrance:

W Smith	5	W J Smith	4
C Dean	5	A Parry	4
Brientnall	5	E Reeves	3
Cockefair	2		
Ayres	4		

Ten bluerocks, $1 entrance, 3 moneys:

W Smith	1111101011—8	Cockefair	0111111001—7
C Dean	1111111101—9	Reeves	0111000111—6
Brientnall	1101011111—8	Ayres	1111101111—9
W J Smith	1010001111—6	Parry	1010111101—7

Fifteen bluerocks, $1.50 entrance:

C B Dicks	101122211122211—14		

*Not members of the club but shot in the sweep. Ties on 14 miss and out: Dicks 0, Loveday 4, others 5 and div. Hy. Ehlers and Abe Kleinman will shoot off tie for medal in next club shoot.

Twenty Peoria black birds for club medal:

Geo Kleinman	00001100111111100111—13
Abe Kleinman	11111011101111111100—16
Chas Nitschke	11101110101011111001—14

RAVELRIGG.

WALNUT HILL, Oct. 29.—It was a wet and tired, but jolly crowd of shotgun men that left this range to-night at the close of the day's shooting. More disagreeable weather conditions hardly could have been provided, but everybody was out for fun, and grumbling was ruled out by a unanimous vote. In the shooting for the diamond pins, Mr. Black went to the front with a rush His score of 29 birds out of a possible 30 is the highest yet recorded in this series of competitions, and entitles him to decorate himself with the championship medal until the shotgun men hold their next meeting. Not content with this victory, Mr. Black also won the competition for the Keystone trophy, allowing but one bird to escape out of 20 at which he shot. The summary:

Diamond Pin Match.

Twenty Keystone targets, firing by squad, and 5 pairs Standard targets.

Black	11111111111111111111—20	11 01 11 11 11—9—29	
Nichols	11111111101111010111—17	11 10 10 11 00—6—23	
Bowker	11110101111111011011—16	10 10 10 10 10—5—21	
Gale	01111111110111111110—17	00 10 10 11 00—4—21	
Perham	11111011000010010111—12	10 10 11 10 11—7—19	
Bradbury	11111131110110101111—17	00 00 00 00 10—1—18	
Curtis	11111001011111101111—16	00 01 00 10 00—2—18	
Burton	11000111111010100100—11	00 10 00 00 12—2—13	

Keystone Trophy Match.

Twenty Keystone targets, from 5 traps, Keystone rules:

Black	11111111111101111111—19	Nichols	11111011011011011111—17
Gale	11110111111111111110—18	Perham	01110110111111111110—16
Bradbury	10111110101111111111—17	Bowker	10111100111110001111—14

On Wednesday, Nov. 12, the shotgun men will convene again to dispute over the possession of the various trophies offered by the club.

CHEYENNE FLATS SHOOT.

GREAT BEND, Kan., Oct. 24.—During the progress of the runnings in the meeting of the American Coursing Club this week, a pleasant little shooting tournament was held near the club house on the Cheyenne Flats, Mr. D. Hugh Halladay and Mr. F. E. Smith, of this city, being the moving spirits. Of course the shooting had to cease at such times as the crowds of horsemen and vehicles were about the club house, but when the dogs were in the field the guns went to work, and quite a number of events were worked off. The wind was quite strong over the plains, which made the live-bird shooting rather more difficult, though the birds were not an extra strong lot of flyers. Bluerock targets were used under A. S. A. rules. The Cheyenne Flats a decade or two ago were covered with buffalo, and within the lines of the boundary flags, or under the flight of the artificial targets, were more than one buffalo wallow still plainly visible. Such is sport to-day. On the whole, this little shoot is interesting for the circumstances that surround it, as well as for itself. Score:

Wednesday, Oct. 22.

Nine bluerocks, $2.50:

F De Tar	110111111—8	R Matthews	111110111—8
A Blockler	111101100—6	Andas	110011010—5
Bush	101011101—6	Hanna	011010111—6

De Tar and Matthews div. first, Bush won second on shoot-off.

HAMILTON, CLUB.—Brown's Driving Park, Long Island, Oct. 28.—The clay-pigeon match for the club cup was shot here to-day. The contestants were Mr. Robert Braith, Mr. Allan Nichols and Col. Gray, all of the club. The air was raw, and those who viewed the match were real enthusiasts. The trophy was gotten up by Tiffany and was well worth a struggle. The terms of the match were 25 birds each, 30yds. rise, 80yds. boundary, club rules:

Nichols	1111111111011111111111—24
Braith	1110111101111111111100011—20
Col Gray	1011011111101111110011110—19

Dr. Preston was referee, Mr. Allan Nichols and Mr. W. Gordon sail Nov. 10 with Mr. Lloyd Phoenix, for a seven months' cruise in the schooner yacht Eclipse. These sportsmen will no doubt find the big game are their return, even as they found it before.

PHILADELPHIA, Pa., Oct. 25.—Nicetown Kennel and Gun Club's shoot at bluerocks, 3 traps, 16yds rise, American Shooting Association rules:

E David	1111111111101101111010111—22
H David	1111111111110110101010111—20

Wolfinger	1111111100111111 —13

BLAUVELTVILLE, N. Y., Oct. 25.—The return match between the Leonia and Spring Hill Gun Clubs took place this afternoon at the grounds of the latter at Blauvelt ville on the West Shore R. R. The conditions were teams of eight men, 25 bluerocks each man, rapid firing plan, three traps. It was a well contested battle, and the Spring Hill men showed good shooting ability by capturing the match, winning by 16 birds:

Spring Hill Club.		Leonia Club.	
Hathaway	20	Gladwin	16
J Bryant	18	Walker	15
Pierson	22	Quss	14
Simpson	20	Beam	19
Kittle	20	Goesser	21
Allen	15	Banta	19
C J Bogart	13	Williams	19
Moeller	23—151	Wright	12—135

Three sweeps were shot at 10 birds each, 75 cents entrance, 16 entries each shoot. The visitors took their departure only when too dark to shoot.

ALGONQUINS VS. EUREKA.—Oct. 30.—A match was shot between the above named clubs at Marion, N. J. Ten men, 10 birds per man, gun below the elbow until the bird is on the wing, 50yds. boundary, otherwise American Association rules. The day was chilly and the wind blowing half a gale, which carried at least 20 per cent. of the birds out of the short boundary, though hard hit. Referee, Mr. Cordt Busch of the Jeannette Gun Club. Judge for Eurekas, Mr. John Maesel, Jr., of the champion Emerald Gun Club team; judge for Algonquins, Mr. Frank Rinn of that club. The losing team have always shot gun below the armpit, and needed a continual warning to keep the butt of the gun in its proper place. The opposing team were veterans at that style of shooting, including some of the best known Long Island rule shots in this vicinity, though they won by but one bird:

Eureka Gun Club.		Algonquin Gun Club.

o dead out of bounds. 12-bores at 25yds. rise, 10-bores at 27yds. A return match will be shot in the near future.—L. H. S.

Yachting.

Yachtsmen who do not see what they want under this heading will please look under the hatches of the *Canoe*, peep into the *Kennel*, squint down the barrel of the *Rifle*, open the *Fish Car* and *Game Bag*, inquire of the *Sportsman Tourist*, and if their yearnings are still unsatisfied, push their explorations into the *Editorial* and *Advertising Departments*.

NIELS OLSEN.

FEW men are better known in yachting circles than Niels Olsen, the superintendent of the New York Y. C. For nineteen years he has been on duty in the New York Y. C.'s house, keeping the affairs of the club in ship-shape order generally, and to-day any man who does not know Superintendent Olsen may be put down as not being possessed with that useful part of the anatomy known in the yachtsman's phraseology as "sea legs."

Ever since he was 18 years old—and he is now 55—Mr. Olsen has had more or less to do with vessels in one way or another. He was born in Christiansand, Norway, June 11, 1835, and he went to sea early in 1853. After making several short voyages in foreign waters he sailed to this country as a deck boy and deserted his ship at Pier 8 North River on her arrival here, going over to Brooklyn, where he fell in with the sailing master of the schooner yacht Norma, owned by Alexander Major. Olsen shipped aboard this yacht as cook and cabin boy at a salary of $5 a month and board, and remained in the employ of the Norma's owner until 1864, when he got a berth aboard the schooner yacht Widgeon, owned by F. Osgood.

After two seasons of sailing close to shore Mr. Olsen went aboard the steamship New York, plying between this port and Central America, and in this vessel he remained thirteen months, until he contracted a fever and went to St. Luke's Hospital for three weeks. That was early in 1867. When he recovered from his illness he took to yachting again and secured a berth as steward of the schooner Fleetwing, sailing in her ocean race against the schooners Vesta and Henrietta for $90 000. Leaving his place on the Fleetwing in the fall of 1867, Mr. Olsen got a job ashore watching Spanish gunboats at the foot of West Thirteenth street while they were fitting out to be used in quelling a rebellion in Cuba.

The next year Mr. Olsen went to sea again, shipping on a vessel bound for China. In March, 1869, he shipped as mate of the old schooner Magic, and sailed in her international races for the America's Cup, after which he took up newspaper work, doing marine reporting for a local paper for two years. In February, 1871, he went as mate of the schooner Columbia, sailing in her international races also.

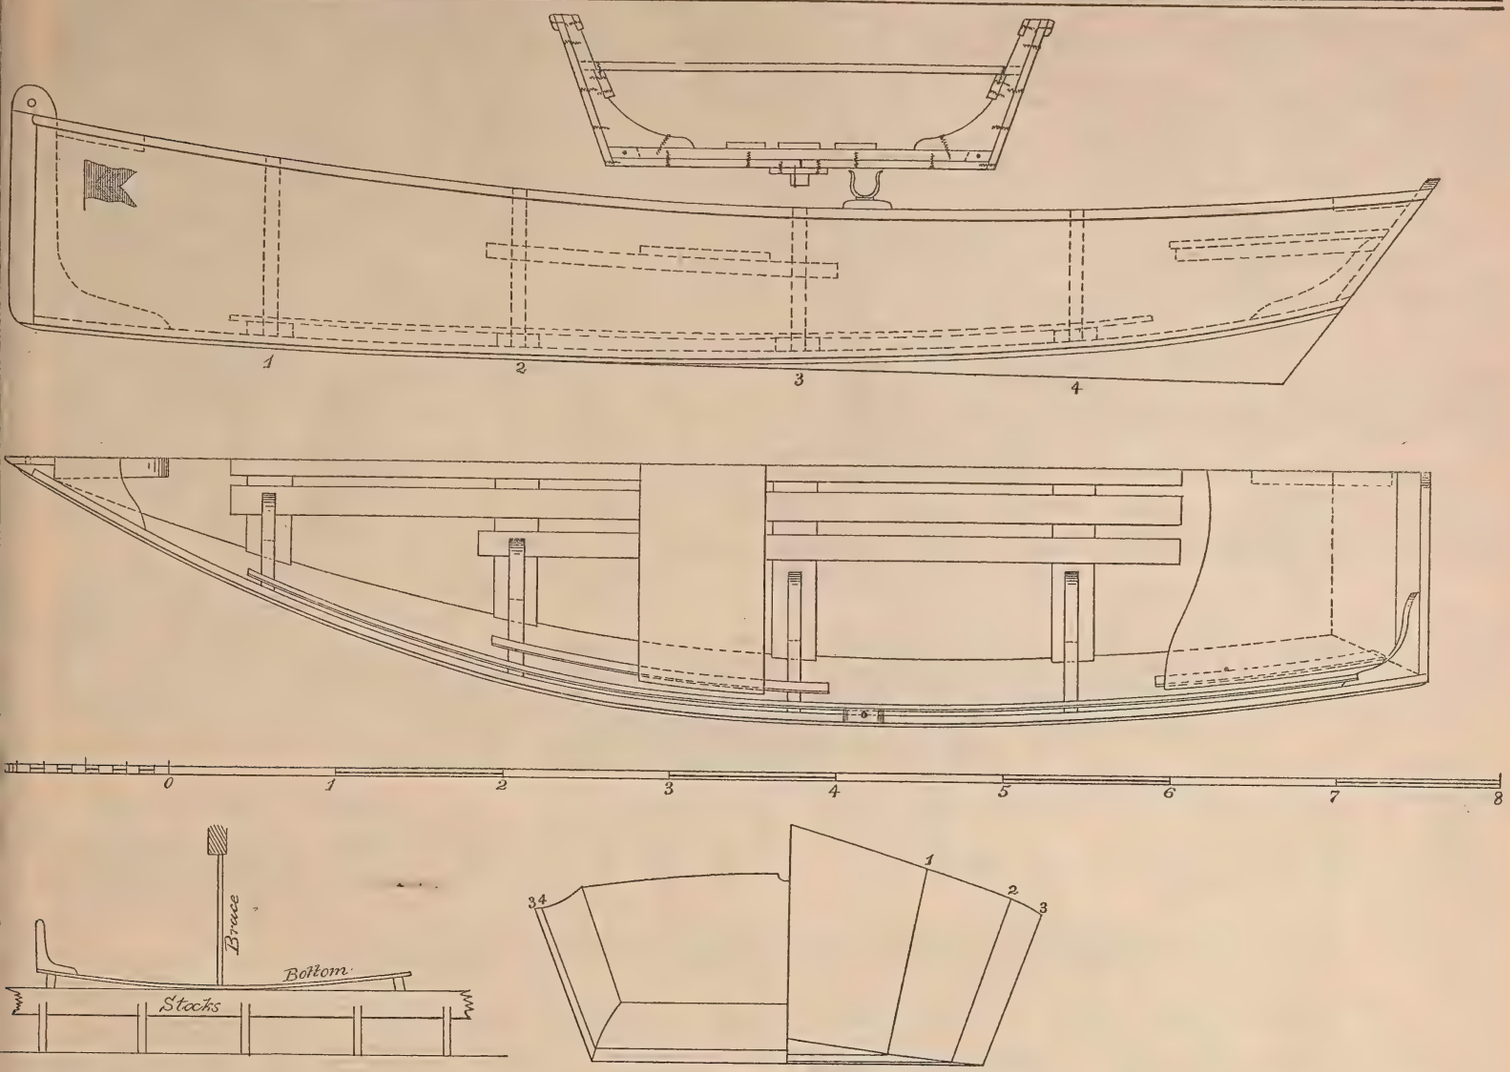
It was in November, 1871, that Mr. Olsen assumed his present duties. The New York Y. C. was then anchored on the northwest corner of Twenty-seventh street and Madison avenue. In 1884 the club shifted its quarters to 67 Madison avenue, its present berth, and if any one will take the trouble to visit the famous model room of the club he will find there on every side evidences of Superintendent Olsen's faithfulness and love for his work.

No man could go through such a life as has been briefly outlined here without having a host of interesting experiences, and although it is hard work to draw much out of Superintendent Olsen, when he has anything to say on yachting or other nautical matters, there are always plenty of yachtsmen glad to listen. It is quite a common thing for yachtsmen to say, "We'll leave it to Mr. Olsen," when in an argument about debatable questions as to "Who won," and it is seldom that they cannot have disputes of this nature speedily settled by this authority.

Mr. Olsen has the history of American yachting within easy reach, from the organization of the New York Y. C. to the present time. He has a complete record of all the vessels which have ever been enrolled on the club's yacht list, including alterations in their hulls, changes of ownership, alterations in the machinery of steam yachts, and other details; and he is at present at work on a book which, when completed, will contain a correct and concise account of every race with which the New York Y. C. has been identified. He expects to have this book finished about Jan. 1, 1891.—*New York Times.*

A SWEEPSTAKES FOR THIRTY-FOOTERS.

THE following circular has been sent out by the Corinthian Y. C.:



At the request of the owners of several boats eligible for such a race, the Corinthian Y. C. of New York has undertaken the management (in connection with the third annual sweepstakes for larger boats, circular for which was recently issued) of a sweepstakes at Newport, R. I., for single masted yachts of from 30 to 40ft. sailing length (formula, $\frac{\sqrt{S.A.}+L.W.L.}{2}$).

The conditions as to time, place, course and prizes will be as follows: Entry moneys $75 for starters ($20 if declared out by June 30, $40 if declared out by July 31). Measurement and time allowance as per by-laws of the club. Copies thereof will be furnished to boats making entries. Owners must furnish certificates of their sailing length (under C. Y. C. rule) by their respective club measurers to the secretary of the club at least five days before the race. Same will be accepted as final unless a remeasurement (by the measurer of the C. Y. C.) be demanded by a competitor in writing within twenty-four hours after the race. No boat not furnishing such certificate will be timed. The entry moneys will be divided in prizes as follows: Sixty per cent. in silver plate to the winner, twenty-five per cent. to the second boat, and fifteen per cent. to the third boat. If less than five start no third prize will be given, and the first and second prizes will be increased to seventy per cent. and thirty per cent. respectively. The race will be sailed off Newport Harbor, R. I., as soon after the termination of the New York Y. C.'s cruise as can be conveniently arranged. The course will be a triangle of twenty-five nautical miles, one leg (if practicable the first) to be laid off dead to windward. The start will be flying, and both start and finish will be at Brenton's Reef Lightship. No time limit for race. The sailing regulations of the Corinthian Y. C. of New York in relation to management of races, etc., will apply to and govern the race (except as modified by the special conditions of sweepstakes).

Entries should be made on or before May 15, 1891, inst., to sailing committee, Corinthian Y. C. of New York, care M. Roosevelt Schuyler, 55 Beaver street. Chas. H. Tweed, E. B. Clarke, *ex-officio*, Wm. H. Plummer, Wm. Gardner, Chas. Stewart Davison, Sailing Committee.

CORINTHIAN NAVY.—A special meeting of the Corinthian Navy will be held at the Hotel Marlborough, Broadway and Thirty-sixth street, on Nov. 6, to take action on the proposed amendments to the constitution and by-laws. The East River Squadron will open its navigation and seamanship school in Harlem, Vice-Com. T. Fleming Day will be chief instructor. The course will include knots and splices, boat rigging and sailing, as well as chart reading and boat building. Commodore Center, S. C. Y. C., will open the lecture series early in December. Proposed for membership: E. J. Veanhofer and Edward Tanner.

PAPPOOSE.—Mr. Bayard Thayer has sold his cutter Pappoose to Mr. Davenport Galbraith, of Erie, Pa. She will be taken to Lake Erie by canal from New York. It is possible that she may race on Lake Ontario next season, coming in the 46ft. corrected length class, with White Wings.

BODY TO OUTSIDE OF PLANKING.

A CHEAP TENDER.

A CHEAP TENDER.

SKIFF building is an art that has received too little attention. Anything is considered good enough for a skiff, yet for small yachts the skiff is better adapted than a round bottom yawl. Stiffness, buoyancy, lightness, roominess and low cost are all in favor of the skiff. A simple and commendable method of construction is shown in the illustration. The shape of the boat will be understood from the body plan, which is to outside of plank. The frame can be got by deducting the thickness of sides and bottom from the sections of the body plan, or they can be got by taking the inside width across bottom and top on the half breadth plan.

The example in question measures 8ft. 6in. over all, 3ft. beam across the top, and 2ft. 4in. across the bottom. The depth amidships is 11in., at stem 15in. The stern board or transom is 2ft. 6in. across top, 2ft. across bottom, and 11in. wide, including the crown. She will carry two hands on a draft of 5in. To put up the boat proceed as follows: Get from the mill one ¾in. board of white pine, 18ft. long. Have it run through a planer to ⅝in. A similar board 14 to 16in. wide for the siding, and some ¾in. oak for stern, cleats, and frames. Also a piece of 3½in. oak or hackmatack for the stem. Saw the bottom board across in half. Lay the two pieces on the floor alongside one another, and with chalk sketch out the shape of the bottom and trim off to the line. Lay the two pieces on the building stocks. Hold them there by a strut from the shop beam above and block up the ends of the boat's bottom to the required camber. Get out the stem with rabbet and screw it in place. Cut out the cross floors of 1×3in. stuff and slot their ends to receive the heel tennon of the timbers. Cut the latter out of straight grain stuff to the shape of a stout knee as shown in the diagrams, leaving a tenon projecting. Drive the tenons into the slots of the cross floors and pin them with a round nail. Also screw the heels down to the floors. When the four sets of frames have thus been put together, with the proper flare, place them in position on the bottom boards and screw them fast from underneath. Bevel off the frames with a spokeshave to receive the side plank. Put the latter in place temporarily, holding it to the frames and stem by clamps. Mark off proper shape of the sheer and the rocker of the bottom and trim off to those lines. Remember that the sides overlap the bottom as shown in the cross section of the boat. The bottom boards must therefore be beveled around the edges with a plane to suit. Screw the side boards in place to the stem, the frames and along the bottom, spacing the small brass screws about 2¼in. apart so as to make a watertight job. Cut out the stern board and screw it in aft between the sides and on top of the bottom boards, and also knee it to the sides at the sheer. Fit an oak breasthook in the eyes forward. The boat is now ready for the fittings. Run a light inwale around the heads of the frames to stiffen the gunwale and nail a chafing batten round outside at sheer height. Screw cleats to the frames and side to receive the thwarts, which, when screwed down, serve to tie the boat together. Fit a center knee to the transom and lay some foot boards across the floors. Also screw down a suitable oak block bored for the swivel rowlocks. Now turn the whole boat over and screw a strip of oak, 3×½in., fore and aft over the center seam of the bottom, and nail on what skag you wish aft over that. Bore the stem head for a painter and putty where needed. Then varnish or paint, depicting the yacht's burgee on each bow. The material, oars and rowlocks, will cost $7, and three days and a half labor $9 more.

A NEW IDEA IN BOILERS.—We copy the following *verbatim* from the *Marine Journal;* the Belleville boiler has been recognized as possessing many points of merit, but we were not aware that centerboards and a schooner rig were among them: "Commodore J. M. Forbes is building a steam auxiliary yacht 125ft. long on the waterline. She will have two Belleville tubular boilers with steel centerboards, schooner rigged, and will develop a new idea in her cockpit being constructed so as to form a lifeboat in case of disaster to the ship. She is intended for cruising in West Indian waters."

ANOTHER "MAGIC."—We learn that Mr. Gabriel Deneher, of Gagetown, N. B., last spring built from the lines of the Magic, in the FOREST AND STREAM of Jan. 16, 1890, rigging the boat as a sloop. She has proved fast, and very well adapted for the waters she is used on.

THE CORINTHIAN SWEEPSTAKES OF 1891.—The Corinthian Y. C., of New York, has issued the following programme of its yearly sweepstake race for next year: 1. Open to boats exceeding 40 and not exceeding 60ft. sailing length, to be divided into two classes. Class A including all boats over 50 and not over 60ft. sailing length, and class B including all boats over 40 and not over 50ft. sailing length. Measurement and time allowance as per by-laws of the club, copies of which will be furnished to boats making entries. 2. Owners must furnish certificates of their sailing length (under Corinthian Y. C. rule) by their respective club measurers to the secretary of the club at least five days before the race. Same will be accepted as final unless a remeasurement (by the measurer of the Corinthian Y. C.) be demanded by a competitor in writing within twenty-four hours after the race. No boat not furnishing such certificate will be timed. 3. Seventy per cent. of the entry moneys in each class will be given in silver plate to the winner in that class, and 20 per cent. of the entry moneys in each class will be given in silver plate to the second in that class. The remaining 10 per cent. of the entry moneys of both classes will be added to the prize given to the boat, of whichever class, which makes the shortest corrected time over the course. 4. The race will be sailed off Newport Harbor, R. I., as soon after the termination of the New York Y. C. cruise as can be conveniently arranged. 5. The course will be a triangle of twenty-five nautical miles, one leg (if practicable the first) to be laid off dead to windward. 6. Start and finish at Brenton's Reef Lightship. 7. The start will be flying—both classes together and from the same signal. 8. No time limit for race. 9. The sailing regulations of the Corinthian Y. C. of New York in relation to management of races, etc., will apply to and govern the race (except as modified by the special conditions of the sweestakes.) Enteries will close May 15, 1891, and may be addressed to Sailing Committee, Corinthian Y. C. of New York, care M. Roosevelt Schuyler, Secretary, 55 Beaver St.

ST. LAWRENCE Y. C.—At a special meeting, on Oct. 24, all the changes in the sailing regulations of this club, proposed in the report of its committee on classification, which was published in our issue of Oct. 23, were carried, almost without dissent. The only amendments to the proposed changes made by the meeting was in regard to the class limits, the classes as adopted being: Class A, 29ft. corrected length and over; 29ft. class, over 24ft. and not over 29ft. corrected length; 24ft. class, over 21ft. and not over 24ft. corrected length; 21ft. class, over 18ft. and not over 21ft. corrected length; 18ft. class, under 18ft. corrected length. The arrangement of the boats in the club fleet will be such as to make good racing between existing boats in the three large classes, and already the prospects are that a number of new boats will be built for the two small classes, particularly for the 18ft. class. The club has now secured comfortable winter quarters in Montreal, it will hold monthly meetings during the winter, and the interest in the club and in the sport is increasing so fast as to promise well for its future. The club's new address is 2367 St. Catherine street, Montreal.

CATARINA.—The wrecking company succeeded in raising the steam yacht Catarina, wrecked on Matinnicock Point; she was towed to this city by the tugboat Rescue. A report was current last week to the effect that the steam yacht Corsair, Mr. J. Pierpont Morgan, was also ashore on Shinnicock Point, but it was entirely false, the yacht being safely laid up at Tebo's.

LADY EVELYN, schr., Sir Roderick Cameron, has been in British and Mediterranean waters for some months. On Oct. 17 she left Cowes for New York, calling at Plymouth the following day, but sailing immediately.

IVERNA.—Like all of the Jameson racers, Iverna has been hauled up and her copper stripped for the winter. She will be planed off and newly coppered under Capt. O'Neill's care in the spring.

SEAWANHAKA C. Y. C.—The fifth regular meeting of the Seawanhaka Corinthian Y. C. will be held at the club house on Saturday evening, Nov. 8, at 8:30 o'clock, punctually.

NYMPH.—Mr. F. W. Flint's 40-footer has been sold to go to Buenos Ayres, Argentine Republic. Mr. Flint will build a 65ft. Burgess schooner, similar to Quickstep.

YACHT DESIGNING.—The New York *Herald* of Nov. 2 publishes a long and very interesting article on this subject by Mr. A. Cary Smith.

THE WRECK OF THE NYANZA.—The cruise of the schooner yacht Nyanza around the world, whose progress we have before noted, has been brought to an abrupt termination, as told in the following extract from the *Field*. The yacht was about 109ft. l.w.l., 21ft. 6in. beam, and 11ft. 8in. hold. "A telegram was received in London last week, stating that Capt. Dewar's cruise on board the Nyanza had been brought to an abrupt termination by the wreck of the yacht at Ponapi, a small island of the Caroline group. The crew and passengers appear to have been transferred to Manilla, about 1800 miles distant, and where there is a telegraph cable via Hong Kong to London. Capt. Dewar stayed by the wreck some time longer to look after the interests of the underwriters, and eventually disposed of her for £140, and went on to Manilla himself, where he arrived on Thursday. This fine schooner was one of the composite vessels built by Steele and Co., for Greenock, and must have had a rare hammering to have become a total wreck. She was built in 1867, for the late Earl of Wilton, Commodore of the Royal Yacht Squadron, and sailed a match in 1868 round the Isle of Wight, under the flag of that club, in half a gale of wind; but she did not distinguish herself against the racing fleet, which on that particular occasion was represented by the Cambria, Aline, Lufra, Egeria ane Pantomine. They all got a rare doing beating up the back of the Isle of Wight between Dunnose and St. Catherine's, and the Cambria would probably have been the winner had she not carried away the jaws of her main-gaff, and subsequently her bobstay. As it was, the Lufra, belonging to Lord Strafford, finished first, but lost the prize by time to Sir Richard Sutton's Aline. The Nyanza was beaten nearly half an hour by the Lufra, but for a 'cruiser' this was anything but a bad performance, although it rather staggered those yachtsmen who had contended—as they had many times before, and since—that, given half a gale of wind and an open sea for a trial to windward, the cruiser would beat the over-sparred and lead-ballasted racer into the proverbial cocked hat."

THE PEQUOTS.—New York, Nov. 3.—The annual business meeting and banquet of the Pequot Yacht and Canoe Association was held at Heublein's café, New Haven, Nov. 1. Officers for the ensuing year were elected as follows: Com., F. P. Lewis, New Haven; Vice-Com., W. M. Chase, New Haven; Rear-Com., Dr. W. S. Putney, Milford, Conn.; Sec'y-Treas., W. W. Cornwall, New Haven; Fleet Capt., Neil R. Mitchell, Westport; Fleet Surg., Dr. G. S. Ford, New York; Chaplain, Rev. A. N. Lewis, New Haven. The business done besides the election of officers was reports of committees, discussion of location of 1891 meet and cruise, etc. The report of secretary shows a healthy growth and good prospects for the coming year.

AN ACCIDENT IN HELL GATE.—On Nov. 2 as the sloop yacht Tyrant, of New York, was coming west through Hell Gate on her return from a gunning trip on the Sound, she grounded in trying to avoid a passing vessel. Her crew of six, Capt. Brown, Fred Spencer, H. H. Bowen, Sidney Smith, F. J. Staub and August Martin, at once jumped into the yawl, which was carried by the tide against the yacht's side and capsized. Bowen was picked up by a rowboat and Spencer, Martin and Brown by another yacht, but Straub and Smith were drowned. The yacht was hardly injured, being towed off later in the day, and had all hands remained by her they would have been dry and safe.

A BASE SLANDER.—T. W. H.—An owner who commands his own yacht does not wear bright brass buttons and a gold band on his cap; but some wear the club button and club badge. In America the owner of a yacht is styled "Captain," and most of them wear bright buttons bearing the club device, also gilt badges on the cap.—*Answers to Correspondents, in the Field.*

CORONET, schr., with Com. A. E. Bateman and family on board, arrived at St. Augustine, Fla., on Nov. 3.

BOOKS RECEIVED.

EDITORIALS AND OTHER WAIFS.—By L. Fidelia Wooley Gillette. New York: Fowler Wells Co.

HUMAN MAGNETISM. By H. S. Drayton, M. D. New York: Fowler Wells Co.

Annual Report of the State Engineer and Surveyor, State of New York, for 1889. Transmitted to the Legislature March 3, 1890.

Canoeing.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

AMERICAN CANOE ASSOCIATION.

OFFICERS, 1889-90.

Commodore: WALTER U. LAWSON, Boston, Mass.
Secretary-Treasurer: RALPH E. BRAZER, 47 Central street, Lowell, Mass.

	Vice-Com.	*Rear-Com.*	*Purser.*
Central Div.	Geo. A. Warder.	E. L. French, 110 Diamond street, Pittsburgh, Pa.	J. K. Bakewell,
Eastern Div.	Dr. J. A. Gage.	A. S. Putnam.	Ralph E. Brazer, Lowell, Mass.
N'thern Div.	W. J. White.	W. J. Read.	C. M. Whitlaw, Montreal, Can.
Atlantic Div.	M. V. Brokaw.	I. V. Dorland.	W. R. Haviland, Yonkers, N. Y.

Applications for membership must be made to division pursers, accompanied by the recommendation of an active member and the sum of $2.00 for entrance fee and dues for current year. Every member attending the general A. C. A. camp shall pay $1.00 for camp expenses. Application sent to the Sec'y-Treas. will be forwarded by him to the proper Division.

Persons residing in any Division and wishing to become members of the A. C. A. will be furnished with printed forms of application by addressing the Purser.

WESTERN CANOE ASSOCIATION.

Commodore—D. H. Crane, Chicago, Ill.
Vice-Commodore—N. B. Cook, Chicago, Ill.
Rear-Commodore—O. A. Woodruff, Dayton, O.
Secretary-Treasurer—J. H. Ware, 130 Rialto Building, Chicago, Ill.

Applications for membership should be made to the Sec.-Treas., on blanks which may be obtained from him, and should be accompanied by $2 as initiation fee and dues for the current year.

THE A. C. A. MEET OF 1890.—II.

ATTENDANCE.—While it was confidently expected that the attendance at Jessup's Neck would greatly exceed that of any former year, such was by no means the case, the number enrolled being only a fair average. The official register shows but 248 names, including Squaw Point, and there were very few, if any, who did not register. This number is small when the present membership, a little over 1060 up to the close of the meet, is considered. The attendance from the various Divisions was: Atlantic 106, Central 37, Eastern 78, Northern 27. Of the 120 odd clubs in the United States and Canada which are wholly or in part devoted to canoeing, but 42 were represented, the number of members which each sent to camp being as follows:

Atlantic Division: Ianthe 21, Brooklyn 13, Yonkers 10, Knickerbocker 9, New York 8, Arlington 7, Red Dragon 5, Hoboken 5, Trenton 4, Orange 1, Bayonne 3, Ompage 1, Lake Hopatcong 1, Kwoneshe 1.

Central Division: Mohican 16, Rome 4, Rochester 4, Longworth 2, Buffalo 1, Ruckawa 1, Amsterdam 1.

Eastern Division: Puritan 10, Hartford 10, Vesper 8, Springfield 5, Shuh Shuh Gah 5, Chelsea 5, Tatassit 4, Seconk 4, Owanux 3, Litchfield 3, Holyoke 2, Norwalk 1, New Bedford 1.

Northern Division: Ubique 6, Toronto 6, R. M. C. 3, Otonabee 2, Lindsay 2, Brockville 1, Whitby 1, Pointe Claire 1.

Of these the Ianthe C. C., of Newark, N. J., takes the lead in point of numbers, having 21 men in camp, besides a large delegation at Squaw Point. The large attendance from the Passaic River that was promised several years since for the first meet in the Atlantic Division did not materialize, the total number of members from that section being but 33. The whole list shows that while there was a scattering of men from all sections, the bulk of the attendance was from the vicinity of New York, from Albany, Lowell, Springfield, Hartford and Boston. The nearness to the Eastern Division brought in a number of clubs hitherto not seen at camp, Chelsea, Tatassit, Shuh Shuh Gah, Seconk, Holyoke, Litchfield. The Ianthe, Yonkers, Arlington and Hoboken clubs sent some new men to camp, but a very large number from the Atlantic Division were men well known in previous camps. The Northern Division delegation was mainly composed of old regulars who have visited every meet for years, there being a few young recruits who came for the racing.

Considering the number of canoeists and canoe clubs in America, it might be expected that the A. C. A. membership and the attendance at the meet would be much larger than it has thus far proved. That this is so is not on account of the expense or because the canoeist gets no return for his money, the annual dues of a dollar are not very heavy, and the Division meets each year are bringing the Association nearer home to members, and aiding canoeing in localities never before reached. The reason why the membership and attendance at the meets are not both larger is on account of the disinclination of most men to take up a new thing unless it is put prominently before them. Considering the length of time that the A. C. A. has been established, and the amount of publicity that has been given to the Association and the meets by the special journals and the daily press, it is surprising how many men who are interested in canoeing know little or nothing about it. Such men at times turn up by accident at a meet, at once taking hold of the whole idea with enthusiasm and joining the Association with expressions of regret that they did not know of it before; but for one such there are dozens who never take the trouble to learn what other canoeists are doing, but go on their way alone. It is true in a way that if a man does not care to pay a dollar and join the Association to see whether it will benefit him the less is on his side; but at the same time it has been proved that such men often make the best members when by any chance they are led to join.

The question, then, is whether it is possible for the A. C. A. to do any recruiting service or missionary work in this direction. A certain amount of such work is incidental to every meet in a new locality, but this is small compared with what might be done by more active and comprehensive measures. The first duty of the Association is to provide for the present members, but if at the same time it could increase the membership it would at once be possible to do much more for them. Such schemes as involve any work of publishing are out of the question on account of the great expense, but there is at least a fair promise of added membership in the perfection and adoption of the club scheme proposed several years since. The small proportion of A. C. A. members in the canoe clubs, and especially in the larger ones, is something remarkable; it would seem that when a man is sufficiently interested to belong to a canoe club and to own a canoe, that he would at the same time see himself in a boat that is doing much, even though his work is not complete or perfect, for the advancement of canoeing; but it is no uncommon thing to find a club of fifty with hardly half a dozen A. C. A. members, the proportion being as low in the smaller clubs.

On the one hand is the Association, with a most complete organization and with an unlimited field for work, needing only more members in general and more workers in its various departments. On the other are canoeists by the hundred, unattached or members of the many clubs, who might belong to the Association with advantage to it and to themselves. The question is how to bring the clubs to the aid of the central body, and no perfectly satisfactory plan has yet been presented. The matter has been taken up in a small way by a few of the clubs, such as the Brooklyn and Ianthe, in which every member must belong to the A. C. A., the usual plan being to include the A. C. A. dues in the club dues, so that each member simply pays his club purser, the latter remitting each year to the Division purser of the A. C. A. for the full membership of his club. Such an arrangement is merely a private affair of the club, and is not officially recognized by the Association at present, but it offers so many advantages that the sooner it can be formally adopted by the Association, the better it will be.

The principal advantages are that it makes each club an active agent for enlarging the membership of the Association; it places the responsibility for the standing of each member on a club which has some knowledge of him rather than of the A. C. A. officers, to whom he is necessarily a stranger; it greatly simplifies the accounts of the pursers, as they look to each club, a definite and responsible body, for the net sum, instead of collecting small sums from scattered individuals; it brings the clubs into a close relation with the Association, which is not now the case; and it increases largely the *esprit du corps* of each club, with the result of a larger attendance and a better display in camp. Canoeists will recognize the fact that aside from the mere point of numbers, the camp is more improved by the presence of large and well managed delegations from the clubs, than by the presence of the same number of unattached canoeists. The various club encampments, such as the Vespers, Ianthes, Mohicans and Brooklyns this year; the club camp-fires, the parts which the clubs as distinguished from the individuals take in the illuminations, decorations and festivities of the camp, go to make the meet far pleasanter than if each man came to camp as an individual only; and yet, at the same time, the clubs are practically unrecognized by the Association.

One great advance has already been made, in the change of the Association from a big club to a more complex but efficient body, through the Division scheme; the next step must be a still further carrying out of the same process by building up the Divisions out of clubs, just as the whole body is made up of Divisions. There are only two serious obstacles in the way of this plan; the large clubs in which some members, for one reason or other, will not join the Association, and the men who belong to the Association and yet do not find it possible to join a club. It would not do to exclude the latter, as they are often the pioneers doing good work on the frontiers and well in advance of any club organizations, and on the other hand there are not a few large clubs in which a part only of the members are interested in canoeing, the others being oarsmen, yachtsmen or athletes. Neither of these difficulties are insuperable, and if the matter were taken up in earnest by the Association a satisfactory scheme might be devised. The expenses of the Association would hardly be appreciably increased by a doubling of its membership, the cost of the extra copies of the year book would be a small matter, probably no more than the postage, while the increased income would enable certain new and useful work to be undertaken; or the present dues, small as they are, might be somewhat lessened by charging a certain reduced sum for the yearly membership of clubs of various sizes, while retaining the present fee of one dollar for unattached members.

There are many cases of large and influential clubs with a membership of perhaps fifty, from which the A. C. A. does not receive more than $10 per year, while the instances in which it receives anything like an average of $1 per man from each club member are very few. If in a club of fifty the whole membership could be taken into the A. C. A. by a payment of say $35 per year, the increase of income would be very material, the only added expense being the extra copies of the year book. This is mainly due to the fact that a camp such as the present one was capable of accommodating 500 as easily as 250, the wharf, kitchen, etc., being fully adequate. Whether the camp would be any pleasanter or the races more interesting with such a doubling of the attendance, is at least doubtful; but the arrangements for transportation, mess, camp stores, etc., could be very much better. A certainty of an attendance of 500 would, for instance, justify the chartering of a good 60ft. launch to run during the whole period, as such a boat would pay its expenses even at a moderate fare; and the great difficulty of catering should be lessened with the certainty of the attendance of a very large number.

The Mess.—Old canoeists have various ways of remembering and identifying the various meets, and one is by the quality of the camp mess, which even the most rigid campers have had occasion to depend on at times. This there are nothing but pleasant recollections attending the generous table of the first two meets at Cresyfield, at the excellent country tare of the Delany farm in 1884, and the more elaborate arrangements of the same table in the next two years; while a man is apt to grind his teeth and experience a hollow feeling within at the thought of the very scant provender of 1888. It was intended that the present camp should be a memorable one in this respect, a sort of red-letter affair, and so it was; no one will deny that. The big mess tent of 1890 will live long in the annals of the A. C. A., it will take a foremost place in the mass of tradition and legend that grows each year besides the camp-fires, and it will furnish a standard of comparison for a long time to come. Like most things, it had its good and bad sides, but unfortunately they were so fairly distributed the good was all confined to the camp programme sent out in advance, the bad was on exhibition three times a day during the camp.

It would be strange if, out of a party of two or three hundred, a few chronic growlers were not always found who find fault with everything and expect the cooking and service of a first-class city restaurant in the woods and at a low price; but as a rule canoeists are not hard to satisfy; plain, substantial food in plenty is all they want; mere quantity goes a good way in making up for extra quality, and little points of cleanliness are none too strenuously insisted on. In the present case, however, grumbling and discontent over the mess was general, and must be admitted with good reason. Not only was the food bad and the prices high compared with previous camps, but at the special request of the committee men had come to camp with no means of cooking for themselves, and relying solely on the promises of a most satisfactory camp mess.

So far as these expectations were realized, in the first place, the advertised prices were higher than ever before. The rate in the past has been $1 per day, generally a charge of 25 cents for breakfast and supper and 50 cents for dinner, or simply 3 meal tickets for a dollar. In either case a man purchased as many tickets as he wanted, or paid for such meals as he took. In the present case the lowest charge was at the rate of $1 per day, but only on condition that a man paid in full for two weeks, or $14. This of course was not unreasonable, though the man paid for his meals, whether he was absent or not, and a man is apt to miss a number when racing, sailing or on fishing excursions. From this minimum the scale of prices ran up to $1.25 per day for a week and $1.50 for 1 or 2 days; while single meals were 50 cents for breakfast or lunch and 75 cents for dinner.

This programme, however, was not fully carried out; men who had paid in advance for a certain time, say 9 days at $1.15, found that when this time was up and they wished to stay a couple of days longer that they were charged the two-day rate, or perhaps 50 or 75cts. for a meal or two. This, of course, simplified the accounts, but it was unfair to the men, and has never been done before. There were many who, owing mainly to trouble in reaching camp or in getting their duffle, spent part of several days in camp and part at Sag Harbor before taking advantage of the commutation rates, meanwhile paying 50 and 75cts. per meal, or even $1.75 per day. These figures may not seem high to those who spend the season at the regular summer resorts, but they were higher than ever before at a meet, and as it proved, higher than would be inferred from the published scale of prices; but there would have been little complaint on this score had the meals and service been even fairly good; so far from this being the case, however, there was nothing about the whole mess that was not conspicuously bad.

In the first place the catering was very poor, the bill of fare as laid out was a most unfortunate cross between a plain wholesome camp mess, as managed by a good guide or camp cook, and a city restaurant. This in itself would not have been so bad, but after the first few days all semblance of this bill of fare disappeared, and the catering was conducted on a sort of go-as-you-please, catch-as-catch-can plan that was simply unbearable. Not only was there an absence of all country produce—fresh eggs, milk and vegetables—but the food provided was positively bad in quality and often scant in quantity. As for the linen of the circular, none was visible, either clean or soiled, and even the supply of cheap paper napkins gave out early in the first week and was never replenished in spite of many promises. The meat and seafood that were expected on salt was were found only in an occasional fish ball and a solitary chowder, and the whole menu brought to mind the old biennial song of Yale:

"The food was not meet for a student, I own;
There was not much flesh, but plenty of Bohn."

Of the service the less said the better, it matched the food.

The excuses made for this state of affairs were entirely inadequate; it was claimed that the surrounding country furnished nothing in the way of milk, eggs or farm produce, the limited supply being taken regularly by the hotels at Shelter Island; and also that it was impossible to procure fresh supplies regularly from New York. However true these may be, they in no way account for the bad management that was apparent everywhere about the cooking department. A very good start was made in the first place; during the winter an ice house was built and filled with the small quantity of poor ice that the warm weather afforded, a good frame kitchen was built and most completely fitted up, the tearing down of one of Delmonico's restaurants in New York giving an opportunity to procure the ranges, broilers and other apparatus at a low figure. The ice venture was a failure, as all melted before summer, but this was a small matter of itself. So far as the committee was concerned, they made every possible effort to secure a good caterer, searching first in the immediate locality and among the hotels, but being unable to find any one who would undertake the mess or the camp store; the final selection was made only after other attempts had failed, and when it seemed certain that the right man had been found. Even then the matter was only closed by the commodore giving a personal guarantee to the caterer that he should lose nothing. It would now appear that there was no counter guarantee, but that both the members and the commodore were at the mercy of the caterer, the former being very poorly fed in return for very high charges, while the latter is out of pocket to the extent of several hundred dollars on the item of the mess alone.

The work of finding a competent and responsible caterer is one of exceeding difficulty even in the large cities, and we know of many instances in which the yacht clubs, though paying good prices for the dinners at their regattas, have fared as badly as the canoeists in the present case, and with no redress. If a fairly good table is provided, with plenty of plain camp fare, the caterer can count on the patronage of nearly all the camp: some 200 at least; and on this basis a competent man should be able to make a fair profit. If it is proved that this can not be done, then the price will have to be raised; but considering the work of preparation done by the Association, and the very simple nature of the service demanded; such board should not cost over $7 per week.

The present case has taught canoeists one important lesson, not to place themselves entirely in the power of the caterer, whoever he may be. As long as they can and do leave the mess tent as soon as the meals fall below a certain standard, there is a guarantee that the caterer will in part hold to his contract, but when he has the cash in his pocket for two weeks in advance, the less they like his table and the more they are forced to depend on the neighboring hotels, the better he will be pleased. The wise canoeist will in the future look out for this by not paying in advance or making any contract with the mess tent, but by carrying with him his own cooking traps and a few stores in case of need; leaving the mess tent and cooking for himself as soon as the fare is no longer to his taste. Where a man pays in advance, with no guarantee of what he can get, or where, as in 1888, practically every one went to camp on an uninhabited island, where nothing could be had to eat save at the mess tent, and took nothing with them, they must make up their minds to a repetition of the present experience.

The only happy ones at the present camp were the few who cooked for themselves, and who had their plain but clean and substantial meals sweetened by the envious glances of the famished aristocrats who passed by on their return from the Hotel Bave. The best mess in camp, and probably the cheapest, was that of the Galt and Ubique party, in charge of a camp cook, with one large tent as a dining room. By dint of long experience the members of this mess have learned how to fare well in camp at a moderate cost, and in this case brought their cook from Canada and purchased a store of provisions and a small stove in New York. When this plan is followed out by a party of ten or twenty it is far pleasanter than the general mess, and a good deal better for the same cost; while if desired a more elaborate spread may be had at a small addional outlay. We went into the subject of cooking in camp very thoroughly in the FOREST AND STREAM of Sept. 6, 1888, and canoeists will find a good many practical hints to aid them in preparing for next year. Now is the time, when the matter is fresh in mind, to make up a camp kit in readiness to ship at any time to camp.

In connection with the mess tent is the camp store; this year in a very convenient location, and under a separate management; but the prices charged were very high. As in the case of the mess tent, there was not only no competition for the privilege, but the committee had hard work to find any one who would undertake to run a store. A storekeeper from Sag Harbor finally brought over a very good stock and kept open during the entire camp, but his prices were very high, his excuse being that he was under considerable expense for a very short time in leaving his regular business in other hands and transporting his stock to camp. This matter of a good camp store is even more important than the mess; if men can procure supplies in camp, especially milk, eggs, bread, meat and vegetables, they can make out very well in spite of poor meals at the mess tent, but where supplies are not to be had, or where they are sold only by the man who runs the mess tent, the canoeist is at his mercy.

THE DEFINITION OF AN AMATEUR.

Editor Forest and Stream:

I have been reading the constitution and by-laws of the A. C. A. carefully, to find how a private member can bring before the executive committee any change he may think advisable. Can you give any information on this point? The A. C. A. is presumed to be composed of amateur sportsmen. In Article II. of the constitution it is stated that, "Its object is to unite all amateur canoeists," etc., but I find no definition of an "amateur canoeist." Nor do I find any rule or regulation which would prevent any professional canoeist competing in A. C. A. races.

I would like to see a by-law inserted after Chap. XII. to read as follows: Chap. XIII. All competitors under A. C. A. auspices shall be confined to amateurs. An amateur is any person who has not competed in any open competition or for a stake, public or admission money or entrance fee; or competed with or against a professional for a prize; who has never taught or assisted in the pursuit of any athletic sports as a means of livelihood. Chap. XIV. to read as at present. Omit Chap. XIII. as it is included under Rule XXII. which I would like to see changed to read: No changes in these rules shall be made, unless recommended by the regatta committee, and sanctioned by the executive committee; the proposed changes having been published for at least two weeks in one of the official organs of the Association before alteration. Any changes made subsequent to May 1, shall not take effect until the following year. J. N. MCKENDRICK.

GALT, Canada.

[There is no way specified by which a member may offer an amendment, but one of the executive committee from his Division would seem to be the natural medium. A definition of an amateur is certainly needed, but we have never yet seen one that was in any way perfect. The amendment to Rule XXII. is likely to be offered at the coming meeting, as the need for it is most apparent.]

BROOKLYN C. C.—The Brooklyn C. C. has laid out the following series of entertainments during the coming winter: A talk on "Bends and Hitches," by Messrs. Ward and Wintringham, a "canoe mess" prepared in camp style, and a lecture by a doctor canoeist, on the subject of simple remedies for use in cruising and camping. The annual dinner will be held on Jan. 12 and a reception Feb. 25.

RUTHERFORD C. C.—C. P. Bellchambers has been elected captain in place of D. W. Bain, resigned. F. E. McLees is at work on a 16ft. paddling canoe.

PARTNER WANTED.—Partner wanted in an old established skiff and canoe factory. Amount of capital not so material, as a man with the necessary experience and qualifications capable of taking entire charge of the manufacturing and management of the whole business, as present partners (two) reside at a distance and are unable to take any active interest in it. Address SKIFFS, care Forest and Stream office, New York.—*Adv.*

W. EVANS.—On Staten Island robins may be killed from Nov. 1 to Jan. 1; highholders not at any time; rabbits, Nov. 1 to Feb. 1.

L. K., Brooklyn, N. Y.—Being an interested reader of your paper I would like to ask you where I could exchange a well-bred water spaniel bitch, house broken and to retrieve, for a good rabbit hound, which must be well broken to rabbits. Ans. You had better advertise, as we do not know of any one who would be willing to exchange.

New Publications.

HANDBOOKS OF ATHLETIC SPORTS.—Edited by Ernest Bell. Vol. I. —Cricket, Lawn Tennis, Tennis, Rackets, Fives, Golf, Hockey. Vol. II.—Rowing and Sculling, Sailing, Swimming. New York: Scribner & Welford. $2 per volume.

This is a series of works on athletic sports, written by the first authorities on each subject, profusely illustrated, and distinguished throughout by thoroughness and intelligence of treatment. They belong to the long and world famous Bohn's Libraries; and should find a place in the library of every healthy youngster.

PRE-HISTORIC AMERICA.—By the Marquis de Nadaillac. Translated by N. D'Anvess. Edited by W. H. Dall. With 219 illustrations. New York: G. P. Putnam's Sons.

The publishers have rendered a distinct service to students of American archæology by supplying this translation of the Marquis de Nadaillac's well-work *l'Amerique Prehistorique*, first published eight years ago. Several of the chapters have been revised, much new material has been added, and the illustrations are numerous and interesting. Who were the Mound Builders and who the Cliff Dwellers? The author declares that they were Americans, Indians, descendants of some Eastern race; for Asia was the cradle whence came the first men who peopled this continent.

Old Colony Trout Ponds

ESTABLISHED 1869.

Three million brook trout eggs for sale. Can be transported with safety to any part of the world. Ready for delivery December and January. Also young trout in the spring.

Unsurpassed fly-fishing in its season.

DENVER, Col., Oct. 21, 1890.

W. L. Gilbert, Esq., Plymouth, Mass.:

MY DEAR SIR—In regard to the trout eggs received from the "Old Colony Trout Ponds" I can say that the best possible results have been had from them at all of the points to which they have been shipped in Colorado. I know of no better packing than that employed by you. After a journey of nearly two thousand miles by rail and stage I have had a loss of less than 1 per cent. in a lot of 250,000. I do not want any better. Very truly, GORDON LAND, Col. State Fish Commissioner.

W. L. GILBERT, Proprietor,
Plymouth, Mass.

The Forest Waters the Farm;

OR,

The Value of Woodlands as Reservoirs.

BEING THE LES ÉTUDES DE MAITRE PIERRE SUR L'AGRICULTURE ET LES FORETS.

PAR M. ANTONIN ROUSSET.

Translated by

REV. S. W. POWELL.

The introduction reviews the extraordinary movement of torrent taming in France, in preparing public sentiment for which the Studies of Master Peter played a noteworthy part. The book was written as a sort of science primer, setting forth the first principles of the relations existing between woodlands and agriculture. The principles and reasoning are not less applicable to the United States to-day than to France then.

Price in cloth, 75 cts.; paper, 50 cts.

ANSWERS TO CORRESPONDENTS.

NEW YORK'S GAME PROTECTOR.

AT the meeting of the New York Fish Commission last Tuesday, representatives of the Anglers' Association of the St. Lawrence River and of the Utica Fish and Game Association were present to protest against the action of the Commissioners in removing Chief Game and Fish Protector Frederick P. Drew. Secretary Thompson of the St. Lawrence Association urged that Mr. Drew's retention in the place was of vital importance to the cause, and that his dismissal meant serious injury to the service. The Commissioners replied that their inside knowledge of the work of the protectors afforded them better means of judging of the efficiency of the several members of the force, and of the wisdom of changes, than could be had by outsiders. In executive session it was resolved by the Commission to retain Major J. W. Pond.

We believe that the Commissioners and the clubs are actuated by a sincere desire to see the service the best attainable, and while such differences as have arisen in this case are to be deplored, there is yet found in them an assurance of one fact, namely that the public is alive to the importance of game protection, and is watching its conduct with careful scrutiny. This is a condition in the highest degree encouraging. Game and fish conservation has become a live issue of the day.

Now that it has been definitely determined to retain Chief Protector Pond, the Commissioners have a right to ask that he be given the same coöperation and aid that societies and individuals have given his predecessor. Time will tell whether the change has been wise or foolish. Let us hope that the work will go on. The situation in this State is full of encouragement. Better the clashings of factions at odds, if need be, than the dead-alive apathy that in almost every quarter of the country calls no check on game slaughter and fish destruction.

A COMMON EXPERIENCE.

NOT the keenest of the sportsman's sorrows is a blank day, nor a series of misses, unaccountable or too well accountable to a blundering hand or unsteady nerves, nor adverse weather, nor gun or tackle broken in the midst of a good day's sport, nor perversity of dogs, nor uncongeniality of comradeship, not yet even the sudden cold or the spell of rheumatism that prevents his taking the field on the long allotted day.

All these may be but for a day. To-morrow may bring game again to haunts to-day untenanted, restore cunning to the awkward hand, steady the nerves, mend the broken implement, make the dogs obedient and bring pleasanter comrades or the comfortable lonesomeness of one's own companionship, and to-morrow or next day or next week the cold and rheumatic twinges may have passed into the realms of bygone ills.

For a year, perhaps for many years, he has yearned for a sight of some beloved haunt, endeared to him by old and cherished associations.

He fancies that once more among the scenes of his youthful exploits there will return to him something of the boyish ardor, exuberance of spirit and perfect freedom from care that made the enjoyment of those happy hours so complete.

He imagines that a draught from the old spring that bubbles up in the shadow of the beeches or from the moss-brimmed basin of the trout brook will rejuvenate him, at least for the moment while its coolness lingers on his palate, as if he quaffed Ponce de Leon's undiscovered fountain.

He doubts not that in the breath of the old woods he shall once more catch that faint, indescribable, but unforgotten aroma, that subtle savor of wildness, that has so long eluded him, sometimes tantalizing his nostrils with a touch, but never quite inhaled since its pungent elixir made the young blood tingle in his veins.

He has almost come to his own again, his long-lost possession in the sunny realm of youth. It lies just beyond the hill before him, from whose crest he shall see the nut tree, where he shot his first squirrel, the southing slope where the beeches hide the spring, where he astonished himself with the glory of killing his first grouse, and he shall see the glint of the brook flashing down the evergreen dell and creeping among the alder copses.

He does not expect to find so many squirrels or grouse or trout now as thirty years ago, when a double gun was a wonder, and its possession the unrealized dream of himself and his comrades, and none of them had ever seen jointed rod or artificial fly, and dynamite was uninvented. Yet all the game and fish cannot have been driven from nor exterminated in haunts so congenial and fostering as these by the modern horde of gunners and anglers and by latter day devices of destruction, and he doubts not that he shall find enough to satisfy the tempered ardor of the graybeard.

Indeed, it is for something better than mere shooting or fishing that he has come so far. One squirrel, flicking the leaves with his downfall, one grouse plunging to earth midway in his thunderous flight, one trout caught as he can catch him, now, will appease his moderate craving for sport, and best and most desired of all, make him, for the nonce, a boy again. He anticipates with quicker heartbeat the thrill of surprised delight that choked him with its fullness when he achieved his first triumph.

At last the hilltop is gained, but what unfamiliar scene is this which has taken the place of that so cherished in his memory and so longed for?

Can that naked hillside slanting toward him from the further rim of the valley, forlorn in the desolation of recent clearing, be the wooded slope of the other day? Can the poor, unpicturesque thread of water that crawls in feeble attenuation between its shorn, unsightly banks be the wild, free brook whose voice was a continual song, every rod of its amber and silver course, a picture? Even its fringes of willows and alders, useful for their shade and cover, when alive, but cut down, worthless even for fuel, have been swept from its margin by the ruthless besom of destruction, as if everything that could beautify the landscape must be blotted out to fulfill the mission of the spoiler.

Near it and sucking in frequent draughts from the faint stream is a thirsty and hungry little sawmill, the most obtrusive and most ignoble feature of the landscape, whose beauty its remorseless fangs have gnawed away. Every foot of the brook below it is foul with its castings, and the fragments of its continual greedy feasting are thickly strewn far and near.

Yet it calls to the impoverished hills for more victims, its shriek arousing discordant echoes where once resounded the music of the brook, the song of birds, the grouse's drum call and the mellow note of the hound.

Though sick at heart with the doleful scene, the returned exile descends to his harried domain hoping that he may yet find some vestige of its former wealth, but only more disappointments reward his quest.

Not a trout flashes through the shrunken pools. The once limpid spring is a quagmire among rotting stumps. The rough nakedness of the hillside is clad only with thistles and fireweed, with here and there a patch of blanched dead leaves, dross of the old gold of the beech's ancient autumnal glory.

Of all he hoped for, nothing is realized and he finds only woeful change, irreparable loss.

His heart, heavy with sorrow and bursting with impotent wrath against the ruthless spoiler, he turns his back forever on the desolated scene of his boyhood's sports.

Alas! That one should ever attempt to retouch the time-faded but beautiful pictures that the memory holds.

SALMONIDÆ PLANTED IN YELLOWSTONE PARK.

WE have noted in these columns the proposed work of the U. S. Fish Commission in stocking the barren waters of the Yellowstone National Park with fishes of the salmon family in 1890. The undertaking was successfully carried out and the results are as follows: 24,012 lake trout were deposited in Shoshone Lake; 12,013 lake trout and 3,350 Loch Leven trout were placed in Lewis Lake; the West Fork of Gardner River received 7,875 Eastern brook trout; 9,800 von Behr trout (*Salmo fario*) were planted in Nez Perces Creek and 10,000 whitefish (*Coregonus williamsoni*) where conveyed from Horse Thief Springs, Montana, to the Yellowstone River above the falls. All of the fish were yearlings. The trout were bred at Northville, Michigan, and the whitefish were wild fish. The total number of fish introduced was 70,400, and it is not too much to expect that these will speedily make an impression in their new habitat. We have already announced the discovery by Professors Forbes and Linton of abundant supplies of food suitable for the *Salmonidæ* in the waters selected for the experiment. It may not be amiss to remind the officials interested of the presence of the lake trout (*Salvelinus namaycush*) in Henry Lake, Idaho, not far west of the Yellowstone Park. We have seen from this lake some very plump specimens of this species.

MILLIONS OF SHAD.

DURING the past summer Commissioner McDonald has repeated the new method of keeping shad in rearing ponds, where they can subsist upon natural food until the dangers of the fry stage no longer threatens them. In a pond of about six acres at Washington, D. C., large numbers of shad recently hatched were deposited during the months of May and June last. The pond was fully stocked with water plants suitable to the development of the minute crustaceans (*Cyclops, Daphnia*, etc.) upon which very young shad feed. Here they were kept until the close of last week, when they were liberated and passed out into the Potomac in a dense silvery shoal containing between one million and two millions of young fishes. Well-fed, active and accustomed to seek suitable food, they have entered upon their journey to the sea with the conditions all favorable for their future growth and return when ready for reproduction. This will be, if current theories are correct, in about three or four years.

The results of rearing shad in this way have been so gratifying, that steps will be taken to stock a much larger pond near the Delaware River at a point convenient to the usual scene of hatching operations. It is proposed to make a pond of about twenty acres, which ought to accommodate fully five millions of young shad. In this way it will be possible at small expense to rear and liberate during every season, a vastly greater number of fish than is represented by the entire catch along the coast, and the shad industry, which now depends entirely upon artificial propagation, will undoubtedly increase in extent and value.

The Sportsman Tourist.

THE PHANTOM OF NAHMAKANTA.

NO lovelier spot in which to take an outing can be found than one of the picturesque mountain-girt lakes that stud the rugged surface of Maine. It was my good fortune a few summers ago to have the necessary leisure to allow me to visit this charming region.

It was one of those mild September days when all nature seemed to be decked in her best, filling the air with sweet fragrance and imparting a feeling of ecstacy and happiness. The trees spread out their branches covered with crimson drapery; the voices of the forest sent forth sweet songs that seemed to come from some enchanted land, lulling one into that dreaminess of mind where life for the hour is an absorption into the glory of the world around.

As we paddled down the Penobscot on such a day as this, the birch canoes gliding silently along, propelled by the swift strokes of the Indian guides, I gave myself up to the fascination of the hour. On either side of the river, which is here little more than a stream, the rich foliage overhanging from the banks, kissed the water as it glided past. Here and there a tall pine raised its majestic head, towering above the surrounding forests like some kingly giant. The sun shone from the clear, blue sky with rare brilliancy. The stream occasionally broke into little falls or "rips." through which we sped, passing great rocks and boulders, over which the water foamed and hissed in petty fury.

The day previous we had left Chesuncook, and paddling across the northern end of Pamedomcook Lake, and from thence westward through a small stream, we reached Nahmakanta Lake, where we had been informed fish were abundant. We entered this lake late in the afternoon, as the sun was sinking in the west, leaving faint streaks of gold and red to mark the course of its decline, and illuminated that placid sheet of water and the surrounding forest.

A suitable camping place having been found we landed. While the guides were pitching the tents and conveying our luggage from the canoes we occupied ourselves with cutting fir boughs for our beds. No one who has not tried a couch of this kind can have any conception of the ease and comfort it affords, especially when one has paddled a canoe all day or waded in brooks casting a fly for the wary trout. By the time we had completed our task the guides announced that supper was ready. Our table was a rude structure of boards, while our provision buckets did duty as seats. It was surprising what a quantity of trout, "flipjacks" and molasses we managed to stow away, just how much I would not dare to say.

After supper had been finished the most of the party gathered round the camp-fire, some filling out their journals, while others got their fishing tackle in readiness for the morrow. As for myself, taking one of the guides, I paddled out upon the lake, in the hope of getting a shot at a deer, as they frequently come down to drink and feed upon the lilies about the shores of these lakes.

A light breeze had sprung up from the westward, ruffling the tranquil surface of the lake. A little later the moon rose, piercing the dark canopy. I sat in the bow of the canoe, and as it danced over the little waves I found myself again indulging in reverie. The stars overhead, the swish of the waves on the side of the canoe, and the moon-lit panorama, extending from our camp-fire in the distance to yonder hill, all had a tendency to dispel thoughts of care and the outside world from my mind and let me drift away into dreamland. Suddenly the tranquillity was broken by a wailing cry. I started in my seat, nearly overturning the canoe, and grasping my rifle, looked about, expecting to see some strange form come into view. After a moment of silence there was a repetition of the cry; it was a cry as of some one in distress. I felt a chill creep through my body as again that wail rose on the night air. Looking in the direction from which the sound came, I beheld a sight that seemed to transfix me with terror. Even now when my mind goes back to the scene of that night, a feeling of horror steals over me, that I cannot describe or suppress. I tried to speak, but could not; the scene held me as one in a trance. I could not move, but sat, gazing spellbound. There, standing on a point of land which jutted out into the lake, in the full light of the moon, stood a figure, draped in a long mantle of white hanging loosely about it. Its arms were extended at full length toward the heavens, while its voice was continually to be heard in mournful cries.

At once there came to my mind a thought of the many weird Indian legends repeated and believed even in our enlightened days by nearly all the dwellers in these parts. One can imagine my state of mind, impressed and stimulated as I was, by the supernatural calm of the surrounding scenery.

Suddenly the Indian gave a prolonged yell, and dashing his paddle into the water, sent the canoe over the lake toward our camp at a tremendous rate of speed. Not a word was spoken by either of us. We were both thinking of what we had just seen. As the bow of the canoe grated on the sandy beach in front of the camp, the Indian leaped ashore, and trembling from head to foot, stood leaning on his paddle, gazing with dilated eyes out upon the lake toward the place where still could be seen the strange and ghostly figure. As we stood there the cry was again repeated, and turning round I saw the Indian sink terrified on his knees.

I must confess that my nerves were not very steady, and calling to the men in the camp to join me, I told them what I had seen. Although they had heard the cry they laughed at me, saying that I was a "dreamer," but looking toward the neck of land I saw that the apparition had not disappeared altogether and was still dimly to be discerned standing in exactly the same attitude as before, while its thrilling cry, now rising, now falling, floated toward us on the night breeze. For some time we gazed at it in silence and then retraced our steps to camp. Sitting around the fire, the silence was not broken until again the cry rose on the midnight air, when involuntarily every one jumped to his feet; then, as if ashamed of the action, all again became quiet.

No one asked the other why he so silently wrapped himself in his blanket that night, each feeling, though ashamed to own it, a blending of alarm, apprehension and uncertainty.

The rest of more than one was disturbed by dreams, from which the sleeper would spring up, thinking himself contending with some strange phantom, only to see the motionless forms and the flickering light of the campfire. Putting an armful of wood on the smouldering logs, and again seeking the blanket and couch of fir, sleep would quiet the troubled mind.

The camp was astir at an early hour, and after breakfast all, with fixed resolution, set out in the direction in which the strange object of the night before had been seen. When we reached this point of land we got out and carefully examined the place. No signs were to be found of any one having been there during the night. After spending over an hour in the place, we were about to leave it, when Mr. R. called out for us to come where he was standing. As we approached, he pointed to an old birch stump and asked if we could not see in it the phantom of last night. The bark on the lower part of the trunk had been torn aside and lay rolled back, looking like the folds of a loose garment, while two limbs, one on each side, resembled extended arms. This was what we had seen, and the moon shining upon it had given it the appearance of life. But then if this was what we had taken for the strange figure, what had caused these mournful cries? We had heard them and they had filled us with terror. Surely they could not have issued from this queer stump. We spent some time trying to find a clue, but at last had to give it up. We remained three days on the lake, but there was no repetition of the sound, and on the morning of the fourth day we left. Our stay had not been without interest, for besides the adventure of our first night, we had good sport hunting and fishing, and nowhere during our trip did we make such large catches. Our only regret was our inability to solve the mystery.

* * * * * * *

Two years later I again visited this lake, and during the second night once more heard those mournful cries, and immediately started for the spot from which they seemed to come. There was the same old stump which had so terrified us on that night, and close by, seeming to rise from the earth, came those startling cries. The sensations which I had before felt I again experienced, but upon a closer examination I found my fears to be groundless.

The wailing noise was produced by the wind blowing through a hollow log lying on the ground. The inside was covered with large thin slabs or splinters. One end was much smaller than the other, and when the wind came from the west, blowing through the log, a wailing noise was produced. Thus the mystery connected with the phantom of Nahmakanta was solved.

WILLIS H. COLBY.

A BEAR HUNT AND ITS SEQUEL.

THE month of November, 1886, found our party of seven snugly housed in our log cabin in the heart of the Alleghanies, ready for our annual hunt. The leader and guide of our party was William Reams, better known as "Bill Reams," probably the most successful hunter in central Pennsylvania, a woodsman from childhood, a true friend and rare good fellow. Then came Kizer, Bill's hunting companion, a true gentleman, a good hunter, well versed in woodcraft, and a dead shot. Tom, Sam, Joe and the writer were there as friends of Bill and Kizer, and had been their companions in more than one hunt. Just over the Chestnut Ridge from our cabin, in a log house built by a pioneer lumberman, lived old Jim McCrury. For four years he had served his country in the great Civil War, after which he came home and settled in the Green Woods, devoting his summers to herding cattle, and his winters to hunting and as guide to hunting parties. The frosts of seventy winters had silvered over his head, but straight as an arrow and 6ft. tall, he knew every hill and hollow and pathway of the mountains, and his familiar "whoop, whoop," was known to every hunter from the Susquehanna to the Sinnemahoning. Rough and rugged as the hills he climbed, honest as the sun, and generous to a fault; no man ever turned from his cabin hungry or cold while old Jim had a crust or a faggot beneath his roof. Poor old man! His faithful wife sleeps the sleep that knows no waking, his cabin is in ashes, his dogs have gone where all good hunting dogs go, and only a few weeks since word came that he too had gone to the happy hunting grounds. Some three years ago he bade good-bye to his friends in the East and went to the West to die among his kindred who had drifted toward the setting sun. But he soon wearied of the plains of Kansas, and he longed for the mountains and hills of his own native State. He came back to Pennsylvania to die, and to-day he sleeps amid the scenes he loved so well. May he rest in peace.

On this occasion "Old Jim," with his dogs Rover, Lion, Dan and Cal, completed the party, and woe to any deer or bear when once Jim and his hounds had struck his trail.

By 2 o'clock on Monday, the first day in camp, our cabin had been cleaned out and everything was ready for the hunt. To the north of us some two miles lay Winter's Ridge, a vast wilderness, to the southeast of which was the "Brier Patch." Bill said he thought he could drive a deer out of that brier patch, and in less time than it takes to tell it we were off for the first hunt. The watchers were stationed, and the dogs and drivers were away for the chase. Bill had taken his position at the head of the windfall, where any deer would likely pass that attempted to escape to Winter's Ridge. As the drivers came up over the hill from the run three shots were heard from the direction of Reams's stand, followed by his familiar whoop, which indicated that he had killed a deer. When we reached the top of the hill we found Reams sitting beside a splendid two-year-old buck with two rifle balls through its neck. The deer had been routed on the brow of the hill overlooking Robert's Run, where he lay sunning himself, and when disturbed he made the fatal mistake that many a buck had made before of trying to run past Bill Reams's watch.

Another drive was made that evening without starting any deer, and we returned to our cabin. Our supper was cooked and eaten and relished as only hungry hunters can relish a meal. And, reader, if there is anything wrong with your appetite take a hunting trip to the mountains. If you are not cured this prescription shall cost you nothing.

For the lover of nature an evening in a hunter's cabin has many attractions. Away from the noise and bustle of business life in the woods and among the mountains, there is a charm one cannot tell. Without, and all around stand the "murmuring pines and the hemlocks, bearded with moss, and in garments green," uttering no voices, save the wailings of autumn winds. The barking of a fox or the hooting of an owl rouse the sleeping dogs in their kennel, and they rush forth and bay at the strange sounds, only to retreat again mocked by the echoes of their own voices.

Around the cheerful fire of the cabin care and trouble are banished, the conventionalities of life are laid aside, and the pent-up desire to get away from one's self and from the world finds vent in innocent pleasure and all-round good cheer. Give me a night in the jolly hunter's cabin, with its stories, its reminiscences and its memories, outlasting the gilded vanities that disappear and leave but their dregs behind.

Bedtime had come and we repaired to our couches where we slept without waking, for the hunter that follows Bill Reams in an all-day chase over the Trout Run hills is generally ready for his supper and his bed at the close of the day.

The plan for Tuesday's hunt was to drive the ridges at the head of Crooked Run, some two miles to the south of our camp. Sam had never been so fortunate as to kill a deer, and as he crawled into his bunk he expressed a desire to get a fair shot at one with his Kennedy, and he would show the boys just what he could do. Tuesday morning at peep of day found us on our way to Crooked Run. The country we proposed to hunt over was a series of low ridges, covered with red brush, but with little timber, and with, at least for the watchers, a fair opportunity of seeing any game that might be started. The day proved a poor one for our dogs, the bracken and leaves were very dry, the game had left but little scent, and the drivers failed to start any deer. Finally Bill ordered Tom, Sam, Joe and the writer to break from west to east over a ridge that projects out into and overlooks a little valley through which winds Crooked Run, while he and Kizer and "Old Jim," would watch the crossings in the valley below. We had not gone far before a beautiful doe jumped up ahead of the hunters and ran back through the line, passing within thirty feet of Sam and his deadly Kennedy. A splendid opportunity was now presented to show the boys just what he could do and to make a record that even Reams or Kizer might be proud of—but "the best laid plans of mice and men"—in the excitement of the moment Sam knocked the pipe from his mouth, the ashes flew into his eyes and he scored a miss. Bill, who watched the scene from the valley below, said the smoke and fire from either Sam's gun or his pipe flew over the deer's back, and if he had dropped his gun he might have caught the deer. Sam was greatly annoyed at missing that deer, and said nothing more about wanting a fair shot. But accidents will happen to the best of people, and the best of hunters will get "rattled." But he was not to be discouraged, and being a fine shot, he resolved to redeem his lost fortunes, which he did the next day.

As the hunt progressed and the drivers approached the point of the ridge where Bill and Kizer watched, two deer were raised, one a doe that ran to the right and escaped the hunters, while the other, a magnificent buck, pitched down over the rocky point on his way across the valley to Stump Lick. He had scarcely reached the low ground when Bill and Kizer opened their batteries on him from either side, while the writer trained his Winchester on the foe from the rear. For years I have hunted over these hills and mountains, but never have I beheld a more beautiful and thrilling sight than that presented by this noble buck as he crossed the valley to escape his pursuers. Some half-dozen shots were fired when the deer's flag went down, and Bill cried out: "Hold on boys, he'll soon stop." He ran some three hundred yards further, then turned and faced his enemies and fell dead. As I remember the prostrate form of that monarch of the glen as he lay stretched upon the plain, slaughtered in such an unequal battle, I regret the half-savage instinct that impels me to stain my hands in the blood of so beautiful a creature, but when I gaze upon his head and antlers, that look down upon me while I record the manner of his death, I instinctively move toward my rifle that stands in yonder corner, and I long again for the chase and to live over again that day on the hills of Crooked Run.

As we sat in our cabin that night, a hunter passed our door and told us the story of a bear hunt that had taken place that day on Winter's Ridge. A party of hunters from the headwaters of the Susquehanna, who were camped some two miles to the north of us, had routed an old she bear near to a spot known as the Woodpecker Tree, and in the battle that ensued their dogs were badly whipped, and the bear, though wounded in the fleshy part of the front leg, escaped into one of the dense laurel beds so numerous in that locality. As there was no snow on the ground and the dogs refused to follow any further, the chase was abandoned.

When our visitor had left us, Reams said, "Boys, we can kill that bear to-morrow. She is in that big laurel bed on Robert's Run. You remember the twelve shots we heard to-day while sitting at the little prairie? That was Kime's party after that bear. We'll hang her up to-morrow before the frost is off." After supper our guns were cleaned and plans laid to capture that old bear. And this is how we did it:

On Wednesday morning, before the owls had gone to rest, we were off for the fray. We expected to find the bear on a rocky hillside looking west, covered with a jungle of high laurel or rhododendron, and faced by another steep hill opposite, between which runs Robert's Run, down a rocky hollow covered with timber and a heavy undergrowth. Four of our party were stationed on the hill opposite, while Sam was left in the hollow on an old road near to an old log slide that had been abandoned many years before. Reams and I were left to take the dogs into the laurels and drive out the bear. After allowing the watchers time to reach their stations, the dogs were turned loose and we entered the jungle about one hundred yards apart. Our plans proved to be well laid, for we had scarcely gotten into the laural when the dogs gave tongue and the fun began. We were somewhat skeptical as to how our dogs would act, as the older ones had not indulged in a bear fight for some time, while Dan and Cal, two staghound pups but nine months old, had never seen a bear. But when the music began there was no longer any doubt of our dogs doing their duty. In a very short while the war was carried from the hillside into the hollow and across the run, and the bear broke cover within thirty yards of Sam, who was ready and waiting for the fray. Seven shots in quick succession

rang out on the clear, frosty air of that November morning, by which time the dogs engaged the foe in a hand to hand fight, preventing further hostilities on Sam's part. The badly wounded bear had taken refuge in a sort of pen formed by the log slide and its supports, and as the dogs had to attack her from the front, they were getting some terrible lessons in boxing from a master of the fistic art. Finding no further opportunity to shoot the bear, Sam cried out, "Hurry up, for heaven's sake, she's killing all the dogs." When Reams and I reached the slide our services were not needed, as the wounds from Sam's rifle had done their work, and the monster lay dead, surrounded by the victor and the dogs.

The remainder of that day was devoted to hunting deer, and though none was killed, the writer demonstrated how easily a hunter can stand on a stump and miss a deer seven times in succession as it attempts to run by him in a thicket.

Thursday morning was fixed as the time for hauling in our game. We were fortunate in having a team and wagon at our camp, so that we were saved the trouble of carrying our deer and bear all the way. In the case of the bear, however, the nearest point we could reach with the wagon was some two miles from where she hung. One mile of this route lay down the old slide road and the other mile up Trout Run Hill. A green birch pole was cut and the bear strapped to it, and with two men under each end we took up the line of march for the wagon. When I think of that pole cutting into my shoulder, and that old bear swinging back and forth, it makes me tired yet. It is fun to kill game in those awful thickets, but when you are compelled to lug a 400lbs. bear or a 200lbs. buck two miles to get him to camp you pay well for the sport.

Thursday night after supper a great pitch-pine fire was kindled in front of the cabin, amid the giant oaks, chestnuts and hemlocks. Around this fire green saplings were bent down, and the bear and the deer were hung high in air, presenting a picture that would rejoice the heart of any hunter. Around this scene our party gathered and led by Reams we executed a genuine war dance in honor of the success of the hunt, while the flames from our pitch-pine faggots sent their lurid light high up into the treetops and far out into the forest, casting weird shadows and fantastic pictures into the surrounding gloom. While we were in the midst of festivities two men, clad in the garb of hunters, approached our cabin. One was a tall man, the other smaller in stature; both carried their rifles, tomahawks and hunting knives. They had come from Kime's camp, on Winter's Ridge, and the latter of the two was Kime himself, well known to the writer in early boyhood. On their approaching our cabin the dance was suspended and the visitors invited to a seat by the cabin fire.

After some pleasant inquiries and a general conversation concerning the success of both parties, Kime, addressing Reams, said: "I understand you killed our bear and we just came over to see about getting our share."

"Yes," said Bill, "we killed the bear you were after the other day, but I can't understand where your share comes in. What do you consider is your share in this case?"

"Well," replied Kime, "we think we ought to have the hide and half the meat, that's the hunter's custom, and we are here to see that we get what belongs to us."

"Well, sir," replied Reams, "the custom is all right, and for forty years I have endeavored to honor the unwritten laws of the chase; but, sir, in this case the custom does not apply, as according to your own admissions you wounded the bear but slightly; she whipped your dogs which refused to follow her; you gave up the chase and she was killed the next day some two miles from where you left her. She is our game, and you are not legally entitled to a pound of meat or a hair of the hide; and, sir, if you had been a little more modest in your demands we would have been glad to give you a quarter; but, as it is, not a pound of that bear goes to your camp."

As Reams announced this decision, the visitors picked up their rifles, and muttering some threats about prosecuting our party for chasing deer with dogs, they left.

Ten days later the hunters' camp on Chestnut Ridge had been abandoned, and the annual hunt for 1886 had become a part of the history of our hunting trips to the Alleghanies. Old Jim had gone to his cabin home followed by his hounds, while the others of our party had scattered, one here and the other yonder, to engage in the occupations of a busy life. I was seated in my office one morning, endeavoring to dispose of the accumulated and neglected work of the week, when the door of the outer room opened, a tall man clad in the garb of a hunter, carrying a Winchester rifle and with a tomahawk and hunting knife in his belt, walked into my sanctum, and standing his gun in the corner of the office sat down. My visitor was Kime, the hunter; not a hunter by occupation, but a farmer and lumberman from the upper Susquehanna, returning from his annual hunting trip to the Green Woods of the Alleghanies, and withal a gentleman and good square fellow. He had brooded over the wrongs inflicted upon him by Bill Reams and his party in refusing to divide the bear with him, and that he might secure his rights he had come to consult a lawyer. When last we had met he was a man, I was a boy, and years had come and gone. True, we had met in the cabin in the mountains on the night of our war dance when his conversation with Bill Reams had ended so abruptly, but he did not know that the hunter who sat back in the cabin bunk in the darkness was his boy friend of years ago and the lawyer from whom he now sought counsel. Drawing his chair close to my desk, and laying his hunting cap upon the floor, he stated his case substantially as the reader doubtless now understands it. It is said of Abraham Lincoln that the secret of his wonderful success as a lawyer is explained by the fact that he always studied the other side of the case as thoroughly as he did that of his client, and it has also been said by some one that the lawyer is a fool who has himself for a client. I was certainly in a position to know something of the other side of the case, if I didn't fully appreciate the fact that my client was a fool. It certainly required something of an effort on my part to harken to this story of the hunter and not reveal the fact that I was at least amused while I listened to his tale of woe. The first thing to do after he had finished was to reveal to him, as a matter of right and honor, just the position I occupied in the case; in short that I was one of the parties who had taken his bear, and that I was in the cabin on the night he and his friend had come for all the hide and half the meat, and hence he must consult some other attorney.

At this unexpected turn of events Mr. Kime said: "Well, sir, I take you for an honest man, and whether the medicine be bitter or sweet I will take it and abide by the results."

The reader if he has followed this story through has doubtless anticipated the counsel given Mr. Kime concerning his case. True to his word, and I confess somewhat to my surprise, as he pushed his chair back and picked up his rifle to leave, he said, "Well, sir, I think your counsel is about straight, and that we got as much of that bear as we were in equity entitled to, and I am satisfied to let the matter rest."

The story of that bear hunt and of Kime's visit to our cabin has been put into rhyme by Bill Reams, but like most of his best stories it has never been written, and can only be heard when Bill and his companions have gathered around their cabin fire after a successful day's hunt.

FRANK G. HARRIS.

MOOSE RIVER AND THE WEST BRANCH.

IX.

FRANCIS is an expert in the management of a birch, and the sight of game brought to mind the way in which we have hunted together. He would say some night as we sat by the fire, "Well, I guess you and me hunt some deers in mornin'."

Up by daylight, we drink a cup of coffee, and in the canoe paddle silently along, keeping close to the bank. At every bend we steal around the shorter curve, and if the stream then turns in the opposite direction we paddle diagonally across, so that we are always in a position to come upon the game without being seen, if perchance a deer has come to the bank to drink or eat. The deer, like most animals, depends upon his ears and nose, more than upon his eyes for warning against danger, and if not startled by noise or scent will always stand a moment to take a good look at a strange object, thereby giving the hunter a chance to shoot.

A buck, when startled, sounds a note of alarm, a snort which sounds like the short, sharp bark of a dog. We paddle along, being careful not to make the slightest noise and we go against the wind.

Sometimes a deer is heard softly passing through the bushes; we were not aware of his presence till we heard a twig crack or the rustle of the underbrush. We did not see him, but he heard or scented us, and not being startled he simply creeps back out of sight. Perhaps we may come upon one suddenly, and then, unless the rifle speaks quickly, we shall see his white flag wave defiantly as he bounds away. When a deer is hit the tail is dropped; but if not wounded it is held aloft, the white underside flashing before the eyes of the disappointed hunter. But on this morning we paddle two or three miles, and to all appearances there are no deer in the country.

Francis speaks for the first time: "I guess we try 'em logon; guess find some deer." Logon is probably a corruption of the word "lagoon," and is the name given to a place where the water from a stream or lake sets back, forming a marshy pond. Such places are much resorted to by deer, as they are secluded, and also furnish lily pads and other food. Wild ducks find the logons suitable places for raising their young.

We paddle along till we come to a logon where the deer come to feed. We pass silently through the narrow entrance and around a clump of trees, and there the logon opens up before us. It is nearly a mile in length and surrounded by the forest. The water is shallow and there is no current; it is covered with lily pads; but there is a channel of comparatively clear water extending up the length of it. As we enter we glance along the edge of the timber, but there is no sign of life. I have laid down my paddle and taken the Winchester.

Not a word is spoken and the silence is oppressive—how loud that grating of the lily pad against the canoe sounds. If it were not for the motion I would not know that Francis was behind me. His paddle makes no noise; I do not hear the slightest tap against the gunwale or the drip of a single drop of water from the blade.

Suddenly the canoe stops and I hear a low hiss from Francis, but I have been watching, too, and saw the deer come out of the woods, away up at the head of the logon. There is no shelter, and our only course is straight ahead across the open. The deer is so far away that it is simply a bright spot against the dark background of forest. How red it looks; nothing else would look like that. Now the canoe moves forward again; it goes so slowly that I can feel no motion, and if I did not see that we were passing the lily pads I should think we were standing still. We scarcely dare to breathe, and I feel an almost uncontrollable desire to sneeze. Francis does not lift the paddle from the water, but works it noiselessly.

Now the water shoals so that he cannot paddle, but pushes the canoe just as silently. We are now so near that we see the deer plainly; it is a big doe, and she is feeding and wandering about near the edge of the woods.

She looks up and toward us; the canoe stops and we sit without moving a muscle. She goes back to her breakfast, and again, without the slightest jar, we steal forward. Now we are almost near enough to shoot, but she turns and walks back into the forest. Well, our game is lost, but it was a pleasure to see the way in which Francis stalked it. His approach to it was a work of art, one of those fine touches which none but one trained to the woods from childhood could have accomplished.

And in no other boat than a birch could it have been done. The canoe is the boat of the wilderness; it possesses a feline quality—creeping, stealthy, silent—which is peculiar to itself. It will float in a few inches of water, and a man can pick it up and carry it from one body of water to another. It can be propelled without noise, and is so small and light that it will penetrate to places that can be reached in no other way. It is to the red man of the woods what the horse is to his brother of the plains. To journey in a birch on the lonely waters of lakes and streams in the heart of the wilderness, is to realize all that is romantic and poetical in the art of traveling.

Francis and I returned to camp with nothing to show for our trip, but on other occasions I have seen venison hanging from a tree near the tent, and have feasted on the savory steaks broiled over the camp-fire.

The stretch of dead water on which Camp Nelhudus was pitched extends from the upper Seeboomook Fall to Gulliver Falls, a distance of ten miles. At Gulliver we had good fishing in the quick water below the falls, which are really more like rapids.

It is a pretty place, and the banks were dotted with the blossoms of the wild onion. For half a mile below the water is shallow and the current strong, which made rather stiff poling.

Six miles above Gulliver Fall is the junction of the North and South Branches, which combine and form the West Branch. A large logon opens from the left bank of the river, three miles above our camp, which is a great resort for ducks. Several times when we were in there we started broods of wood ducks and sheldrakes, and it was interesting to watch the solicitude of the old ones and the courage they displayed in the protection of the young. At our approach the little ones would skitter away over the water as fast as feet and wings could carry them, while the old one would follow slowly between them and the canoe. She would swim along at about the pace of the canoe, quacking encouragingly to the goslings, her head moving anxiously from side to side as she watched us. She would plainly show her nervousness and excitement, but nevertheless she put her life in jeopardy as long as the young were in sight. But the moment they disappeared under the reeds she would take wing and fly away with the swiftness of an arrow. Then, circling high in the air, she would return far overhead to the place where her offspring were in hiding.

Seeboomook Fall is a wild place where the water goes roaring and rushing through a narrow gorge. There are three pitches at Seeboomook, but we only visited the upper one on this trip. The name, however, brings to mind a day, when on a former excursion we made the carry around the lower falls during a severe storm. The lower falls are three miles below the upper ones, and both are wild and dangerous places. At the upper fall of Seeboomook there is a gruesome curiosity in the shape of a coffin, which for twenty-five years has remained on the bank. This fall is dreaded by the river drivers and is the worst place on the West Branch through which the boys have to pass. One spring while engaged in starting a jam, one man did not succeed in reaching the shore when the logs moved, and was carried down with them. His companions, expecting to recover the body below the pitch, built a coffin and placed it on the bank in readiness, but the merciless river never gave up its dead, and the coffin still remains where it was left a quarter of a century ago. The river drivers have a superstitious dread of it, and many stories are connected with it. One spring, when a bad jam had formed, a daredevil lumberman stretched himself in it, saying, "I want to see whether it fits, boys, before I go on to that jam." The men were made so nervous by this that it was four days before the jam was broken, so cautious were they. Strangely enough, the man whose levity had unnerved the crew, did fall into the river, but was rescued, and the old weather-beaten boards are still unused.

The day we went to Seeboomook we were caught in a heavy down-pour of rain, but the canoes were turned bottom up on the bank, and under them we found protection. One night I was awakened by the sound of rain and lay with open eyes listening to the storm. The fire was sputtering and nearly extinguished by the terrific down-pour which was beating on the tent and spattering on the ground. The trees were dripping and I could hear the pattering of the drops on the surface of the branch, but in the tent we were snug and dry, and before morning the storm had passed. We had no discomfort, but even if we had we should have taken it philosophically, for Dame Nature is not always in the same mood, and one must expect tears as well as smiles. The following evening, as I was walking about the camp, I suddenly noticed that the ground had the appearance of being strewn with live coals. The effect was startling at first sight, for all about me were patches of light, which glowed with a brilliant white lustre, tinged with a beautiful pale green. These spots varied from the size of a penny to some of several inches diameter, and I saw at once that they were chips of phosphorescent wood. They gleamed against the dark, damp forest floor with a steady, slumbering flame, dazzling in its brilliancy, like pieces of fiery beryl. I picked some of them up and they lighted my hands, but the effect was most incongruous; for, though I held what appeared to be a substance heated to a white heat, it was cold and damp to the touch. On looking about to discover where they came from, I found an old, hollow stump, in an advanced stage of decay, of which the whole interior was illuminated with the same immaculate and wonderful fire. I had seen bits of phosphorescent wood before, but never so large pieces nor in such quantity.

Beautiful as was the sight, there was something inexpressibly uncanny about it, as we saw it—this light without fire and fire without heat—in the darkness of the grim forest, so far from the haunts of men. We imagined the old stump to be the opening of some subterranean tunnel, through which the strange light escaped from the unknown regions of the under world. The heavy rain of the preceding night and the subsequent dampness were probably the cause of this interesting phenomenon, for we had not noticed it before.

WILLIAM AUSTIN BROOKS.

KANSAS QUAIL.—Ottawa, Kan., Nov. 6.—Last Saturday was the opening day for quail shooting in this State, and many birds were killed around here. A friend and his companion went hunting Saturday morning for quail in the vicinity of his farm, four and a half miles from town, and bagged twenty-one quail and two rabbits. Another sportsman from Ottawa was out yesterday with a good dog and bagged thirty-two quail, the largest number I have heard of being killed by one person in a day's shooting. Not very long ago a party of nine Ottawa men went down to Pottawatomie Creek, some twenty miles below here, and camped out over night; they were not gone over thirty-six hours, but they returned with over 200 squirrels, 40 ducks and several coons and possums. This is the largest bag of squirrels I ever knew to be killed in Kansas, and it shows that although this State is mostly prairie, there is still timber enough to hunt in. One of our prominent business men lost a valuable horse last week while out hunting. He fastened his horse not far from the river, and while he was out of sight in the woods the horse got loose and wandered off. It was thought at first that the horse had been stolen, but it was found next day in the river drowned. As soon as the prairie grass has died down enough to permit rabbit shooting and we have a week or two of rainy weather there will be good shooting the rest of the season.—F. B.

Natural History.

THE LION OF FANCY AND OF FACT.

[Continued from Page 308.]

WE come now to the subject of the lion's courage, which it appears to be the fashion at present to impugn. One feels a certain hesitancy in championing "the sultan of the desert" against the charge of cowardice, considering the way in which it is usually preferred. In treating of the same quality as exhibited by the tiger, an attempt was made to show that although this terrible brute had no moral courage, the consciousness of his prowess made him extremely dangerous whenever experience had not cowed him by organizing in his brain the conviction of impotency. Thus far it is the same with the lion, but the character of these groups of the Felidæ is not identical, and if the question be one of evidence, judgment must be given against those who call the lion a poltroon. Moffatt and Delgorgue are, perhaps, the most prominent authorities who accuse the lion of cowardice, but the experiences which they record as justifying this conclusion are susceptible of a different interpretation from that given. Of course some lions are brave, others timid; some, as Drummond says, "will make a point of attacking every human being they meet," while others will never fight, even under provocation, if they can run away. This, however, is about the substance of what Delgorgue and Moffatt bring forward to show how dastardly is the lion. Dr. Livingstone, who was very little of a sportsman, says the lion has very much the appearance of an overgrown dog, and thinks meanly of his courage. At the same time he has described ("Travels and Researches in Southern Africa") a situation in which none of his household "dared to venture out of doors after dark" on account of lions. Meunier also emphasizes an amount of caution upon the part of this beast that might give the impression that the lion was "the most pusillanimous of animals." Burchell ("Travels into the Interior of Southern Africa") spent four years in that country, always avoiding (according to his own account) any rencontre with lions, and never coming into contact with one but once. This animal was shot through the body, and because he did not tear Burchell and his party and his dogs to pieces, he has "no very high opinion of the lion's courage." Naturally, this sounds like an exaggeration, but if any one will be at the pains of reading the two quartos referred to, it will be seen that it is no more than a simple statement of fact.

If anything more than a sketch of the subject was intended it might be worth while to show that most of these detractors from the lion's bravery are as inconsistent in their statements as Gordon Cumming, who in describing the deliberate and unprovoked assault of a lion upon an armed camp, speaks of his "desperate attack," and calls him a "cowardly brute" in the same paragraph. Certain naturalists, moreover, among whom Dr. Jerdon ("The Mammals of India") is prominent, writes with much assurance of the timidity of "the king of beasts." This author, by whom the obvious relations of structure seem to have been completely disregarded in this instance, had evidently not hunted the lion in Gojerat with Capt. Delamaine or he would have discovered reasons for modifying his views. Preposterous as such a proceeding is, lions have been commonly compared with men—not with savages, in whom many of the traits of the wild beast are faintly reflected, but with civilized human beings, evolved beyond the possibility of such a comparison. It is safe to assume that any adult animal of this class who is in good health, is conscious of his own prowess, and that, like any other creature with a mind, he is ready to encounter dangers he has been accustomed to meet and overcome, when the motives for doing so are sufficiently powerful. On the other hand, he is cautious under unusual circumstances, and alarmed when these are entirely strange, as the average man would be also. Finally, when peril threatens, which experience—his own, or that which he has inherited in the form of instinct—teaches him, is not to be successfully braved, hardihood gives place to what the writers referred to call cowardice, and unless his intelligence has been temporarily subverted by hunger or rage he will retreat. Let us, however, see how the evidence itself stands for the lion's courage.

"The natives of India," observes Col. Julius Barras ("India and Tiger Hunting"), "except under European leadership, will not go out against dangerous animals. The result is the tigers get the better of the natives and kill so many of them and their cattle that I have seen many ruined villages, abandoned owing to the neighborhood of these animals." Selous ("A Hunter's Life in Africa") says, "it is far otherwise" for the most part in that country, where "man-eating lions are not common," because, "when a lion becomes dangerous and destructive," even the least martial tribes assemble, and generally with loss to themselves, surround and destroy him. The different conditions under which the larger Felidæ are thus placed by the difference in boldness and enterprise of the populations in their respective habitats, justifies the very sensible remark of the writer upon the lion in the Encyclopedia Britannica, to the effect "that lions, like other animals, undoubtedly show considerable individual differences in character, and behave differently under varying circumstances."

Despite their reprisals, however, Selous informs us that "many natives are killed every year in those parts of the country where lions are plentiful," and further, where these beasts abound, and where broken tribes, poorly armed, and with but little cohesion alone oppose them, the brute dominates the man, and the latter directs his intelligence toward devising means of escape. For example, the Makubas, living on the Ghobe, place stockades of special construction around their villages to protect them against lions; and the Bakorus—"miserable Bakorus," Anderson calls them—inhabit platform houses in trees to the same end. Finally, it is impossible to mistake the tenor of Gérard's account of the lion of North Africa. There he is master, and unhesitatingly attacks an Arab douar, even while its inmates are alarmed and prepared to receive him.

Taking the testimony of the African hunters generally, it will be found that the idea of the lion's cowardice and of his innate fear of man is scarcely justified.

"When lions are met with in the daytime"—when, as Gérard thinks, they are under as great a disadvantage as a man is at night, since, among other things, their sight is confused by the glare, which is also the case with the tiger, according to Sanderson—they are, as a rule, fully fed, and therefore, Anderson states, comparatively harmless. Under such circumstances, continues Selous, "they almost invariably retreat before the presence of man," in the deliberate way so graphically described by Leveson and Drummond. "But if pressed they usually charge and, *ceteris paribus*, I have found * * * that a far larger proportion of them do charge than of any other animal in South Africa. * * * As with man, and all other animals, individuals differ so much in disposition, one from another, that it is impossible to tell from an experience of one what the next is likely to do, and I do not consider that any man has a right to say that lions are cowardly because the two or three he has shot have not happened to show fight. * * * As to the character of the lion, I myself consider him to be a far more dangerous animal to meddle with than any other in South Africa." Not to Gérard alone are we indebted for a knowledge of the awe which experience has taught the Ouled, Meloul or Ouled Cessi Arabs to feel toward the lion; and, upon the whole, the evidence corroborative of his courage and daring overbalances that on which his cowardice rests. Moffatt himself, with his whole train, was stopped during daylight on the road by a lion whom he did not venture to fire at, while the stories told by Freeman, Green, Alexander and Galton speak for themselves.

HALF-HOURS IN THE SIERRA NEVADA.

VI.—LEAVES FROM AN ANGLER'S NOTE BOOK.

SOME years ago a dam was thrown across the outlet of Echo Lake for storage purposes. A tunnel some one-half mile long was run through the mountain and the water taken into the headwaters of the American River, and thence into a large mining ditch. When the natural water of the river got too scanty during the dry season, for a full head of water to supply the ditch, then Echo was tapped to maintain the supply. The dam being 10 or 12ft. high, it backed the waters of the lower lake into those of the upper, and so formed a vast reservoir, several square miles in extent. Consequently, spots that afford the best fishing during high water, are not good after the lakes are lowered to their natural level. The dam is irregular in shape, following the formation of the shore at the outlet. It is composed of rough granite rubble, and during high water is haunted by thousands of minnows. In a retreating angle of this wall, where the rocks composing it were large and irregular, an interesting sight was observed last summer. Five large trout, running from 2½ to 4lbs. in weight, had a school of minnows corralled, and could be seen at all hours of the day herding them as dogs would herd a flock of sheep. There must have been several hundred of the small fry, and the trout kept swimming back and forth between them and the deeper waters of the lake. The little fellows kept in a solid bunch, and when one of them would stray away, it was promptly driven back to the main body by the seemingly untiring sentinels.

They were seen, time and again, by all the members of our party and by some visitors, and every one expressed themselves as having never seen the like before. The trout did not seem at all timid in the presence of man, and when the minnows would try to dash away from the bank when any one approached, they were headed off in all directions, and speedily driven back. None of our party ever observed a trout capture a minnow, but doubtless they did so, when not embarrassed by our presence. It was a subject of considerable speculation to us, to know how they contrived to keep their prey together, night and day, but they did so. And throughout a space of ten days they were constantly to be observed, when the water was not disturbed by waves and our vision so obscured. Perhaps they were "spelled" nights by change of sentinels. We thought when first they were noticed, that they were guarding their fry, but this proved not to be the case, as the small fish were undoubtedly minnows and well grown at that, some of them being 5in. long. I think that the same trout were always on guard during the time they were noticed, as there were always five—no more, no less—and apparently the same size. No attempts were made to capture them, as we were curious to see how long they could maintain control of the situation. I would like to hear from my brother anglers whether a similar instance ever came under their notice.

On these lakes, especially the upper one, a phenomenon is often observable, that I have rarely seen elsewhere. On a perfectly calm day, when not a ripple disturbs the water, a peculiar wave can be often seen traveling at a high rate of speed, and generally in a straight direction. It looks as though a huge fish, or some sub-aqueous animal, were swimming just underneath the surface and causing a bulge in the water above. Now, I would like to ask the editor of FOREST AND STREAM if it is a flaw of wind that causes this? And if so, how can it travel so fast upon an otherwise calm day, and cause such a bulge upon the water? It seems at times as though the wave was 3 or 4in. high. I have seen the same thing on other bodies of water, but never so frequently as here.

One day as I was "projeckin" around upon the mountain side watching a family of Clarke's crows, I sat down under a large Douglass pine, with my back against the trunk. The birds consisted of the parents and four noisy, clamorous young ones. This is one of the noisiest birds in the world, I believe, and its habitat being restricted to the highest timbered mountains, where few persons go, it is seldom observed in this state, at least in this part of it. I watched with interest the arduous labors of the old birds, opening pine cones and extracting the seeds to fill the greedy, noisy mouths of their offspring. As I sat thus, my attention was drawn to a mimic warfare among the pine needles at my feet. A caterpillar had lost his grip where he had been feeding, and had fallen among the needles—and also among enemies. As soon as he fell he was pounced upon by two lusty red ants. One got him securely by the tail and the other got a catch-as-catch-can hold on his body. Mr. Caterpillar began a series of vigorous writhings, which soon dislodged the ant with the body hold; but the one at the tail was evidently a trained athlete, for he never lost his hold, but only fastened himself the most firmly. The dislodged ant skirmished around the combatants, watching for another chance, until the caterpillar ceased struggling, when he immediately fastened on again. Again was he shaken off; and this performance was repeated time after time. The fellow with the "tail-holt" never let go, but held on like grim death all through the battle. My sympathy was entirely with the plucky ants. The caterpillar was about an inch and a quarter long, and of a dull muddy green color. Had he been a handsome fellow, I might have freed him from his foes. Such an unconscious influence has beauty upon us all! The persistent efforts of the two tiny warriors finally won the day, the efforts of the caterpillar ceased, and he was ingloriously dragged away; a captive Gulliver to his Lilliputian foes. As I sat and gazed out upon the valleys and everlasting mountains, I could not help thinking that this petty strife was no more contemptible in my eyes, when contrasted with the sublime surroundings, than the warfare of mighty nations and armies is in the sight of nature's God, when compared with the grand plan of the universe.

Speaking of ants reminds me of an incident observed a day or two afterward. B., myself and old "Hatchet" had gone out to the road one morning to await the coming of the stage. We had some trout to ship to our friends below and had carried them out in time for the down trip. We arrived half an hour ahead of time and to pass the moments of waiting I began prowling around among the surrounding timber, watching the antics of some marmots, a colony of them occupying this locality. Presently I noticed a peculiar black streak, about a foot wide, crossing a patch of bare sand. I approached to ascertain its nature and saw a curious sight. It was a colony of large black ants migrating.

The animated black streak extended both ways, as far as the eye could follow it, among the shadows of the wood. It was composed of thousands upon thousands of the creatures, all traveling along in the same direction and in as perfect order as a well-drilled army—which it was. Along its sides, and keeping almost equi-distant from the main column, marched officers or guards, whose duty it seemed to be to keep all stragglers from wandering from the ranks. Now and then an extra large black and shiny fellow could be seen in the midst of the marching hosts, closely attended by a chosen few, who helped him over obstructions and kept the others at a respectful distance. About one-fourth of the number carried either ovæ or full grown young ants in their mouths. I called my companions and we viewed with interest this hegira. The arrival of the stage interrupted our observations, but on its departure I returned, to trace the colony to its destination. I then found that the rear-end of the column had about reached the spot where I first noticed it, showing that the colony must have been an immense one. I walked rapidly alongside of the column for about 100yds. and came to a large half-decayed pine, destitute of bark, which was lying in a little flat. Into this pine, through several entrances, the ants were swarming. There was no haste or shoving, however, for as they ascended its sides to the entrance, which appeared to be all near the top of the log, the stream of ants was divided and sub-divided by stationary sentinels, who appeared to exercise full direction over the movements of the rank and file, and sent them to the right or left, as desired. These commands seemed to be conveyed by a quick touch of the antennæ and was unquestioningly obeyed. I viewed with ever-increasing delight the perfect order with which every detail was carried out. There would sometimes occur a mishap, to temporarily throw them into confusion, but under direction of the officers this was soon remedied. Two such occurrences I noticed. One was caused by an ant, heavily laden with a full-grown young one, missing its footing on a bit of rotten wood on the side of the log, and going tumbling over and over through his companions and falling to the ground. This caused some disorder, which was quickly quelled. The other was caused by an ant coming to one of the entrances, with an extra large one in his mouth, which he could by no effort crowd into the hole. He tried it in every way, even backing in and trying to pull his burden after, but without effecting his purpose. This soon caused a crowding around the entrance, which attracted the notice of one of the guards, who came up and seized the overgrown youngster, in conjunction with its weary bearer, and together they forced it in. The rest then followed on, and order was restored. It seemed as though a part of the colony must have come ahead of the rest several days, and prepared the habitation for occupancy, as in different parts of the log I could see the "carpenters" still at work. It was wonderful to see the system of division of labor among these. I could not see the internal workings, but the system was no doubt as perfect there, if not more so, than on the outside. At regular intervals the head of an ant would appear from one of the openings, carrying a mouthful of sawdust. As soon as he got it fairly out of the hole it was taken from his jaws by another ant upon the outside, who was always in waiting for the purpose, and carried to the slope of the log where it was dropped, and rolled to the ground. If it lodged and did not roll properly, the ant would give it at extra shove which was sure to send it safely away. In one spot, where there was a groove in the surface of the log, there were two ants at work. One carried the sawdust from the fellow inside to the slope of the grove, down which he dropped it. A second ant picked it up from the groove and carried it to the slope of the log at a point where it invariably rolled to the ground. It was comical to see them watch every particle thus dropped, to see that it was properly disposed of before returning for another load. Their actions were too much like those of human beings under similar circumstances to dream that they were not directed by intelligent reasoning. Call it instinct, gentlemen, as much as you like, but no man can persuade me that the lower orders of life do not reason—at least to a limited degree.

AREFAR.

AUBURN, Cal.

THE WOODCOCK AND THE WORM.—Their mode of feeding, as observed in an aviary in Spain, is thus described by Daniel: "There was a fountain to keep the ground moist, and fresh sod was brought to them, the richest in worms that could be found. The woodcock stuck its beak into the ground, but never higher than the nostrils, drew the worms out singly, and, raising its bill in the air, it extended upon it the whole length of the worm, and in this way swallowed it smoothly, without any action of the jaws. The whole was performed in an instant, and the bird never once missed its aim."—*North American Birds.*

A BOOK ABOUT INDIANS.—The FOREST AND STREAM will mail free on application a descriptive circular of Mr. Grinnell's book, "Pawnee Hero Stories and Folk-Tales," giving a table of contents and specimen illustrations from the volume.—*Adv.*

Game Bag and Gun.

THE FULL TEXTS of the game laws of all the States, Territories and British Provinces are given in the *Book of the Game Laws.*

CHICAGO AND THE WEST.

CHICAGO, Ill., Nov. 7.—The last couple of weeks have been spent in that portion of the realm commonly known as "bleeding Kansas." Just why it is called bleeding Kansas is hard to say, for it's too dry to bleed just now. Probably the term arises from the practice of the Great Bend liverymen, who try to bleed everybody they take for a tenderfoot during their harvest of the coursing club meeting at that place.

Kansas is dry this year, and no mistake, and the glory of her boom has departed for the present. But though in real estate circles times are dull, in sportsmen's circles it is rather the reverse. The capricious State, changeable, uncertain, now impoverishing and again lavishing wealth on her devotees alike in real estate and sport, is this fall on hand with one of the best crops for upland shooting which has been known in any recent time. The table-lands of the upper Arkansas valley have not had water enough for a great flight of wildfowl, the marshes of the Rattlesnake, below Larned, seeming to be about the only place where many ducks were coming in at the close of the past month, not even the pools of the Cheyenne Flats having enough acreage to attract the wildfowl. But all over the State, so far as we could learn, all the way from Great Bend to Hutchinson, at least, and from Hutchinson up to Salina, the quail crop was something simply tremendous. At Hutchinson FOREST AND STREAM'S valued correspondent "Shady" informed me that the quail were abundant, though there had been more or less shooting before the season opened. Himself and Eli Young had gotten a few ducks only, out at the ponds east of town, the ducks not having yet arrived in any numbers.

At Great Bend, Kan., quail shooting has been going on for the past thirty days. One of the attendants at the coursing meet, a St. Louis physician, was out on several different days, bagging from a dozen to two dozen quail daily, a week before the law was out. Nobody molested him, for all the shooters at Great Bend were doing the same thing. I presume we must bow in blind submission to the law, but I confess that the Kansas quail law is a thing deserving but slight respect. It opens the season at Nov. 1, a date which by reason of climatic conditions confines the shooting season to only about thirty days, usually of rather raw, rough weather. This fact alone is not so exceptionally bad, although the birds in October are perfectly developed and able to take care of themselves; but the law has other features, as an attorney friend, Mr. Wm. Osmond, of Great Bend, pointed out to me. After a close study of this wise effort of the Kansas Legislature, we came to the conclusion, doubtless legally correct, that under the Kansas statute it is absolutely unlawful for any person to kill a quail in Kansas, except upon his own land, and between dates of Nov. 1 and Jan. 1! Look this law up in the *Book of the Game Laws*, and let us see whether we have the latest statutes. If so, a rather astonishing state of affairs is developed and one more dead letter discovered among the game laws. Under our reading, no alien and no resident could shoot quail except upon his own land. When this was borne in upon me, for once I rebelled openly and declared my intention of breaking the Kansas law, though not by shooting before the date of Nov. 1. That seemed to me as close to the letter of the law, and as far away from common sense, as a white man need to go.*

As has been stated earlier in another column the great Uhl and Carney ranch, north of Great Bend, was this fall sold to other parties, Mr. Carney, much is the pity for that community, may possibly go to another country. Mr. Carney is gentleman, ranchman, greyhound man, fox-terrier man, bird-dog man, shooting man and a whole lot of other things all combined. "You don't get out of this State alive until you've gone quail shooting," said Mr. Carney; and as a matter of fact I didn't, although that at first seemed impossible.

A party was made up by Mr. E. T. Vernon, of Larned, under which arrangement several of us were to have gone south of Larned, along the Rattlesnake, after ducks and chickens, but the Hutchinson coursing meeting broke that up. At the close of that meeting only one day intervened before the opening day of the quail season, which fell on Saturday. There was no refusing Mr. Carney. Mr. Luse, also of the Bend, promised to go shooting also. I hesitated, was promptly lost, as I knew all along I was going to be, and was soon back in Great Bend, 55 miles from Hutchinson, over the old Santa Fé trail. A little later a solitary horseman might have been seen turning up the lane of the Carney ranch in a buggy drawn by a deliberate and broken-kneed Western pony, fresh from his home in a livery barn.

But alas, alas! Mr. Luse did not appear on the following morning, as was agreed, and a long-winded customer came to buy a lot of cattle from Mr. Carney. Alone in Kansas, with only one day to spare from business.

As this juncture Mrs. Carney—may she live a thousand years and be happier each year—came to the rescue with a lieutenant in the shape of her son Charlie Carney, ætat 8 years, already somewhat of a slayer of snowbirds with an air gun, and with strong symptoms of becoming a chip off of the parent block. Charlie wanted to go quail hunting with me. That settled it at once, and therefore when the sun was just getting things warmed up a little on the morning of Saturday, Nov. 1, Charlie and I were rolling over the Cheyenne Flats, bound for beyond the hills, where the open sesame of Mr. Carney's name was to secure for us a day's shooting along the hedges of a certain nursery which abounds in quail, but which is by no means open to the public.

To those who have never gone hunting with a boy eight years old, and looked through his still unwearied eyes at what may still be remembered for one's self as once a big and wonderful and beautiful world, let me say it is a pleasure of whose memory one is bound to be very jealous. All the world is real to the boy. He believes that all he sees is really there. His joy is actual. The widening horizon is widening heaven for him, and each creature he sees is a fine and glorious thing. His geese are swans. The hardest cynic must melt his heart before the genuine fervor of a live boy's happiness, and in that happiness be happy too, if the earth and the air be not already enough for that.

"There's a owl!" sung out Charlie, as we passed a "dog town" over which a little prairie owl was flapping about. "Give it to him!"

Now I had in mind a proposition of Mr. Carney's, that no shooter could kill more than about three out of five of these same undersized Minerva birds, and I just wanted to show Charlie how little his papa knew about my skill on owls. So I slipped in a couple of shells, and as the owl flopped by in easy range, I sprang to the ground and cut away at him. The owl gave a jump and a great dive, and then went on placidly. I gave him the left barrel, and he made another dive, and wasn't in it again. A most malfeasant, improper sort of owl, and one misformed in judgment of eternal fitness. By all the rules of war that owl's time had come. "W'y didn't you kill 'im?" asked Charlie, as I crawled back into the buggy.

A big chicken-hawk next occupied our attention, and we opened a running fire on him as he flew along the fence, at last knocking him over with a charge of No. 6, much to Charlie's edification. "Now we'll shoot some snow-birds;" said he, "I think we're making a pretty good beginning." But the snow-birds wouldn't hold still enough for Charlie, and so we drove on, and at noon had our credentials honored by the lady of the place, with our horse in the shed and our luncheon eaten, as well as we could eat for the whistling of the quails, which we could hear within a hundred yards of the house.

We must not forget the third member of our party, Mr. Carney's setter, Lady. This clever little bitch is one of a pair selected for Mr. Carney by the writer from Tommy Davey's kennels at London, Ont., and she has turned out a very good bit of dogflesh. Her owner told me that she was not well broken, as this was the fourth hunt she and he had ever taken; yet I must say that she worked in many ways like an old one, and showed all the making of a most killing dog, her nose being remarkable and her staunchness absolute. Her only fault was the little eagerness to wing common to all young dogs, and the easiest fault of all to correct.

Well, Lady and Charlie and I were just about to start away from the buggy, when there came a lusty whirring of wings, and out of the orchard to our left sprang a goodly bevy of quails, thirty or more, it seemed to me, and lit upon the hard open ground directly in front of us, not 50yds. away. And there they stood, with heads erect, looking square at us, brown, big, beautiful and bunched. Yes, bunched. And as I looked, an evil spirit came into my mind. I knew I could make a killing with that right barrel which I had purposely had bored out open for quail. I knew that one raking, murderous swipe through that bunch of quail would assure my bag for that day. I shook and looked and trembled; and if old St. Anthony had any tougher time than I had, he had it under less temptation, that is all I have to say about it. "It would never do," thought I; "the boy must be brought up right. I'll treat Mr. Carney's boy and Mr. Carney's dog on the dead square, so help me. But oh, holy Moses! what a wad of 'em I could lay out! If something doesn't happen pretty quick I don't know what I'm going to do about this!"

Lady had set the birds on sight. She drew a step closer. Three or four of the nearer birds went up, and as they rose I fired, the whole flock springing as I touched the trigger. I expected to kill about a hundred as they rose, for it seemed to me the air was full of quail, but only two dropped out to the first barrel. Then I regained a somewhat more sportsmanlike frame of mind, covered a single bird with the left and killed it clean at long range. They say confession is good for the soul, and I want to say right here in open meeting that while I didn't shoot into that flock of quail on the ground, I had a "most almighty narrow escape from it," as "Uncle Kingfisher" would say. It caught me sharply, these being the first quail I have seen for about a year.

We now crossed a little bean patch, and here I saw half a dozen quail running just ahead of me. These I could have potted easily, but the temptation was gone now, and I put them up, getting one and missing one. After that I had frequent sight of running birds, and believe I could have bagged seventy-five at ground shooting, but was able to keep from that; although I consider that to be alone along a Kansas hedgerow with a lot of quail trotting in plain sight ahead of you is a mighty dangerous situation for weak and erring human nature. It is best to take a friend along to watch you.

"We're doing pretty well," remarked Charlie encouragingly, as he stuffed our four quail into the pockets.

We now took to the hedges, and never in my life have I seen a better chance for a great day's shooting than we now found. Lady made point after point, in splendid style, and we had three big bevies scattered in less than fifteen minutes. This hedge shooting is the prettiest on earth when there are two shooters. The birds stick to the hedge, flying up or down it, and with a gun on each side it is plain that few birds get away unsaluted. With but one gun, the case is quite different. The birds nearly always fly out on the side opposite to the shooter, and there is next to no chance to get a sight of them as they dart along the thick osage wall. Sometimes we partially remedied matters, when Charlie and Lady would go down one side of the hedge while I took the other. "She's got a point!" the boy would call out, eagerly, from his side of the hedge, and then when I came up he would poke in the leaves with his little galvanized gun barrel and put the bird up, in which case we usually got the quail or scared it pretty bad. Once we located a cripple in the hedge, and on this Charlie made advance. I said he carried an air gun; it was really a spring gun, using a single No. 1 shot. The spring had become weak from constant employment, so that when Charlie shot his quail with it he only made it squeak at first. Finally, however, he stood off and made a line shot on its back, which laid it out. This quail he carried about with great pride for some time. "I've noticed that my gun shoots harder if I get off a little way," remarked he, "and I've found out there's a soft place in a bird's back."

After the first dozen quail we did not work so hard, and spent a lazying afternoon, with some rests in consideration of legs only eight years old, and some mild discipline for Lady when she showed a wish to capture any of the omnipresent jack rabbits, and some talks on natural history, in which latter the youngster asked a lot of puzzling questions, after the fashion of youngsters generally. I don't know how any one could have a pleasanter half day afield. The air was fine and warm, the game was abundant and easily found, dog and gun were working well, and my companion was one of the very pleasantest I ever had with me on a shoot. Plucky, uncomplaining, a theorizing and moralizing little fellow, with a strong disposition to know the why of things, but a keen enjoyer of what was going on—I am not sure but I owe more than half the pleasure of the day to Charlie. I wonder will he grow up and go shooting with some little fellow some day, and whether he will remember this day then? *Dies juventi!*

There were a great many jack rabbits and cotton-tails about the nursery, and in accordance with the wish of the owner, we killed a few of these to assist in protecting the young trees; although in what we may call the greyhound country of Kansas, it is not now considered a very nice thing to kill a jack rabbit with a gun. In the evening, as we were coming home, we saw one of these great hares sitting in a field, apparently nearly 60yds. distant. The boy wished me to fire at it, and this I did with the close left barrel, using a No. 7 shot shell. To my surprise the animal was killed quite dead. They seem very easily knocked over. This was a very large specimen. When Charlie, arrayed for warmth in my shooting coat, a world too large for him, came lugging the creature back to the buggy, I noticed that it dangled over his back with the forefeet below the edge of the coat and nearly touching the ground as he grasped the hindlegs over his shoulder. This hare, with another not quite so large, was on the following day hung up in Mr. Carney's parlor, and a deft young kinswoman of the family made from the pair a very spirited and faithful painting. I question whether our long-eared little deer, as he sat up in the pasture and dared the shot from the distant roadside, knew that he was bidding for so swift and fine an immortality as he has received.

Charlie and I bagged twenty-two quail that day besides our fur and the big hawk, and the owl we didn't get. All in all it seemed to me a very beautiful little hunt. We might have gotten more birds, but I'm awfully glad now that I didn't shoot into that bunch of quail on the ground. We did enough to prove that quail are plentiful enough for any one in western Kansas, and moreover to prove, for ourselves at least, that there can be a whole lot in a day outdoors which you didn't bring home in your pockets. For instance, there was the point Lady made on the single quail right out on the buffalo grass. The boy called it out to me, but when I turned it seemed to me that Lady must be mistaken, the cover was so very short. But by careful search we at length discovered the bird not over 4ft., I should think, from Lady's nose, and just barely half covered with a little wisp of red grass. The bright and beady little eye, with the white band over it made the only possible mark by which to locate the bird, though after we had found it we could see every feather plainly. It is not often one can see the bird his dog is pointing, but here we saw the whole vivid, beautiful little picture. I suppose now some smart young fellow will want to ask, Did you get the quail? I am sorry to say I did. I believe it jumped 40ft. before it unfolded a wing. But that was a very pretty point that Lady made.

The only unpleasant part about this little shoot was the saying good-bye to the host and his family. Mr. Carney will soon leave the ranch, and it is not yet certain where he will locate. It is certain that the community which catches him will catch a pretty good pigeon shot and some good saddle horses and a setter or two and some dead game fox-terriers, and something more than that.

So it seems that shooting matters in Kansas are all right so far as the possibilities for game are concerned. Chickens were reported fairly abundant in season. Quails fairly swarm. Wildfowl will probably not be so very abundant.

The only other stops made West were at Des Moines and at Newton, Iowa. Mr. John J. Hamilton, editor of the Des Moines *Daily News*, was just upon the point of starting for the Indian Territory for a hunt. Mr. Hamilton is one of the hardest working reposers on the flowery bed of journalism, and has taken to these trips because he sees the sense in them, as well as the pleasure.

That white-headed Dutchman, Rolla Heikes, of Dayton, Ohio, was at Des Moines visiting our mutual friend Charlie Budd. I met them Tuesday evening, just getting off the train from Somerset Junction, a little way below Des Moines, where they had been having a two days' quail shoot. They had—now what do you suppose they had, these two expert and famous trap shots? They had nothing, absolutely nothing! Hunted two days and didn't bring a feather back with them! The fact is, they did not see a single quail in the whole hunt. Yet they were in a good country, and last spring, as Charlie Budd personally saw, quails were abundant all through that section. It is probable that the birds migrated. Charlie and Rolla each killed a pheasant (ruffed grouse) and a cottontail, but they ate these down in the country. As they got off the train they were a very weary and disgusted pair of shooters. That evening Rolla started East for Freeport shoot. Charlie stayed at Des Moines with his family, shot in the regular club shoot of the new and vigorous club of which he is one of the mainsprings, and will be on hand to meet Rolla Heikes, the Chicago team, and all the rest at Kansas City tournament next week. The exodus of the boys from this city will transpire now shortly.

From what little I could learn about game in central Iowa, the prospect is not in the least encouraging. About Newton, in Jasper county, where quails were once a common bird, none to amount to anything at all are reported. About the only game that part of the State can boast is the hardy cottontail. A few squirrels and "pheasants" are appearing again in the old shot-out covers and woods, but regular sport for dog and gun is apparently a thing of the past.

E. HOUGH.

---

*The Kansas law on quail, as given in the *Book of the Game Laws*, forbids their capture, "provided, it shall not be unlawful for a person to shoot quail on his own premises, between the first day of November and the first day of January of each year."

LOADS AND LOADING.—Minneapolis, Minn.—*Editor Forest and Stream:* I am satisfied the fashion out here is for too light loads of shot, especially in the larger sizes. Last September I loaded my 12-bore with 3½ p. and 1¼oz. No. 4 for ducks against the protest of the man who did most of the loading for the town, is a huntsman himself, and who said those loads would knock my shoulder blue. Whereas, these loads did beautiful work, and the gun was steadier in hand than when in discharged an ounce of No. 8 shot. What say others?—W. A. W.

GELBITE AMMUNITION.

ON Friday last, Nov. 7, a test was made on the FOREST AND STREAM range at Claremont, of the new gelbite cartridge. Mr. Newton Emmens, the son of the inventor, brought to the range a quantity of the paper sheets, in which form the new candidate for shooting favor is presented to the trap and field shots of the country. On the way to the range a stop was made in the store of Smock & Cornwall, and a box of "Your best black powder cartridges" was purchased. These were in U. M. C. Club shells, and marked "3¼drs. powder, 1¼oz. No. 8 shot." They were loaded with a card and two black-edge wads over the powder and one card over shot. At the range the yellowish paper or gelbite was cut into slips, rolled up, and inserted in the empty Club shells, a card and pink-edge wad placed over and a charge of 1¼oz. shot poured in before the card wad and crimping was done. On analysis of two cartridges of each sort, the count and weight taking showed:

		Powder. Weight.	Shot. No. Pellets.	Shot. Weight.
Gelbite..	No. 1	19½grs.	481	538 grs.
	No. 2	20 grs.	468	523 grs.
	Average	20 grs.	474	530 grs.
Black....	No 1	90½grs.	486	539 grs.
	No 2	88½grs.	475	536½grs.
	Average	89 grs.	480	538 grs.

A Remington 12-gauge 8½lbs. gun was used in the test and but three shots of each sort of powder were fired from each barrel. The day was admirable for good work, being damp and lowering, with but a trifle of wind.

In shooting Mr. Emmens fired only at 40yds. and from the standing position, which in a measure accounts for the increase of the number of pellets in the selected circles over those in the aimed circles struck from the center of the bullseye fired at. The exhibit stands as follows:

GELBITE—RIGHT BARREL.

Shot.	Pellets, Aimed Circles.	Pellets, Selected Circles.	Penetration Sheets.
1	209	295	4
2	36	96	3
3	165	202	7
Average	138	198	5

GELBITE—LEFT BARREL.

1	198	178	3
2	243	251	5
3	199	301	5
Average	213	243	4

BLACK POWDER—RIGHT BARREL.

1	159	302	10
2	240	335	10
3	296	311	10
Average	232	316	10

BLACK POWDER—LEFT BARREL.

1	284	281	10
2	210	355	10
3	289	325	9
Average	261	320	10

It will be seen that though there was nominally a variance of ½oz. of shot in the two sets of cartridges they were practically the same, being 474 to 480 pellets. In the right barrel they were accounted for in the ratio of 198 to 316, and in the left barrel in the proportion of 243 to 330, or taking the average of both barrels, in the proportion of 220 to 318. In other words, the black powder in a selected circle at 40yds. accounted for 66 per cent. of the charge, while the gelbite charge had 48 per cent. of the charge in the 30in. circle. In penetration where the comparison is direct, the black powder shot got through 10 sheets of the Dennison pad paper, while the gelbite-driven shot went through half as many sheets.

Further tests of the paper explosive will be made, and in this ready fashion in which this class of explosives can be loaded up for any initial velocity, or in a general way penetration, will enable the preparation of a charge of greater force than that above shown.

In speaking of the new compound Dr. Stephen H. Emmens, its inventor, says:

"Gelbite is a high explosive of the gun cotton class. It consists of a special quality of paper, chemically treated, and impregnated with a variety of Emmensite, the well-known explosive. The name 'gelbite' is derived from *gelb*, the German word for yellow. Gelbite is supplied to consumers in the form of sheets of paper of a yellowish hue. From these sheets strips may be cut of a width and length corresponding to the size of the cartridge shell to be loaded. For example, a moderate charge for a .32cal. pistol cartridge is a strip of gelbite 3¼in. in length and ¼in. broad. The strip is rolled up in a hollow coil and is then placed in the cartridge shell. The bullet is next seated in the usual way, and the cartridge is then ready for firing.

"By rolling up the strip of gelbite into a hollow coil (which may conveniently be done by wrapping it round a parlor match or other small rod) an air space is obtained in the center of the charge. This air space serves to moderate the initial pressure when the charge is exploded, and thus renders the use of gelbite perfectly safe, although the explosive itself is much quicker in its action than ordinary gunpowder. The width of the strip of gelbite for any cartridge should not be less than the length of the corresponding powder charge; and the diameter of the central air space should not be less than ¼in. in pistol and rifle cartridges, and ½in. in shotgun cartridges. These dimensions may, however, be exceeded to any desired extent.

"The bullet or wad should never be driven down so as to compress the charge of gelbite—any compression having the effect of increasing the quickness of explosion as well as of diminishing the air-space. In pistol and rifle cartridges a loading tool should be used, so as to insure the seating of the bullet in its proper position without being forced in upon the gelbite. In shotgun cartridges the coil of gelbite should be placed in a carton tube of cardboard, of a length equal to the width of the coil, and of an outside diameter corresponding with the interior of the cartridge shell. The wads and shot can then be rammed home with any desired degree of force—the carton preserving the gelbite from compression. Cartons to fit No. 12-gauge cartridge shells will do also for No. 10 and No. 16 by being cut through lengthwise on one side.

"The power of gelbite as compared with that of gunpowder, weight for weight, varies according to the size and form of the cartridge employed. In pistols and rifles, as a general rule, 1gr. of gelbite will be found equal to about 7grs. of gunpowder. In shotguns 1gr. of gelbite is equal to about 4½grs. of gunpowder. A dram avoirdupois, the usual unit in loading shotgun cartridges, is 27.34375grs., so that a 3-dram charge will be 82grs.; and the corresponding charge of gelbite is 18grs. The most advantageous charge for any particular weapon may always be arrived at by a little experimental firing—care being taken to commence with a very moderate amount and to very gradually increase the charge until the desired muzzle energy is attained. Care must, of course, be taken to avoid any dangerous degree of initial pressure; and this can be guarded against by observing the signs of strain shown by the cartridge shells after firing—a standard being first made by firing a cartridge with a maximum charge of ordinary gunpowder.

"There are two grades of gelbite. No. 1 is slower and less sensitive than No. 2. In shotgun cartridges the primers are generally insufficient to properly explode No. 1; and therefore, the charge is best made up of an internal coil of No. 2, surrounded by an outer coil of No. 1. An ordinary charge for a No. 12-gauge cartridge consists of a strip of No. 2 gelbite 7in. long and ¼in. wide, inside a strip of No. 1, 10½in. long and 1in. wide. This is the charge that will be found in the sample shotgun cartridge inclosed in each box of gelbite.

"The advantages of gelbite over black powder may be summarized as follows: 1. It is smokeless. When it is discharged, all that appears is a little vapor, which almost immediately vanishes, and which does not obscure the view of the game or target. 2. Diminution of recoil. This is very marked, and its advantage will be appreciated by every sportsman. 3. Diminution of noise. The report of a gun loaded with gelbite is of a quicker, slighter character than where gunpowder is used, and is much less fatiguing to the ear. 4. Diminution of heat. A gun may be fired much longer and more rapidly with gelbite than with gunpowder before it becomes too hot for handling with comfort. 5. Absence of fouling. Gelbite leaves a gun very clean. There is no fouling or injurious residuum. The only result from long-continued firing is a little 'leading.'"

MAINE GAME.

BOSTON, Mass., Nov. 7.—Mr. J. F. Dwinell, of the well-known coffee and spice firm of Dwinell, Hayward & Co., has just returned from his annual partridge hunt in the wilds of Maine. Mr. Dwinell has for some years visited Upton, Me., for this purpose, taking the two weeks' vacation he allows himself from business in this way. There he boards with Lomin Sargent, one of the best guides in that region, and whom Mr. Dwinell has befriended in a very substantial way. They hunt every day when the weather permits, and this year the weather was agreeable every day but one. In twelve days' shooting Mr. Dwinell got 43 birds. Last year he got 81 in the same length of time, barring a number of rainy days, and the year before he shot 93. This goes to show plainly that the grouse are not as plenty as usual this fall in Maine, a fact generally admitted by all of the gunners who have returned, but not brought to quite as forcible proof as in the case of Mr. Dwinell. He used some effort to find out the cause of this scarcity of partridges, inquiring among the best guides and residents as to the reason. It was generally admitted that the old birds wintered well, and that as a rule a good many chicks were hatched out. But later it became apparent that foxes were unusually plenty. At least the settlers living near the woods were greatly troubled by these same foxes among their poultry. In confirmation of this idea, Mr. Dwinell also remarked that out of all the birds he shot but very few were chickens. Old birds were the rule. In that part of Maine foxes are remarkably plenty, and the hunters promise themselves rare sport as soon as the snow comes and the fur is in its prime. Mr. Dwinell says that if he had given his attention to foxes instead of grouse, he could probably have had as much sport, and rid the country of a few foxes that may now live to destroy the grouse next year. If Maine were to give a small bounty for the destruction of foxes, instead of the foolish bounty on crows, it would aid the farmers in poultry raising, as well as greatly increasing the supply of that best of bird game, the partridge.

Mr. J. H. Jones, with Jas. N. Emery, in the fresh fish trade, has returned from his gunning trip to Buckfield and vicinity in Maine. He hunted four days and secured twenty-seven birds, a remarkably good score for this year. He did not get a bear, for bruin was too shy for him. Still bears are reported plenty in nearly all the remote parts of Maine. Lomin Sargent, mentioned above, has already trapped two, one a very small one. In the vicinity of Kingfield and Eustis a good many have been killed. Several have been shot in orchards, where they were up in the trees and helping themselves to apples. This has been done in some cases by watching on moonlight nights, and in other cases the bear has been surprised in the orchard in broad daylight. In Rangeley, Madrid and Phillips the record of bears killed is also very large. In one case a cub has been shot from an apple tree, which cub only weighed 27lbs. It is quite plain that bears are on the increase in Maine. The record of those killed this fall is greater than ever before.

There have already been one or two falls of snow sufficient to track deer in northern Maine, but these snows have been too short-lived for really good hunting. The fall of snow in the night has been followed by warmer weather next day, with melting and droppings from the trees, making the very worst sort of weather for hunting deer, not only on account of the discomfort of being in the woods, but because the falling of the snow from the limbs has prevented the seeing or approaching of game. One party in the vicinity of Kennebago is reported to have started six deer in one day, neither of which was secured, for the reasons mentioned above. The same report comes from the vicinity of Moosehead. There have been snows, but the snows have been very bad for hunting. Two Boston merchants—they will not let me mention their names—came back from a deer hunt above Moosehead Lake the other day in considerable disgust. They got no deer, though they think that they trailed twenty in one day. A party of New York hunters are looking for deer on the Cupsuptic River, with Billy Soule as guide. SPECIAL.

THE VERMONT LEAGUE.—Mr. J. W. Titcomb writes from Rutland, Vt., Nov. 3: "The organization of the league is quite a task in Vermont, but we now have fifty-five charter members pledged, and hope to make the seventy-five this week."

ELK ON SNAKE RIVER.

[*Continued from Page 309.*]

NOV. 1.—All hands lay in camp until noon, then Frank, Charley and I went down in the hills below camp, and Frank got a fine blacktail buck with as handsome a head of horns as I ever saw; it had twenty-five points in all. I got on a fresh track of a big bull elk, and after following it some distance saw him standing in a thick patch of brush upon a bench of the mountain, some 300yds. distant. I fired two shots at him that missed. He was further off than I thought he was, as I discovered when I came to climb the hill to examine his trail for signs of blood. After following his trail for some distance, I was joined by Frank and Charley. This is a fine deer range—low hills sparsely covered with scrub timber, aspens and underbrush. Deer were very plenty in here some two weeks ago, but have gone below now to get out of the snow. One man told me that he saw bands of two and three thousand in a band cross the Snake, heading for the country on the Troubelsome, being mostly does and fawns. The bucks came down later and in small bunches. We arrived in camp in time for an early supper. After supper I went out and set two fox traps. Fox trails are thick all through the hills here, but it is very seldom we get to see one.

Nov. 2.—Found it snowing like fun this morning, but about 10 A. M. it eased up some and Charley and Frank took the horses and went after the buck killed the day before. I started out to look after my fox traps. Found them snowed under and no fox. On my way back to camp I struck the fresh track of what seemed to be a three-legged buck. It would take too long to tell what a chase I had after this deer, but my two legs were too much for his three, and I finally overtook him in the rough hills away over on Three Forks of Snake, and after several shots at long range, brought him down. He had been wounded some weeks before by having a front leg shot off at the knee, which was most healed over now, but made it hard work for him to travel in deep snow. I dressed him and took his head on my back and carried it to camp, some five miles, with the deep cañon of the North Fork of the Snake to cross. I arrived in camp just at dark, and as could be expected, about as tired as one wishes to get. The boys were all in. Frank had shot a grouse. This deer head was the one Mr. Hunt so kindly offered to mount for me; it was a very fine one with five prominent points on each side.

Nov. 3, Sunday.—When one is so far from home away up in the mountains, where he is liable to be snowed in at any time, he is naturally anxious to get his game and to be getting a little lower down. This was our fix just now. So, Sunday as it was, we concluded to take our horses and go up and bring our elk to camp; and it was high time we did, for the magpies and camp robbers were trying hard to work holes in the hams. Had it not been lying flat on the ground and well covered with snow they would have had it ruined. To-night we have written home and a line to FOREST AND STREAM, as Frak Crow expects to pull out to-morrow for Rollins, Wyo., with a four-horse load of hindquarters of elk and deer, and I believe a bear or two. His wagon all loaded stands in front of our camp now. He takes the load out for two brothers from Saratoga Springs, Wyo., who have been in here hunting all the fall, and have sent out several loads. I did not learn their names. Wyoming will allow such work as this to go on, and no one says a word, but so soon as they find a non-resident, especially from Colorado, after a deer or elk for his own use, they set up a howl and order him out. Our party made it a point to do our hunting on the Colorado side of the line, when we knew where the line was, although we sometimes made our camp on the Wyoming side.

Nov. 4.—Frank Crow left this morning with his big load of game and his two partners, Geo. Pixley and L. G. Iiams, the latter better known as "Stub," went with him on horseback to help pull him up some hills, with their lariats tied to the saddle horn. They expect to be back to-night and move camp with us to-morrow some fifteen miles over on to Slater Fork, where George says hunting will be better and elk plenty. George has been a resident of this country for several years, and knows where game is the thickest. Charley and I packed in my buck, and Frank and Con packed in one of the elk killed by Frank some days ago.

Nov. 5.—Up early, as we expect to move camp if George and Stub return. Just as breakfast is ready, while looking out of the tent door, I discover four elk passing out of the east side of the park in which our camp is located and heading up into the timber. I call to Hunt, whose tent is near by, and point the elk out to him. He proposes that we go after them, so without stopping to eat our breakfast we take our guns and circle off to the right, intending to flank them and get the wind in our favor. After making quite a circle through the timber we came to the edge of the park, but too low down for the elk. On looking across the park to the north of camp about three-quarters of a mile, we discover a band of some forty or fifty quietly feeding and some lying down. After holding a council of war we decide to retreat in good order and make another advance further up the park, which we do in fine shape, but our big band of elk has disappeared. Looking over into the timber to our right we see twelve or fifteen elk standing looking at us, and some 250 or 300yds. away. Thinking this must be the band we were after, we decide to try them a shot, as we have no other show. Frank selects a young elk to the left, while I pick on a calf off to the right of the bunch, and we turn our lead loose. My calf goes down dead where it stood, and Frank's is badly wounded. I fire two or three more shots and I get another calf. Frank's wounded elk seems to be badly bewildered, and circles around and stops in almost the same place it was in when Frank first fired at it. Frank is more careful this time, and at the crack of his gun the elk drops. We now fall to work dressing our game, and are joined by Charley, who has stood in camp and seen the battle. He informs us that the big band we were after passed around the slope to our left between us and camp, and went up in the timber, where we first came down. We now return to camp and get our breakfast, when all hands take the trail of the big band and follow it up on the range, but finally give them up; and we scatter out for a return to camp.

On my way in I run on to a small band of some four or five elk. The timber being thick, I have a poor chance to shoot, but I make a pop shot and wound one. After

following it some distance, I find it is but a flesh wound in the foreleg; so I give it up and strike for camp, where I arrive after dark and find the boys all in, but George and Stub have not returned yet. A. A. KNOTT.

VIRGINIA FIELD SPORTS ASSOCIATION.

THE fifth annual meeting of the Virginia Field Sports Association will be held at Amelia Court House on Wednesday, the 19th day of November, 1890. The Eastern Field Trials Club, of New York, will meet at Otterburn Springs (one mile distant from the Court House) at the same time, and our members will have an opportunity of witnessing the running of the most celebrated dogs in the United States, besides meeting with prominent sportsmen from every section of the Union. The executive board decided upon this place of meeting in consequence of the great interest felt in seeing these trials, and we trust that the wisdom of their choice will be shown by having a larger attendance than we have ever had at an annual meeting. An excursion train will leave Richmond about 8 o'clock on the morning of the 19th, and will return at a late hour that night. The annual shoot (members only) for the Association badge will take place on that day, and it is a handsome trophy, and becomes the property of the winner, I trust that the members will come prepared to enter for the prize and make the shoot one of the attractive features of the occasion.

The annual dues for this year are but one dollar. Members who did not pay up last year are requested to mail to Mr. John W. Pierce, Treasurer, Richmond, Va., three dollars, which will liquidate last and this year's dues. All sportsmen ought to be members of this accociation, and we would be glad to have them make an application in writing, inclosing two dollars, and receive a membership ticket for the year commencing Oct. 1, 1890, and ending Sept. 30, 1891. Members of our association have been granted special privileges by leading railroads in this State, showing the value of organization, and apart from the social feature which our association enjoys, the benefits received more than compensate for the outlay in annual dues.

Sportsmen and others who may be interested in the field trials, and wish to accompany us on the excursion to Amelia Court House on Nov. 19, are requested to make an early application for tickets, so that we may know how many coaches will be necessary for our transportation.

The Chesapeake & Ohio Railroad and its connections have kindly given to the members of our association a round-trip ticket at two cents a mile when on hunting trips, and allow one dog for each sportsman free; and we have the promise of some liberal arrangement on other roads, of which due notice will be given.

Members holding last year's tickets are requested to forward the same to the treasurer (inclosing one dollar) and receive tickets for the season of 1890 and 1891. These tickets must be presented to station agents in order to secure reduced rates. POLK MILLER, President.

RICHMOND, Va.

A SOUTH DAKOTA GAME COUNTRY.

GRAND HAVEN, Mich., Nov. 3.—After a lapse of four years it has once more been our pleasure to take a short hunting trip through South Dakota. Having had four consecutive seasons of shooting in the Dakotas (the last being in fall of '86) I supposed I was well posted as to where to go, but to make assurance doubly sure, letters were written to old friends in various localities formerly known to us as good shooting grounds. From nearly all came the response that "owing to the continued drouths the small lakes and streams were dry, and no ducks or geese were to be had." From Cottonwood Lake, whence I wrote you several letters, and which at my last visit was a body of water three miles long and three-fourths of a mile wide, came word that the bed of the lake was now used as a cattle pasture. I presume the duck boat left there by me four years since is now used as a feed trough. *Sic transit gloria.*

Notwithstanding these unfavorable reports I was satisfied that there were still left good points for duck and goose shooting, so, spreading out a late map of South Dakota, I found that the Chicago, Milwaukee and St. Paul Railway reached almost all parts of the State, and I decided to take this road at Chicago, head for Dakota and depend upon information gleaned from conductors as to just where to stop. My experience on former trips has been that conductors on our Western roads are as a class enthusiastic sportsmen, in the true sense of the word, and consequently in warm sympathy with any one in search of hunting grounds for amusement and recreation. (No pot-hunters need apply.)

I left Chicago Oct. 15, at 6:30, via C. M. & St. P. Ry., the train being a solid vestibule train of sleepers with dining car attached, and all lighted by electricity. As one settles himself in these luxurious cars it is difficult to realize that he is *en route* for hunting grounds, and that a few hours' ride will bring him to a portion of our country which within the last decade was known only to the Indians and a few hardy trappers and hunters. The next morning at 9 o'clock I reached Sioux City, Iowa, distant from Chicago about 500 miles. Here I met an old acquaintance in Conductor E. H. Fargo, who has the run from Sioux City to Aberdeen. I found him the same courteous and affable gentleman as of old, and felt that the problem as to where I would go would soon be solved. As soon as his duties permitted we were seated together, and he gave me the benefit of knowledge he had gleaned as to the best points for hunting. By his advice I left the main line of the road at Trip, which place was reached about 2 P. M. From Trip we took a spur road of the C. M. & St. P. to the flourishing little town of Armour, 20 miles west from Trip. Here we found first-class accommodations at the Hotel Orient, and started out to make acquaintances and get posted generally. I was soon convinced it was the place I had been looking for. A week's stay did not change my opinion, and I unhesitatingly recommend it to readers of FOREST AND STREAM as one of the best all-round shooting places it has ever been my good fortune to find. In the immediate vicinity are several small lakes which literally swarm with ducks. Lake Andes is only 7 miles from the town. This lake is about 15 miles long and affords fine duck shooting, and later in the fall the geese make it "headquarters." Goose shooting was what I was after, but unfortunately the weather was so warm and balmy that the honkers had not come in, and I could not wait for a northwest blow which I was assured would bring them in in great numbers.

The country just north of Armour is settled largely by Germans. They are thrifty farmers, and despite the dry weather have raised good crops the past season. They pay but little attention to hunting, and their broad fields of wheat and corn have furnished splendid feeding ground for prairie chickens, which consequeutly have been and are now very plentiful. Mr. R. A. Panks, a local sportsman, shot over 600 chickens during the past season from Aug. 15 to about the middle of September. This was the largest number killed by any one person, but a bag of twenty to twenty-five could be had any day within a few miles of town.

Mr. Geo. Lumley, proprietor of the Douglass County Bank, is an ardent sportsman. I am under many obligations to him for information and courtesies. He is conducting a large business extending over a large portion of the State, but is never too busy to give information to any one who is on a hunting trip for pleasure, but has a natural aversion to market-hunters or any one destroying game out of season. His son, Geo. Lumly, Jr., is a young man in years, not yet having reached his majority, but is old in his knowledge of hunting and the habits of the game he hunts. His skill as a marksman might well be envied by older heads. He has one of the best, if not *the* best, pair of greyhounds in the State. During the past winter he captured with his hounds forty large gray wolves. One can well imagine the excitement of a chase of this kind over the open prairie where every move of both wolf and dogs is in plain view.

I fear this letter is already too long, but in conclusion would say to any of your readers seeking a place for good shooting, go to Armour. For ducks and geese go about Oct. 20, from that time until the lakes freeze up the shooting is first-class.

Mr. Geo. Lumley, Jr., will answer any inquiries by mail as to time of arrival of flight of geese. For any information as to excursion rates or anything pertaining to the comfort or convenience of any one wishing to make the trip, Major G. H. Heafford, Assistant General Passenger Agent of the Chicago, Milwaukee & St. Paul Railway (at Chicago), will gladly answer all inquiries.

G.

GROUSE SHOOTING WITH A BEAGLE.

EARLY one November morning I donned my shooting coat, shouldered a little 12-bore of 7lbs. weight that I swear by for cover shooting, and was off for a half-day among the grouse. No need to whistle up my dog; he is always on the watch and at my side the moment I leave the house, and in every possible way manifests his joy at seeing me ready for the field. He is a beagle of large size, intelligent and active to a degree, and although rabbits are his first love, he will road out and flush up a bird in a way that might give points to a well-trained spaniel.

The day was favorable for sport—moist, snow on leaves and grass. The first piece of cover visited held a single grouse that flushed wild to the dog, went across a field to the woods and was not followed. I crossed the creek, and as I climbed the slope beyond a rabbit sprang from among the withered stalks of golden-rod at my very feet and went off jerking his cotton with an energy born of sudden fright. I caught a glimpse of it in line with the rib and pressed the trigger and saw it perform the tumbling act. After a few vigorous kicks it regained its feet, but I refrained from using the second barrel, thinking to give my dog, already on the trail, the pleasure of picking it up. But he failed to get there, the rabbit going to earth before being overtaken. That I very much regretted, not because I cared for the rabbit, but I always dislike wounding game and having it escape to die a painful, lingering death. A clean miss is much to be preferred. I soon jumped another rabbit from some tall grass that got away under cover of a fence. A musical chase followed across the fields some sixty rods to a swamp. Following, I climbed upon a fallen tree and enjoyed the music as bunnie doubled through the thickest tangles in the swamp. My dog is a sure trailer and well up on all the tricks of the most wily of rabbits. His musical voice echoing to the hills, he follows and finally drives it past my stand, and a quick shot stretches it dead upon the leaves. Coming up, he stands over it with lolling tongue and slowly vibrating trail, and the large expressive eyes turned to mine invite a caress and express the satisfaction he feels at the successful termination of the chase.

Next in order came a swampy piece of cover, bordered on one side by a rocky ledge covered by a dense growth of evergreens, and so thick as to almost exclude the possibility of a successful shot. While standing in a little opening in the thicket, waiting for my dog to quarter the ground, I heard several birds get up to my right, the sound indicating that they crossed a narrow clearing and settled on the other side of the slope. Thither I followed, the dog in his eagerness preceding me, and three of the birds flushed wild. Two were marked down in woods near by, the other taking a long flight across fields to a distant wooded ravine. Restraining my dog until I reach a favorable point, a wave of the hand sent him on and he is soon seen roading eagerly a running bird. With rigid muscles, eye and ear alert, and gun firmly clasped, I await the result. Not long to wait, for very soon a grouse gets up with a rush that quickens the pulse and sets every nerve tingling. Rising above the sprouts it starts for the woods with the speed of an express train. My gun comes quickly to my shoulder and is swung into line with its flight, and the trigger pressed. The rapidly vibrating wings close instantly, but the momentum gained carries it forward several rods before it strikes the ground with the thump so suggestive to a sportsman's ear; but a cloud of feathers are left behind that float and quiver in the still air as they slowly settle earthward. Slipping another shell into the gun I send the dog back into the sprouts, he having started for the dead bird; and he flushes another that gets up with a rush and flurry like the first, and my shot results as before. This proving to be the last, I go forward and find them lying but two steps apart. My dog stands over the last one shot, with his jaw placed firmly on the upturned breast, while the spasmodic beating of the wings shows the last flickerings of departing life. And as I look at them, the king of all our game birds, mingled with the exultation felt at their capture is a deep feeling of regret at the taking of such noble life. Carefully smoothing ruffled plumage I bag my birds and start in search of their companion, marked down in the woods. They are soon found and go into my pockets with the others. A gray squirrel that attracts my attention by leaping from tree to tree is added to my bag, and although it is but 10 A. M. I turn toward home, satisfied and well pleased with the morning's hunt. But my dog shows his displeasure, thinking it all too early to return. BON AMI.

AUBURN, Susquehanna County, Pa.

WHERE BRUIN NEEDS NO PROTECTION.

Editor Forest and Stream:

I see in a late issue of FOREST AND STREAM an article from "Ursus A." in regard to the protection of bear from hunters and trappers. Now I have been a bear hunter for the last fifteen years, and my father hunted them from the first settling of this part of the country until his death, in 1884—he being then in his seventy-ninth year. And in all the narratives given by him (and he certainly had as much experience with bruin as any man, living or dead), I never once heard him express himself other than that bruin was fully capable of taking care of himself. And I know from experience that such is the case. They breed at a season of the year (February) when every river and bayou is swollen so that it is impossible to hunt them. And in the summer, after the little fellows begin to follow the mother, it is impossible to hunt them on account of the heat. And as for hunting them in the fall and winter (the time that I always hunt), if my dogs have ever gotten after a bear that was not fully able to take care of himself, I don't recollect it; except, of course, a young one that was too fat to run.

As "Ursus A." says, "it is the grandest of sport," not by any means to be classed with any other hunting in this part of the country. I have chased them from morning till night. On one occasion I called my dogs off, it being too dark to follow any longer, and going back next morning, putting the dogs on his trail, still had an exciting chase of another half-day before he was killed. His skin is now in possession of an Ouachito River steamboat captain, who had it tanned and is now using it as a rug. I can also recall several hunts where the bear, after an exciting chase of hours, eluded both dogs and hunters, some dog returning with a leg broke, another with his ribs smashed in from a stroke with bruin's big foot, and most of the others hurt more or less by him. Oh, no, don't talk to me about protection for bear. Myself and company killed twenty-one last winter; and our score runs from ten to thirty every winter, and there seem to be as many as ever.

In regard to trapping, that is something that I know but little about; but from what I have seen I don't think the bears are in any danger of extermination from it. We are the only bear hunters in this section (I mean bear killers). And I know they are in no danger of extermination from us. W. R. OSBORN.

LOUISIANA.

AS SEEN BY A PESSIMIST.

BEHOLD, now, the Modern Sportsman as he goeth forth into the fields. He weareth apparel which is his glory; and in it are pockets large enough to bear away an ass's load of game. His weapon is his pride, and he puffeth himself up and saith: "What is there to contend in the fields against me, or what can stand before me in the forests?" And there is nothing; for lo! a squirrel he bloweth to flinders, and a bear, even the grizzly bear of the mountains, doth he make into particles; the deer of the forest he maketh into atoms; and molecules are the birds of the air before his face. He smiteth all living things as with a flame; with one weapon doeth he all these things, and the name thereof is the Best All-Around Gun.

The joy of the Modern Sportsman is his power to kill, and he goeth about making himself joyful. No man dare molest him, or stop him, or make him afraid; for he is an all-devouring pestilence on the face of the earth, and men flee from before him.

His anger is fearful. He snorteth in the valley and rageth on the hills; and on the pleasant fields his wrath doth wither the green things. His anger is enkindled against the small boy, and the farmers, and the rottenness of the law to restrain all but himself; and his name is Hog, having many prefixes. His tribe doth increase; he flourisheth as the green bay tree, and when he goeth to his long sleep many there be ready to take and fill his place.

And behold, although he destroyeth all beasts of the field, and all fish of the streams, and all birds of the air, and still sigheth for mightier weapons of death wherewith to slay all these, there is no man to rise up and seize him, and bind him for a term of years, wherein lieth the salvation of these beasts and birds.

But when the deer have fled forever from my forests, and the birds no more build their nests by my murmuring streams, and the fish have altogether gone from my waters, then will I arise and see what can be done about it, saith the Legislature. ED NOEL.

IN A HEAP OF LEAVES.—The morning of Dec. 1 rose cold and bright over the plains of the Mohawk, and after breakfast I prepared to go in search of the ruffed grouse in company with my brother. At length we had gone through quite a large woods without starting a single bird, and were coming out at a place where two fences met. In the corner lay a large heap or pile of leaves, blown there from the neighboring trees. We had just passed through an opening in the fence about 50ft. from the corner, when on looking back I saw my dog eyeing it wistfully. Supposing he had seen a chipmunk or red squirrel run on the ground, I spoke to him to "come." This he did not feel inclined to do, but moved a few steps nearer to the corner. Upon this I went back into the woods and looked the leaves over, but saw nothing that particularly attracted my attention. On a sudden impulse, however, I walked up and began kicking around in the leaves, and the next moment something akin to a crater belched forth in front of me. With a tremendous roar and a whirlwind of leaves a grouse rose out of the pile, and immediately after disappeared in the forest. My dog had disappeared also, and when I again saw him he was looking at me around a tree about 50yds. off. This incident nearly ended my hunting for that day, as my nerves were pretty well shaken up by it. Although the grouse sometimes takes refuge under the newly fallen snow in severe wintry weather, yet I have never, but on this occasion, seen one do so under a pile of leaves.—DORP.

A WORD FOR THE ENGLISHMAN.

Editor Forest and Stream:

I will not waste much of your valuable time, even if you are good enough to give me a hearing, but as a fellow sportsman, albeit an Englishman, I should like to call attention to one or two points in a rather important sporting book just published, entitled "The Big Game of North America."

For myself I have been long enough on this continent to find out that there may be such a thing as a good American, and it is just possible that among your readers there are those who believe with the Rev. Josiah Cooke that (in his own words, pp. 154) "after all Englishmen are as a class humane, and love fair play for man and beast."

That "after all" is delicious; for "after all" is it not just possible that some of that sporting instinct and love of fair play, of which Mr. Cooke is so fond, was inherited by Americans from the old English stock, from which they came and to which (in spite of all political drivelings) they in their inmost hearts are still proud to belong?

Mr. Cooke's indignation is stirred by a story which he tells at second hand of an Englishman "full of money," who was a "human fiend," in the habit of slaying all the game he could find and leaving it to rot, and whose supreme pleasure it was to torture a wounded beast by firing as many bullets into it as he could without killing it.

Now, that such a monster existed, except in the trapper's imagination, I beg leave to doubt. There is no semblance of probability about the last incident in the story, and if the trapper lied in part that renders the rest of his story unreliable.

But in any case is it quite giving "fair play to man and beast" to describe this butcher and then brand him "foreign" and label him "English?" There are some Englishmen who would hardly call an American a foreigner, and some Americans, perhaps, who would hardly care to be so called. But apart from that ought not this sporting parson of America to mix a little of the virtue of charity with his zeal in a good cause, and would it not be as well for the editor to produce proofs of his story before holding what all agree is a despicable character up to the world as a sample of a class with name and nationality attached, but neither of them proven?

One more word, sir, and I have done. It was not English lust for blood, but surely the desire of another race for dollars which wiped out the buffalo. They are not, I believe, English firms which are at present causing the destruction of the big sheep of the Northwest, by supplying every up-country trader with a list of prices to be paid for trophies (so much per inch round the butt of the horn), to be sold to would-be Nimrods, probably too fat to climb a foothill; and I think I can produce proof of the slaughter and exportation last year of 3,000 deer (hides only exported) from one small district by an American skin-hunter.

Finally, sir, I should like to call attention to Mr. Perry's story of elk shooting (pp. 66-68, of "The Big Game of North America"). In this the writer claims that on one day he killed eight elk and wounded another; that his companions killed three more, and that the weight of one of these elk was 800lbs.

I don't believe in calling men names who are perhaps 3,000 miles away from me, and unlikely to have a chance of answering as they would like to, so that on that ground alone I should refrain from imitating Mr. Cooke, but unless Mr. Perry has some strong reasons to allege for the killing of some score thousand pounds of meat, on one day, it is hard to see how he is to escape from the censure of any right-feeling sportsman.

Regretting that a book containing such articles as Dr. Rainsford's, and graced by such names as Van Dyke's, Caton's, "Coquina's," and J. Fannin's, should be marred by any such an unfair attack upon one of a nation which has done its utmost for a thousand years to uphold the truest interest of all manner of sport, I am sir, yours obediently, C. P. W.

WORCESTER, Mass.—One of the dailies report that A. L. Gilman, William Burgess, F. H. Davis, O. F. Ward and A. E. Ward returned yesterday from a hunting trip over the country at the head of the Machias River, Maine, bringing with them five carcasses of venison. The country hunted is near that on which the Maine game wardens, Hill and Niles, were assassinated a few years ago. Game of all kinds was found in plenty. Mr. Gilman brought down a buck weighing 289lbs. Big bags of game have been the rule the past week. A. W. Walls brought in 6 woodcock, 4 partridges, 2 quail, a gray squirrel and a great-horned owl as the result of a day's hunt. Milton Humes, of Oxford, shot 15 woodcock over Manchaug cover. Friday George Newton alone bagged 7 woodcock, 3 partridges and 2 quail. E. T. Smith and Vernon Prentice bagged 14 woodcock in one day's shooting.

NEW JERSEY GAME AND FISH PROTECTIVE SOCIETY.—A meeting of the Board of Directors was held at Plainfield, N. J., Nov. 5, for the purpose of electing a treasurer and to fill three vacancies in the Board of Directors caused by the deaths of W. B. Dunn, Martin W. Schenck and William E. Jones, the last named holding the office of treasurer at the time of his death, Oct. 10. President Percy C. Ohl presided. There were but three nominations, viz.: Gen. W. H. Sterling, W. H. Egbert and R. M. Stelle, who were duly elected. Mr. Randolph M. Stelle, the only nominee for treasurer, was unanimously elected. The society has been particularly active this season, and there was considerable business of importance to be transacted; but owing to the lateness of the hour the meeting was adjourned subject to the call of the president.

SPRINGFIELD, Mass.—Have found birds fairly plenty. Have received reports from quite a number of locations and all agree that this season is a very good one. Partridges are abundant, and in southern Massachusetts and Connecticut quail have not been so plentiful for years. Woodcock have also been plentiful, but owing to the mild weather the flight has been straggling, and in consequence the sport has been prolonged and a large number of birds have been bagged. As a rule quail were not well grown on Oct. 1, and even now many broods are hardly ripe. I notice the trout streams have plenty of water and the fish will have no trouble in reaching their spawning grounds.—SHADOW.

VERMONT WOODCOCK.—Bennington, Vt., Nov. 1.—We have killed our last woodcock for the season of 1890. As a rule, the hunting has been good—quite up to the average at least. We have bagged in all 98 woodcock and 32 partridges. The largest bag was 13 woodcock, 1 partridge; the smallest 1 woodcock. The hunters are Fred Godfrey, W. H. Bradford, H. C. Shields, John Davis and Seymour Van Santvoord.

A SUCCESSFUL HUNT.—Ironton, O.—George Hewland and myself in two days, Oct. 22 and 23, killed four wild turkeys, twenty-two squirrels and three quail; and caught four pike, one 35in. long, one 33, one 30 and one 28. How is that for a good time in camp? No telling what we would have done, but rain came and raised the creek; then we got disgusted and came home, but will try it over soon.—J. N. D.

IOWA GAME PROSPECTS BOILED DOWN.—*Scarce*—Ducks, geese, cranes, smiling shooters, water, last but not least, the market-shooters, as they have gone to other parts for their fall slaughtering. *Plenty*—Fine weather, idle retrievers, disappointed shooters, rabbits, squirrels and large stocks of loaded shells for the dealers to carry over. —WILLIAM H. STEELE (Forest City, Ia., Nov. 1).

NEW YORK GAME LAWS.—At the annual meeting of the Southampton Sportsmen's Club, held at Southampton on Saturday evening, Nov. 1, Messrs. Lawrence W. Clark and Edward Bell were appointed as delegates to represent the club before the commissioners appointed to revise the game laws of this State, at their meeting in Albany on Nov. 18 and 19.

THE COON HUNTERS shall have a page to themselves next week.

A VALUABLE COMPENDIUM.

DR J. A. HENSHALL, secretary of the Ohio Commission, says of the *Book of the Game Laws:* "It is a very valuable compendium, and should be in the hands of every sportsman and angler, and student of game protection. I would suggest that future numbers contain a digest of the most important decisions in cases of violations of game and fish laws in the different higher courts."

Mr. A. N. Cheney, of Glens Falls, writes: "I do not know as you will find any one who will more thoroughly appreciate your work, as I know from experience something of the magnitude of the labor, the difficulties and the vexation to bring the book to its present complete form. Everything is so plain and simple for him who turns the pages that few will understand the difficulties surmounted to make it simple of reference, and correct."

Sea and River Fishing.

THE FULL TEXTS of the game fish laws of all the States, Territories and British Provinces are given in the *Book of the Game Laws.*

"DON'TS" FOR AMATEUR TACKLE MAKERS.

DON'T omit to wax your tying silk well, using a resinous wax (not beeswax). A very good recipe is as follows: White resin 4oz., white wax ½oz., raw linseed oil 1 teaspoonful; melt together, pour into cold water, and pull as you would candy.

Don't tie a hook to imperfect gut; don't tie an imperfect hook to gut of any kind.

Don't omit to varnish all whippings with bleached shellac varnish.

Don't twist the ferrule of a rod when unjointing it—pull it straight away.

Don't make a splice too short when mending a broken rod. Each tapered end should slightly belly so as to fit snug when wound with the waxed thread.

Don't omit a flat wood-file and sandpaper when going fishing, also don't forget the silk, wax and varnish for whipping a broken joint.

Don't place a ferrule in the fire with the intent to burn out the wood; ream it out with a knife blade, if it takes an hour, in preference, for the reason that the ferrule will certainly lose its hardness and become as soft as paper if you heat it.

Do not omit to tie on the hook very securely in fly-making, bringing the whipping to within an eighth of an inch of the end of the shank. Don't forget to tie the head of a fly with two half-hitches at least, or the "invisible knot" if you know how to do it.

Don't clip a hackle, it spoils it. Don't cut a wing, but if it seems too long, pinch it off. Don't place the gut on top of the hook, but underneath—this makes a considerable difference to the coincidence or otherwise of the line of impact with the direction of force applied when striking a fish.

Don't use a dyed feather if one of nature's own dyeing can be procured. Few colors are absolutely fast or unfadeable.

Don't use cheap and nasty tackle. You must give a good price for good goods.

Don't omit to vaseline your reel occasionally. Black lead (plumbago) and vaseline form an excellent lubricant.

Don't attempt to knot gut without thoroughly soaking it. A little acetic acid in the water renders it very pliable.

Don't expect your feathers to escape moth and the worm unless you use naphthaline or pyrethrum. The buffalo moth is also specially destructive and must be carefully looked for.

Don't lay gut away in too warm a place or in the full daylight; it will be sure to perish if you do.

Don't use a frayed leader. Cut out the frayed part and rejoin. Leaders may be kept soft by placing between felt pads, wetted with glycerine and water, equal parts of each.

Don't forget to crush the end of the gut well between your teeth before whipping it to the hook. This proceeding prevents slipping.

Don't use hackles or feathers of any kind indeed from very old birds if it can be avoided. Young birds just mature provide the best feathers.

Don't use strips of feathers from one side of the bird only. Wings for flies are derived each from a different wing of the bird.

Don't omit to strengthen all bodies of flies made with peacock herl with a thread of silk or a length of fine gut. The herl alone "rags" out at the first fish.

Don't use a hook with too much metal in it. A heavy hook deters a shy fish from taking the lure.

Don't be careless about any detail in fly or general tackle making. Be sure your carelessness will find you out if you are guilty of it. Eternal vigilance is the price of good tackle making.

Don't disregard the superior qualities of the "eyed" hook. It is the hook of the future.

JONATHAN LACKTACKLE.

MORE ABOUT VERMONT TROUT.

THE communication in FOREST AND STREAM of Oct. 26 from "Lancewood," of Waterbury, Vermont, in regard to trout fishing, is to the point, and with most of it I am in hearty accord. The six-inch law is not enforced and the people are not educated up to believe in it. It is openly violated by a good many more.

I believe it to be a good law, and that it has had some effect in the increase and size of trout; but has done very little good to what it is capable of doing if enforced. The wet seasons for the last few years, with plenty of water in all our brooks, has done more to keep up the supply than the six-inch law as it now stands, but I think that it can be made more effective. Let the newspapers of the State give the subject some prominence in their columns; educate the people to believe in it, appoint wardens in every town who will enforce the law, and let it be known that it is to be enforced; have posters printed and put up in public places and on brooks giving the penalty for violating it, and let the people know there is such a law and some one to enforce it. As it now is, there are not half of them in the back towns who know the penalty, and many who do not know what the law is. Let the Legislature vote enough money for this purpose so the Commissioners will have a little to work with.

I do not agree with your correspondent about the talked-of State fish hatchery. It is just what we want. Vermont has been behind the other States in this matter long enough, but there is time now, if taken at once, to make her lakes, rivers and brooks worth many thousands of dollars to her citizens every year by drawing within her borders the angler and visitor from other States. By all means give us the State hatchery and enough money to keep it running.

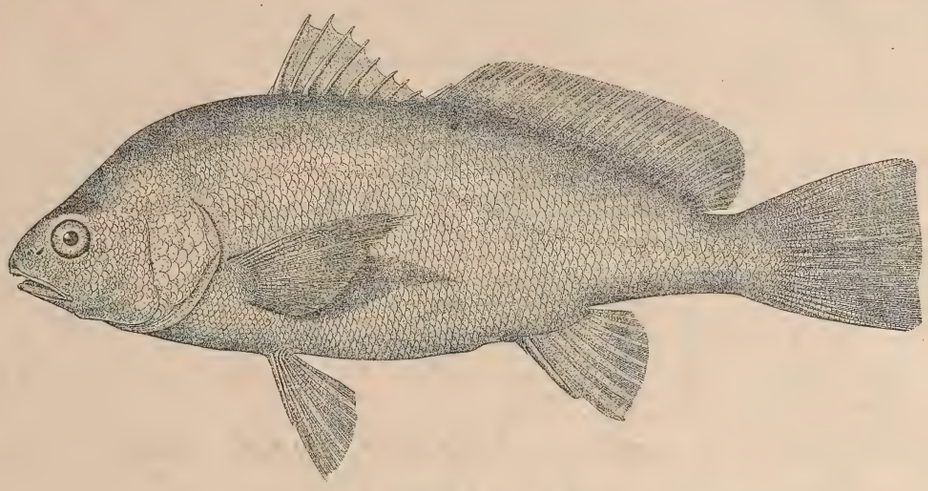
I also think that the law as it now stands, from April 1 to Aug. 1, is better than to make it from May 1 to Sept. 1. There would be more trout caught in August than in April and we can hardly afford this at present. When the streams are better stocked by all means give us August, as that is the month in which we would draw more people here to spend their vacation. Cut off April if you wish, but do not open August for a year or two. Let the people wake up on this subject; and by the way, let the Commissioners have a little more "git up and git" to them than they have had for the last few years. I am pleased that they have waked up enough to recommend to the Legislature that we have a State hatchery, and if I mistake not they have always opposed this in the past. But I hope they will now go forward with the good work with a little more push and energy. OMPOMPANOOSUC.

BLIND FISH FROM A WELL.

ON Sept. 23, 1890, Mr. W. F. Page, superintendent of the Neosho Station of the U. S. Fish Commission, sent to Col. Marshall McDonald, Commissioner, a living blind fish from the town of Neosho, Mo. Unfortunately the fish did not survive the journey to Washington, and it was preserved in alcohol and referred to Dr. Bean, the ichthyologist of the Commission, for identification. It proves to be a specimen of *Typhlichthys subterraneus* of Girard, which was described in 1859 from underground streams of Alabama, Kentucky and Tennessee. The Neosho specimen, wrote Mr. Page, was obtained from a well which is supplied by a strong vein of water, supposed to be a tributary of one of the many large springs of the region. Several of these fishes have been drawn up from wells of similar character in the vicinity of Neosho.

Typhlichthys is derived from the Greek *typhlos*, blind, and *ichthys*, fish. It is one of two known forms of little fishes with rudimentary eyes, concealed under the skin, which live in subterranean streams in the limestone regions of certain Western States. The body of these creatures is translucent and pale in color, and covered with small scales. The head is crossed by numerous ridges, which are organs of touch, and the fish are found to be quickly dispersed by any disturbance of the water in which they stay. Profs. Putnam, Cope and Garman have published accounts of their habits which are very interesting. Efforts will be continued to bring them under observation in the aquarium of the U. S. Fish Commission.

SMALL BOY AND BIG FISH.—Westfield, Mass., Nov. 7.—This morning a colored lad by the name of Shipley captured a 11lbs. carp under very peculiar circumstances. He was out gunning for ducks upon a small reservoir that supplies one of our paper mills with a portion of its motive power. The lad passed up the pond to a small brook which is a feeder to the reservoir. He had gone but a short distance up the brook when his attention was called to a large fish endeavoring to reach the water in the pond below. The boy's first impression was to shoot the fish, but on second thought he seized a club and struck the fish a couple of blows that disabled it. He then brought it to land and carried it, still struggling, to the mill, but no one there recognized the stranger, so he brought him to town and placed him upon exhibition in Mr. Lewis's gun store, where the fish was at once recognized as a German carp. It weighed 11lbs., measured 27in. in length, 18in. in girth. It was upon exhibition during the day. It attracted, mystified and surprised our local anglers and the general public. This leviathan is the result of the stocking of a small pond with German carp some five years ago, and the brook that fed this mill pond also supplied the pond that these carp were placed in, and this fish probably came down the brook into the pond and had been there undisturbed. It was truly a royal fish and shows what can be done in the direction of stocking ponds.—WORONOCO.



THE FRESH-WATER DRUM.

ONE of the commoner fishes of the Ohio and Mississippi valleys and the Great Lakes is the subject of our present sketch—a species known under many names and held in variable repute. In the Ohio Valley it is called the white perch, although not a member of the striped bass family and resembling the white perch only remotely. Another misapplied name for the fish is that of lake sheepshead, from a supposed resemblance to the well-known marine species of *Pogonias*. At Buffalo and Barcelona, N. Y., it is called black sheepshead. In lakes of northern Indiana the name crocus is associated with the fresh-water drum, and this is a corruption of croaker, which belongs to a small marine fish of the same family. It is in the Southern States that the name drum is applied to the species, and the same region furnishes the additional terms thunder-pumper, gaspergou and jewelhead. Gaspergou is current in Arkansas, Louisiana and Texas. The names drum, croaker and thunder-pumper are based upon the sounds produced by the fish in some unexplained way, some writers supposing them to arise from the grinding together of the large molar-like teeth in the pharynx, while others believe that the large and muscular air bladder is concerned in the operation. The term jewelhead is probably related to the presence of ear bones of curious shape and markings, better known to some of us as "lucky stones." According to Mr. Albert Turpe, of Brackettsville, Texas, who has recently sent a specimen to the Smithsonian Institution, it is known among the Mexican population in his vicinity as the "gaspagie," which is a variation of gaspergou.

We have already indicated the range of the fresh-water drum in a general way. It was common in Lake Champlain in 1842, according to Thompson ("Natural History of Vermont"). Mr. Turpe says it is rare in western Texas. He has made extensive observations in the wilds of Texas, New Mexico and northern Mexico, and has found the fish only in clear limestone streams emptying into the Rio Grande. The species seldom enters small streams, and it is for the most part a bottom fish.

The fresh-water drum feeds principally upon crustaceans and mollusks, occasionally varying this fare with fishes of other kinds. Crayfish are especially liked, and such shells as *Cyclas* and *Paludina* are mentioned by Richardson among its stomach contents. Mr. Turpe says that its food includes water plants and it will take a hook baited with a worm or a small minnow.

The fish reaches a length of 4ft. and a maximum weight of 60lbs., although market specimens seldom exceed 2ft. in length and smaller examples are preferred. We know nothing about its breeding habits notwithstanding its wide distribution and great abundance. It seems that the common fishes, apparently known to every one, are really little more than a shape and a name to most of those who are making fish literature, and it is to be regretted. Here is where anglers can fill a void out of their rich and varied experience by simply recording the common occurrences falling within their notice.

THE FRESH-WATER DRUM.

There is a great difference of opinion among authors as to the edible qualities of the fresh-water drum, and a great deal depends, it seems, on the character of the water in which it lives and the nature of its food. Dr. Jordan has the following concerning it:

"Although from its size and abundance it becomes an important market fish, it cannot at best be considered one of high quality. Its flesh is tough and coarse in fiber, and often of a disagreeable shark-like odor, particularly in the Great Lakes, where it is never eaten. The flesh of partly grown specimens is better than that of the adult." Thompson, in the "Natural History of Vermont," 1842, speaks of the fish in Lake Champlain as "lean, tough and bony, and seldom eaten." De Kay (1842) writes: "Unlike the sheepshead of the ocean it is [in Lake Erie] a poor, dry and tasteless fish, and is scarcely ever eaten." De Witt Clinton in 1815 speaks of the Lake Erie fish as a very ill-tasted one. Thompson, however, was informed that the fish taken from the Ohio River are fat, tender and well flavored. Jordan admits that its qualities improve to the southward. The writer can testify to the fairly good qualities of small examples from the Ohio. Mr. Robert Ridgway, ornithologist of the National Museum, has found it to possess excellent table qualities in Wabash River, Indiana, although other persons in the same locality considered it an inferior fish. Sir John Richardson gives the following account of the species under a name which we have not before introduced. It is believed that the malashegany is merely a deformed specimen of the fresh water drum; the name is credited to the Cree Indians:

"The malashegarie inhabits Lake Huron. It is taken in the Georgian Bay, on the north side of that lake, during the summer months, in gill nets set in deep water, or by hooks baited with worms. It feeds much on crayfish. It is a firm, white, well-tasted fish, but never fat, and requires much boiling. It is called sheepshead by the Anglo-Canadians, probably for the reason that the same appellation is bestowed on the *Sargus ovis* (salt water sheepshead) in the United States, viz., from its having an arched nose and 'some smutty shades of color on the face.' I can bear testimony to its excellence as an article of food, in which respect it may be compared to the turbot of Europe."

Mr. Turpe considers the fish, in the clear limestone streams tributary to the Rio Grande, as undoubtedly one of the finest flavored of the food fishes, comparing favorably with brook trout and black bass. He states that it can usually be fried in its own fat, which has a sweet taste. This is the story of the extreme variations of opinion concerning the qualities of a well-known species and it shows that a fish, like a person, even with the best intentions, can not please every one.

AUREOLUS.

SUNAPEE LAKE, N. H., Nov. 3.—*Editor Forest and Stream:* The controversy regarding the *aureolus*, or golden trout, is settled, or seems to be. Hon. Walter Aiken, of Franklin Falls, N. H., and myself visited Dan Hole Pond last week together. While there we captured four trout of the kind known as *aureolus*, and thus the fact that they exist in waters other than Sunapee Lake is established. Dan Hole Pond is beyond the second divide from the lake; in other words, counting Sunapee Lake as one, Dan Hole Pond is on the third water-shed from here. Sunapee Lake finds its way to the ocean through the Connecticut River; the next water-shed is drained by the Merrimac, while the waters of Dan Hole Pond eventually form a part of the Saco River.

Deeming the question at issue of general interest, I inclose herewith, for publication, a copy of our report to Col. E. B. Hodge, Commissioner, by whose authority and through whose courtesy we were enabled to conduct our investigations. FREDERIC M. DEY.

[*Copy.*]

REPORT OF INVESTIGATION AT DAN HOLE POND, MADE BY WALTER AIKEN AND FREDERIC M. DEY.

DAN HOLE POND, Carroll Co., N. H., Oct. 30.—E. B. Hodge, Esq., of the Game and Fish Commission of New Hampshire.—SIR: Acting in accordance with the instructions and directions furnished by you upon our solicitation, and for the purpose of settling a vexed question, we are now at Dan Hole Pond. As our work is done, our purpose accomplished, and as we are about to leave for home, we beg to submit the following report:

We reached this pond after dark, Monday evening, Oct. 27, beneath a cloudy sky and in half a gale of wind, which rendered a visit to the water that night utterly impracticable. However, we improved the time of enforced idleness by questioning our host about the peculiarities of the pond, its depth, temperature and the fishes it contained. He remembered the locality where two of the trout (*aureolus*), of which we were in search, were speared a year ago by a person acting upon your orders. He saw the man at work the night the trout were procured, knew the spot and was therefore able to provide us with the desired information. During the conversation he confided to us a number of reminiscences regarding the trout of the pond, and listening to him we became convinced that our trip would be successful.

On the following morning (Tuesday, Oct. 28), soon after daylight, we made our first attempt to find the fishes in question. The pond was very rough, there being a heavy northwesterly wind blowing; but we reached the spawning ground, anchored and began casting our spoons. For an hour or more we continued our exertions, our spirits emulating the temperature of the day, which was steadily getting lower. At last, however, when our hands were so cold that it was difficult to distinguish an oar from a fly-rod by the sense of touch, we saw a trout—a small one, to be sure, not over 8in. in length, but a trout.

Somewhat cheered we went ashore, sought the seclusion of the woods and built a fire where we soon warmed ourselves back to confidence and determination, notwithstanding the fact that a steady and pelting rain had settled in, apparently "for keeps."

Again to the boat and to the casting of our spoons, this time, however, minus all encouraging details; and then to dinner. After dining, the aspect of the weather was most discouraging. Rain descended in sheets and the wind blew a veritable gale. On the mountains around us, within rifle shot, snow was falling, putting its winter cloak upon rocks and trees, and we were content to remain indoors and while away the time in smoking. But a stern fact confronted us. The net (which you had provided for our use) must be set. Reference was occasionally made to the threatening duty, followed by a natural shudder of apprehension.

At three o'clock we went forth in the storm armed with the net alone, and were blown (rowing was a superfluous exertion going that way) to the spawning ground. There we put out the net (A simple statement of fact, but a task as difficult under the circumstances as the seven labors of Hercules combined; to describe the operation would be to create a "corner" in stationery) by fastening one end to a pole on the shore and anchoring the outward extremity in eighten or twenty feet of water.

Darkness (of the genuine type) had fallen by the time our task was finished, and the necessary outlay of exertion consequent upon our return can be better imagined than described. We were obliged to go directly against the wind, the night had become simply black and the exact locality of the place where we were obliged to land, if anywhere, was delightfully vague; so vague, indeed, that we spent nearly an hour searching for it.

The following morning (Wednesday, Oct. 29) we were up betimes, and, as soon as breakfast was dispatched, on our way to inspect the net. The weather was somewhat better; very cloudy, but minus both wind and rain; the pond was nearly calm.

At last the net was reached, and a quick inspection was followed by a ringing shout of joy and mutual congratulations between the signers hereof. The net contained three fishes. One was a pickerel. *The others were trout exactly resembling those seen by us at the hatching house, Sunapee Lake, and known as the* AUREOLUS, *or golden trout.*

Both were "jacks," and weighed (estimated) 3lbs. each.

Our wish was to secure four specimens, so we left the net where it was and again had recourse to our spoons. While we were casting, a third trout of the same kind, with the same gaudy coloring, was seen by us near the net, but could not be captured.

Snow began to fall and dinner time drew near. We decided to leave the net where it was and troll around the pond on our way back.

At a distance of about fifty rods from the net, going east, a female trout of the same kind, weighing (estimated) not less than 5lbs., was captured by Mr. Aiken.

We visited the net again just before dark, but it was empty.

This, the ensuing morning (Thursday, Oct. 30), we reached the net very early. It contained one fish, which was a "jack" trout exactly like those captured the previous morning, only smaller. Weight (estimated), 1¾lbs.

Our work is done. We have accomplished the purpose for which we came to the pond. We have proved beyond the peradventure of doubt that trout known as *aureolus* do exist in waters other than Lake Sunapee. It is our mutual pleasure to congratulate you upon this incontrovertible fact.

Our team is at the door. The weather is frightful. Will conclude report later.

Same Day, 5 P. M.—Franklin, N. H.—We reached Meredith Village at noon. The trout were packed under our supervision at the store of Mr. Beede, in Meredith, and were delivered by us to the express company.

Two—the female and one of the "jacks"—were sent to Dr. T. H. Bean, Smithsonian Institution, Washington, D. C.; one was forwarded to Prof. J. D. Quackenbos, New York city; the other—the smallest—was sent to you.

We are prepared to make affidavit to all of the foregoing at any time. Very truly yours,

WALTER AIKEN.
FREDERIC M. DEY.

[Under date of Nov. 7 we learn from Hon. Walter Aiken that the *aureolus* or golden trout have probably finished spawning. He and Col. Hodge were at Sunapee Nov. 6, which was a warm and perfect day, and saw only a few trout on the Loon Island reefs. Mr. Aiken has in mind one or two other New Hampshire ponds in which he believes the golden trout exist.]

VERMONT TROUT AND PERCH.

Editor Forest and Stream:

It is exceedingly gratifying to the pioneers in game and fish protection to note that the seed sown during the past decades has not been unfruitful, but is likely to bring forth in the end abundantly. The action recently taken by the Province of Quebec Fish and Game Protection Society, to stop net-fishing in Missisquoi Bay, is a step in the right direction, and will be a public benefit to the public both sides of the "line," Vermont as well as Canada. The Vermont "Fish and Game League" is another movement that should be encouraged and helped onward by every true Vermonter. It was the writer's amendment to the Vermont fish law that several years ago gave her Fish Commissioners $2,000 a year to assist them in carrying on their work, and we wish that the amount would be largely increased this year, as the Commissioners' report proves that they have made good use of the money granted them. While there is much in their work deserving the highest praise, there is one action that deserves the severest censure, that is in recommending "yellow perch" as a desirable fish to stock Vermont waters. What weakness, to think of polluting the clear waters of the Switzerland of America with the bony, detestable vermin—the spawn-eating yellow perch. A single perch, if given the opportunity, will daily destroy hundreds of young fry of the trout and other game fish. Any person who would seriously harbor such thoughts against Vermont waters deserves to be made to fish for pumpkin-seeds in a mud hole with a pin-hook during the remainder of his days. There is too much selfishness among sportsmen and fish and game protectionists, who instead of working for some private purpose, should work for that which will be of the most benefit to the general public. We trust that the present law makers of Vermont will make it a penal offense for putting perch into waters that they are not already in—for when once such vermin get into a stream or lake they are a curse to those waters for all time—not for a month or a year, but forever. STANSTEAD.

AKRON, Ohio, Nov. 4.

SYRACUSE ANGLERS' ASSOCIATION.—A brief meeting of the Angler's' Association was held in the rooms of the Business Men's Association last week, at which the good work which the association has been doing to check the depredation of the fish pirates in Oneida Lake and its tributary waters was talked over in a general way. The association has a record of 103 nets captured and destroyed since Sept. 1. Within the past four weeks it has instituted suits against 16 violators of the game laws. The war on the fish pirates has been carried on by Deputy Sheriff Harrison Hown, of Cicero, working under the directions of the association. All the members of the association speak highly of the business-like way in which Mr. Hown has gone about this work. The association hired a small steamer and placed it at his disposal, and he has gone up and down the lake day and night dragging for the nets of the illegal fishermen. The association has been considerably agitated the past week by the news of the removal of Chief Game Protector Fred P. Drew, of Washington Mills, and the resignation from the Fish Commission of Hon. R. U. Sherman, of New Hartford. Mr. Drew was removed by the Fish Commission, which has so far seen fit to withhold from the public any reasons for such removal beyond the mere assertion that Mr. Drew was not working to further the best interests of the Commission. Many plain letters upon this have been sent members of the Commission by prominent anglers of this city, and they propose to get at the bottom facts of the matter, if such a thing is possible. The resignation of Mr. Sherman from the Fish Commission is deeply deplored by the Syracuse anglers. Mr. Sherman is a man of wealth, and he spent large sums of money annually in stocking and protecting the fishing waters of central New York. But notwithstanding these disappointments the Anglers' Association of Syracuse proposes to go right along with the good work of protecting the fish in the waters readily accessible from this city. A petition containing the names of all the prominent citizens in Syracuse will be sent to the Fish Commission this week, praying for the appointment of a game protector in this city who shall work under the direction of the Anglers' Association. Mr. Drew has been assigned to duty in the Oneida district, where it is thought his efficient services will be of great value to the anglers of this city, as Oneida Lake is in that district.

TROUT AND DEER IN THE ADIRONDACKS.—A veteran correspondent writes: "I should like to meet the game law committee, for I think that after thirty-eight years in the Adirondacks every summer I could give them some points, but you can do it for me. I should for five years stop entirely transportation of deer and trout from the woods comprising the Adirondack section. Also stop buoy fishing, which is almost as destructive to trout growing as set lines. I should increase greatly the penalty on the set line business, and would also greatly increase penalties, both as to the least infringement of laws relating to law breaking as regards trout and deer. Also would add penalty to express companies taking any box out unless they know its contents. Please call attention in your paper to the above suggestions. Of course some, yea many, will decidedly object. I have seen painfully the decrease of trout especially, and think the above simple addition to the laws would save the above game wonderfully."

COD FISHING AT EASTPORT, MAINE.—It has been many years since the fishing was as good in our harbor as this season. The catches of the past week have been something extraordinary. At high water Saturday there was great sport fishing off some of the wharves. At the International Wharf Mr. Pine took advantage of a few spare moments and pulled in 25 deep sea cod. At the Government Wharf men and boys made a great catch, and in fact there was good fishing all along the wharves. What has caused the deep-sea cod to strike in close to the American shore, right in our harbor here, in such immense schools, the like of which was never known before, the oldest inhabitant is unable to tell.—*The Eastport Sentinel*, Oct. 29.

Fishculture.

MAINE FISHCULTURE.

Editor Forest and Stream:

In reading your account of the progress of fishculture in New Hampshire, I am led to give a brief account of what we have done on a small scale in Maine. Lake Auburn is in the city of Auburn, and contains about 20,000 acres of clear, pure water, with a maximum depth of 110ft. It is largely fed by springs and has long been known as a favorite resort of the brook trout (*Salvelinus fontinalis*). Large quantities of spawning trout have been taken every fall from the tributaries and shore spawning beds. No successful effort has until this year been made to stop spearing and illegal captures. Through the efforts of our fish commissioner, Mr. Henry O. Stanley, and others interested in protecting and stocking this beautiful lake, we have made a beginning which has thus far yielded excellent results. We have organized under the title of the Lake Auburn Fish Protective Association, with a membership of 200. Nine hundred dollars has been raised by private subscription. Weirs have been put in and a comfortable house built on a tributary to the lake. We have employed three men during the season thus far, to take care of the trout and provide for the hatching of the eggs. A hatching house is nearly completed at East Auburn with a capacity of a million eggs. We have now more than 400 trout and two landlocked salmon in our weirs.

I was informed last week that the work of taking the eggs had fairly begun, with a most gratifying result. Thirty-four trout yielded 99,000 eggs, as measured on the trays. Mr. Arthur Merrill, who has charge of the stripping, informs me that the actual count may be possibly 20 per cent. less, which would give not far from 2,400 as an average for a trout. I shall try to give you later the actual number taken. Our salmon are females, and it is proposed to fertilize their spawn by milt from Sebago Lake if we are not fortunate enough to take a male salmon. Great interest has attended our efforts thus far, and we are backed by a healthy public sentiment. Those who have been accustomed to take trout illegally seem disposed to aid the work. No aid has been received from the State, except through the efforts of Mr. Stanley. He has done all he could to encourage and advise, but has not been able to aid us financialy. He has promised to supply our hatchery with landlocked salmon eggs from the State hatcheries, and he will do all he promises.

I ought to especially mention in connection with our work the efficient and painstaking labors of Mr. Wight, who was selected by Mr. Stanley to take charge of the work. I am unable to give at this time his full name, but a man is known by his works, and they are good. A. G. WHITMAN.

MELROSE, Mass.

The Kennel.

All communications must reach us by Tuesday of the week they are to be published; and should be sent as much earlier as may be convenient.

FIXTURES.

DOG SHOWS.

Dec. 30 to Jan. 3, 1891.—First Dog Show of the Buckeye Poultry and Pet Stock Association, at Canton, O. James Sterling, Sec'y, 39 North Market street.

1891.

Jan. 13 to 17.—Third Annual Dog Show of the South Carolina Poultry and Pet Stock Association, at Charleston, S. C. Benj. McInness, Jr., Secretary.

Jan. 20 to 25.—First Annual Dog Show of the Louisiana Poultry and Pet Stock Association, at New Orleans, La. A. E. Shaw, Secretary, Box 1658.

Jan. 20 to 25.—Dog Show of the Georgia Poultry and Pet Stock Association, at Augusta, Ga. A. H. Vonderleith, Secretary.

Jan. 21 to 26.—Dog Show of the Elmira Poultry and Pet Stock Association, at Elmira, N. Y. Carl Hart, Secretary.

Jan. 27 to 30.—Inaugural Dog Show of the South Carolina Kennel Association, at Greenville, S. C. F. F. Capers, Secretary.

Feb. 24 to 27.—Fifteenth Annual Dog Show of the Westminster Kennel Club, at New York. James Mortimer, Superintendent.

March 3 to 6.—Second Annual Dog Show of the Maryland Kennel Club, at Baltimore, Md. W. Stewart Diffenderffer, Secretary.

March 10 to 13.—First Annual Dog Show of the Duquesne Kennel Club, at Pittsburg, Pa. W. E. Littell, Secretary.

March 16 to 19.—Inaugural Dog Show of the Washington City Kennel Club, at Washington, D. C.

March 24 to 27.—Second Annual Dog Show of the Massachusetts Kennel Club, Lynn, Mass. D. A. Williams, Secretary.

March 31 to April 3.—Seventh Annual Dog Show of the New England Kennel Club, at Boston, Mass. E. H. Moore, Secretary.

April 1 to 4.—Fourth Dog Show of the Cleveland Kennel Club, at Cleveland, O. C. M. Munhall, Secretary.

April 8 to 11.—Third Annual Dog Show of the Mascoutah Kennel Club, at Chicago, Ill. John L. Lincoln, Jr., Secretary.

Sept. 1 to 4.—Dog Show of the Youngstown Kennel Club, at Youngstown, O.

FIELD TRIALS.

Nov. 17.—Twelfth Annual Field Trials of the Eastern Field Trials Club, at Otterburn Springs, Va. W. A. Coster, Saratoga Springs, N. Y., Secretary.

Dec. 1.—Second Annual Field Trials of the Central Field Trials Club, at Lexington, N. C. C. H. Odell, Mills Building, New York, Secretary.

1891.

Jan. 19.—Eighth Annual Field Trials of the Pacific Kennel Club, at Bakersfield, Cal. H. H. Briggs, Secretary.

Feb. 2.—Third Annual Field Trials of the Southern Field Trials Club. T. M. Brunby, Secretary, Marietta, Ga.

ROBINS ISLAND CLUB'S FIELD TRIALS.

LAST Friday was commenced and finished the ninth annual trials of the club named. Such rapidity in the running of a field trial is something marvelous. The conditions were such that it was possible. In no other place, at no other trial could such celerity be attained. Three or four things added together made one of the greatest successes of this ninth annual trials of the clubs. First, the weather was of the most charming description. Everything worked in favor of the dogs and their owners. Skies were clear, the air was cool to frostiness, the scent was strong, the birds were in greater number than ever before, and the dogs themselves, that is the larger number of them, had been worked for some time by the professional trainer now on the island. Greatest of all, however, was the system adopted by the Robins Island Club for the government of its field trials. Here the dogs are judged by a scale of points. The dogs are run together in braces, not one as against the other, but for the purpose of expediting matters. Thus there are no long series of heats in which the winning dogs are run against one another until all are weeded out, save one. Here, the moment the allotted time has expired, the dog has finished. The element of luck comes in, of course, but the judges can at their option, and if they deem it necessary, allow an animal a longer chance to show of what character his field work is.

Friday evening saw assembled at the club house the more enthusiastic shooting men of the club. First and foremost, Dr. S. Fleet Speir, who was the originator of the club; S. B. Duryea, who has worked side by side with the Doctor in all that would help to further the sportsman's interests in club matters. W. M. Van Anden, one of the younger men, but heart and soul with anything that tends to the improvement of Robins Island as a game preserve. William Stanley, a thorough shooting man and dog lover, a member of but few years standing, but ready at any time to help the trials by making entries and running his dogs. E. W. McClave, another of the new men, unable to be present himself, authorized Dr. Speir to enter and run his setter bitch Josephine. Many of the well known men were absent. Alden S. Swan, the winner of last year's All-Aged Stakes, with his Irish setter dog Berkley, was unable to be present. H. W. Polhemus and Chauncey Marshall, two of the most ardent sportsmen in the list of members, were off shooting redheads and canvasbacks on the Chesapeake. W. L. Wellington, the genial and kindly secretary of the club was at home ill with some pulmonary trouble, while Bullard, who has been at almost every trial, was away. Those present, nevertheless, made up in enthusiasm what they lacked in numbers.

The island was reached by the correspondent of the FOREST AND STREAM on Thursday afternoon. The day was fast closing, and as the light waned, man after man came in with his dogs and happy in the possession of a goodly number of birds. Among these fortunate ones were Judge Pratt, W. M. Van Anden, G. Walter Green, S. B. Duryea, W. Stanley and Dr. Speir. They one and all reported the quail in greater number than ever before, but extremely wild and wary. Judge Pratt had put up some 40 birds, yet never got a point on one, all his kills being quick shots as the birds rose wild before him.

Immediately after dinner and while enjoying the post prandial tobacco, Dr. Speir referred to the illness of Secretary Wellington and asked that Mr. Jacob Pentz accept the entries and attend to the drawing of the dogs. This was at once acceded to, and in less time than it takes to write it, the following dogs were entered for competition in the different stakes:

ALL-AGED STAKES—ENGLISH SETTERS.

ST. ELMO IV. (S. Fleet Speir, Brooklyn, N. Y.), black, white and tan (champion St. Elmo—Clio), 8yrs.

BELLE RAPIER (S. Fleet Speir), blue belton (Count Rapier—Dell), 3yrs.

TARDY JACK (S. Fleet Speir), orange and white (Ned—Maida II.), 18mos.

BELLE (W. M. Stanley, Englewood, N. J.), blue belton (pedigree not given), 4yrs.

BINSSE (W. M. Stanley), black, white and tan (Count Fritz— ——), 3yrs.

GREY (W. M. Stanley), blue belton (pedigree not given), 4yrs.

NED (S. B. Duryea, Brooklyn, N. Y.), blue belton (Blunder—Fannie), 5yrs.

JOSEPHINE (E. W. McClave, New York city), black and white (Count Rapier—Dell), 4yrs.

IRISH SETTER.

RHEUMA (Wm. M. Van Anden, Brooklyn, N. Y.), (Diedrich's Tip—Spower's Grace), 3yrs.

BRACE STAKES—ENGLISH SETTERS.

BELLE RAPIER (Dr. S. Fleet Speir), (St. Elmo IV.— ——),

RHEUMA AND GOUT (Wm. H. Van Anden).

BLUE AND GRAY (William Stanley).

IRISH SETTER.

GOUT (Massey's Duke—Pratt's Daisy), aged.

DERBY—ENGLISH SETTERS.

NAPOLEON (S. B. Duryea), blue belton (Ned—Lulu), 7mos.

FEATHERS (S. B. Duryea), blue belton (Ned—Maida II.), 18mos.

TARDY JACK (Dr. S. Fleet Speir), orange and white (Ned—Maida II.), 18mos.

CHUMP (Irish setter), (pedigree not given), 12mos.

After these entries had been taken the following letter was read:

NEW YORK, Nov. 6.

Officers of the Robins Island Club:

GENTLEMEN—Your committe, appointed for the purchase of field prizes, beg to report as follows: We have sent you to-day by express one solid silver flask and cup, which is to be first prize in the All-Aged Stakes; a leather box for holding shells, to be the second prize; a leather gun case, lined with oak, to be the first prize in the Derby, and a nickle-plated revolver second prize in the same stake. The first prize in the Brace Stakes will be a solid silver coupling chain. This will be a donation from your humble servants. The second prize in the Brace Stakes, a leather gun case. Your committee trusts that you will be pleased with the prizes, some of which will be found inside of the large gun case. We feel neither one of us will be able to be on hand at the trials, but wishing you success and a brilliant future, we remain very respectfully yours,

CHAUNCEY MARSHALL, ALDEN S. SWAN, } Committee.

The prizes were displayed in the main reception room and were the subject of much admiration. Then followed the drawing for the order of running. It resulted as given below. It must be remembered that the dogs are simply run in braces to get through the trials expeditiously. They are not one as against the other, but each dog is judged by his own performance. The drawing was as follows:

ALL-AGED STAKES.—Belle Rapier and Gray, Ned and Josephine, Rheuma and Blue, Tardy Jack and Binsse, St. Elmo IV. a bye. According to the rules governing these trials, the bye dog is run in company with a dog selected from among those at the kennels.

BRACE STAKES.—St. Elmo IV. and Belle Rapier, Gout and Rheuma, Gray and Blue, with the privilege of substituting Binsse in place of Gray, the latter having much tail action, had whipped it raw for several inches from the tip.

THE DERBY.—Chump with Feathers, Tardy Jack with Napoleon. By this time the evening was fast approaching another day; so, mindful of the morrow's work, couches were sought and with them that restful sleep so dear to wearied men.

The morning dawned clear and beautiful. So heavy had been the fall of dew that it hung drippingly from every twig, from every blade of grass. In a strong light it was white as a November frost. Breakfast was had at an early hour. Rubber boots were in demand, for no leather ever made would prove impervious to the searching quality of that dew. Eight o'clock saw every one on the move and the first brace in coupling, with the trainer, Harry Glessing, in charge. Right well did he see to the bringing up of the dogs. When a brace was ordered up, there he was, ready with the next. In no case was there delay. He seemed to know by instinct when and where to be with the change of dogs. This conduced much to the rapid running of the trials. Never was a better run trial, from start to finish everything moved along like clockwork.

ALL-AGED STAKES.

GRAY AND BELLE RAPIER.

These were the two first put down to inaugurate the Ninth Annual Field Trials of the Robins Island Club. W. Stanley handled his Gray, Dr. Speir his Belle. Cast off at 8:35, they were hunted over the open rolling fields to the east of the club house. Nothing found. Reaching the low bluffs at that side, the dogs were sent down to the one hundred acres of tall sedge grass lying under the bluff. Scarce in when Stanley claimed a point for Gray, running up to flush, nothing was found. Ordered on, the dogs hunting from north to south, Gray again came to a point by the side of a little clump of bushes which rose from the otherwise dead level of the field. Stanley again claimed the point. Ordered to flush the bird, for the second time no bird was found. The sedge field yielding nothing, a move was made along the edge of the bluff where grew a little fringe of low blackberry bushes. After running along this bluff a few rods, Gray pointed stiffly. The party was called up to see the point and Belle was called up for a back. The noise started the birds and they flushed wild, scattering in every direction. Gray steady to wing. Stanley put his gun to his shoulder and pulled hard first one trigger then the other. There came no response, and examination showed the "safety" of his hammerless had slipped back. On again for a few yards, when a single bird flushed some distance ahead of Belle. Bitch steady to wing. Getting to the ice pond a hare bounced from her form and scurried off for safer surroundings. Acting on impulse, Dr. Speir shot at it. Both dogs steady to fur and shot. Belle was then hunted along the fringe of woods at the east side; Gray along the bluff or near it on the west, the judges occupying an intermediate position, where the action and working of both dogs could be observed, and the general direction a southerly one. Of the two, the work of Gray was the more stylish. Gray now and then did a bit of roading, but never fairly established a point. The Devil's Kitchen, that place of briars, thorns, water and "cuss words" reached, here Gray roaded in slowly and carefully, came to a pool of water and was lapping it, when up bounded a quail flushing wild to left of dog. Stanley with a quick snap shot killed it. Gray perfectly steady to shot and to wing. Ordered to retrieve, he did so in elegant fashion. Then a move in for a few yards and Gray pointed nicely. Bird flushed but not shot at. Belle had the bad luck of the birds. Dogs taken up at 9:40, having been down an hour and five minutes.

JOSEPHINE AND NED.

Josephine, handled by Dr. Speir, for her owner McClave, Ned handled by his owner, S. B. Duryea. No time was lost, for at 9:45 the dogs were started. Around the thicket of the Devil's cooking apartment to the left, hunting in northeasterly direction. Here Josephine found the birds and pointed staunchly. Ned called up for a back, came along at race-horse speed, caught the scent for himself, dashed past the bitch and jumped a handsome bevy of birds, chasing them a few rods, when they flushed. Josephine steady amid all the excitement of flushing, shooting and bad example. Jo' soon got another point. Belle called up for a back, as was also Gray, both did so in handsome fashion. Bird flushed and nicely killed by Dr. Speir, using a little 20-gauge gun. Jo' ordered to retrieve, failed. Moving now due south Ned, strong and fast, ran on and put up another nice bunch of birds. He ran after a flying bird, stopped to whistle, turned, ran down the steep 100ft. high bank, took a plunge in the surf, raced back again over the beach, shaking a shower of sparkling drops from his glossy sides as he ran. Up the steep bank he came and dashed away again, as if it all was the greatest fun imaginable. Ned having no chance to win on account of his great speed and want of command, dogs were ordered up at 10:25, having been down 45m. At exactly the half hour the next brace were taken from the waiting wagon; these were

BLUE AND RHEUMA.

Blue, hunted by Stanley, and Rheuma by Van Anden.

Rheuma soon showed his Irish blood, for he dashed away like a thoroughbred. The longer he ran and the faster, the better he seemed to like it. The dogs were started near the Southwest Point and hunted easterly. Hares were put up continually, both dogs steady under much provocation, Rheuma roading a good deal in the quickest kind of style, Blue working much more slowly, finally stopped on a stiff point. Rheuma, called up to back, refused and ran past the standing dog; ordering the bird up nothing was found. Moving forward once again, Blue, after a little roading, got a point in the scrub oak which surrounds the little bit of water known as Black Duck Pond. Rheuma, called once again for a back, came along at a jump, passed the pointing dog and ranged off and away. No bird found. The party then struck off and around the little patch of water and through an opening in the bluff to the sedge on the south beach. Along here Blue again stopped, but nothing was found in front of him. Still along the beach to its uppermost distance at South Point. Here Rheuma did a little roading, nosing up a bird which flushed wild some distance ahead of the dog. Turning backward and retracing steps, a single bird flushed wild ahead of dogs. Rheuma threw up his head, walked toward Van Anden, when bur-r-r-r, out sprang a quail not a yard from the man's toes. A step forward and Blue, roading along gently, stopped hard and fast. Rheuma took a turn round, came up, passed Blue, and flushed the bird in handsome style. Blue steady to wing and to shot. Then a turn north along East Bluff for a short distance and Blue established another capital point, bird flushed to order. Dogs ordered up at 11:20. At half past the next brace in order,

TARDY JACK AND BINSSE,

were cast off at the same bit of cover where the last brace had been taken up. Quail were heard whistling and calling to each other from all directions. A movement made to the left, where the notes were loudest and clearest. Scarce started, when up with a roar jumped a bevy of at least twenty birds. They scattered in every direction, north, south, east and west; marked down and followed. On the top of the south bluff, in a little patch of dried grasses, growing in a small opening of the scrub oak, Jack drew to a beautiful point. It was in a style particularly handsome. The birds flushed wild ahead of the point. Then across and through this sedge grass. At the very edge of the bluff, where it pitched in sharp incline to the beach, out jumped a dozen birds. One-half flew west, the other half east, over the salt sedge growing right in the sands of the beach. Moving back into scrub again a bird flushed in front of Binsse. The dog was hunting in a slow, listless manner, as if it all was awfully tiresome. Dogs, horses and men are alike. Each has his day, and this day did not belong to Binsse. A little further in scrub and Jack got a good solid point. Bird put up to order. Stanley shot and killed. Jack retrieved in "smashing" manner. Into the scrub again and through it and a tangle of blackberry canes to top and very edge of south bluff, where the quail had been marked down. Binsse very slow and methodical, Jack faster and doing his work stylishly and in good form. Going down wind Jack flushed a bird. Stanley shot and killed. Binsse retrieved, but indifferently. Dogs ordered up at quarter past twelve. Ten minutes afterward the bye dog, St. Elmo IV., hunted by Dr. Speir, and the dog selected to run with him, Swan's Fly, hunted by trainer Glessing, were cast off.

ST. ELMO IV. AND FLY.

The birds had been marked down and were followed to the southwest point of the island, where they had been located. St. Elmo worked slowly, but also with great carefulness. The spot was a tangled mass of blackberry canes, vines and knee-high bayberry bushes "in confusion worse confounded." Saint struck the scent, and throwing his head up to snuff the air, roaded through the spot with his nose only above the bushes. He soon stopped stiffly. Fly came spinning along from the other side, ran into the birds and started them grandly; Saint perfectly steady to shot and wing. Ordered on again, he moved but a few yards when he stopped again to a stiff point. A single bird flushed wild before the point, was shot at and missed. The birds had been marked down by Judge Pratt and were at once followed. Judge Bruce almost stepped on an outlying bird, it lying like a clod until the Judge's foot was almost on it. Saint moving very carefully, caught scent and roaded along after a running bird. Once more the pointer ranged up, and again were the birds flushed, this time within a yard of Saint's noise. Birds shot at and missed, Saint perfectly steady to both wing and shot. Dogs taken up at 1 o'clock.

The wind was blowing freshly from the southeast. After the hot work of the morning, when man and dog were heated up, this wind carried too much of the North Pole on its wings to be pleasant. So, as lunch was close at hand, a move was made to a little hollow, which protected one with its height from the chill air. Here on the still green sward the cloth was laid and the contents of the hampers placed on it. "Hungry as hunters" may be an old saw, but it meets just such cases as the one now described in perfection. Throwing tired bodies upon the grass, meat and drink were amply discussed. In the conversation that followed hunting stories were, of course, the chief subject. Dr. Speir told of the trouble that had followed the introduction of two pairs of hares upon the island in 1888. They became, as the rabbits in Australia, a veritable plague. Everything green was devoured. All was grist that came to their jaws, and as a consequence the birds suffered. The edict went forth last fall (1889) to kill and destroy. No less than 3,000 were killed in various ways. The plague was stopped for a time, but there are enough left to again sow the seed for a large crop the coming year.

Ned	25	20	0	6	0	5										

*Tardy Jack no opportunity given for a back, as he had no chance of winning a place, was not again tried.
*Ned to try for a retrieve in morning (Saturday).

BRACE STAKES.

Immediately at the finish of lunch the Brace Stake was started. Two braces were put down at once, so as to save time and get through the trials in a single day if it could be done, and at the same time give every dog a fair and equal chance to "get there" if he could.

GRAY AND BLUE—RHEUMA AND GOUT.

From the very start the first named brace had much the better of it. The Irish lads were too high in flesh, too short in work to give a good account of themselves. They raced here, they plunged there, each hunting by himself. The dogs are both excellent ones in field work, but each requires "a power" of work to bring him to a realizing sense of what is required of him. Gout was the first to get on the scent, and roading up quickly the bird flushed a dozen yards ahead of him. A dozen yards further on another single flushed from before the roading Gout. The judges each flushed a single. Rheuma wild and not at all amenable to command. Blue not responding to whistle or call was hunted up and found standing on a good stiff point. Gray called up, backed beautifully as soon as he came in sight of Blue. Birds put up to order, shot at, one killed, one wounded, both dropped. Rheuma ran and caught the dead bird and gently mouthed it. The wounded bird ran. Blue followed the scent and soon located the bird and was again backed by Gray. Rheuma again ran and chased the crippled bird. Called back, Blue was ordered to retrieve the dead quail which was still lying on the ground. He did so in first-rate style. Another point was gotten by Blue and he was again backed by Gray. Rheuma coming up from the left, the bird flushed itself. Blue got another point a moment or two afterward. Bird flushed to order, Stanley shot and killed. Rheuma ordered to retrieve, found the dead bird but refused to bring it in. Blue and Gray worked better as a brace and when together than when either was hunting alone. Taken up at 2:25 P. M.

ST. ELMO AND BELLE.

These were hunted westerly along the bluff at south side of island, and in and out of the patches of scrub oak. A single bird got up fairly under Stanley's feet, was shot at and missed. A little distance ahead Saint pointed and was backed in first-rate fashion by Belle. The bird was flushed to order, not shot at. A rod or so to the left Belle got a point, Saint backed in excellent shape—the birds flushed themselves before the point. Not a dozen yards away Belle got another point. Saint again backed her nicely. Birds flushed, shot at and one fell. Saint retrieved the bird, a wounded one, in good form. While bringing it in a single quail flushed before the incoming dog. Judge Pratt shot and killed it. Belle returned to order, but not in the best fashion. Dogs taken up at 3:50 P. M.

THE DERBY.

The south side, which part of the island had proved so prolific in birds, was now left and a hasty march made to the north side, toward the open meadows lying to the east of the club house. At Blackberry ravine, where are located several open fields, the first two puppies of the Derby were cast off.

CHUMP AND FEATHERS.

The first, a red Irish hunted by Dr. Speir, and the last-named, a handsome blue belton, owned and hunted by S. B. Duryea. Each was exceedingly puppyish in action, seemingly not knowing what to do. The red one, as usual, racing along like a thoroughbred, but with little purpose. Feathers was still more of a youngster and passed the most of the time looking for a face and figure she was acquainted with. After a fifteen minutes' spin they were ordered up as having no chance to win, unless the other brace of puppies did no better work then Chump and Feathers were to be put down again for another trial.

TARDY JACK AND NAPOLEON.

At a little opening in the oak timber and just out from the road bisecting the island, the dogs were started. Not a dozen steps from the road Jack got a point, but was so undecided in manner that the Doctor did not claim the point. Judge Pentz and others saw the birds running away, scattering as they ran. Jack was called away by the Doctor, but after a short turn came back to the starting point and pointed again good and staunch. Dr. Speir walked in and flushed a bevy of at least a dozen birds just at the edge of the wood. The light getting too dense to follow them to the cover of the timber, a move was made to the large open meadow in front and to the right of the club house. This runs directly to the beach on the north side of the island, a little fringe of bushes separating the grass land from the beach. Hunting along this fringe of slight cover and from east to west, Jack pointed capitally. Scarce had he established, when with a roar was started the largest bevy of birds yet found. It had at least 30 well-grown birds in it. Napoleon slightly unsteady to wing. Here was seen a pretty instance of good behavior, the triumph of education over instinct. Jack, when this mass of birds flushed, made a single jump after them. As he struck the ground after the jump he flushed a single bird. He now dropped to wing, as if knocked down with a club. After this Jack secured a succession of good points. Birds flushed, shot at and two killed. Each puppy tried for a retrieve, neither did well, but Jack much the better of the two. Dogs ordered up. Time 5 P. M., and the trials of 1890 a matter for record and following the record of history:

THE DERBY, FIELD TRIALS SCORE.

Name of Dog.	Points of Merit.										Demerits.

Napoleon	20	12	0	5	2	4	3	3	4		53					
Chump																
Feathers																

The tired sportsmen adjourned to the hotel, where a sound wash, toned up every one. Dinner followed, and as a matter of course the events of the day met with full discussion.

G. W. Green, an enthusiastic guest at the trials, but forced by business engagements to leave before they were ended, sent the following note, accompanying it was a round of Pommery Sec:

"To the president, members and guests of the Robins Island Club. Greeting:

"I leave my farewells and a heartfelt blessing for my three happy days (a bottle each, interpolation), and I ask you to drink to the health of winners and losers both. To the former I say, be modest in your bearing and remember that I predicted your success; with the latter I sympathize deeply, and don't forget I wished you to win.

"I shall long remember the joy of each morning's start. The daily starting signal of Judge Pratt will long ring pleasantly in my ears—'Where in sheol is my hat!' With the warmest as well as the best of wishes, I am,

"THE NOVICE (George Walter Green)."

Mr. Green's memory was fully toasted in his own wine.

This ninth annual trial of the Robins Island Club will go down in the history of the club as the greatest success yet had in that direction.

The judges at the trials were Calvin E. Pratt, of the Supreme Court; Jacob Pentz and Leslie C. Bruce.

PECONIC.

CENTRAL FIELD TRIAL ENTRIES.

THE entries of the Central Field Trial All-Age Stake for 1890 closed with 77 nominations, distributed thus, 29 pointers, 46 English setters, 1 black and tan, and 1 Irish setter.

POINTERS.

TAMARACK (Tam O'Shanter—Croxteth's Royal Queen), Frank Billings.
BARKER'S GROUSE (Mainspring-Swain's Fly), S. T. Barker.
HICKORY'S STAUNCH (Ayer's Don—Lady Spottswood), E. R. Bellman.
ROCK II. (Graphic—Lady Belle), Connell & Cullen.
FAN FAN (Graphic—Lady Belle), Connell & Cullen.
MOONSHINE (King of Kent—Hops), Charlottesville Field Trial Kennels.
ZIG-ZAG (King of Kent—Hops), Charlottesville Field Trial Kennels.
TAPSTER (King of Kent—Hops), Charlottesville Field Trial Kennels.
MAID OF KENT (King of Kent—Hops), Charlottesville Field Trial Kennels.
KING OF KENT (Priam—Kent Baby), Charlottesville Field Trial Kennels.
FRANK W. (Duke of Vernon—Royal Cute), L. Gardner.
DOCTOR (Don Juan—Alameda), Wm. Howkins.
LASS OF BLOOMO (Lad of Bow—Bloomo), W. T. Hunter.
DUKE OF HESSEN (Luck of Hessen—Blarney), Hempstead Farm Kennels.
IGHTFIELD DICK (Dick III.—Bell of Bow), A. P. Heywood-Lonsdale.
IGHTFIELD GUELPH (Bang's Boy—Linda), A. P. Heywood-Lonsdale.
IGHTFIELD DEUCE (Wynstay—Dainty), A. P. Heywood-Lonsdale.
KESWICK'S BOY (Osborne Ale—Keswick II.), Dr. C. E. Michel.
ZERO (Osborne Ale—Keswick II.), Dr. C. E. Michel.
SHOT (Neno—Vic), W. B. Mears, Jr. & Co.
ORANGE DON (Neno—Vic), W. B. Mears, Jr. & Co.
LALLA ROOKH (Sensation's Son—Grace), C. H. Odell.
B. D. (Bang Bang—Lalla Rookh), C. H. Odell.
CROXIE WISE (Croxteth—Young Buelah), P. H. O'Bannon.
TRAY (Tory White—Lapford Pearl), N. L. Rockwell.
DEVONSHIRE DON (Molton Baron—Village Star), Dr. H. J. Thomas.
PEARL'S DOT (Trinket's Bang—Pearlstone), J. B. Turner.
TEMPEST (Beppo III.—Lass of Bow), J. H. Winslow.
TAMMANY'S BOY (Tammany—Juno), Miss H. Wooster.

BLACK AND TAN SETTER.

BEAUMONT (Ronald III.—Floss), Beaumont Kennels.

RED IRISH SETTER.

ROCKWOOD (Desmond II.—Luray III.), Chas. T. Thompson.

ENGLISH SETTERS.

CASSIO (Count Noble—Lizzie Hopkins), J. M. Avent.
ANTONIO (Roderigo—Bo Peep), J. M. Avent.
U. S. DAN (Roderigo—Juno A.), J. M. Avent.
HATTIE (Roderigo—Juno A.), J. M. Avent.
EDGE MARK (Skidmore—Flo Maclin), Francis S. Brown.
PRINCE LUCIFER (King Noble—Elsie Belton), J. I. Case, Jr.
LADY RAPIER (Count Rapier—Donna J.), J. I. Case, Jr.
LITTLE GIFT (Roderigo—Queen Bess), Bert Crane.
NATALIE II. (King Noble—Natalie), Bert Crane.
ROI D'OR (Roderigo—Bo Peep), O. W. Donner.
KING'S DAN (King Noble—Elsie Belton), Elmwood Kennels.
HARRY C. (Roderigo—Countess House), Elmwood Kennels.
EDITH (Roderigo—Sue Gladstone), Elmwood Kennels.
NOBLE COUNT (Mac D.—Lady Mac), Mrs. S. A. Elliot.
JUBILEE (Gath's Mark—Esther), J. M. Freeman.
JIM PHELAN (Bob Gates—Nannie Gladstone), D. A. Goodwin, Jr.
MISS MONARCH (Roy Monarch—Flossie), Chas. E. Gray.
GENE (Druid—Barley), Chas. E. Gray.
FANNIE M. (Gladstone's Boy—Flame), H. Hulman, Jr.
SAM MILLER (Roderigo—Dixie), W. T. Hunter.
ANNIE F. (Roderigo—Juno A.), F. R. Hitchcock.
TORY LIEUTENANT (Jean Val Jean—Princess Helen), F. R. Hitchcock.
FRED GATES (Bob Gates—Lilly B.), Hamilton & Jackson.
IGHTFIELD IAN (Woodhill Bruce—Lucy), A. P. Heywood-Lonsdale.
IGHTFIELD RANGER (Dick Wind'em—Peep Bo), A. P. Heywood-Lonsdale.
IGHTFIELD ROSA (Ross—Pitti Sing), A. P. Heywood-Lonsdale.
DILL (Toledo Blade—Dashing Lady), P. Lorillard, Jr.
LADY NOVICE (Paul Gladstone—Dashing Novice), Joseph Lewis
LEWIS'S FAN (Jim Gladstone—Nina), Joseph Lewis.
TONEY GLADSTONE (Paul Gladstone—Belle Ward), Joseph Lewis.
RODERIGO LUFRA (Roderigo—Lufra Cross), Wm. Marshall.
NANNIE B. (King Noble—Queen Vashti), J. A. McLeod.
ORANGE DON (pedigree not given), W. B. Meares, Jr. & Co.
KATE MILLER (Roderigo—Lufra Cross), N. B. Nesbitt.
FRATURNESS DON (Gath's Mark—Lufra Cross), N. B. Nesbitt, agent.
BALIE GLADSTONE (Paul Gladstone—Bessie A.), N. B. Nesbitt, agent.
REVERDY (Gath's Mark—Rosa), P. H. O'Bannon.
MISS NELLIE Y. (Gath's Hope—Lady May), P. H. O'Bannon.
LILLY BURGESS (Gath's Mark—Esther), Frank Richards.
SIMONIDES (Gath's Hope—Gladys), D. E. Rose, agent.
DAISY'S HOPE (Gath's Hope—Daisy F.), W. W. Titus, deputy.
SAM R. (Dash Bryson—Daisy Hope), W. W. Titus, deputy.
BANDANNA (May Dawn—Doe), Will Wilson.
CASH BOY (Cashier—Flake), H. A. Waldron.
COUNT HOWARD (Sir Allister—Mena), F. Windholz.
PRINCESS BEATRICE II. (Royalty—Kate Westmoreland), F. Windholz.

THE NATIONAL BEAGLE CLUB TRIALS.

IT was a good move on the part of the officers of this club when they decided, before much of the week had been wasted, to seek fresh fields and pastures new. This is an old saying, I know, but like most good things it improves with age, and is particularly applicable to my story. I have already told how we fared the first day, and I am certain had we continued in, to speak mildly, that most unsuitable country we should still, I am positive, be running the Frank-Don heat. The change of venue to Salem, N. H., was a lucky and judicious one, and though game was not abundant, the country to be hunted over was of a much more open and negotiable nature. Consisting chiefly of young timber-land, it was at times pretty hard to get through when dogs and bunny started off at a 2.10 gait, and one had to work pretty nearly as hard with one's arms as with the legs. There were, nevertheless, many open spots of low-lying brush and furze which afforded good going, comparatively speaking, though at best I should not advise any one to participate in the runs unless their wind was up to concert pitch. This was no child's play, and the judges' office was by no means a sinecure. Handlers could take a rest between heats and so recuperate, but the two men upon whom rested the duty of deciding each heat, had to keep pegging away all the time till one felt that a "Willie Day" run across country must be a mere scamper. After a night spent at Lawrence, Mass., and a hearty breakfast, the boys and their dogs took train to Salem, N. H., a few miles further on. We were then assigned to different farmhouses, where we soon donned our fighting costumes, at least what was left of them from the previous day's hard battle with the bushes and briars of Hyannis, and reported at headquarters, which was at Mr. Peabody's barn, about half a mile above the village. About 10 o'clock a start was made across the fields to where the rabbits were said to be quite plentiful. From the look of the neighborhood we were all satisfied at once that we were at last in the right kind of country, and when at 10:25 A. M. on Wednesday the first brace,

FRANK FOREST AND DON,

were put down and within five minutes ran a rabbit into a wall hole, congratulations were indulged in and our spirits rose proportionately. But I must hark back and pick up the trail at the beginning. This heat was the undecided of the previous day. They were let go alongside a hedge row, and working this down into some fairly open woodland, Frank opened on a trail with such music as cheered us all. Don, hunting in another part, failed to connect in time to see bunny take to earth with Frank close on. Messrs. Chapman and Lacy set to work pulling up stones till the former, with an instinct born of much beagle hunting, made a happy hit and was able to draw the rabbit from his fancied security. Did we kill it? Not much! that was not our game. He was tenderly taken into the woods and dropped, to become a subject for future reference. Given a few minutes law, dogs were laid on and after several very pretty casts in swampy ground by both dogs, Frank struck a note and was soon off on a hot scent. He was hard to follow, as he is a very fast working beagle, but he could be heard ringing the woods several times. Don harked back to the swamp where the other dog had started from and pottered around, Frank coming back again to make a fresh attempt, crossing trails evidently bothering him. Both dogs were started even again, when Frank at once found and in full cry led puss another merry dance through the underwood, the rabbit finally coming out near the spectators and was followed almost immediately by Frank, who did a smart piece of work in trailing without a check, till puss was compelled to take to earth again. Don, who had been hunting round on his own hook and paying too much attention to the multiplicity of trails, now came up, and before any one could get to him, ousted Frank from his well-earned honors, biting him at the same time through the nose and lip. Dogs were then held up till on the outskirt of woods. The dogs were turned down once again, though the judges were satisfied that Frank was the better dog, we thought that an equal chance should be given them in the open. Frank again showed his superiority by finding. This decided it, and after trying them for gunshyness, both being steady, the heat and first prize in Class A was awarded to Frank Forest.

After some consultation the judges decided that Don had shown more hunt than Sunday, and awarded him second prize, Sunday taking third. As I stated last week Clyde had been withdrawn. In reviewing this heat where two of the best dogs in the trials competed, some very good hunting was done by both dogs, both are stylish at work, but Frank is the keener in his hunt for likely places. Owing to the nature of the ground hunted, it was hardly possible to judge of pace, but there was little difference. I have devoted a good deal of space to this heat, but only from the fact that most of the heats were but repetitions. Prize ribbons were distributed to the owners and a few congratulations indulged in; this being the first prize for beagle hunting ever awarded, it was excusable. A move was now made for lunch. About 2 P. M. Class D, for bitches 13in. and under, was called, and

BELLE ROSS AND BANNER QUEEN

were put down. Both dogs were worked by their owners. Some woods to the left of where we hunted in the morning were tried, both hunting well for half an hour, Bell showing more sense and go. Finally a rabbit was started and trailed to earth by Belle Ross. Drawn away, Belle Ross hunted in the neighborhood of the burrow, but Banner Queen started off on an old trail and led Judge Lacy on the double for some distance, till finally she was worked toward the other, at the same time she showed some pretty hunting, which, however, counted for nothing. Belle Ross not caring to leave the hole or its vicinity, an attempt was made to get puss out, but failed. Shortly after a rabbit was started by Banner Queen and both beagles were soon in full cry; dogs were shortly at fault, Belle Ross striking it off after some pretty work; the chase was hot for twenty minutes, Belle showing her superiority, and finally ran puss to earth. Belle won. Down about 1h. 20m.

BELLE ROSS AND BABY DEANE.

After a short rest, Baby Deane, the bye, was put down with Belle Ross. Baby Deane was handled by A. D. Parry. This bitch was rather handicapped, as her handler was entirely strange to her, and this no doubt had a good deal to do with her defeat, as she is otherwise a good worker, but was under no control. Starting at 3:30 P. M., Belle soon struck a trail and did some fast work, forcing the rabbit to take to earth in self-defense, in eight minutes. Almost at the same time Baby Deane trailed to the other end of the burrow, which was only about 3yds. long, with both in full tongue and only their wagging sterns to be seen, the picture was a pretty one. Dogs being held up, Judge Lewis poked a stick up the hole to force her ladyship out, then Judge Lacy, dropping on his knees at the other end, prepared to catch bunny as she escaped, but hardly had he settled into position when out popped the rabbit like a flash, and bounding over his shoulder escaped to the brush. Dogs were let loose and all was hurry scurry and hot running, till the rabbit was forced to earth under a large rock. Put down again at 3:48 some good hunting was done by both dogs, Belle especially, Baby showing an inclination to hunt back to the old hole despite Mr. Parry's best efforts. Dogs ordered up at 4:30, and heat and first prize given to Belle Ross.

BANNERQUEEN AND BABY DEANE

were then put down for second place at 4:45. They hunted for some time in likely places at edge of woods, along the swamps and across some fields, and then hunted into some low ground heavily covered with brushwood. Here a rabbit started almost under the writer's feet. Bannerqueen called to trail, failed to strike it at once, when Baby running up, struck it off immediately and led us one of the fastest chases of the meeting, circling round and round the swamps, losing occasionally but finding again, till darkness coming on the dogs were ordered up. Baby being under better control this heat, she showed better work, and was given second prize. Bannerqueen was less confident and seemed too fond of its owner to go far away. This ended the hunting for the day. Though the day dawned with a heavy hoar frost, Old Sol was not to be denied, and during the middle of the day it was uncomfortably hot for the work we had in hand, and of course the scent lay too dry for good work. Every one was happy over the progress made, and everything pointed to a successful trial after all. After supper at our respective homes, and grateful we were for such cleanly, comfortable quarters after the hard work of the day, we adjourned to the corner grocery to smoke and talk over again the events of the day, and I doubt not, many followed imaginary trails even in their sleep.

MEMBERS OF THE NATIONAL BEAGLE CLUB AT THE FIELD TRIALS.

THURSDAY.

Class B—For bitches 15in. and under.

It was proposed to make an early start to-day as a good deal of work had to be got through, for there were some good dogs in this stake. About 8 A. M.

MOLLIE AND BABY DEANE

were put down in edge of woods. Mollie did some good hunting, but without a find, Baby, as usual, paying no attention to her handler, Mr. Parry, who, by the way, is a past master at this game, and given a dog that will mind him he will get all the hunt out there is in the dog. Near the end of the first 45m. Mollie struck a trail, and whimpering occasionally, led us some little runs which amounted to nothing in the way of game; old fox trails principally. Mollie showed herself the better bitch and was given the hunt at 9 A. M. This was about the most unsatisfactory heat run during the meeting.

MR. A. PARRY'S BEAGLE FRANK FOREST.

(Winner of Special for Best Beagle in the N. B. C. Trials.)

DESDEMONA AND SUE.

These two were put in at 9:25. After some good hunting Desdemona gave tongue, and such a throatful we had not heard so far in the trials, she was easily the truest hound-toned beagle in the pack. Desdemona seemed to know this and gave forth when there was little need. Game was scarce and dogs were taken to another part of the woods. Sue then began to show us what she could do, drawing all the likely places in a workmanlike manner, and was rewarded shortly after with a ringing find which she followed but eventually lost, but making a pretty cast she took it up again, and after a terrific chase, which pretty well knocked the judges to pieces, she forced bunny to earth at 11:45. Dogs ordered up and hunt given to Sue; down 2h. 20m. A move was made for lunch, and after a welcome rest the judges called

TWINTWO AND GYPSEY FOREST.

In open ground these two pretty beagles were turned loose, and Twintwo was not long in finding, though Gypsey was hunting too, and taking up the trail the latter worked the game at a merry pace, with only a few checks for something like half an hour, when she finally sought her burrow. Gypsey was then held up to allow Twintwo a chance to find the hole, which she did in good style. Gypsey showed herself a better driver, with more sense and go than Twintwo. Gypsey on the second rabbit made a beautiful ring cast, and striking the trail, the rabbit led her a merry dance till finally even puss found the pace too hot and a hole in the wall was sought. After another half hour's work, in which Gypsey put another rabbit up and ran it to earth, dogs were ordered up, and Gypsey Forest won. Down one hour.

LILLA AND JUNE ROSE.

These two were handled by their owners. They were cast loose in woods and worked toward the open land, which was pretty well covered with furze bushes and seemingly good ground, but as we often found, the most likely places were drawn blank and bunny found scooting from a patch of woods no one would dream of meeting her in. In the work that followed June Rose did some good hunting, Lilla following on. The latter bitch is a fallow red and is a most difficult dog to keep in sight when running over the dried pine needles and leaves. June Rose found first and ran the rabbit through woods back to open ground, where it sought safety in her earthy home at 4 P. M. After being down some twenty minutes longer, June Rose doing the best work, that is, showing the most hunting sense, Lilla being content to potter around her handler, and seldom striking out for herself, the heat was given to June Rose. Down 40 minutes.

BELL ROSS AND CORA.

These two beagles being cast off at 4 P. M., Bell Ross started off with her usual thorough work. She is one of the best trailers and careful workers I ever saw. At times she almost potters, and then will suddenly make up her mind that this place is no good and start off for a more likely one, which she hunts over thoroughly before leaving. In some open country she forced a rabbit out of the furze and quickly ran it to earth, where it was left. Then Cora hunted a bit like finding, but it amounted to nothing. Then Bell worked the previous rabbit, which had been forced out, to another burrow lower down the hill, when Mr. Parry was left to get it out if possible. Ranging on through rough ground, Bell did some careful work, doing more brush work than any dog in the trials. She is not afraid to go in any cover, however dense. Cora hunted over a piece of swampy ground and failed to give a sign. Bell coming after struck a note and did some very fine work, till the rabbit breaking cover across a rocky field, Dr. Power shot and missed the only rabbit fired at during the trials. Cora has not a good nose, but works with good intent. Bell is all fire and go, but at the same time misses no ground, giving due attention to every likely hold. Bell won. Down 50 minutes. As darkness was coming on apace, a move was made toward home, about two miles distant. The day's sport was voted a good one, and all hands turned into bed at an early hour thoroughly tired out.

FRIDAY.

Second Series.

MOLLIE AND TONE.

The morning opened with a drizzling rain, which boded good for scent, and as it proved was the best running day we had had. Tone was the bye dog in the first series and was put down to run with the first winner at 8:15 A.M. Mr. Parry having secured the rabbit he was after the previous evening, Secretary Chapman took it home in his pocket, so that he would be sure of one rabbit on the morrow. As it turned out it proved, as might have been expected in a strange country, worse than nothing. Let loose in some open ground it ran to a stone wall, where it was trailed by Tone, who was first to strike the scent. Rabbit then bolted into the open field where a mild Hicksville coursing match was indulged in by both dogs, bunny not knowing where to run, narrowly escaping a squeeze several times. Dogs were caught by their handlers and the writer succeeded in capturing bunny, when he took her to a cosy part of woods and turned her loose for another day. Dogs were drawn off and taken to another part of woods at 8:20. It was not long before Tone struck a note and then bursting into full cry, followed by Mollie, led us a merry scamper through briar, shrubs, scrub oak and other impedimenta, for 10 minutes, when rabbit proved too clever. After casting around for a while they both struck the trail and were away again, but rabbit was lost in the number of contrary trails. After hunting till 9:40 the dogs were ordered up and heat awarded to Tone. Though both hunted well Tone had the luck, but at the same time showed more sense, drive and ambition, Mollie stopping several times in her work in a hesitating manner, as if she did not know exactly what she was there for. Down 1 hour and 25 minutes.

SUE AND GYPSEY FOREST.

Shortly after being put down Gypsey struck a trail full in the face, and worked the rabbit at a quick pace, finally forcing it to a hole in wall, where it was impossible to get at it. Sue had passed this spot when Gypsey found, but failed to score, and went off on her own account to other side of woods, but found nothing; when brought right back to the trail Gypsey had opened on, she hesitated to follow it up. Afterward they were tried in the open together, for hunt and nose. Sue did not work with the vigor of the young one, who did some pretty nosing and eventually won the heat. Down half an hour. Gypsey Forest much the best.

JUNE ROSE AND BELL ROSS.

This couple were cast off at 10:25 in underwood. Bell Ross found the trail of a rabbit that had been turned loose, lost it shortly after, when it was picked up by June Rose, who ran rabbit to earth. Both dogs worked well and packed nicely, more so than any of the other couples. Cast off again, June Rose showed more hunt and range. Bell Ross, the lively bitch of the day before, did not seem herself at all, she is only a young bitch and this work is new to her and doubtless she was stiff, she having had some pretty heavy work the previous two days. Heat was given to June Rose. This completed the second series, and the judges decided that Tone and Gypsey Forest should compete for the first prize, and were accordingly cast off at 11:45.

Final Series.

TONE AND GYPSEY FOREST.

Tone handled by Mr. Jameson, Mr. Parry handling his own. Before they had been ranging five minutes, Tone gave tongue and trailed bunny merrily through the woods, first one then the other leading, as they cast for fresh hold; rabbit finally seeking shelter in a sandhill burrow at 11:40. Tone found again at 11:45 and carried the trail at a great pace for about 15m., top and over a wall 7ft. high into some brush, both dogs doing their level best, over another wall and down into a culvert where the quarry had sought a sanctuary. Game had not been seen, but as this would have decided the heat in Tone's favor, Mr. Parry having in mind that big wall, suggested that it was not a rabbit at all, and on investigation he proved to be right, for after a little prodding a beautiful puss of the Maltese persuasion coursed the next field like a streak of lightning, amid the laughter and chaffing of those lucky enough and with wind enough to carry them to the finish. As we were now quite close to the home farm lunch hour was called. At 1:54 we assembled at the woodside again, and putting down the two dogs, Tone found and

led, followed close by Gypsey; working the rabbit back and forth for some time in the thick brush, finally Gypsey took possession and ran bunny to earth at 2:12. Put down again both seemed tired of it, especially Gypsey, who did not hunt with the spirit previously displayed, looking too much to her handler, and did not seem to wish to hunt. Tone made several wide casts and was by far the better ranger in this hunt, though a little off control. At 2:26 dogs were ordered up and Tone was given first prize amid the shouts of the company, Gyspey Forest taking the red ribbon, and third being divided between Mollie, June Rose and Bell Ross, as being the best of those left in the second series.

SUMMARY.

Dogs—15in. and under.

B. S. Turpin's Clyde against W. J. Rutter, Jr.'s Don.
A. Parry's Frank Forest against G. E. Greenleaf's Sunday.

First Series.

Don beat Clyde.
Frank Forest beat Sunday.

Second Series.

Frank Forest beat Don and won first prize. Don won second and Sunday third.

Class B.—Bitches—15in. and under.

Clark & Rutter's Mollie against E. W. Whitcomb's Baby Deane.
F. W. Chapman's Desdemona against G. P. Berry's Sue.
Twintwo against Gypsy Forest.
Glenrose Kennels' Lilla against O. W. Brooking's June Rose.
F. W. Chapman's Cora against B. S. Turpin's Belle Ross.
Glenrose Kennels' Tone, a bye.

First Series.

Mollie beat Baby Deane.
Sue beat Desdemona.
Gypsy Forest beat Twintwo.
June Rose beat Lilla.
Belle Ross beat Cora.
Tone, a bye.

Second Series.

Tone beat Mollie.
Gypsy Forest beat Sue.
June Rose beat Belle Ross.

Third Series.

Tone beat Gypsey Forest and won first prize.
Gypsey Forest won second.
Belle Ross, June Rose and Mollie were given equal third.

Bitches—Under 15in.

B. S. Turpin's Belle Ross against F. W. Chapman's Banner Queen.
E. W. Whitcomb's Baby Deane a bye.

First Series.

Belle Ross beat Banner Queen.

Second Series.

Belle Ross beat Baby Deane and won first prize.

Third Series.

Baby Deane beat Banner Queen and won second prize, Banner Queen third.

The judges decided that Mr. Parry, with Gypsy Forest, won Mr. Diffenderffer's special of a $25 silver plate, for the best dog owned and bred by any member of the club winning the greatest number of heats in the trials. Mr. Bradford S. Turpin won, with Belle Ross, a pair of field glasses, given by Mr. Barrett, for the best trailing throughout the trial. Mr. Parry won, with Frank Forest, a special prize of a painting of Frank, for the best dog or bitch of all classes, Belle Ross being withdrawn. Mr. Rutter took the special of a $25 silver plate, given by Mr. Chapman, with Don, who was decided to have the best voice, Desdemona having been withdrawn, as she belonged to donor.

A DAY WITH A SCRATCH PACK

Editor Forest and Stream:

Perhaps some of the readers of FOREST AND STREAM would like to know about the grand hunt held by the National Beagle Club after the successful termination of their recent field trials, which I have no doubt will be as ably reported by Judge Lacy as was the first part, which appeared in last week's issue. The party, which was composed of Messrs. B. S. Turpin, W. F. Rutter, A. Parry, Jos. Lewis, O. W. Brooking, Charles and John Peabody, B. Innis (reporter for the Boston *Herald*) and myself, started from the Peabody farm, where the dogs were comfortably quartered, at about 8 A.M., with 20 beagles. The day was damp and cloudy, very similar to the preceding one, in which the trials were concluded, and we had not been out over 15 minutes when Desdemona, who had worked over to the left of the other dogs, opened on an old trail. There was a great rushing through the bushes of all the dogs, and Tone soon opened some distance ahead and in about a second had the rabbit running. After playing up and down for two or three turns, Mr. Rabbit came to the conclusion that this patch of woods was growing too small for him, and he therefore made for another and more extensive one, which contained several "holes." About this time, too, he began to understand that the sooner he got there the better, so putting his ears back he started straight for the woods before mentioned, which lay just opposite the field we were in. Fatal decision! No sooner had he leaped the wall than three guns sprang to the shoulders of as many men and at the united report, which blended and sounded as but one, poor bunny lay stretched on the damp turf, and two handsome beagles, Tone and Don, were fiercely contesting for all that was left of as fine a rabbit as ever ran. Hastily jumping the wall I ran to the struggling hounds, which were now joined by the entire pack, and by dint of much cuffing and snatching, succeeded in getting the rabbit from them and into the game pocket of my coat.

Again, after a short tramp another bunny was started, which was put into his hole in short order. Then the party, after walking by the shores of one of New Hampshire's most beautiful lakes, were disagreeably surprised to find the dogs at work on a hot fox track, and it was only by some severe handling that the dogs were induced to abandon it. Several rabbits were run after this, but to describe all that occurred would take more space than your paper would care to devote to any one subject, and I will therefore conclude by saying that not a rabbit that was started was lost; all were either shot or holed; the dogs worked together splendidly, running with a fifty-feet front, and no matter which way bunny turned, whether to the right or to the left, some one was sure to pick him up, and he soon found that his only safety lay in a straightaway course to his hole. The entire party only bagged six rabbits and two partridges, but had more genuine fun than if they had slaughtered a thousand; for a man to shoot a rabbit ahead of the National Beagle Club pack must needs be both quick and sure with his gun, for no rabbit will stay long above ground with them at his heels. We shall have several meets this winter on white hares, and expect lots of enjoyment and instruction therefrom, as there are probably over 200 beagles owned by our members. Will try and give the FOREST AND STREAM an account of one of the meets when it comes off. F. W. CHAPMAN, Sec'y.

MELROSE, Mass., Nov. 10.

The Washington City Kennel Club have evidently sunk their differences, and the threat that a new club would be organized has awakened them to a sense of their position. The date claimed for their show, is the week after Pittsburgh.

DOG CHAT.

THE members of the National Beagle Club demonstrated to their entire satisfaction that beagle trials can be held with a result that is most successful. Many people on both sides the water have scoffed at the idea, and no doubt judging by the report in last week's FOREST AND STREAM, they hugged themselves still closer and indulged in sundry "I told you so's." But they are wrong, and very much so. We admit that at Hyannis the outlook was blank—like the woods. Given a good country and one still more open even than that at Salem, N. H., any amount of sport may be had, and at the same time the merits of two beagles in a heat can be satisfactorily arrived at without much trouble in one sense, but not without much leg weariness in another. Any one who attempts beagle trials in this country must be prepared for some downright hard work. Unlike pointer and setter trials, a horse would be entirely *de trop*, as it is quite exceptional to get any trailing in the open fields, the rabbit naturally seeking the protection of the woods and the most likely places he can find to put his pursuers at fault. The result of the trials last week has considerably added to the enthusiasm of the members of the N. B. C., and it is safe to say that another year the entries will be much larger, and if a convenient and suitable country can be found, many more sportsmen will take part than was the case this year. The trials were remarkable in one sense, and that was the entire absence of the "kicking" element. This may be accounted for in one way by the fact that the judges were very careful not to give a decision till they had thoroughly satisfied themselves, and it was patent to all which was the better dog. This was somewhat tedious, but any one who has had experience in this kind of hunting will know that the element of luck enters largely into a trial of this sort, and sometimes only after repeated trailings could a just decision be arrived at. The judges, Messrs. Lewis and Lacy, thank the members of the club for their kind and courteous treatment during the trials.

This beagle club may congratulate themselves on the fact that these trials will create a desire among beagle men to own a working beagle, and no doubt in time the blood of winning field trial beagles will be as much sought after, comparatively speaking, as that of the field trial winners in pointers and setters. Everything has a beginning, and the start made by the N. B. C. was most auspicious.

Mr. W. J. Comstock writes us to correct an error several people have fallen into in crediting him with the ownership of the recent black and tan terrier importations. They belong to his cousin and business partner, Mr. Frank P. Comstock. They arrived at Providence only last Friday, nearly a fortnight after their arrival in New York, and fortunately were in very fair shape, in spite of McKinley trammels. They think the terriers just about the right sort.

We are pleased to see that the recent agitation by several writers in regard to the fictitious value that some people attached to the word "registered" in a catalogue when the dog had simply been entered in the *Kennel Gazette* at quarter rates, has shown good fruit. Now the word "registered" will carry with it its proper significance and be the protection to the breeder it was intended to be, and not as before a vehicle for fraud.

The A. K. C. has awakened to the fact that clubs claiming dates must, to have them recognized, enter their claim with the secretary, and not as heretofore has been the custom, to simply notify the kennel press This has led to a rather unfortunate state of things. The Cleveland Kennel Club it seems wrote to Mr. Vredenburgh Nov. 1 claiming the first week in April for their coming show. This date had already been claimed by the New England Kennel Club in the *American Stock Keeper*, the first paper that could get it in after the club meeting. We received the claim on the morning of Oct. 29. Mr. Moore, the secretary, not thinking it necessary to do so at once, neglected to notify the A. K. C. secretary of their claim, and said secretary receiving Nov. 3 the Cleveland claim, gave them the dates. Now there is a very fine point contained in this. The A. K. C. rule says secretaries of shows must notify the A. K. C. of their claim, but there is nothing which decrees that to have their dates recognized, they must be sent to the A. K. C. secretary. Now supposing these two clubs had claimed their dates simultaneously with the secretary, who is to decide the prior right? Something ought to be done about this and a rule made that could not be construed in any way but the right one. Now we come to the point at issue. It is well known and has from long usage—some seven years—become a fixture, that Boston always claims the week in which their Fast Day holiday occurs. Mr. Munshall, as secretary of the Cleveland Club, and a man in touch with dogdom, ought to know this, and doubtless does. Boston had claimed their dates in the kennel press before anything was known of the Cleveland Club's action. Now, supposing these two clubs insist on their dates. Boston, according to a rule which says that clubs insisting on conflicting dates shall be suspended, would undoubtedly be put in that position if Cleveland chose to stand by their guns. Would it not therefore be better for the younger club to give the older and larger one the preference? If Cleveland sees fit to antagonize the Eastern club it will engender much ill will and will no doubt materially affect their entry list. We should think that the week after Chicago would be a far better date for them, as there are few Eastern kennels which would risk a week in Cleveland before making their appearance at such a show as Chicago. Held the week after, they would catch a big entry on the way home; in fact, most of the Eastern dogs. The Boston show is counted the second in the country, and as such it deserves some consideration at the hands of smaller clubs. We trust that an amicable arrangement will be arrived at. We were informed by the secretary of the A. K. C. that Lynn has no dates, they not having advised him of their claim, though such has been posted in the kennel press for upward of six months.

We hear that last week Mr. Percy C. Ohl purchased from Mrs. Grant the St. Bernard bitch Beda, which it will be remembered was lost or stolen while on a visit to Roland. It is very likely that this peculiar case will form a subject of discussion at the next A. K. C. meeting.

We have received further particulars of the mastiff bitch Lady Cobrey from Mr. Chas. E. Bunn, her importer. She is by champion Beaufort—champion Toogie, she by Crown Prince. She is is one of Beaufort's largest daughters and is dam of the pup Mr. Cook showed at the Crystal Palace mastiff show. Before leaving England she was bred to Sir Stafford, but has not proved in whelp; she will now be bred to Mr. Bunn's Ormonde.

A dog show will be held, we hear, at San Francisco in April next, by the Pacific Kennel Club.

We are enabled to give our readers the name of the St. Bernard bitch Mr. Moore is importing. She is the noted Lady Sneerwell, by champion Pouf out of Jael, the bitch Mrs. Lee lately purchased. She is described as one of the best bitches out. She weighs 160lbs., standing 28½in. high, and must therefore be a very heavily built bitch. Her winnings are: Cup for best pup at St. Bernard show, 1889; first open and novice, Southampton; first and cup, Crystal Palace; first and cup, Manchester, 1889; first, Coventry; first, Tunbridge Wells, 1890; beating such bitches as Andromeda, Lady Floris II., Lady Ida, Abbess, Sabrina, Prudence, Treasure and Zenith, etc. She has already whelped nine pups to Sir Bedivere and seven to Alton. She sailed last Tuesday. Mr. Moore has now a pretty strong hand.

The South Carolina Kennel Association, of Greenville, S. C., have claimed the dates Jan. 27 to 30, 1891, for their inaugural show. This club, it will be remembered, was refused admittance to the A. K. C. on account of the club at Charleston, S. C. being a member under the same name. They have now altered their title and filed their claim, which will now no doubt be acted upon favorably at the December meeting, so that wins will count.

Mr. John Grace has been selected as judge at the [illegible] coursing meeting which comes off next week at Merced, Ca It is very likely that he will have two assistants should the meeting last longer than is expected. There is every indication that the meeting will be a big success.

The St. Bernard champion Guide is dead. He broke one of his thighs and was put out of misery by his owner's directions. He is the sire of champion Watch and Peggotty.

Re the action of the advisory committee taking upon itself the duty of voting the salaries of the A. K. C. officials, we called upon Mr. Vredenburgh and asked for information as to the amount of salaries voted on. This could not be obtained, but Mr. Vredenburgh, with his blandest smile, told us that the amounts were a little less than last year, and more than this. Further than that we shall not know till the items which go to make up the expenditure account for 1891 are published in 1892. Has the advisory committee power to vote on such matters? This is, or ought to be, the duty of the executive committee alone.

Several English notes and other matters must be left over till next week, for want of space.

THE PESHALL CASE.

THE celebrated case of The People vs. Peshall has been put on the calendar for trial next Thursday, Nov. 20. The New Jersey Kennel Club held a meeting last Thursday, which is thus reported in the Jersey City *Evening Journal*:

"The New Jersey Kennel Club, in the course of a red hot meeting held in Taylor's Hotel last evening, paid its respects to the main organization, known as the American Kennel Club, and rebuked in no uncertain tones the managers of the latter organization on account of their attitude toward Counsellor C. J. Peshall, one of the most active members of the New Jersey branch. Mr. Peshall is president of the New Jersey Kennel Club. He presided during the early part of last night's meeting, as usual, and then surrendered the chair to Vice-President Hopf. An eloquent and impassioned speech by the president followed. Mr. Peshall went for his adversaries without gloves. He reviewed the management of the American Kennel Club, tried to prove that his criticisms were just, and then wanted to know the nature of the charges on which he had been tried before the advisory committee, and on the strength of which he had been disqualified. No copy of these charges, he claimed, had ever been presented to him, and no opportunity to defend himself had been offered him. Mr. Peshall said he felt called upon to take this method of clearing himself in view of the fact that he is president of the New Jersey Kennel Club, and because he felt that the disgrace was not only attached to him but to the club as well. The libel suit instituted by Mr. Vredenburgh, he said, would come up for trial in New York in a short time, and then he would prove that his charges against the managers of the American Kennel Club were merited and founded on facts. He also said that he would apply, through his counsel, ex-Judge Haines, for a mandamus to compel the American Kennel Club to restore his qualifications. Counsellor Peshall left the room at the conclusion of his speech, and then a wordy conflict ensued. Mr. Peshall's friends were in the majority and they loudly demanded that Mr. A. C. Wilmerding, the club's delegate who had voted for Mr. Peshall's disqualification, state the nature of the charges that had been trumped up against him. Mr. Wilmerding hesitated. H. A. Thomas, Secretary Wilms, Mr. Hetherington and others strenuously insisted that Mr. Wilmerding should explain. The delegate retorted that this meeting was packed in the interest of Mr. Peshall, and that he did not intend to speak while strangers (referring to the *Journal* reporter) were present. Mr. Wilmerding further asserted that members who had been dropped from the roll had been reinstated in order to help Mr. Peshall for the evening. J. D. Shotwell indorsed Mr. Wilmerding, and a lively discussion ensued. 'If the club wants to know why Mr. Peshall was disqualified, I will make a written report about the matter for the next meeting,' said Mr. Wilmerding. He intimated subsequently that the disqualification was made on the ground that Mr. Peshall had sold some of his dogs on paper in order to give them a fictitious value, and because he had shown dogs that were not his property. Peshall's friends ridicule these charges and say that the aid of the Supreme Court will be invoked to 'knock out the conspirators who through jealousy have seen fit to disqualify him.' The meeting adjourned in a whirl of excitement."

THE GORDON SETTER STAKE.

Editor Forest and Stream:

As all the entries for the Gordon Setter Stake have now been received and the forthcoming trials promise to be brought to a successful conclusion, I desire to take the present opportunity of thanking you for the earnest co-operation and assistance afforded in this matter. The trials promise to be a great success, and it is to be regretted that the Gordon Setter Club took no part whatever toward making it so. It is calculated that this will be a starting point for future similar events taking place annually, and that the result of these trials will demonstrate to the public generally the field qualities of the Gordon breed. The following entries have been made:

CORTO (Royal Duke—Norah), J. L. Campbell.
GORDON (Stubble—Countess of Devonshire), J. B. Blossom.
SALLY BEAUMONT (Beaumont—Countess Flo), J. B. Blossom.
MONT (Tom—Pearley), Dr. Tillinghast.
KING ITEM (Little Boy—Roxie), Item Kennels.
COUNTESS ROXIE (Little Boy—Roxie), Item Kennels.
BENDIGO (Ben Nevis—Blanche IV.), Claire Recta Kennels.
CURLEW (Drednought—Walker), Claire Reeta Kennels.
BEAUMONT (Ronald III.—Floss), Beaumont Kennels.
BELLMONT (Dasher—Blanche IV.), Beaumont Kennels.

In addition to the $100 given by the Central Field Trial Club, $75 has been donated by private subscription, which will be divided into three moneys, viz: $100 to first, $50 to second, $25 to third. The subscribers of the $75 are as follows: Mr. J. B. Blossom $25, Item Kennels $25, Beaumont Kennels $25. Besides the cash prizes the Philadelphia *Item* Field Trial Trophy, value $100, has been given on the following terms: When the owner of any contestant has had his name inscribed on it three times (not necessarily in succession) it becomes his personal property. The Van Zandt cup, value $50, will be awarded to the dog winning second money. A meeting of the executive committee of the Gordon Setter Club was called for Oct. 29, at 44 Broadway, New York. No quorum being present the meeting adjourned to a future date. The resignations of President H. Malcolm, Vice-President Dr. Whitaker, and Secretary and Treasurer I. T. Norris were received. JOHN H. MEYER.

THE POINTER CLUB OF AMERICA.

NEW YORK, Nov. 8.—*Editor Forest and Stream:* The Pointer Club of America deems it proper to state in answer to inquiries as to its condition, that financially it is prosperous, and that in point of numbers its membership is satisfactory. We have not thought it necessary to constantly advertise our existence or to get up excitements. It would be gratifying to officers of the club if the members would attend the meetings, but we do not feel that any great pressing interest is suffering by such inattention, and are confident of full attendance on an emergency.

It is now proposed to hold a meeting of the club at New York on the occasion of the next Westminster Kennel Club show. At that meeting we shall ask for the appropriation of a large amount as prizes to be competed for in one of the great field trials of 1891, by pointers only. We give this early notice of this purpose, in the hope that the attendance will be large and that we shall have the full expression of the will of our club as to the time when and the place where and the conditions under which these prizes shall be competed for. We will invite correspondence and suggestions as to what shall best be done to promote the interest of breeders and owners of pointers.

During the past year we have contributed largely, we think, to the meritorious shows throughout the country, as will be seen by the following list of cash prizes offered by the Pointer Club:

Boston Show—	
The Pointer Club Produce Stakes for 1890	$50 00
For best pointer dog with field trial record	10 00
For best pointer bitch with field trial record	10 00
Chicago—	
For best pointer dog	10 00
For best pointer bitch	10 00
American Field Pointer Cup, value $100.	
New York—	
For best pointer stud dog shown with two of his get	10 00
For best pointer brood bitch, same conditions	10 00
Rochester—	
For best pointer dog	10 00
For best pointer bitch	10 00
Baltimore—	
For best pointer dog	10 00
For best pointer bitch	10 00
Detroit—	
For best brace of pointers	25 00
Making a total of	$175 00

And a $100 cup given during the year. We think this compares favorably with the record of any other specialty club. The expenses up to date have been $11.30, postage and printing, the secretary performing necessary clerical work gratis, as well as furnishing an office without expense to the club. We cordially invite all lovers of the pointer to become members of the club.

JOHN S. WISE, President.
GEO. W. LA RUE, Sec.-Treas.

NEW YORK CITY, Nov. 8.

INDIANA KENNEL CLUB'S FIELD TRIALS.

THE DERBY—SUMMARY.

BICKNELL, Ind., Nov. 4.—Indiana Kennel Club's Derby, open to all setters and pointers born on or after Jan. 1, 1889, $10 forfeit, $20 additional to start. Sweepstakes purse, after deducting expenses, 40 per cent. to first, 30 per cent. to second, 20 per cent. to third, 10 per cent. to fourth. Entries closed June 1 with forty nominations and thirteen starters. The drawing was as follows:

First Series.

IVAN (R. B. Morgan), black, white and tan English setter dog (Gath's Mark—Esther),

against

CRICKET (Harry S. New), orange and white English setter bitch (Rush Gladstone—Quail).

SUNOL (E. Cadman), liver and white pointer bitch (Cornerstone—Dinorah),

against

QUEEN VIC (J. I. Case, Jr.), black, white and tan English setter bitch (King Noble—Queen Vashti).

JUBILEE (J. M. Freeman), blue belton and tan English setter dog (Gath's Mark—Esther),

against

QUAIL II. (Harry S. New), black, white and tan English setter bitch (Rush Gladstone—Quail).

RANCHO (F. H. Perry), red Irish setter dog (Claremont Patsy—Nino),

against

CANADIAN QUEEN (G. G. Pabst), black, white and tan English setter bitch (Locksley—Liddersdale).

REVELER (W. B. Hill), black, white and tan English setter dog (Gath's Mark—Esther),

against

SPOTTED BOY (Chas. Proctor), liver and white pointer dog (Trinket's Bang—Nellie Bow).

PENELOPE (Lebanon Kennels), lemon and white pointer bitch (Lebanon—Penelope),

against

TRAP, JR. (Samuel Grant), lemon and white English setter bitch (Ruby's Druid—Trap).

COYOTE (J. I. Case, Jr.), black, white and tan English setter bitch (King Noble—Cricket), *a bye.*

Ivan, Sunol, Queen Vic, Rancho, Canadian Queen and Penelope were spotted out by the judges.

Second Series.—Jubilee beat Cricket. Reveler beat Quail II. Trap, Jr. beat Spotted Boy. Coyote a bye.

Third Series.—Coyote beat Jubilee. Reveler beat Trap, Jr.

Fourth Series.—Reveler beat Coyote and won first.

Fifth Series.—Trap, Jr. beat Jubilee. Coyote a bye.

Sixth Series.—Trap, Jr. beat Coyote and won second.

ALL-AGED POINTER STAKE.

BICKNELL, Ind., Nov. 4.—Indiana Kennel Club's All-Aged Pointer Stakes, forfeit $10, with $20 additional to start, sweepstakes purse after deducting expenses, 50 per cent. to first, 30 to second, 20 to third. Entries closed Oct. 1 with 11 nominations and 6 starters. The drawing was as follows:

First Series.

THOMASTONE (W. H. Holmes), liver and white dog (Cornerstone—Firenzi),

against

CROXLILL (W. J. Smith), liver and white bitch (Croxteth—Daisy).

LASS OF BLOOMO (W. T. Hunter), liver and white bitch (Lad of Bow—Bloomo),

against

BOUNCE (G. W. Amory), liver and white dog (Bob—Sal).

DOLLY C. (Joseph Crugom), liver and white bitch (Graphic—Marguerite),

against

BERTRALDRO (J. E. Guinnotte), liver, white and ticked dog (Cornerstone—Bessie Bufort).

All dogs remained.

Second Series.—Croxlill beat Thomastone, Lass of Bloomo beat Bounce, Dolly C. beat Bertraldro.

Third Series.—Lass of Bloomo beat Croxlill, Dolly C. a bye.

Fourth Series.—Lass of Bloomo beat Dolly C. and won first prize.

Fifth Series.—Dolly C. beat Croxlill and won second, Croxlill third.

ALL-AGED SETTER STAKES.

BICKNELL, Ind., Nov. 6, 1890.—The conditions of the All-Aged Setter Stake, were the same as the Pointer Stake. There were 16 nominations and 8 starters. The drawing was as follows:

First Series.

DON'S NELLIE (A. H. Fowler), black and white English setter bitch (McDuff—Fame),

against

QUAIL (Hon. Harry S. New), black, white and tan English setter bitch (Change—Flora).

PRINCE LUCIFER (J. I. Case, Jr.), black, white and tan English setter dog (King Noble—Elsie Belton),

against

SAM WELLER (W. T. Hunter), black, white and tan English setter dog (Roderigo—Dixie).

JERRY MANDAN (R. B. Morgan), black and white English setter dog (Mandan—Prairie Belle),

against

NANNIE B. (Dr. J. H. McLeod), lemon and white English setter bitch (King Noble—Queen Vashti).

LILLY BURGES (G. A. Day), orange and white English setter bitch (Gath's Mark—Esther),

against

DAN FOREMAN (H. H. Fowler), black, white and tan English setter dog (Foreman—Miss Elsie).

All dogs remained in.

Second Series.—Quail beat Don's Nellie, Prince Lucifer beat Sam Weller, Nannie B. beat Jerry Mandan, Lilly Burges beat Dan Foreman.

Third Series.—Prince Lucifer beat Quail, Lilly Burges beat Nannie B.

Fourth Series.—Lilly Burges beat Prince Lucifer, and won first.

Fifth Series.—Prince Lucifer beat Nannie B., and won second. Nannie B. third. P. T. MADISON.

[We have received the full report, but too late for publication this week.]

A. K. C. ADVISORY COMMITTEE MEETING.

A MEETING of the advisory committee was held Saturday, Nov. 1. Present, August Belmont, Jr., Thomas H. Terry, James L. Anthony. The following matters referred to this committee, with power to act, by the executive committee of the American Kennel Club, as per resolution at the meeting of Sept. 25, 1890, were submitted by the secretary, and acted upon:

James Watson vs. Rochester Kennel Club. } *Appeal in matter of reserve numbers.*

Resolved, That in the opinion of this committee, reserve numbers should be given in all cases, but in the case of the Collie Special at Rochester, in 1889, the judge having left the show between the hours of four and five o'clock on the first day of said show (Tuesday), and the request from Mr. Watson for a reserve number not having been received by the club until the fourth day of said show (Friday), that it was not within the power of the club to accede to the said request.

Dr. M. H. Cryer vs. Cincinnati Kennel Club. } *Appeal from decision in Pug Special.*

Ordered, That the action of the committee of the Cincinnati Kennel Club in not sustaining the protest of Dr. Cryer, against the award for the special offered at Cincinnati in June, 1890 for the "best kennel of four pugs, entered and owned by one exhibitor," is hereby overruled, and that the said special prize be, and is hereby, awarded to Dr. M. H. Cryer, in accordance with the telegram of June 10, 1890, sent to said club by Mr. James Mortimer, the judge of the pug classes at said show.

Mrs. F. Smyth vs. Cincinnati Kennel Club. } *In violation of Club rules Nos. I., IX., X.*

Ordered, That the charges be forwarded to the secretary of the Cincinnati Kennel Club, with the request that he furnish this committee with such testimony and explanation as might be in his power, in defense of the action of his club in connection with the charges.

T. Jacobs vs. E. M. Oldham. } *Charges of misconduct in connection with Dogs.*

Ordered, That the secretary be hereby directed to inform Mr. Oldham that this committee is in possession of all the evidence in behalf of Mr. Jacobs (through his attorney) in connection with the charges preferred against him, and that said Oldham be given thirty (30) days from this date within which to furnish evidence in refutation of that now before this committee, in default of which he be disqualified. In the meantime no transfer of the spaniels Newton Abbot Lady II., No. 12,380, or Newton Abbot Lord, No. 12,381, will be recognized by the American Kennel Club.

Max Wenzel vs. Westminster Kennel Club. } *Appeal in matter of Setter Special.*

Whereas, At the show of 1890 a special prize was offered by a friend of the club for the "best setter with a field trial record," and the English setter Roger and the Irish setters Chief and Tim were presented for competition, and,

Whereas, The committee of the show ruled that Chief could not compete, as he had already been beaten in the challenge class by Tim, and,

Whereas, The late decision of the American Kennel Club, in defining what should constitute a field trial record, made Tim ineligible to compete for such a special, while Chief was eligible, by reason of having won first in an open stake for puppies, at the Eastern Field Trials Club trials in 1889; and,

Whereas, This committee could not undertake to determine what the result of a competition between Roger and Chief would have been under the judge officiating at said competition, it was, therefore,

Ordered, That there had been no competition for the said special for the "best setter with a field trial record," and the Westminster Kennel Club be directed to return the prize to the donor.

American Kennel Club vs. Maryland Kennel Club. } *Discipline.*

Ordered, That the Maryland Kennel Club be, and is, hereby granted fifteen (15) days from this date, to withdraw its vote of July 19, 1890, whereby it censured the American Kennel Club for acting according to its constitutional rights, and to apologize for said action, in default of which said club and its officers, holding office at the time of said meeting, shall stand suspended, subject to any further action in the premises by the American Kennel Club or its executive committee.

Louisiana Poultry and Pet Stock Ass'n, vs. Georgia Poultry and Pet Stock Ass'n. } *Conflict of show dates.*

Ordered, That unless the Georgia Association can furnish this club with the written consent of the Louisiana Association permitting the first named association to hold its show upon the same date, as claimed by the latter, that the rule applying to such a case will be enforced, and the Georgia Association will be suspended, provided it insists upon, and does hold its show upon the dates already claimed by, and awarded to, the Louisiana Association.

Recommendation of Stud Book Committee. } *In matter of Gazette registrations.*

Ordered, That on and after Jan. 1, 1891, all *Gazette* entries shall be known as "Listed," and shall be published each month in the *American Kennel Gazette*, under that heading, in contradistinction to Stud Book entries, which shall be known as and published under the heading "Registered."

The proposition made by Spratts Patent (America), to furnish all American Kennel Club blanks, was accepted for the year 1891.

The appropriation for all salaries of persons in the employ of the club, for the year 1891, was made, based on the total expenditures of last year.

The secretary reported a balance in the bank of $2,075.02, with no debts due at this date.

Adjourned. A. P. VREDENBURGH, Secretary.

MR. MALCOLM'S RESIGNATION.—Baltimore, Md. Nov. 10.—*Editor Forest and Stream:* On my return from a few days' successful partridge hunting I find in looking over the columns of your paper, under the head of "Dog Chat," a few remarks, I presume written by friend Lacy, commenting on my having "made the first move in his (my) determination to sever his (my) connections with the men of dogdom, by sending in his (my) resignation as Maryland K. C. delegate to the A. K. C. * * *" He could have also added that I had resigned the presidency of the Gordon Setter Club of America, and that in a short time I shall resign as president of the Maryland K. C. and as a member also. I shall remain in the Chesapeake Bay Dog Club, as it is composed solely of sportsmen—no men of "dogdom" are on the membership list. I feel and know that what friend Lacy states is true, that in every walk in life we will find men who are at variance with our ideas of right and wrong. I never expect to find men anywhere who all think alike, and do not disagree on that point. I am well aware that some men in "dogdom" are of that high order of manhood to which order I know friend Lacy belongs, and I know there are many more, but "dogdom" will find soon that the scales will drop from the eyes of those who are sportsmen, and they will leave "dogdom" and watch the mud-slingers of "dogdom" wallow in mud and destroy themselves. Sportsmen are out of their sphere in such company, and I would advise them to leave "dogdom" forever.—H. MALCOLM.

AMERICAN COURSING CLUB MEET.—Chicago, Ill., Nov. 7.—In the matter of the report of the American Coursing Club meeting, issue of Oct. 30, the statement is made that the Lady Graham Glendyne—Verdure Clad heat was an undecided. This is wrong, as the course was given to Lady Graham Glendyne. The error was made in a singular way. When the judge turned back from this course he was understood by the reporters to call this course an undecided one, and the press men so wrote it up. Later on, the next day, it was learned that he announced on his return to the assembly point his decision for Lady Graham Glendyne. The report should then have been changed to that effect, but in hurry this must have been overlooked, although it is a surprise to see it so. Dr. G. Irwin Royce calls attention to the fact that in the American Coursing Club report, Oct. 30, the pedigree of the two bitches Dollie and Belle is not correctly given. It should be Trales—Humming Bird, not Tralee—Blue Bell. In report of Hutchinson meet this pedigree was announced correctly on the programmes, and was of course printed as given, as was also the case at Great Bend. There were many errors in the programme printing at Great Bend, of which this is doubtless one. Dr. Royce cites another error, the pedigree of Trales being given as by "Wandering Tour" instead of Wandering Tom. This is only typographical.—E. HOUGH.

SPORTING DOGS CAN BE COMPANIONS TOO.—Toronto, Can., Nov. 8.—*Editor Forest and Stream:* I should like to inquire of your decidedly befogged correspondent "G. S. T." on what he founds his flat that sporting dogs are not "well adapted to the family companionship." The majority of the ladies of my acquaintance are by no means of his opinion, and swear by their handsome and hardy setters and spaniels. With reason, too; for what can be handsomer than a dog of any of the many varieties of these families—English, Irish, Gordon and Clumber, Sussex, field or cocker? They are handsome, faithful, courageous, clean in the house and good watch dogs. Not "lap dogs," to be sure; but I don't think many ladies would fondle an Irish terrier or a good-sized black and tan to that extent, while the "silken-fleeced Yorkshire terrier" would not retain the aforementioned silken fleece very long after he had bidden chamois skin bootlets, cocoanut oil and professional manipulation a long adieu. No, no, "G. S. T.," your favorites are all very well, but don't let prejudice force you into misstatements derogatory to other breeds.—SETTING SPANIEL.

A TEXAS DOG CASE IN COURT.—Austin, Tex., Oct. 30.—*Editor Forest and Stream:* I inclose you a recent decision of the Texas Court of Appeals, showing a dog is property in Texas, at least.—J. V. B. The report reads: "The High Courts. Commission of Appeals. St. Louis, Arkansas & Texas R. R. vs. J. P. Hanks, from Henderson. Appellee brought this suit to recover for the value of a shepherd dog killed by appellant. The evidence shows that the dog was walking with appellee along the track. As a freight train came along appellant stepped aside, while the dog kept on down the track, running for his life. It was a hard race and hotly contested, but the mogul at the end of 500yds. came under the wire a length ahead and over the mangled remains of poor Fido. Held: The court below gave instructions applicable to the evidence, and the jury having found for appellee, we find no ground for disturbing their finding. The judgment for $100 is affirmed. Hobby, J."

A SPITEFUL ACTION BY A DOG KILLER.—A year ago two dogs belonging to E. L. Mills, of this city, president of the Capital City Gun Club, were shot by H. G. Otis, manager of Judge Fullerton's farm, near Clifton, Va. Mr. Mills published a card in which he criticised the shooting of his dogs severely, and last Sunday, while Mr. Mills was hunting in the neighborhood, Otis had him arrested on a charge of trespass, purporting to have occurred the year before. He was taken to Centreville, six miles distant, and tried before Magistrate Simpson at 10:30 Sunday night. The prosecutor could not make out a case, and at midnight the magistrate discharged Mr. Mills and placed the costs on Otis.—*Washington Post, Nov. 4.*

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

BRED.

☞ **Prepared Blanks sent free on application.**

Gitana—Balkis. Miss Ida Orme's greyhound bitch Gitana to H. W. Huntington's champion Balkis, Oct. 25.

Cleo—Bradford Ruby II. John H. Law's (Cincinnati, O.) pug bitch Cleo to Eberhart Pug Kennels' Bradford Ruby II. (champion Bradford Ruby—Puss B.), Nov. 7.

Viola—Bradford Ruby II. Eberhart Pug Kennels' (Cincinnati, O.) pug bitch Viola (champion Treasure—Topsy) to their Bradford Ruby II. (champion Bradford Ruby—Puss B.), Nov. 4.

Fanny—Little Boy. W. J. Hopkins's (Boston, Mass.) Gordon setter bitch Fanny to Prof. S. G. Dixon's champion Little Boy (Dixon's Pilot— ——), Nov. 4.

Kildare Ruby—Dick Swiveller. Geo. H. Covert's (Chicago, Ill.) Irish setter bitch Kildare Ruby to his Dick Swiveller, Nov. 2.

Rochelle Nadjy—The Senator. Rochelle Kennels' (New Rochelle, N. Y.) black and tan terrier Rochelle Nadjy (champion Vortigern—champion Meersbrook Maiden) to their The Senator (Patrick—Pink), Oct. 1.

Rochelle Lady Teazle—The Senator. Rochelle Kennels' (New

Rochelle, N. Y.) black and tan terrier bitch Rochelle Lady Teazle (Dick—Rochelle Lass) to their The Senator (Patrick—Pink), Oct. 2.

WHELPS.

☞ **Prepared Blanks sent free on application.**

Pearl. A. Hasselmier's (Covington, Ky.) pug bitch Pearl (Lavinia Belle—Joe II.), Sept. 14, four (two dogs), by Eberhart Pug Kennels' Bradford Ruby II. (champion Bradford Ruby—Puss B.).

Lavinia Belle. Henry Eichler's (Covington, Ky.) pug bitch Lavinia Belle (champion Treasure—Viola), Oct. 19, five (four dogs), by Eberhart Pug Kennels' Bradford Ruby II. (champion Bradford Ruby—Puss B.).

Lady Thurman. Eberhart Pug Kennels' (Cincinnati, O.) pug bitch Lady Thurman (Dixie—Silver Shoe), Nov. 7, five (four dogs), by their John Bull (champion Loris—May Queen).

Belle. Mrs. S. E. Davis's (St. Paul, Minn.) pug bitch Belle, Nov. 5, six (three dogs), by Eberhart Pug Kennels' Bradford Ruby II. (champion Bradford Ruby—Puss B.).

Ruby S. Mrs. R. Strauss's (Cincinnati, O.) pug bitch Ruby S., Sept. 1, five (three dogs), by Eberhart Pug Kennels' Eberhart's Cashier (champion Kash—Lady Thora).

Kate IX. Geo. H. Covert's (Chicago, Ill.) Irish setter bitch Kate IX., Oct. 8, three (one dog), by his Dick Swiveller.

Meersbrook Maiden. Rochelle Kennels' (New Rochelle, N. Y.) black and tan terrier bitch champion Meersbrook Maiden (Meersbrook Chance—Meersbrook Empress), Oct. 30, seven (four dogs), by T. Ellis's Broomfield Dick (Halifax General—Pearl).

Bell. F. F. McGuire's (Bangor, Me.) Yorkshire terrier bitch Bell (champion Bradford Harry—Old Bell), Oct. 14, six (three dogs), by P. H. Coombs's champion Bradford Harry (Crawshaw's Bruce—Beal's Lady).

SALES.

☞ **Prepared Blanks sent free on application.**

Caspar. Black greyhound dog, whelped Aug. 5, 1890, by champion Balkis out of Loisette), by H. W. Huntington, Brooklyn N. Y., to Dr. F. A. Coates, Mystic, Conn.

Genesta. Liver and white pointer bitch, whelped May 20, 1888, by King of Kent out of Hops, by Fred F. Merrill, Milwaukee, Wis., to J. W. M. Cardeza, Philadelphia, Pa.

Miss Swiveller. Red Irish setter bitch, age not given, by Dick Swiveller out of Kildare Ruby, by Geo. H. Covert, Chicago, Ill., to G. C. Hamilton, Athens, Ga.

Tryphosa. Red Irish setter bitch, whelped April 10, 1890, by Blaze out of Gladys B., by R. H. Burr, Middletown, Conn., to W. E. Crane, Peoria, Ill.

Master Swiveller. Red Irish setter dog, age not given, by Dick Swiveller out of Kildare Ruby, by Geo. H. Covert, Chicago, Ill., to J. C. Cline, Los Angeles, Cal.

Rochelle Lady Teazle. Black and tan terrier bitch, whelped Jan. 27, 1890, by Dick out of Rochelle Lass, by Rochelle Kennels, New Rochelle, N. Y., to F. S. Ward, Oxmoor, Ala.

The following smooth fox-terriers, by James Mortimer, Babylon, L. I.: Dog Suffolk Risk to C. L. Wilton, New York; two bitches, Suffolk Spinster and Suffolk Syren, to John E. Thayer, Lancaster, Mass.; dog, whelped June 17, 1890, by Veronese out of Suffolk Spinster, to Allen Wallace, New York; dog, whelped July 4, 1890, by Raffle out of Suffolk Rarity, to Miss Leroy Jones, New York; wire-haired bitch Suffolk Chagrin to L. H. Rice, Philadelphia, Pa.

KENNEL MANAGEMENT.

There is no charge for answering questions under this head; we are always glad to give advice on the care and management of dogs; and we shall make this a special feature.

T. E. B., Hoboken, N. J.—Will you kindly give names and pedigrees of the pug dog and bitch which took first prizes at the last dog show of the Westminster Kennel Club? Can I obtain printed copy of their pedigree, from whom and at what expense? Ans. Open pug class, Miss J. A. Yard's Tim was first, whelped Jan. 10, 1889, Breeder, owner. By champion Max out of Paquette. This dog is now dead. In bitches, Mohawk Kennels' Bo Peep II. was first. Whelped Nov. 6, 1887. Breeder, owners. By champion Joe out of Tody. For extended pedigree of Tim write Dr. M. H. Cryer, 1527 Arch street, Philadelphia, Pa., and Bo Peep's, write Harry L. Goodman, Auburn Park, Ill.

T. A. W., Boston, Mass.—I have a very fine-bred bull-terrier (round head) that has had some kind of trouble with his skin since he was 3 months old; he is now 9 months. He has lost most of his hair, some growing again on his back, but his legs and under part of neck are bare and have a red look. I have tried several mange cures and soaps, but they do not seem to do any good that I can see. I am giving him Glover's Blood Purifier at present. He is very active and seems to be all right every other way. Can you help me get hair on him and rid him of the pimples? If so, you will confer a great favor. Ans. Try the following mixture: 1qt. lard oil, ¼lb. sulphur lac, ¼lb. antimony. Mix and rub well into the affected parts. Keep the dog warm. In a few days wash off with warm water and castile soap. Continue the blood medicine, and let us know result.

Rifle and Trap Shooting.

RANGE AND GALLERY.

A REVOLVER TARGET.

THE inclosed target is a fac-simile of six consecutive shots made by Mr. George Bird with a Smith and Wesson, .44cal., frontier model, revolver, at 12yds., using the gallery ammunition and shooting at the word of command, each shot being fired

between the words "one" and "three." It was made at Conlin's gallery, Thirty-first street and Broadway, this city, on Nov. 4. Mr. Bird is a member of the Kildare and Currituck clubs, and is one of the best all-around shots in the country. Among the many on exhibition in the record room of Conlin's, this target is without doubt the best.

ST. LOUIS, Mo., Nov. 8.—But six members of the St. Louis Pistol Club attended the last shoot. The medal was won by W. Bauer, who succeeded in scoring 93 out of a possible 100. A 12½yds. Standard American target is used for all shooting. Score:

W Bauer	10	10	10	8	10	9	10	9	7	10—93
M Summerfield	7	9	9	8	9	10	10	8	10	8—88
G Alexander	0	5	8	9	10	8	10	10	8	10—87
J Bast	7	7	10	9	9	9	6	10	9	8—84
M Billmyer	9	10	8	7	8	8	8	10	7	9—84
A McBean	9	10	8	10	8	9	7	7	7	6—81

UNSER FRITZ.

NEWARK, N. J., Nov. 4.—A big party of enthusiastic riflemen were in the Shooting Park to-day, the attraction being a 100-shot match on the American champion target. The entrance fee was $5 and there were nine contestants, four of whom were winners. The full "possible" on this target is 1,500 points. The scores of the match would have been much higher had it not been for a continually shifting light and a "fish-tail" wind. The contest for first honors between Boyken, Coppersmith and Holges was very interesting. The result by 10-shot strings is appended:

J A Boyken	120	133	135	124	130	118	131	131	116	127—1,265
J Coppersmith	122	133	119	133	124	125	123	135	123	113—1,250
H Holges	125	111	133	132	136	128	107	119	128	123—1,242
H W Hawes	118	120	124	123	113	122	126	110	115	114—1,185
F C Campbell	117	123	126	109	98	127	126	117	123	113—1,179
G Joiner	116	119	123	108	119	120	125	115	106	119—1,170
G Homrighausen	116	120	122	124	112	110	123	115	114	110—1,166
H Rothard	120	108	111	103	112	114	100	91	97	109—1,066

A 50-shot match on the German ring target will take place at the Shooting Park on Thanksgiving day, beginning at 12 o'clock. The conditions will be $2.50 entry, half winners and half losers.

NEW YORK, Nov. 4.—The Empire Rifle Club held their weekly shoot at Zettler's gallery, on the Massachusetts 12-ring target, distance 100ft., off-hand, possible 120 points:

Wm Rosenbaum	111	W Overbaugh	108	C Zettler, Jr.	103
A Stahl	110	W Miller	105	J Zettler	95
J Grimm	111	E Smith	104	G Hillmeyer	88
W Misenholder	110				

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

FIXTURES.

If you want your shoot to be announced here, send in notice like the following:

Nov. 18-19.—Open-to-All Tournament of the Woodside Gun Club, Woodside, N. J. Carl Von Lengerke, Sec'y, 843 Broad street, Newark.

Nov. 25-28.—Tournament of the Newark Gun Club, at Erb's Park, Newark, N. J. Two days at inanimate targets and two days at live birds. Jacob Pentz, Secretary.

THE DAYTON WIND-UP.

DAYTON, O., Nov. 10.—The shooters wound up the trap season with a live bird team race on the new club grounds on the peninsula south of the city, 3 men on a side, 25 pigeons to each man, American Association rules, L. K. Buntain was referee, and by agreement the three-year-old red Irish setter bitch Minnie, trained by Sale Good, the new superintendent of the Dayton Kennels, and sold to Scott McDonald, was to retrieve all the birds:

McDonald	1011111221221101022121 11—22
Makley	1011101111000110202001121—16
Hannah	0202220212211522110120120—18—56
Sander	1200110021211001110100101—15
Cooper	1010110002200001102011110—13
Troup	1012112211022011202011 11—20—48

Only one or two birds got away out of the 150 without being hit, and of the 46 lost birds, 32 were scored dead out of bounds.

The shooting afforded great sport to the crowd of spectators, but the perfect work of the dog Minnie was marvelous. She retrieved every dead bird, whether within or without the bounds without an error, and saved two birds from crossing the dead line. When the shooter stepped to the firing point Minnie was keen and quivering, and after each shot her eyes flashed with excitement, but she waited for the word "fetch." She marked every bird down, and shot like a streak of lightning to retrieve, and she enjoyed the work as well as the crowd did the exhibition of her perfect training. Of course the dog grew tired, but she did not lag until the last bird was delivered into her master's hands.

A swift-flying incoming bird was killed dead in the air, but was going at such velocity that it seemed likely to fall back of the dead line. The dog seemed to realize it, and with lightning speed circled and headed it off and caught the dead bird at the first bounce about a foot inside of the line. In retrieving a crippled bird she showed remarkable judgment by making a detour to prevent the birds going outside the boundary line. While Minnie was retrieving a dead bird McDonald shot at a low-flying stray pigeon and feathered it. The dog saw that the second barrel was to be used, dropped to shot, and when McDonald killed she brought in both dead birds. Such exhibition of a perfectly trained retriever working through an entire shoot was never witnessed here before. BROWN.

MR. DRURY UNDERWOOD.

HUTCHINSON, Kas., Oct. 29.—Shooters and sportsmen all over the West are to-day shocked by the news of the death by accident of Mr. Drury Underwood, one of the most familiar and respected figures of Kansas City sporting circles, and a man known very widely elsewhere. The following are the despatches which briefly convey the saddening news:

KANSAS CITY, Oct. 28.—Drury Underwood, a well-known business man of this city, while out driving this afternoon was struck by the Alton express at Sheffield, a suburb, and was instantly killed. Mr. Underwood was president of the Exposition Driving Park Association, the Kansas-Missouri Interstate Fair Association, and a prominent contractor and brick manufacturer. He was also a member of the Kansas City Gun Club, and an active patron of amateur athletic sports.

KANSAS CITY, Oct. 29.—At 2 o'clock this afternoon Coroner Elston began an inquest into the cause of the death of Drury Underwood. The inquest is being held at the home of the deceased, where the body now lies awaiting the last glances of his many friends.

Coroner Elston yesterday visited the scene of the accident on the Alton tracks at the Blue avenue crossing. He was accompanied by Joseph Underwood, a brother of the dead man, and Samuel, the eldest son. Mr. Elston says the crossing is a veritable death trap, but no worse than many others. The east side of the road is steep and on this side a sight of the tracks is not obtainable. It is probable that the sight of the train so near made the horses unruly, and that Mr. Underwood took his whip and attempted to drive them across the rails ahead of the oncoming train, when they shied and turned down the center of the track. The wheel marks indicate this. Mr. Underwood was an expert horseman and was familiar with the animals he drove.

The last time the writer saw "Uncle Drury," as he was lovingly called by all the boys, was in a box at a Kansas City theater, last spring, where he was acting as one of the hosts of the East and West teams then visiting that city. He was then, as always, a hale, hearty, cheerful man, grayhaired, portly, and the soul of overflowing geniality. He was known and loved by every one.

A singular incident is connected with the lamentable matter. In the programme for the great Kansas City tournament to be held early next month, the boys, in their serio-comic, quasi-complimentary style, have put in the following line: "Shoot No. 3.—Drury Underwood's Last Shoot." Mr. Underwood was approaching the time when age would compel him to lay down his gun. The boys who looked forward to meeting "Uncle Drury" as one of the pleasantest features of the coming meeting will look with sadness on the pathetic prophesy of that line, "Drury Underwood's Last Shoot." E. HOUGH.

PINE IRON WORKS, Pa., Oct. 29.—This was the second match between the Jacksonwal Club and the Pine Gun Club for a supper, 10 Keystones, Keystone rules:

Jacksonwal Gun Club.		Pine Gun Club.	
J Gechter	1111111111—10	J Dierolf	1011011110—7
A Adams	1001101000— 4	S Schaeffer	0101000100—3
F Wentzel	1101000111— 6—20	T J Dierolf	0101011000—4—14

First sweep, 10 Keystones, 50 cents entrance, three moneys:

J Gechter	4	T J Dierolf	5	S Schaeffer	2

J Dierolf	8	T J Dierolf	6		

Fourth event:

J Gechter	6	F Wentzel	7	T J Dierolf	4
A Adams	6	J Dierolf	6		

STANDARD-KEYSTONE TARGET CO.

THE formation of a company styled as above has just been completed and will hereafter make a strong bid for its share of the target business in this country. For many weeks Mr. H. A. Penrose has been quietly working for this end and has succeeded in placing the stock among representative sportsmen in various sections, and a reference to the list of stockholders shows that he has succeed in making a very strong company. It is a combination of the plants of the Standard Target Co., formerly located at Cleveland, Ohio, and the Keystone Mfg. Co., at Corry, Pa. The new company has been capitalized at $100,000, divided among the following gentlemen: H. A. Penrose, C. H. Ames and C. G. Harmon, of Corry, Pa.; O. R. Dickey, T. G. Strater, Herman Strater, W. Strater and Chas. Bradburn, of Boston, Mass.; W. C. Cady, New London, Conn.; T. B. Bristol, W. H. Andrews & Sons, and Mr. Langden, of New Haven, Conn.; Jas. and Wm. Wolstencroft, of Frankford, Pa.; and Chas. and Al. Hebbard, of Cleveland, Ohio. The company is incorporated under the laws of the State of New Jersey, and will have offices at New York and Chicago. On Saturday, Oct. 25, a meeting was held in Jersey City, where the following officers were elected: President, H. A. Penrose; Vice-Pres., O. R. Dickey; Sec'y, Jas. Wolstencroft; Treasurer, W. C. Cady. Directors, T. G. Strafer, T. B. Bristol and W. Wolstencroft. Ground has been secured at New London, Conn., and the erection of a large plant is to be started at once. New machinery is to be put in as well as that now in use and every preparations will be made for a large out-put. Mr. H. A. Penrose is to have general management of the business, and will visit the tournaments as formerly and the trade as well, while the factory will be superintended by the Hebbard brothers.

CHICAGO VS. KANSAS CITY.

CHICAGO, Nov. 9.—The great Chicago-Kansas City match is booming. The Chicago boys left this evening over the Burlington, arriving at Kansas City to-morrow morning. The day will be spent in preliminary practice. The Chicago party will be met by a committee of Kansas City sportsmen and escorted to the Midland Hotel, which will be their headquarters during the week. The list of visitors who will represent Chicago is as follows: R. B. Argan, W. P. Mussey, Geo. Kleinman, Henry Kleinman, George Arey, Abe Kleinman, John Watson, M. J. Eich, C. B. Hicks, P. F. Stone, C. E. Felton, Abner Price, W. N. Low, Geo. T. Farmer, Geo. Hofman, E. M. Steck, J. E. Price, A. W. Reeves, I. W. Budd, W. H. Skinner, C. D. Gammon, H. W. Loveday, Henry Ehlers, W. E. Phillips, V. Hofman, C. S. Barton and many others. With them will be Chas. Kern, L. B. Crooker, H. D. Nicholls, M. D. Hart, M. R. Hart, Rolla Heikes, H. W. Jenney, John J. Gillespie.

The two teams of shooters will be on board fully made up. The match will be shot in two teams of 10 men each. Kansas City is reported to be making preparations for a royal entertainment of the visitors. At 5 P. M. the Chicago boys gathered at Mussey's hall and started for the train with stern determination written on their faces. Something is going to drop. Just what, will be known better in a week. H.

[Speial to Forest and Stream.]

KANSAS CITY, Nov. 11.—There is great excitement here. There will be a grand reception and a pleasant time to-night. Five races were finished on first team of 10, Chicago leading 7 birds at halfway post. Total—Chicago 264, Kansas City 257.

Bingham, of Kansas City, beat Stone, of Chicago, 47 to 41; Mussey, of Chicago, beat Halliwell, of Kansas City, 44 to 43; Eich, of Chicago, beat Chateau 48 to 44; Twitchell, of Kansas City, beat J. E. Price, of Chicago, 41 to 39; Geo. Kleinman, of Chicago, beat Guinotte, 46 to 43; Abe Kleinman, of Chicago, beat Vories, 46 to 39; Felton, of Chicago, and Jim Riley at dark a tie on 28 each out of 30. This is proving a great event all around.—E. H.

THE COUNTRY CLUB, of San Francisco, send us the official summary of their pigeon shooting for the year 1890, which they tell us is the highest record made by a club of twenty-three men in California:

	Shot at.	Killed.	Per cent.
Ramon E Wilson	44	39	88.63
Fred R Webster	172	140	81.04
R B Woodward	137	109	79.56
E L Bosqui	24	19	79.17
Fred W Tallant	137	108	78.83
F L Wooster	143	112	78.32
J D Redding	108	80	74.07
Alex Hamilton	84	62	73.81

TOWANDA, Pa., Nov. 8.—A fair number of shooters turned out on Friday, Nov. 7, to contest for the monthly badge shoot. Field sports are almost daily being indulged in by the members, still when trap day comes the attendance seems to be the same in and out of the game season. Following are scores, 3 traps, Am. Ass. rules, for club badge, 25 single targets:

Dittrich	1100111110111111011100100—16
Snider	0100101100110110111110110—15
Montanye	0110111100011111100101110—16
Mace	0001010001110100010010000— 8
Rittenbury	0101110110111111011001010—15

Dittrich and Montanye tie for club badge. In shoot-off Montanye wins.

For county badge, 25 singles:

Dittrich	0110011111001011011100 01—15
Snider	1101110111100111101111101—19

Worthiny	0010000110101000010000100— 7

W. F. DITTRICH, Sec'y.

NEWARK GUN CLUB TOURNAMENT.—The programmes for the four days' tournament of the Newark Gun Club, that is to be held at Erb's Park, Newark, N. J., are now ready for distribution. The first two days, Nov. 25-26, will be devoted to Keystones; on the 27th, Thanksgiving Day, and Friday, the 28th, live birds will be used. The committee have decided to debar the professionals from the target competitions. Among those under the ban are: Wm. Wolstencroft, of Pennsylvania; E. D. Miller and Wm. Sigler, of New Jersey; Harvey McMurchy, W. S. Crosby, H. B. Whitney and F. D. Kelsey, of New York; R. O. Heikes and Al Bandle, of Ohio; Stice, Budd and Elliott. The live bird events are to be open to all. It is more than probable that this depature will draw together a large number of the amateur shots; as heretofore the men mentioned have invariably captured the bulk of the prize money at all of the Eastern tournaments.

WATSON'S PARK, Nov. 1.—Forester Club, 15 live pigeons, Illinois State rules, for club medal:

Ed Price	121212220202121—13	A Price	201201111121111—13
GCunningham	122121202012122—13	W C Price	201121210211122—13
J O'Brien	020111122202??	W D. Price	101021212011111—12
A Weaver	011020102011?—10	C E Willard	022120102211221—13

After killing 3 birds each, 3d Price, Gib Cunningham and C. E. Willard decided to finish ties for medal in next club shoot.

Same day at 5 live pigeons, Illinois State rules, 3 moneys. All ties divided:

Ed Price	12122—5	Geo Kleinnan	12111—5
Gib Cunningham	12211—5	E M Steck	10121—4
J O'Brien	02011—3	John Watson	12121—5

W G Payson	11212—5	Beaulf	10121—4
H Y Kleinman	11111—5		RAVELRIGG.

WORCESTER, Mass., Nov. 6.—The merchandise race was the principal event at Coal Mine Brook Range yesterday. It is a series of contests begun last spring under the auspices of the Worcester Sportsmen's Club, and continues until next spring. The regular meets of the club have been monthly since the law was off on game. The meet yesterday was the twenty-third in the series. Each man had a possible 25 clay pigeons. The work of each follows: A. B. Burbank 22, A. B. F. Kenney 21, G. J. Rugg 21, W. L. Davis 19, G. E. Adams 19, E. T. Smith 18, E. F. Snow 17, H. W. Webber 17, A. R. Bowdish 16, M. D. Gilman 15, E. Jordan 11, L. Crompton 10, H. Colvin 6.

The remaining events of the day were with strings of 10 clay pigeons. The result of each event follows:

First—E. T. Smith, W. L. Davis and G. J. Rugg each broke 8 and div. first. A. B. Burbank broke 7 and took second, A. B. F. Kenney secured the third place.

Second—W. L. Davis and G. J. Rugg each broke the 10 and div. first. E. T. Smith and A. R. Bowdish each broke 8 and div. second, A. B. F. Kenney and M. D. Gilman each broke 7 and div. the honors of the third place.

Third—A. B. Burbank, M. D. Gilman and A. B. F. Kenney each broke 9 and div. first, G. J. Rugg broke 8 and won second, E. T. Smith broke 7 and won third.

Fourth—E. T. Smith and M. D. Gilman each broke the 10 and div. first, G. J. Rugg and W. L. Davis each broke 9 and div. second, A. B. F. Kenney and A. B. Burbank each broke 8 and div. the honors of the third place.

McMURCHY AND ELLIOTT.—St. Louis, Mo., Nov. 8.—There is a big surprise in store for the trap-shooting fraternity in the near future. A new delegate for match shooting honors is about to make his debut. He is well-known to the trap shots of this country, but has not engaged in any prominent matches. He is conceded one of the best, if not the best, all-around man that ever faced a trap in this country, but owing to his business calling was averse to engaging in private matches. This person is none other than Mr. Harvey McMurchy. There is a person named Jim Elliott, at Kansas City, who, owing to his recent successes at the trap, is suffering with a bad case of inflation, and to tone him down a little Harvey has determined to enter the race for championship honors. Press of business duties prevents McMurchy from making a match now, but he hopes to be able to issue a challenge in a few months. The deli will be forthcoming in due time, and in the language of the irrepressible Jack Winston, the Kansas City man will either have to accept or jump the fence. Harvey was in the city a few days the past week, and quietly whispered the above information into the ear of the writer.—UNSER FRITZ.

Yachting.

A NEW INTERNATIONAL CHALLENGE CUP.

THE following conditions, which have just been made public by the Royal Victoria Y. C., of Ryde, Isle of Wight, England, are likely to give an entirely new turn to international yacht racing, as they put into the field a rival to the trophy so long held in the possession of the New York Y. C. During the past thirty years there have been a number of international trophies open to challenge on one side or the other, such as the Cape May, Brenton's Reef, Bennett-Douglas, and various cups contested for at times by Dauntless, Gitana, and other American yachts in the English Channel and on the Mediterranean, but in all this time the America's Cup has been the premier yachting trophy, no other ever having reached sufficient distinction to claim a rivalry with it. While the actual status of the other international trophies is no better to-day than five years since, all being more or less buried now, as they were then, the America's Cup has undeniably lost much of its prestige since the last contest for it in 1887, in consequence of the absurd and onerous conditions then attached to it by the New York Y. C.; and, so far as any prospective challenge from British yachtsmen is concerned, it is little better off than the moribund Cape May and Brenton's Reef cups taken home in 1885 by Genesta, and since unchallenged for by American yachtsmen.

It has more than once been suggested in the course of discussion over the new deed of gift that as the America's Cup was no longer open to friendly international competition on fair terms, the time had come for the establishment of a new trophy on a broader and more liberal basis; and this feeling has at length taken shape in the present action of the Royal Victoria Y. C. To how great an extent this action has been inspired by a mere desire to promote the fortunes of the club, and to reap such benefits as the races of '85, '86 and '87 have brought to the New York Y. C., or to what degree it partakes of the nature of a retaliation for the injustice of the new deed of gift, and an attempt to supplant the America's Cup, we cannot say; but it is at least certain that the barriers now surrounding that trophy have greatly increased the chances in favor of the establishment of a British rival for the honors of international racing.

The new trophy is a cup, to cost $2,500, and though the value of such a prize must always be sentimental rather than intrinsic, for this sum a prize should be secured in every way suited to the magnitude of the events which it will in time commemorate.

In regard to the Royal Victoria Y. C., it is practically contemporary with the New York Y. C., being founded early in 1845, or less than a year later than the other. At an early day it took a very prominent place in yacht racing, and many of the classic contests of the south coast were sailed under its red burgee. The only "Queen's Cup" for which the America sailed, the trophy that has since become notorious in connection with Mr. Tankerville Chamberlayne and the Arrow-Mayflower controversy, was one given to this club in 1852 and sailed for in August of that year; America, then owned by Lord Londesborough, being beaten by the cutters Arrow and Mosquito. The present commodore of the club is the Marquis of Exeter. The conditions as given out are as follows, though we are not yet informed whether they have been finally adopted or are still open to amendment:

The cup is, and shall continue to be for all time, the property of the Royal Victoria Y. C., of Ryde, Isle of Wight, the sailing committee of which club shall, at any time while actually holding the cup and prior to receiving a challenge, have power to alter or vary the conditions attached thereto, but any other club which may win and hold the cup shall only alter or vary the conditions with the sanction and approval of the sailing committee of the Royal Victoria Y. C. Any royal or recognized foreign or colonial yacht club shall always be entitled to challenge for the cup, and such yacht must sail on her own bottom from her own country to the country where the matches are to be sailed. All races for the cup in the British Isles will be held in the neighborhood of the Isle of Wight and under the supervision of the sailing committee of the Royal Victoria Y. C. Should the club holding the cup be from any cause dissolved the cup shall be transferred to some other royal or recognized yacht club of the same nationality which the winner may select. Failing in this the cup shall be immediately returned to the Royal Victoria Y. C.

The competing yacht, if of one mast, shall not be under 65ft. nor over 90ft. on the load waterline; if of more than one mast she shall not be under 70ft. nor over 115ft. on the load waterline.

With each challenge there shall be sent a certified statement of the name of the owner of the yacht, the name of the yacht, her rig, her rating under the British Yacht Racing Association rules, and her length on load waterline as measured by the British Yacht Racing Association rules forty-eight hours before the first match, which shall not vary more than five per cent., nor her rating more than ten per cent. from that stated in the challenge. The winner to be the yacht which wins three out of five matches.

Challenges must be received by the club holding the cup not less than eight months nor more than ten months before the date of the annual regatta of the club holding the cup.

The club holding the cup shall not be bound to accept the challenge from the club which nominates the defeated yacht until after another challenge has been made and decided.

The club shall not accept more than one challenge at one time.

Ballast may be shifted between the times of entry and forty-eight hours before the race.

Starts to be made at the exact time specified unless a dense fog prevails. A postponement may be made if the Sailing Committee thinks it desirable, but if either of the competitors desires to start at the time specified, the Sailing Committee shall start them at that time.

If an accident occurs before the start reasonable time will be given to effect repairs. If a serious accident occurs during any match reasonable time will be given before the next match to effect repairs, but a yacht must abide by her accidents during a match.

Any match the average rate of which is under five knots per hour must be resailed.

All matches for the cup are to be sailed in Europe and America between the first day of May and the last day of October.

The matches are to be sailed under the supervision of the sailing committee of the club holding the cup, and to be held under the British Yacht Racing Association rules.

Scales and allowances to be in force at the time of entry, except where it is otherwise specified.

The course for each match to be not less than thirty-five knots; low water soundings on any part of the course shall not be less than three and a half fathoms; three of the courses to be as far as possible different and as far as possible free from all disadvantages due to local knowledge; one of the courses to be as nearly as practicable twenty knots to windward or leeward and return.

The name and rating of one yacht selected by the club holding the cup to defend the same shall be given to the challenger one week before the date of the first match, and no other yacht shall be substituted. British Yacht Racing Association rating of defending yachts shall not exceed that of the challenging yacht stated in her challenge by more than twenty per cent.

Should the club holding the cup fail to provide a yacht to defend it or retire from the contests, the cup shall be delivered up to the challenging club. Should any dispute arise as to these conditions or any interpretations of the sailing rules, the matters in dispute shall be referred to the sailing committee of the club holding the cup and the Royal Victoria Y. C.

The first matches for this cup will be sailed near the Isle of Wight in August or September, 1891.

The challenge, in accordance with the following form, will be received for this year only as late as March 1, 1891, at the Royal Victoria Y. C., Ryde, Isle of Wight, England. A gold medal and added money will be given by the Royal Victoria Y. C. this year. No entrance fee required. Should no yacht registered out of the British Isles enter by March 1 the conditions under which the cup will be sailed for will be as subsequently announced by the Royal Victoria Y. C.

The first race shall be from the Warner Lightship to the Nab Lightship, then ten miles to windward or leeward and back, twice around.

The second race will be from the Warner Lightship to Owers Lightship; thence to a flagboat off Dunnose, east of Princessa to a buoy off Nab Lightship, to and back to Warner's.

The third race shall be from Warners around Cherbourg breakwater and back.

The fourth race to be the same as the first race.

The fifth race to be around the Isle of Wight.

The form of entry arranged is this: Please enter —— yacht for the Royal Victoria Y. C. International Cup matches, near Ryde, Isle of Wight, in August or September, 1891; her distinguishable flag is ——, her rig is ——, her rating, in accordance with Rule 9, of the British Yacht Racing Association rules for 1890, is ——, and her length on load water line is ——, and I declare that no alteration shall be made in her length of load water line or in the length of spars or in her sail area from the time she is measured by the official measurer of the British Yacht Racing Association and her certificate issued, and the time of the first and succeeding matches for the above cup, and I undertake that while sailing under this entry she shall not have on board any bags of shot; that all her ballast shall be properly stowed under the platform or in the lockers and shall not be shifted or trimmed in any way whatever, and that I will obey and be bound by the sailing rules of the British Yacht Racing Association. Signed, this —— day of —— owner of yacht ——.

After the many suggestions and requests made by British challengers for the America's Cup, and the freedom with which British yachtsmen have dared to criticise the famous "lawyers' deed," American yachtsmen will read with interest the similar document prepared by the Royal Victoria Y. C., and it will have to stand a pretty severe overhauling before being approved or condemned. In the first place, the ownership is permanently vested in the club, the donor of the cup, so that there is no danger of any ridiculous farce of returning and re-donating; if the club ever wishes to replace the present terms by others more rigorous and unfair it must shoulder the responsibility itself, and not impose it on one individual. A certain amount of elasticity is preserved in the original conditions by the proviso that they may be changed by another club which may hold the cup for the time, as long as the changes are sanctioned by the donating club, but no change may be made while a challenge is pending. The cup is open to challenge from any recognized yacht club.

The provision for the transfer of the cup in case a club ceases to exist is a very fair one. The limits of size are the same as in the new deed, except that the minimum limit for schooners is 10ft. smaller.

The fact that the same limits have been chosen is certain to be brought forward as an answer to some of the criticisms made against the new deed, but there is a vast difference in the attendant conditions. While in the deed of gift of the America's Cup the limit is nominally a wide one, of 65 to 90ft., and 80 to 111ft. it is practically by means of the clause, "without any time allowance whatever," and the absence of any guarantee that the challenger will not be greatly outbuilt, made a fixed size of 90ft. waterline for singlestickers, the schooner and yawl limit being similarly 115ft. In the light of the action of the New York Y. C. in regard to the Sweet's challenge in 1887, and especially in declining to meet Valkyrie with a boat of her own size last year, the minimum limits of 65 and 80ft. for sloops and schooners must be looked upon as mere blinds, and it would have been far more honest for the New York Y. C. to have limited the size of all challengers simply to 90 or 115ft., according to rig. On this point the Royal Victoria Y. C. has pursued a very different course; it is specially provided in a later clause that the rating of the defender shall not exceed that of the challenger by more than 20 per cent. As the rating of a 70-footer like Katrina would be about 84, the largest yacht which could be chosen to meet her in case of a challenge would be one of about 100-rating, or 80ft. L.w.l., a sufficiently large margin, but very much nearer than 90ft., or say 125-rating. A limitation of this sort was most necessary in the case of the America's Cup, and its omission, coupled with the exclusion of time allowance, is one of the worst features of the new deed.

The margin of 20 per cent. is a large one, and as it is almost a foregone conclusion that in future races the defender, and in all probability the challenger as well, will be specially built for the purpose, it is in every way desirable that the first step toward a race shall be a mutual agreement that each party shall build to a specified limit of rating or corrected length.

It will be no surprise to find that the odious dimension clause of the America's Cup has no place in the present conditions, all that is required being the names of owner and yacht, the rig of the latter and her rating and waterline, a variation of not more than 10 and 5 per cent. respectively being allowed between the figures of the design, given eight months in advance, and the completed and tested boat. There is no attempt to pry into the private affairs of the designer of a challenger, to extort information which gives an unfair advantage over him, or to hamper him in any way; but he has the universal privilege of altering the trim and draft of his boat after the trial. The waterline is required with the rating, which carries with it the sail area as a matter of course; and even while this in comparison with the demand for four dimensions and a Custom House register is very large, we believe that it is too much to ask. All that a defender can rightfully demand is the racing measurement of the yacht he is to meet. With the various factors of this final measurement, be they waterline length, beam, sail area, displacement or any other elements of design, he has nothing to do; his task is to combine these factors, in such proportions as his judgment dictates, so that the net product, in the form of rating or corrected length, shall not exceed that of his opponent. Perhaps this is too far in the direction of fair play for an immediate application to international racing; but this point has already been reached in club racing, and must soon extend to the grander branch of the sport.

The limitations to the time of challenging are quite different from all of those governing the America's Cup at various times, the computation being made from the date of the annual regatta of the club holding the cup. In the case of the Royal Victoria Y. C., whose regatta is held in the middle of August, the earliest date at which a challenge can be received is the middle of October and the latest the middle of January. In the case of American clubs, whose annual regattas are held nearly two months earlier, these dates would be correspondingly advanced, so that a challenge would be required not later than October 15 for a race to be sailed, as American custom is, in the following October. This is evidently an oversight, due probably to an ignorance of the early dates of American regattas; and it would work to the detriment of foreign challengers should the cup ever be held on this side.

The provisions concerning a second challenge from a defeated club, and also prohibiting a second challenge while one is under consideration, are each reasonable enough.

The requirements of three out of five races, and of starts at fixed hours are distinctly traceable to the Volunteer-Thistle matches, in which both of these points were brought up by the challengers. To sail four or five matches in September or October, with a time limit of 7 hours, has proved a difficult undertaking in the neighborhood of New York, Newport and Marblehead, however easy it may be about the Isle of Wight. It means in all probability seven or eight successive attempts, making serious inconvenience for the club managing the matches, and having a very bad effect on both contestants. Races such as those between Volunteer and Thistle are no ordinary every-day regattas, to be sailed as a matter of course, but the parties on each side can bear testimony to the labor, anxiety and mental strain attendant on international races of this kind; and to prolong this for seven or eight days instead of three or four would prove on trial undesirable to both parties. The strain on the crew in a long series of hard races and abortive attempts is something to be considered, as the work on these big racing craft is heavy and the excitement to all concerned is too intense to be prolonged for an indefinite time. If, as is proposed, the yachts start out each morning, crossing the line at 11 A. M., regardless of wind, and drift about until it is evident that no race can be made, doing the same the next day and the next until four or five races have been sailed, the proceeding may take a couple of weeks.

The proviso for starting is a compromise between the American plan, of leaving full discretion to the regatta committee, and the British plan, of starting at a fixed hour, regardless of wind and weather. The start is to be made at a fixed hour, but at the same time the regatta committee is given power to postpone it unless a start is positively demanded by one party. This complicates the business of starting, and is no better than the plan followed in the recent races for the America's Cup.

The clause as to the vexed question of time allowance is by no means complete, the measurement is inferred but not mentioned. It is provided merely that the tables of the defender shall be used. Since the measurement rules and allowances of the leading British and American clubs are practically uniform, and are likely to approach still closer in the future, the question of time allowance has practically disappeared from international racing, and the same may be said of the kindred issue, the admission of the centerboard. If in arranging conditions for any international trophy there is reason to fear that a club while holding it may change its rules to the disadvantage of a challenger, as the New York Y. C. did in 1870, and as it has been generally claimed by the friends of the new deed that a British club would do should it ever obtain possession of the America's Cup, a mode of prevention is easily found.

It may be provided that in the event of a dispute over the measurement rule or allowance, such as would follow a change in the face of a challenge, the challenger may call for the average allowance of three leading clubs of each nationality. For instance, in the event of a British club winning the America's Cup and at once going back to the old tonnaze rule, the American challenger would be entitled to call for an average allowance of the Y. R. A. on the one hand, and say the Larchmont, Seawanhaka or Eastern clubs on the other. Such a provision would open a speedy time in the future to keep international races under the rules then current in the yachting world, instead of some special rule devised to keep the trophy, and would be far preferable to the absurd attempt to eliminate all allowance, in the new deed.

The provision as to depth of courses is practically the same as in the new deed, the limit being 21½ft. While the conditions are not in all respects complete and perfect, there is nothing in them which is unfair to either party, and American yachtsmen can send in their challenges as soon as they please, with every possible expectation of fair play and sportsmanlike treatment.

THE AMERICA'S CUP.

THE story of the America and the cup which has so long borne her name has been told so often that it should be familiar to every yacht-man, but we have lately had several inquiries as to how the "Queen's Cup" was won and how it came into the possession of the New York Y. C. The America's Cup was never what is called a "Queen's Cup," but was a special prize offered by the Royal Yacht Squadron of Cowes, England, for a regatta around the Isle of Wight, which was open to yachts of all nations. The schooner yacht America, built in New York in 1849 or '50, was then owned by John C. Stevens and four associates, who decided to visit England at the time of the first of the great world's fairs, then to be held in London. While her owners considered her to be a fitting representative of American progress, and hoped to try her against the best British yachts, they had no special races in view up to the time of leaving New York, nor was the yacht built to compete for a "Queen's Cup" or any similar prize.

The America was entered by Com. Stevens in the open regatta above mentioned, the prize being a 100 guinea cup. Of the eighteen entries, all but four were smaller than she, the fastest of them being the smaller cutters of 50 to 80 tons, the large schooners being for the most part old-fashioned boxes. There was no time limit, and Com. Stevens declined to enter unless the race was without time allowance, so none was insisted on. The victory of the America is known to all the world; she won the cup, and it became the property of her five owners. For the six years following, the Royal Yacht Squadron cup was of no more importance or public interest than the forgotten Bennett-Douglas cup won by Genesta in 1885, or quasi-international cups won here in open races by Minerva, Clara and other British yachts; it was in the possession of Com. Stevens, an ornament to the parlors of his hospitable mansion, and in blissful ignorance of the troubled future before it.

The death of Mrs. Stevens made a great change in the household of the commodore, and the partial closing of the house suggested the need of a more permanent depository for the cup. This was finally accomplished in July, 1857, as told in the following letter, the original "deed of gift" of what has ever since been known as the America's Cup:

To the Secretary of the New York Yacht Club:

SIR—The undersigned members of the New York Yacht Club and late owners of the schooner yacht America, beg leave, through you, to present to the club the cup won by the America at the regatta of the Royal Yacht Squadron at Cowes, Aug. 22, 1851.

This cup was offered as a prize to be sailed for by yachts of all nations, without regard to difference of tonnage, going round the Isle of Wight (the usual course for the annual regatta of the Royal Yacht Squadron), and was won by the America, beating eight cutters and seven schooner yachts, which started in the race.

The cup is offered to the New York Yacht Club subject to the following conditions:

Any organized yacht club of any foreign country shall always be entitled, through any one or more of its members, to claim the right of sailing a match for this cup with any yacht or other vessel of not less than 30 or more than 300 tons, measured by the Custom House rule of the country to which the vessel belongs.

The parties desiring to sail for the Cup may make any match with the club in possession of the same that may be determined upon by mutual consent; but, in case of disagreement as to terms, the match shall be sailed over the usual course for the annual regatta of the yacht club in possession of the Cup, and subject to its rules and sailing regulations, the challenging party being bound to give six months' notice in writing, fixing the day they wish to sail. This notice to embrace Custom House measurement, rig and name of the vessel.

It is to be distinctly understood that the Cup is to be the property of the club, and not of the members thereof, or owners of the vessel winning it in the match, and that the condition of keeping it open to be sailed for by yacht clubs of all foreign countries, upon terms above laid down, shall forever attach to it, thus making it perpetually a challenge cup for friendly competition between foreign countries.

(Signed) J. C. STEVENS. J. BECKMAN FINLEY.
HAMILTON WILKES. GEORGE L. SCHUYLER.
EDWIN A. STEVENS.

The subsequent history of the Cup is well known; how four of the five owners of the America died before the first challenge was received in 1870; and how eleven years later the above deed was negotiated by the club with the proviso said down by the "surviving donor," the process being repeated in 1887.

Whether any change of the original conditions is legal, and if so, whether the trust has not been violated by the onerous provisions of the "new deed of gift," is a question for the lawyers; but every yachtsman who loves fair play and fair sailing can say whether the plain intention of the five donors, as evident in every line of the above document, has been observed by the New York Y. C. in its recent negotiations with Mr. Sweet in 1887 and Lord

Dunraven last year. That all "friendly competition" has been excluded from the Cup races, and that the Cup is no longer open to be sailed for on terms that are fair alike to challenger and holder, is as fully proven as is the fact that the America's Cup has become a bar and hindrance to international racing.

THE WRECKED CATARINA.

THE steam yacht Catarina, wrecked on Mattinaicock Point on Oct. 24, has been out this week on Handren & Robbins's dry-dock, Erie Basin, where temporary repairs have been made to enable her to lie afloat until all arrangements for her complete repairing are completed. The work of rescuing the yacht from her dangerous position was undertaken by the Merritt Coast Wrecking Co., of New York, and was successfully carried out by Captains Bertram H. Herbert and Fred R. Sharp. The yacht lay well out of water at ordinary tides, resting on a bed of rocks, two points of which had pierced the bottom, one on each side under the engines. Two portable boilers and three powerful wrecking pumps were placed on board, and after the holes had been stopped as far as possible, a cable was led over the stern, with a powerful tackle along the deck, the fall being carried to the steam capstan of the yacht, which was temporarily connected with a pipe from the boiler on the forward deck. By this means the yacht was hauled off last week and brought by the wrecking steamer Rescue to the company's wharf at Staten Island. From there she was towed to the Erie Basin and docked. Her keel and the bottom from the bilge up are uninjured, the keel evidently lying just between the two rocks, but the third and fourth strakes on each side, from the bow to a point abaft the engines, are badly dented, while on each side is a large hole, the frames and floor-plates being broken in. Besides these two apertures, the seams of the bottom plating are so started in places as to leak. One of the propeller blades is broken off at the hub, and the others are more or less damaged. On deck comparatively little damage is done, the deck houses, bridge and rigging are intact, the only injury being to the bulwarks on the port bow and to the hatches and companions. Below deck everything in the cabins has been ruined by salt water, joiner work, upholstery, bedding and furniture. The carved mahogany and joiner work can probably be repaired, but the furniture and decorations must be entirely renewed. The boilers are in place, but the engines are badly damaged. The full extent of the damage to the bottom cannot be ascertained until the plating is removed, but some of the frames will require to be replaced besides those immediately about the holes. These latter have been covered with 2in. planking well bolted on and caulked, so that the yacht can lie afloat until the arrangements for her repair are completed. The way in which the yacht has stood the heavy pounding speaks well for the work of her builders, Messrs. Robert Steele & Co., and of her designer, Mr. John Harvey.

DEATH OF A YACHTSMAN.—The cable brings the news of a very sad disaster at Belfast, Ireland, on Nov. 7, in which Viscount Cantelupe, a young British yachtsman and owner of the 5-rater Fair Geraldine, lost his life. The yacht is evidently the 4-rater Uranus, built by Payne this year, a cutter of about 30ft. waterline and 7ft. 9in. beam. The report is as follows: The loss of the Urania in Belfast Lough, with her owner, Viscount Cantelupe, the eldest son of the Rev. Reginald Windsor Sackville, Earl of De La Warr, during the fearful storm of the past few days has already been announced. It appears that the Viscount had just purchased the yacht at Glasgow and was enjoying his maiden trip. On Thursday evening he anchored off Bangor, 12 miles from here, some 300yds. off the shore, and only a stone's throw from a row of terraced villas at the foot of the main street of the village. Early Thursday evening a gale began blowing and continued to increase in strength until it had attained the proportions of a hurricane, sweeping down from the north and west, the night turning out to be one of the wildest ever experienced on the coast. As the wind increased the sea broke over the little vessel, and much uneasiness was felt on shore lest she should be unable to ride out the storm. About 2 o'clock on Friday the yacht sent up signals of distress, and it became evident that she was drifting on Salt Pan Rock, upon which the ship City of Lucknow was wrecked several years ago. The gale had, however, so increased in violence that it was impossible to launch the life-boats, and the ill-fated vessel was blown steadily inshore until she struck, her keel becoming wedged in a rocky cleft and remaining about two hours in that position, the sea sweeping over her. The Viscount and his men meantime decided to take to the rigging, as the yacht was beginning to fill. Cantelupe going first. He had just begun to ascend, having passed one arm through a life buoy and around the rop s while the other was extended to help the man next below him, when he was struck by a tremendous wave and carried off the wreck. His body has not yet been recovered. The crew were subsequently all rescued by means of life-lines. The conduct of the Viscount, who was only twenty-two, was most gallant throughout, his last words being full of encouragement for his men. He was married last June.

MINEOLA.—Designer Burgess and owner Belmont have decided to try the advantages to be gained from the use of the modified Mariquita type of yacht in the 46-foot class. Consequently, the first design which was made for the Mineola has been put to one side, and another is being worked out which will contain more of the ideas of the Mariquita. The new design for the Mineola will be wider than either of the other designs which have been drawn for the 46-foot class, her bilge will be harder, and her midship section will have a quicker turn at the garboards. All the things are steps in the direction of the Mariquita type. On the other hand, the new Mineola design will call for a boat no wider absolutely than the Mariquita, though 6ft. longer on the waterline. The bilge and midship section, though showing harder curves than the other 46-foot designs, are yet not as hard as those of the Mariquita. The new boat will have the advantage of light construction and of a better lead keel construction than the Mariquita had. In short, the new Mineola will be of the Mariquita type, barring the extreme power which was sought to be put in the Mariquita's model, and without the disadvantages of heavy construction, high freeboard, large wetted surface and improper keel plan which Mr. Belmont's boat of last year showed. It is safe to say that the new Mineola will give the so-called "Mariquita" type a fair trial, as her competitors will differ sufficiently to make the racing a contest of types.—*Boston Globe.*

SEAWANHAKA CORINTHIAN Y. C.—The fall meeting of the Seawanhaka Corinthian Y. C. was held on Nov. 8 with Vice-Com. Hill in the chair, Ex.-Com. Canfield, who has lately returned from a long visit to Europe, was also present. A motion to change the club night from Saturday to Tuesday was finally carried, having been introduced at a previous meeting. The race committee was also empowered to look over the three club courses with a view to their revision in accordance with the existing buoys and marks in New York Bay, and a proposal was made to change the third course, around Buoy 5, off the Hook, to Buoy 1 off Point Comfort in Raritan Bay, the course now sailed by the corresponding classes in the Corinthian Y. C. The race committee was also requested to examine Section 13 of Rule XXXIV., with a view to fixing its exact meaning. Mr. J. W. Miller addressed the club on the question of the unification of the various departments pertaining to the commercial marine of the United States in one body similar to the British Board of Trade, and also on certain important changes in the rules of the road, the subject being referred to the race committee with power. The most important business of the evening was the presentation to Ex.-Com. Canfield of a handsome silver cup as a recognition of his services to the club.

NEWPORT CATBOATS.—On Nov. 6, a race was sailed off Newport between the catboats Humming Bird and Four Brothers, the stakes being $500 a side. The course was 10 miles to windward and return, from Goat Island Light around a stakeboat off Point Judith, the sea being smooth, with a single reef breeze. Humming Bird, sailed by Capt. Tom Shea, led from the start, gaining 13 min. on the windward work and winning easily, the times being:

	Start.	Turn.	Finish.
Humming Bird	10 13 45	12 55 30	2 35 15
Four Brothers	10 13 49	1 08 45	2 49 36

CORINTHIAN NAVY.—At a meeting of the association held on Nov. 6, important changes in the constitution and by-laws were made. The most important step taken was the making of the 25-rater class, and now boats up to 25ft. w.l. can come into the organization. Several members are building small cutters this class. The dues will remain as heretofore—to wit, $2 per annum. The commanding officer is now an admiral while the squadron officers are commodores. All the old officers were elected to fill out their unexpired terms. Proposed for membership, William Gardner.

FORTUNA, schr., Mr. Henry S. Hovey, will at last give up her bowsprit and flying jibboom for a single nose pole. Mr. A. Cary Smith's first sail plan, made when the yacht was built in 1883, called for this rig, but it was too far ahead of the time, and the conventional coaster's headgear was adapted.

NYDIA, steam yacht, Dr. R. V. Pierce, built at Wintringham's last winter, has returned to New York after summer on the canals and lakes, and is fitting out for a Southern cruise.

XARA.—Mr. Jas. Means' 40-footer is reported sold to Mr. Kane, of Newark, N. J. She has lately been coppered at Lawley's.

KATHLEEN.—On Thursday of last week, Mr. Zerega gave a dinner at the Seawanhaka Corinthian Y. C. house to the members of Kathleen's crew, 14 being present. A large and handsome collection of prizes won by her in 1889 and '90 was displayed.

CORONET, schr., Mr. A. E. Bateman, arrived at Nassau on Oct. 30, after a cruise of 30 days from Madeira, with her owner and family on board, sailing on Nov. 1 for Jacksonville and Fernandina.

Canoeing.

THE A. C. A. MEET OF 1890.—III.

THE CAMP.—In its surrounding, amusements and every-day life, the meet of 1890 was a very pleasant one. One thing that contributed greatly to the sociability was the excellent laying out of the camp, the natural features of the ground being peculiarly favorable, and utilized to their fullest extent by the committee. There was practically one long avenue through the whole extent of both camps, running along the edge of the bluff, and on this fronted most of the club encampments; the tents running back in rows and streets. Each club had its flag pole and club flag on the bluff, while the most attractive of the tents were pitched to face the avenue, the effect being further improved by such ornaments as the Red Dragon, the Puritan Ship, the Treaty Elm, Plymouth Rock, and other grotesque and picturesque works of art. In the center of the main avenue was the headquarters (the commodore's official tent with a smaller one in the rear), the post office and secretary's office, and a tent devoted to the chief signal officer and his staff, in front being two lofty poles and a yacht gun from the commodore's yacht Vandal, anchored just in front of the camp. The tent of the regatta committee and the official bulletin board were close beside the secretary's tent.

At the end of the camp nearest the wharf, and as close as possible to the mess tent, was the large encampment of the Ianthe C. C., in the form of a square, the open space in the center being adorned with the club flag inlaid with white pebbles in the turf. From here down to the Brooklyn camp, which formed the other end of the long rows of tents, extended a second street, parrallel with the first and not quite so stylish or regular, where many of the late comers pitched their tents. The two were connected at intervals by short cross streets, though these latter were not as numerous as they should have been, some of the campers pitching their tents in spaces intended to be left open for passage through the camp. Back of all the tents was a space for twice as many more, with another front on Peconic Bay and a second good beach.

In all the main camp there was hardly a tree and not a stone or boulder, the turf being smooth and even. By means of the club flags a new-comer could at once locate the various clubs, while each separate camp was easy of access from the main avenue. The result of this was that, instead of hunting about among trees and underbrush for missing friends, and often failing to find them for several days, it was an easy matter to know who was in camp and where each was to be found; while the avenue made a general promenade best of all as a rendezvous, so that the men were thrown much closer together than in the wooded camps of the last three years, and all became quickly acquainted.

This was the more desirable on account of the altered composition of the attendance that was so noticeable to old campers this year. A very large number of familiar faces, men who have attended nearly every meet since the first Grindstone, were missing this year, and a proportionate number of new men were seen. In some camps the new men would have pitched their tents quietly in a corner and made acquaintance only with their immediate neighbors, if they had any; but here they were in the open, seeing every one and being seen in return, and very quickly entering into the friendly and fraternal relationship that has characterized nearly all the camps.

Much of the pleasure of an A. C. A. camp is dependent on the weather, and in this respect there was really little to complain of this year. Some days were not particularly pleasant, and in spite of much threatening there was very little rain, the worst being the heavy showers of the first day or two, and in particular of the first Sunday evening. On several occasions there was every indication of a sullen and prolonged easterly storm, but they were not verified, and the campers experienced little serious discomfort from the rain. One partial guarantee of the committee, and that a rash one, was kept: there were but few mosquitoes, far less than the average attendance on salt water, and no special complaint was heard on this ground.

One picturesque feature of the meets, the club uniforms, has almost entirely disappeared, each man dressed merely to suit his own taste. This was indeed an excellent purpose in keeping up the *esprit de corps* of each club, and it is a pity that it has fallen into disuse. There was less of the dudish display and over-dressing that has been criticised at times, the tendency this year being rather toward grotesque and fantastic costumes, where men wore anything else than ordinary shore togs in tweeds and flannels. One of the tall men of the camp cut a rather striking figure in a jersey of open netting over very brown arms and shoulders, and another even taller set off his length by a jersey of horizontal stripes, red and white, surmounted by a red toque.

The club badges were abundant and some of them very pretty. It has become the fashion for each club to provide a handsome silk badge, numbers being given out to friends, especially to the ladies. This year there were about 30 different ones.

The guarding of the camp devolved on a captain of the watch and four pickets, together with the officer of the day. One picket was stationed at the entrance from the Neck, at the Squaw Point end, another on the wharf, a third on the west shore, and a fourth along the main front. Visitors from the yachts were always welcomed, and many who came in by carriage or small boat in small parties, but it was found necessary to place some limit, or the camp would have been overrun at all times. Catboats, launches and small craft of all kinds besieged the wharf, while the attack on the land side, on foot or in conveyances of all sorts, was hardly less vigorous. A compromise was in a measure effected by the announcement of a visitors' day, which occurred during the second week; but on this occasion the camp was literally taken by storm, it was estimated that 2,000 people visited the camp, and nothing more unpleasant for the campers could well be imagined. Each shore was lined with boats, from the largest schooner yachts down to rowboats and naphtha launches, while sloops and catboats lay at the wharf in three tiers.

Many of the visitors were well behaved and orderly, but a large number were of the ordinary type of country sightseers, without regard for anything. Armed with lunch baskets and paper parcels, they settled down on the camp and made it their own. Hammocks, camp stools and chairs were coolly appropriated before the eyes of the indignant owners, and tent strings were untied and the interiors inspected, while many tents were invaded by parties of strangers who simply went in and made themselves at home in the absence of the owners. One unhappy proprietor of a large tent headquarters was appalled on his return in the afternoon to find a sign in front, placed by some thoughtful friend, "Basket Parties Welcome," which invitation had been freely accepted by a dozen or more of the natives of Long Island. The camp had the aspect of a county fair all day, to the utter discomfort of its rightful owners, and there was a shout of joy when a rain squall came up late in the afternoon and drove the unwelcome intruders to their boats.

The admission of visitors to camp is a very troublesome matter to arrange; without any wish to be inhospitable, it is simply impossible for the Association to throw its camp open at all times to strangers, or even to do so for a single day. The time is too short for the canoeists to be turned out of their tents and have all the pleasures of the camp suspended during one of the best days, and some measure should be devised to prevent such a wholesale and offensive invasion as that of this year. It has been the custom at all times to welcome all who have friends and acquaintance in camp, as well as strangers who profess any interest in canoeing, or any desire to know more of it, but the line must be drawn somewhere to keep out the ordinary sightseer who comes in droves. There is no reason why such persons, unknown to those in camp and unable to give a good reason for their desire to visit it, should be allowed to land when in such numbers as to be troublesome. At one time on the St. Lawrence the local steamers went so far as to bill the surrounding country with notices of excursions to the camp at 25 cents per head, a proceeding which was promptly met by refusing the right of landing to these boats. The requirement of a visitor's badge, which may only be obtained at headquarters, and which is practically a pass, is a very good one when it is rigidly enforced, but special care is necessary in guarding the privacy and seclusion of the camp from mere idle intruders.

In close relation to this question of transient spectators is that of non-members staying in the camp. In 1888 the following amendment to Article I. of the by-laws was adopted to cover this point: "Non-members of the A. C. A., when accompanying members, may be admitted to the camp at the discretion of the commodore and secretary; provided that if they spend more than two nights in camp the member introducing them shall pay for each the regular dues and camp fees paid by members." This amendment, though adopted at the Lake George camp and at once put in force there, was never inserted in the A. C. A. book, and has been completely lost sight of. This year a new motion was made, to the effect that no one but an A. C. A. member shall spend more than one night in camp. The wording of this last motion is very objectionable, as in the event of any visitor whatever being obliged to spend more than one night in camp, he must become a member of the Association, without regard to his desire to join or to his eligibility for membership. It has not infrequently happened that men have come to camp who were not members, but who were known as canoeists or sportsmen, and to whose presence for a few days there could be no objection, as they were properly vouched for by some members. Under the new rule such men may stay in camp just one night, then they must apply for membership or be expelled from the camp; there is no discretionary power left with the officers.

Under the first rule quoted not only is a longer period of grace allowed, but any man who has a friend visit him in camp can apply to the commodore and secretary for permission for a longer stay upon the payment of the ordinary camp charges to a member. This latter proviso is a bar to an evil that has existed in the past, where men who have refused to join the Association have come to camp, sometimes for several years in succession, paying neither dues nor camp fees. There is no opening allowed for tramps of this sort, but at the same time the courtesy of the camp can be extended to strangers in cases where it is desirable without giving them the option of joining the Association or immediately quitting camp.

A special feature of this year was the signal code and the observance of yachting etiquette in the matters of salutes and colors to an extent never before practiced. So far, in fact, was the latter carried that when the commodore visited the camp tonsorial parlors his flag was immediately hoisted on the parti-colored pole at the door. No doubt a certain amount of ceremonial is desirable, but it is possible to carry such things too far. The signal code, for which the Association is indebted to Commodore Stanton and Mr. E. W. Brown, was of practical value and has become a permanent institution, though to utilize it completely an open camp is a necessity; in several of the past camps the signals would have been visible only from a few points, on account of the trees.

One amusing character about the camp was a huge shambling black cur that turned up, no one knew where from, and adopted himself to the Brooklyn C. C., being known thereafter as "Brooklyn." He circulated about the camp at will, either alone or at the heels of a member of his club, and his uncouth, but good-natured, face made many friends. He has gone down to fame in one of Mr. Stoddard's photos, where he is rigged out with a bathing suit on his hind legs, an oilskin coat, and a pair of rubber boots on forward, and an old sou'wester on his head.

An A. C. A. camp always affords plenty of amusements, and this year was no exception, there being the usual round of visiting, gossip, canoe talk, scrub races, paddling and fishing trips, camp-fires and flirting, with the added pleasures of the yachting and of good still-water bathing. In addition to the regular out-door fun the experiments of 1887 and '89 were repeated, in the ball and minstrel show, but without the signal success that attended the first efforts in each direction; in fact it appears doubtful whether such outside affairs, however well managed, are worth encouraging in camp. The dance at Lake Champlain in 1887 was something unique, an impromptu affair that every one enjoyed on account of its novelty. The one of this year was as well managed, but it was not the great success that was expected; and, considering the number of men and the very few ladies, the camp ball is hardly likely to become a fixed institution. The circus at Stave Island last year was so good, and so entirely unexpected, that it achieved an immense and well-deserved success. After it, however, the entertainment of this year was very flat; in fact, barring such comparison and on its own merits, the minstrel show cannot be set down as a success. It rose no higher than an impromptu amateur minstrel show, with a very strong and disagreeable variety flavor; and lacked entirely the brilliancy and spontaneity of the circus. This was the more noticeable from the fact that some worthy successor of the latter had been in a measure announced and expected. As all four of these entertainments were under the same able direction, that of Mr. Seavey, who has proved to be a sort of Barnum, Dockstadter and Ward McAllister in one, the fault does not lie in the management, but in the fact that such entertainments are not in harmony with the spirit of camp-life, and can only be successful when occurring at intervals and without pre-arrangement. As soon as men come to camp with costumes and outfits for a set show the result is likely to be disappointing. There is so much to be done in the line of camp-fires, illuminations, lantern parades on the water, and such out-door amusements that there is no necessity to go outside of them to seek special features. The water parade by night and the review of the fleet by day are each too good to be abandoned, and as neither has been seen for several years it might pay to revive them next season.

The most appropriate and pleasing of camp entertainments is the evening camp-fire, of which fewer than usual were held this year. The general farewell camp-fire, at which the prizes were presented, was partly spoiled by bad weather, but there were two others that were more fortunate. One of the pleasantest evenings of the meet was that at the Vesper camp-fire, a very well-managed affair at which special attention was paid to the ladies. Another pleasant affair, to which, however, the ladies were not invited, was the camp-fire of the Mohican C. C. in front of their encampment on the bluff, of which Mr. Stoddard has made an excellent flashlight picture. An evening like this, beneath a clear starry summer sky, the circle of canoeists lit up by the flames from a huge pile of fragrant cedar, with good and appropriate music from banjos, guitars, mandolins and a large chorus of voices, is widely different from a couple of hours spent in a tent half lighted by smoky lanterns, while one listens to the fine old crusted jokes so often heard before. This year the Yonkers quartette did a great deal to enliven the camp; not only were the individual members most unselfish in giving up racing, rigging and similar pleasures for the sake of those in camp who knew nothing of either, but at night their voices furnished the most and the best of the vocal music.

One valuable discovery was made at the Vesper camp-fire. It is always a difficult matter to promote congregational singing, which is after all the true music for the camp-fire, and this is particularly the case after the circle has broken up and the ladies departed, when an extra bottle is emptied into the pail of punch on the embers and the songs decrease in melody as they gain in force of expression, and when those stupid, tiresome and shameless old reprobates, the camp choristers, the same ill-flavored lot that were heard in 1880 and '81, and have done steady duty ever since, come out for an annual airing in the darkness. This year, for what reason we know not, the second session of the camp-fire did not go with its accustomed swing and vigor, keeping the punch boiling and the embers bright until 1 or 2 o'clock and afterward, making sleep impossible in camp until daylight. After the ladies departed a few songs were sung, the doings of the day in camp, the arrivals, the results of the races and the probable bill of fare for the next day, were quietly discussed and the meeting broke up before midnight. A few terrible fellows sat up and played cards or told stories in their tents, but there was nothing to disturb the majority who wished to sleep. The contrast in point of order between this camp and some of the preceding ones was most apparent, and entirely in favor of this year; let us hope that the improvement is a permanent one.

One threatened danger that menaced the camp at first was happily averted; the loss of rest caused by the *Daily Disturber* was very slight; in fact, the first attempt at a camp newspaper must be set down as a failure. In the hands of an old camper, one thoroughly familiar with the meets and the men, a camp paper might be very bright and entertaining; but the present one was neither. The diluted amount of news and the machine-made jokes savored strongly of the ordinary church fair journal, and the paper was in no way an index of the true life of the camp.

THE EXECUTIVE COMMITTEE MEETING.—The meeting of the executive committee of the A. C. A. in Boston on Saturday next, promises to be the largest in point of attendance and also the most important yet held. A very large number of canoeists are likely to be present in addition to the members of the executive and other committees. The proposed business will probably include in addition to the routine of reports and choice of a camp site some measures of special interest to the cruisers, in the shape of a more active recognition and encouragement of cruisable canoes and of efforts to encourage cruising as well as racing. We hope to be able to give a full report in the next issue of the FOREST AND STREAM.

THE VOTE OF 1889.

WE have been trying for some time to obtain exact and reliable information concerning the vote taken by letter in May, 1889, on the standing sail and sliding seat, but without much success, as there is no record of the vote in the official minutes. It is only within the present week that, through the courtesy of the librarian of the A. C. A., we have been permitted to examine the replies from the members of the executive committee in answer to the following circular sent out in April, 1889. The figures which we now give should have been officially published at the time, and had this been done, with the letters on which they are based, a great deal of trouble would have been saved the Association. As these figures are the property of the members at large there can be no impropriety in publishing them. The circular reads:

PETERBOROUGH, March 19, 1889.—*To the Commodore of the American Canoe Association:* SIR—The regatta committee of 1889 having been directed by the executive committee to consider and report upon the question of sliding seats and fixed sails beg to report that in their view it is not in the interests of the Association that these should be retained as appliances to be allowed and authorized in the general programme, and they, therefore, respectfully submit to the executive committee the advisability of introducing in the sailing regulations such amendments as may be necessary to remove all doubt on the subject.

The following amendments are suggested:

Rule I. Under the head "Measurement," in the last paragraph add after the first sentence the words "sliding seats or other like appliances beyond the gunwale in the sailing classes shall be added to and measured in the beam."

Rule XIV. Add the words "all sails shall be capable of being effectively and readily raised and lowered when afloat."

E. B. EDWARDS, Chairman Reg. Com.

The vote was as follows:

	Standing Sails.		*Sliding Seat.*	
To Retain.	Marsh, Huntington, Stryker, Stephens, Palmer, Brokaw,	6	Marsh, Rice, Huntington, Stryker, Stephens, Palmer, Brokaw,	7
To Prohibit.	Rice, Holmes, Tyson, Rathbun, Fraser, Masten, Andrews, Dunnell,	8	Holmes, Tyson, Rathbun, Fraser, Masten, Andrews, Dunnell,	7

No answers received: Robinson and Shedd, 2. In favor of prohibiting both, but not voting by mail: Com. Rogers and Sec'y Hatton, 2; total 18.

In this table 14 out of the 18 members of the executive committee are positively accounted for; of the other 4 there is no record, it does not appear that Messrs. Robinson and Shedd voted at all, the latter we believe was then beyond the reach of the mails. As to Com. Rogers and Sec'y Hatton, it is known that both were in favor of abolishing the standing sail and sliding seat, but as there was no necessity for either to vote by mail, being in charge of the whole matter, there is no record of votes from them. As but 6 men out of 18 voted against the amendment relating to the standing sail, and but 7 against the other, it certainly appears that both amendments were carried in May of last year. Why the result of the vote was not publicly announced at the time, and how such a serious blunder was made, remains to be explained. The error is all the more remarkable in that Mr. Edwards, who introduced the same motion for the prohibition of the standing sail at the late meeting of the executive committee, was the proposer of the motion in 1889 and was closely associated with the Commodore and Secretary in the counting of the votes. From the above summary it appears that the motions to prohibit standing sails and to limit sliding seats were drawn up in the proper form, of specific amendments to the sailing rules, recommended by the regatta committee, and regularly passed by the executive committee in May 1889, becoming a part of the Laws of the Association; in which case the late irregular legislation all falls to the ground. The whole matter from the beginning up to the present time is without parallel in the history of the Association, and it is to be hoped that when once set right it will long remain in that condition.

PARTNER WANTED.—Partner wanted in an old established skiff and canoe factory. Amount of capital not so material, as a man with the necessary experience and qualifications capable of taking entire charge of the manufacturing and management of the whole business, as present partners (two) reside at a distance and are unable to take any active interest in it. Address SKIFFS, care Forest and Stream office, New York.—*Adv.*

Answers to Correspondents.

H. A. C., Boston.—Where are muskrats found in the greatest number? Ans. The New York fur dealers receive their largest supplies of muskrat skins from Delaware, New Jersey and Maryland.

WIRE CARTRIDGE, Evansville, Wis.—The wire cartridges are used less now than formerly. You can probably get them from Squires, or other like dealers, by sending particulars of bore of gun, size of shot, etc.

J. M., Moorheadville, Pa.—The shooting qualities of the gun you ask about are equal to those of the others. For ruffed grouse you may use a setter or pointer or a spaniel. The paper shells will prove satisfactory.

A. H. D., Sandusky, O.—I have a very fine pointer dog, and he works well except he mouths a bird. What is the best thing to do? You had better read "Training vs. Breaking," where this subject is fully treated.

E. W. B., Akron, Ohio.—Please answer through your paper where I can get ferrets trained for rabbit hunting. Ans. We do not know. Ferrent hunting rabbits is not considered sportsmanlike. The Ohio law forbids the practice except by landowners on their own premises.

W. O. W., Charlottesville, Va.—Kindly tell me if there is any difference in the shooting of 28 and 30in. 12-bore shotgun barrels. Ans. Yes, the 30in. barrel will burn more powder than the 28in. barrel; but the difference is not great enough, in our estimation, to make the 30in. preferable, if the shooting is in the bush.

SOUTH SIDE, Ottumwa, Iowa.—Will you please tell me whether or not such shooters as Budd, Stice, Heikes, Wolstencroft, Ruble, etc., shoot (at the trap) wood or Schultze powder or black powder? Ans. We believe that Budd and Stice shoot wood powder, having been hired to use it, and Hiekes the Schultze. Ruble shoots black.

J. N. B., Pine Iron Works, Pa.—I see in your columns they have a license in the State of Delaware for gunners. If I should go on a visit to some friends and go out with them, must I have a license. I have a brother-in-law living in Lewis, Sussex county, and if I go to see him I would like to take my gun; but if I must have a license I will not take it along. Ans. The law requires that a non-resident must obtain a license from the Delaware Game Protective Association. The fee is $5 for the first year and $2 for succeeding years. The Association secretary's address is George Churchman, Wilmington. See full text of law in *Book of the Game Laws.*

ENQUIRER.—1. Can I find any publication that gives better rules for loading than Chipmunk's "Wingshooting?" 2. Have you ever put in pamphlet form the result of your gun trial tests, so that one can see at a glance which gun did the best shooting? Ans. 1. There are two or three loading tables in "Hints and Points." 2. No, but they will be so printed.

S. S. A., Ellisburgh, N. Y.—Please give your opinion on the following: Can a man control a stream (as far as shooting and fishing are concerned) upon which a schooner of 60 tons burden does a regular business through the whole season every year? Ans. We think not, unless he holds the stream by some special grant, but your statement is not definite enough to warrant a specific reply.

L. O. K., New York.—Will you kindly inform me if a permit is necessary to hunt deer in Ontario or Quebec? If so, to whom do we apply for same, and also if game can be taken out of the country? Ans. Non-resident license required for Ontario, fee $10, issued by Commissioner of Crown Lands, at Ottawa. License required in Quebec, fee $20. Exportation of game from Canada forbidden. See full text of law in *Book of the Game Laws.*

A. B.—Please inform me as to the difference between a professional pigeon shooter, such as Bogardus and Brewer, and amateur pigeon shooters, as Macalester and Murphy. Ans. It is difficult to define the distinction, since if any exists, it is largely in the imagination; but it is generally conceded that a man who is employed by gun makers to shoot their guns, or who shoots as a business, is a professional. In most sports the distinction lies between competing for money and competing for fun; but shooting for a money stake does not constitute a contestant a professional.

F. L. C., Pittsfield, Mass.—Will you kindly inform me if I pay twenty-five cents for registering a dog in the *American Kennel Gazette* whether that entitles me to the name claimed until I see fit to enter in Stud Book? Ans. The A. K. C. secretary says in reference to this that in so far as it lies in his power, it does protect the name, though in the case of a name listed with the secretary of a show for the purpose of showing a dog, he can of course have no power, as the name has not been filed with him in the first instance. A registry number in the Stud Book protects you fully.

C. L. J., McIntosh Bluff, Ala.—Do you know any party engaged in frog culture for market or otherwise to whom I could write for information concerning the industry, or know of any work on the subject, or where the best breeds of bullfrogs can be had. What I want most is to get on the right track for information as to where to get the best Jersey stock and information about raising, breeding, etc. Any light that you may be pleased to give me will be appreciated by your obedient servant. Ans. We know of no successful attempt to breed frogs. Probably Alabama swamps will supply as choice breeds for experiments as New Jersey.

C. F. E., South Lincoln, Mass.—1. C. B. Vaux, 34 Cortlandt st., New York. 2. This receipt for browning gun barrels is given by Greener in his "Modern Gun:" Take 1oz. muriate tincture of steel; 1oz. spirits of wine; ¼oz. muriate of mercury; ¼oz. strong nitric acid; ½oz. blue stone; 1qrt. water. Mix well, and allow to stand 30 days to amalgamate. After the oil or grease has been removed from the barrels by lime, the mixture is laid on lightly with a sponge every 10 hours. It should be scratched off with a steel wire brush night and morning until the barrels are dark enough; and then the acid is destroyed by pouring boiling water on the barrels, and continuing to rub them until nearly cool. If the barrels are of laminated steel do not dilute the acid so much. 3. J. Annin, Jr., Caledonia, Livingston Co., N. Y., or W. L. Gilbert, Plymouth, Mass., can supply trout and, doubtless, landlocked salmon. 4. Probably not; they require plenty of room, considerable depth of water, low temperature and plenty of natural food. Landlocked smelt are generally introduced where it is proposed to keep salmon.

Canoe and Camp Cookery.

By "SENECA."

A practical cook book for canoeists, Corinthian sailors and outers. Practical because the author gives explicit and intelligible directions for preparing such dishes as he has himself actually tested in camp and on a cruise. This is just where the recipes differ from the absurdly impracticable dishes given in some so-called camp cookery books. The cooking outfit is described, and numerous hints on camp economy add to the value of the work Cloth, 98 pages. Price $1.00.

NEW YORK: FOREST AND STREAM PUBLISHING CO., 318 Broadway.
LONDON: DAVIES & CO., 1 Finch Lane, Cornhill.

The Forest Waters the Farm;
OR,
The Value of Woodlands as Reservoirs.

BEING THE LES ÉTUDES DE MAITRE PIERRE SUR L'AGRICULTURE ET LES FORETS.

PAR M. ANTONIN ROUSSET.

Translated by
REV. S. W. POWELL.

The introduction reviews the extraordinary movement of torrent taming in France, in preparing public sentiment for which the Studies of Master Peter played a noteworthy part. The book was written as a sort of science primer, setting forth the first principles of the relations existing between woodlands and agriculture. The principles and reasoning are not less applicable to the United States to-day than to France then.

Price in cloth, 75 cts.; paper, 50 cts.

FOREST AND STREAM PUBLISHING CO.
39 Park Row, New York.

Names and Portraits of Birds

Which Interest Gunners; with descriptions in language understanded of the people.

BY G. TRUMBULL.

Contains the local names in popular use, and eighty-nine illustrations, which, with the clear descriptions in the text, will enable any man who can read to identify the contents of his game bag.

OPINIONS OF THE PRESS:

It is the first, so far as we know, of a class of books of which the need is felt in every department of natural history.—*Troy Press.*

To all dwellers by the water and in the country and especially all who shoot, the book will supply a great need, and every one who is interested in birds will be interested in it.—*Boston Evening Traveller.*

The book should find its way to a choice place in every sportsman's library.—*Chicago Inter-Ocean.*

There is a delightful dearth of dead languages in this book. The sportsman who looks between the covers for a description of some game bird—a description which will enable him to identify the creature should he meet it in the woods or on the water—is not compelled to shut the book, drop a bad word or two upon it and go in search of some Greek and Latin dictionaries to find out what the description means.—*New York Herald.*

Old Colony Trout Ponds

ESTABLISHED 1869.

Three million brook trout eggs for sale. Can be transported with safety to any part of the world. Ready for delivery December and January. Also young trout in the spring.

Unsurpassed fly-fishing in its season.

DENVER, Col., Oct. 21, 1890.

W. L. Gilbert, Esq., Plymouth, Mass.:

MY DEAR SIR—In regard to the trout eggs received from the "Old Colony Trout Ponds" I can say that the best possible results have been had from them at all of the points to which they have been shipped in Colorado. I know of no better packing than that employed by you. After a journey of nearly two thousand miles by rail and stage I have had a loss of less than 1 per cent. in a lot of 250,000. I do not want any better. Very truly, GORDON LAND, Col. State Fish Commissioner.

W. L. GILBERT, Proprietor,
Plymouth, Mass.

FOR SALE.

Valuable ducking property in North Carolina. Price seventy-five hundred ($7,500) dollars.

Above consists of Harbor Island and over one hundred acres of marsh land situated at the entrance of Core Sound, North Carolina. Sixty miles from Newberne and forty from Morehead City. Harbor Island contains about eight acres and has on it a house forty-four (44) by forty-two (42), two stories and attic. (Lower story abode); nine bed rooms on second floor, a two-story extension forty-six (46) by eighteen (18), (all plainly but sufficiently furnished), together with a few necessary out-buildings. Large wine cellar under main house. All the buildings less than three years old. Pier extends to main channel.

Shooting consists of redheads, broadbills and other ducks; also brant and geese. In spring and fall curlew and snipe are numerous. Duck shooting commences December first and lasts till March. Photographic views will be shown and full particulars given by FREDERICK ROBERT, Nos. 97-99 Water street, N. Y. 2t

ANSWERS TO CORRESPONDENTS.

SERIOUS CHARGES.

IN New York there are fifteen game and fish protectors. They are appointed by the Commissioners of Fisheries. The law prescribes that these protectors "shall hold their office respectively during the pleasure of the Board of Fish Commissioners, who may summarily remove any one of their number whenever, in their judgment, they shall deem such a change, for any cause, advisable." They are further authorized to designate one of the fifteen protectors as a chief, to have superintendence of the others. He is as one of the fifteen subject to summary removal.

At the last meeting of the Commission Fred. P. Drew was removed from the position of chief protector, and J. Warren Pond, of Malone, was put in the place. We have already commented on the criticism elicited by this action; but new charges have now been brought against the Commissioners, which surely deserve attention, for they are of a most serious character.

One former criticism had been that Mr. Drew was Gen. Sherman's man, and that in removing his man in Gen. Sherman's absence, the other Commissioners put upon Gen. Sherman a direct personal affront. A second charge was that the removal was without due cause. A third, that the change means certain and serious injury to the cause of protection.

Of these several charges the first one is quite unimportant from the public standpoint. If there was any lack of courtesy in the course pursued by the Commissioners it was certainly unfortunate and to be deplored; but it as certainly has nothing whatever to do with the one point at issue, which is the wisdom of the change. As to the second charge, that Mr. Drew's removal was without sufficient cause, we have previously expressed the opinion that his superiors might justly be presumed to know more about that than the public; and the presumption—good until proved erroneous—is that they acted under a conviction that the change would benefit the service. This presumption is based on the known character of the Commissioners. The third charge, that the removal of Mr. Drew means a blow to the interests of protection, may be true or it may be unfounded. That will depend largely on the conduct and ability of his successor.

The new man, J. Warren Pond, of Malone, was appointed wholly on his record, which was far the best of all the protectors; he has never lost a case; is a man of acknowledged courage and ability, and has won the respect and confidence of those who are familiar with his work in the fifth district. Whether he is competent to fill the place of chief protector time will tell. If he cannot do the work of the office, we have not the slightest doubt that some one else can be found to do it. But we believe in the justice of giving Chief Pond an opportunity to show his mettle, before crying out that his appointment means the death blow of game and fish protection in this State. At best this third criticism can be at present only a matter of opinion and prognostication; his conduct of the office will demonstrate the facts.

There are other charges against the Commissioners which are so serious that they should be proved true or withdrawn, and that at once. In the Utica *Morning Herald* Mr. John D. Collins, of the Utica Association, commenting on the FOREST AND STREAM'S suggestion that it was to be presumed that the Commissioners had good cause for their action, says: "From knowledge of the chief's official success and zeal in protection, equally it may be 'presumed' he has been too efficient, his success interfered too much with Fulton Market's supply of fish caught by illegal nets. In the 103 nets destroyed in Oneida Lake in the past few months some seventy-five barrels of game fish were liberated from them. These fish were to be shipped to New York city's markets, as such spoils have been, generally in barrels labeled 'potatoes.' * * * There are many other facts in possession that come much closer to this question of removal, that relate to the doings and happenings inside Fulton Market, where the president of the Commission has a place of business, from which the public might claim 'presumption' that would go to show the contrary on equally as good grounds as the FOREST AND STREAM presumes probable cause; but is not necessary at present."

This is saying in effect that the four Fish Commissioners, Messrs. Blackford, Burden, Joline and Bowman, removed Chief Drew because he interfered with the supply of illegally caught fish shipped to Fulton Market. In other words that public officers charged with executing certain laws have conspired to render the violation of those laws more easy; and have removed a subordinate because he stood in their way toward effecting this end. Further, the plain implication is that Mr. Blackford was himself to be the recipient of these unlawfully caught fish, which were intercepted on their way to market by the activity of Protector Drew.

It would be difficult to frame a charge more serious than this one against the Commissioners. It would be intolerable if State officers guilty of such malfeasance were permitted to hold office. The gravity of the accusation demands that Mr. Collins should give his evidence to the public or lay it before the Governor, in order that the charges may be substantiated, and the Commissioners removed. Mr. Collins must at least believe that he has the necessary evidence, for it is difficult to understand how any one should make such public charges without believing them well founded on something more than hearsay.

As we have said, all other criticisms of the course of the Commissioners in this affair are trivial in comparison with this one. Every body of men is liable to errors of judgment and ill-advised steps; but no public body should be permitted to continue in existence, if so morally rotten as Mr. John D. Collins by implication avers the New York Fish Commission to be.

We need not remind Mr. Collins that this proof should be forthcoming, not only for the public good, but for his own sake as well. Until he substantiates his accusations their acceptance will be confined to those who are ready to believe evil of the Commissioners because they do not know them; while that portion of the public which now esteems the members of the board, honors them for their public services and trusts them as men of integrity and high character, will demand that these charges against them be proven or withdrawn. Until such proof shall be forthcoming the Commissioners will continue to enjoy public confidence.

THIRTY-TWO PAGES.

THIS is a period of unusual activity, and our space, even with an enlarged paper, is taxed to the utmost to record the meetings of field trial clubs and the great Kansas City and Chicago trap-shooting contest. Our pages this week reflect the wide scope of American field sports. One noticeable feature of the growth of these pastimes is the proclivity to organize for competitive trials, witness the newly established beagle "field trials" and the fox hunting "field trials." The angling competitions have apparently died out, there having been no fly-casting tournament; but if the tendency of the times shall prevail here we may look for a revival of these pleasant gatherings.

IN a recent despatch from Laramie, Wyo., to the San Francisco *Chronicle* are narrated the adventures of an expedition made by some young men into the Red Desert country to try to capture the last of the buffalo which are lingering in that waterless waste. Six or seven years ago there were 250 to 300 of these animals there, but they have been killed off mainly by Indians and cowpunchers, until now there are not more than 20 or 25 in the whole region. The purpose of the party who set out on this trip was to secure enough living buffalo to start a buffalo ranch. It is hardly necessary to say that they were wholly unsuccessful. During two months of hard work, lasting through September and October, they saw but two bunches of buffalo, one containing five and the other fifteen individuals. They roped two cows, one of which died of exhaustion after being tied, while the other was choked to death. It has often been stated that these Red Desert buffalo were a herd that had wandered out of the National Park, but there is no reason for believing this to be the case. Persons familiar with the region have known for twelve or fifteen years of the existence here of this small herd of buffalo, which has constantly grown smaller, and it is believed that it has always ranged in this section. It is true that the Red Desert lies south of the National Park, but we know of no reason for supposing that the herd of buffalo which has so long ranged there was ever recruited from the bands that are found in the Park. For years—ever since the extermination of the wild buffalo in the West became inevitable—most of those who knew of the Red Desert herd kept its existence a secret so far as possible. Now that it has become practically extinct, there is no longer reason for silence on the subject.

IN these days of carping criticism of fishcultural methods it is gratifying to be able to record some recent work of the Pennsylvania Fish Commission. At the Corry hatchery in western Pennsylvania, the number of eggs of the brook trout taken up to the present time is about 1,000,000, and the capacity of the station is so heavily taxed that it has become necessary to send eggs to the Allentown station. It will be necessary also to dispose of a lot of large brook trout in the spring because the pond capacity is not great enough to retain the stock of breeders. Besides these eggs of brook trout, Corry has collected 250,000 eggs of lake trout, and 100,000 have been taken from the beautiful hybrids between the lake and brook trout. Superintendent Buller says that some of the hybrids are extremely large and as handsome fish as he has ever seen.

THE two modes of American fox-hunting are well represented in our reports to-day of the Radnor Hunt and of the Western Massachusetts meet. In the former the hunters rode to hounds, in the latter they shot at foxes on runways in approved New England style. It is to be said for these pursuits that each is proper in its place; and nothing can be more foolish than for the participants in one form of fox hunting to criticise those who take part in the other. That both flourish here side by side, and are growing in popularity, is a pleasing testimony to the sportsman's resources of the country.

THE London, Ont., Gun Club has made a capital stroke by enlisting the services of the lithographic color artist, and has had prepared a large and flaming poster in red and blue, giving a digest of the game and fish laws. This is the most elaborate and attractive poster for such a purpose we have seen, and it ought to go far toward proclaiming the statutes so that he who runs may read.

The Sportsman Tourist.

MOOSE RIVER AND THE WEST BRANCH.

X.

WHEN we returned to the Northwest Carry, the West Branch was so high from the rain that the water flowed from it to Carry Pond, instead of in the opposite direction, as it did when we passed through before; so that we went with the current both times, though traveling in opposite directions. I have noticed this same change in current in Lobster Stream, which connects Lobster Lake, or Peskebegot, with the West Branch, seven miles below the lower Seeboomook Fall. The carry was very wet and muddy, and in places the legs of our rubber boots were none too long. We went down the lake that afternoon as far as the mouth of the Socateau River. We had been afraid that we might be windbound at the carry; but the weather was propitious, and the distance of sixteen miles was across an unruffled surface, though the sky was overcast with dark and threatening clouds. Ktaadn showed faintly through the haze, and the other mountains on the eastern shore rolled away in long waves of light and shadow.

While rounding Socateau Point, a few puffs of wind, which we feared might be the precursors of a storm, caused us to paddle a little faster; but they soon died away. That part of the lake between Socateau Point and Farm Island has a bad reputation for contrary winds and disagreeable, choppy seas, which has given it the sobriquet of the Devil's Blow-Hole; so we were fortunate in not encountering a "blow."

At the mouth of the Socateau is a good shanty, which was dry and not so dirty but we made it habitable by sweeping the débris from the floor. Most of these deserted camps and log cabins have a damp, musty odor, which makes the open air or a tent preferable, but this one was well ventilated, and we passed the night in it.

The day had been well nigh perfect and the evening was one to be remembered. The shore in the vicinity was rough and rocky, but in front of the camp was a small beach of yellow sand, on which the four canoes were drawn up, forming a pretty foreground to the picture before us. The great lake, whose glassy surface glistened with the sheen of the setting sun, stretched away in long reaches of silvery light to the eastward.

Rising above Farm Island were Kineo and the Blue Ridge, and across the bay, Tomhegan Mountain was clearly cut against the sky.

Several small ledgy islands, on which are a few stunted trees, lie half a mile off shore, and so perfect was the reflection that the waterline could hardly be distinguished. The sun went down like a ball of fire behind the forest, its red disc burning through the trees and causing every leaf and twig in its path to stand out in bold relief.

The mountains, trees and islands seemed to float in the hazy atmosphere, which softened their outlines and colors as they faded away in the far-reaching and dreamy perspective.

In the morning the fog obscured the further shore of the lake, but the sun soon burned through it.

We went up the Socateau four miles to the pool at the foot of the falls, where we caught some fish which bit well, though they were all small. A short distance above the mouth we started a herd of five deer, which went bounding away with prodigious leaps over logs and bushes, and further up we saw a little spotted fawn standing on the bank.

The Socateau is a pretty stream of dark-colored water, with but a slight current. Near its mouth a good many trees have been killed by water, but beyond, the spruces and hackmatacks bend over it gracefully. A fringe of lilypads extends along by the banks, on which the deer come to feed. From the Socateau we went across twelve miles to Kineo, whence we had the steamer take us to the head of Spencer Bay, fifteen miles further.

Spencer Bay extends from the narrows, five miles to the northeast, and is the most solitary part of the lake. Three streams empty into it; Lucky Brook, Spencer Stream and Roach River. At the head of the bay the two mountains, Kokadjo and Sabotawan, stand alone; and nestling under the shadow of Kokadjo is a pond which the Indians call Kokadjeweemgwasebemsis. This pond was our objective point, and the little steamer took us to the mouth of Spencer Stream, which is its outlet. We went ashore, the steamer became smaller and smaller as she sped away from us, and once again the link between us and civilization was broken. We cooked our dinner and then set out for the pond, two miles distant.

Spencer Stream is not navigable; it is shallow and rocky, but canoes may be dragged up. There is a path on the right bank, which I have heard called a "good road," and over this trail we walked, leaving the guides to follow the stream. They waded through the water over slippery stones, dragging the canoes, but their road was quite as good as ours, which was one long, miry bog, filled with mud, water, rocks and logs, with an occasional strip of rickety corduroy.

We splashed through the water, stuck in the mud, leaped from one stone to another, balanced on slippery logs, and walked carefully along the corduroy, which was mostly a "hollow mockery, a delusion, and a snare." As the road was near the stream we went part way with the guides, through the water, and found it about as easy traveling.

These "tote" roads are used by the lumbermen in the winter when the snow lies deep in the woods, and all that is required is an open path, for the snow covers all stumps, stones and inequalities. But in the summer they are about as bad as one can imagine. However, we arrived in good season at the pond, and the next question was where to camp.

This pond is nearly circular and is a mile and a half in diameter, with a good portion of its surface covered with lily pads, grasses and aquatic plants, giving much of it a swampy appearance. There is some good fishing usually at the two inlets, and the vicinity is one of the best localities for large game. There is a dam and a gate at the outlet, by which the lumbermen hold back the water when necessary. We came out on the shore near the outlet, and at about the same time the guides paddled under the gate. Three immense logs, so large that there had not been water enough to float them down, lay in the stream just below the dam. They were of a size now rarely found, except in the more remote regions of the forest, and were the largest I ever saw in Maine, one of them being little short of 4ft. in diameter, and the others not much smaller. On the further side was a knoll which looked as if it might be a good camp site, and as we feared from the swampy nature of the pond that the mosquitoes would trouble us, we wanted to avoid camping directly on the shore. We crossed over and liked the appearance of the spot. The tents were pitched, and luckily we were troubled by insects the least we had been in any place.

Camp Kokadjo, as we named it, had the most picturesque and romantic outlook of any of our temporary homes. It was situated on the top of the knoll, at the foot of which was a clean, pebbly shore and was surrounded by Norway pines, spruces and hackmatacks. Back of the tents the rugged bulk of the mountain, Kokadjo, frowned over us, rising above the forest which clothes its feet. Its sides showed great ledges and cliffs of bare rock, worn smooth by the storms of centuries, and where there was soil enough, the trees waved above the dizzy heights. To the northwest were the Lobster Mountains only a few miles away, and to the northeast we had a glimpse of Sabotawan, peering over the shoulder of Kokadjo. Standing in the tent door we looked across the lonely waters of the little lake and at the encircling forest. Wild currants, blueberries and mountain cranberries were growing all about us. We went to the southeast inlet for the evening fishing, taking a pail along in which to get some drinking water from the brook, for the pond water was warm. There is a pool at the mouth of the inlet and two others up the brook. We fished till we had a mess for breakfast, and then went up stream till the water became cold, when we filled the pail. We took no trout of over half a pound in weight, though now and again a huge fish would rise to the surface, lazily turn over and disappear, giving us a tantalizing glimpse of his proportions. Immediately several seductive flies would drop lightly to the widening circles of the agitated water, and cast would follow cast, but the big fellows ignored all of our efforts in their behalf.

They were feeding on some small black insects which were flitting over the water, and our fly books offered no attractions. The setting sun cast a long bridge of trembling light across the pond, and water and sky to the westward were diffused with a golden, roseate glow, shot with rays of tender violet, which deepened to a purple, which in turn faded to blue.

The sun sank below the mountain sky line and the gray twilight stole upon the scene. The last rays lingered on the hoary summit of Kokadjo, and the Lobster Mountains cast their dark shadows in the still water.

Here and there some great pine and spruce towered above the other trees of the dark and mysterious forest, and the plaintive chant of a white-throated sparrow was the only sound which broke the silence.

No one who has not experienced it can appreciate the solemn, almost supernatural, stillness which pervades these solitudes, especially at nightfall.

As we returned across the lonely lake a feeling of awe crept over us, though we had all many times seen the sun sink behind the forest and had the night enfold us in its dusky garment when we were miles from any fellow man.

The light canoes, guided by noiseless paddles, bore us on past the silent shore and under the black shadow of the overhanging mountain, and it seemed as if we were drifting into another world. It was a scene such as a Dante or a Doré might have chosen as a background, against which to depict some wild fancy of his brain, and as we looked the cry of a loon added the only touch which was needed to emphasize the weird loneliness and complete the feeling of isolation.

Our fire sent forth a cheering gleam, however, and as we gathered around it we felt that in it we had a friend which would always give us a warm welcome and make us feel "at home." We spent a Sunday at Camp Kokadjo, passing a quiet, restful day, which was acceptable after the activity of the week. During our stay we fished at both inlets with about equal success—plenty of trout, but all small. Harry gave us a little excitement one morning by putting a fourth fly on his leader, and then hooking four fish, of which he landed two. Our greatest annoyance was in taking so many fish too small to keep and returning them to their element. The brooks had an unlimited supply of the little six and seven-inch fellows. Two of the best ones we got I took at one cast at the northwest inlet. They fought well and gave good sport before Francis had them in the net. Francis himself was very "handy" with a rod, as were the other guides, and it was a pleasure to see him cast. Standing erect in the canoe or on some point of rock, his sinewy wrist manipulated the pliant rod, sending the flies to any desired spot in a manner calculated to deceive the most wary trout.

One night when up the inlet after water we explored the brook for a mile, and as it is crooked, narrow and choked with alders, and the woods were already dark, we had quite an experience before we got back to the mouth. Twice a startled deer crashed through the bushes, one of which was an old buck which barked at us from his retreat, and now and then a musquash would splash into the stream or swim silently past under the bank. But after a struggle with the barriers which blocked the way, and which seemed to be tripled by the darkness, we returned to camp.

At the northwest inlet were several floating islands, composed of tangled masses of grass and lily roots, logs and drift wood, on which soil had collected and grass and small bushes taken root. Once while fishing there I saw a loon fly by only a few rods distant. This was the only time I ever saw one of these birds on the wing, for the great northern diver is much more at home in the water than in the air. Harry and I explored the shores of the pond one morning, and during our circuit we started six deer. At the western end were some musquash houses.

We walked up an old "tote" road which runs around the base of the mountain, but which is now used only by the deer. They had a path as well defined as a cow path in a pasture, and our foot prints mingled with those of deer, moose and caribou. With the exception of the deer path, the road was almost obliterated by the encroachments of the forest. The caribou and moose both make large tracks, but the former's is wide and round and deeper at the sides than in the middle, while that of the latter is pointed and of equal depth.

WILLIAM AUSTIN BROOKS.

Natural History.

THE LION OF FACT AND OF FANCY.

[Concluded from Page 328.]

WE may now inquire into the right of the lion to the title of "king of beasts" as resting on other grounds than his laziness, audacity and destructiveness. Buffon and the French encyclopedists, relying upon the reports of the earlier travelers—Bernier, Le Vaillant and the rest—say it was given him on account of his virtues! Prof. Phil. Robinson ("Under the Sun") suggests that it was not for the reason that he was so brave and so courageous that the lion was so called; and "not because he had any of the kingly virtues, but because he had all the kingly vices"—for the same reason, in fact, which placed the "ureus" upon the headdress of an Egyptian king and induces a chief in modern Africa to wear the lion's claws and imitate his walk. The title may sometimes have exhibited a certain element of derision also, but far more probably it had its origin in fear. His most regal appearance has not been denied by any writers except Livingstone and Selous. The former, as we have seen, is reminded by the lion of an enlarged dog, which statement, by the way, may not be so detractive as it was intended to be. Selous disparages his majesty of mien more deliberately. "To look majestic," he remarks, "a lion should hold his head high, and this he seldom does. When at bay * * * no animal can look more unpleasant than a lion; but there is nothing majestic or noble in his appearance." Perhaps this may be to a great extent a question of taste, but probably most persons who have seen the animal, even in captivity, will side with Harris, Leveson, Baker, Gérard, etc., in thinking his form and carriage awe-inspiring and imposing. That such, at least, has been the general verdict, plainly appears from the forms of speech which have found their way into several languages. Apart from this, the lion is a ruthless marauder, who lives by rapine, murder and fraud. His way of living is strikingly like that of a typical negro king, and it is not at all surprising that he should be held in high respect by savages, who invariably venerate whatever inspires them with apprehension.

As for the lion's voice, that which is said of it is equally discrepant with reports or his other characteristics. Drummond denies that it has "any resemblance to thunder," but the North African Arabs have only one word to express both sounds. Walking by night on the ramparts at Guelma, Gérard came to a silent group of Spahis. "The full moon that silvered all the landscape fell on their white bournous and their bronzed faces." He tells that upon them all there was "an expression of sadness." Listen! said an Arab officer. "I listened, and heard a distant sound—now sharp, now heavy, but which appeared extremely loud, judging from the distance from which it came. * * * That is the lion, the lion of Archioua," he said, and Gérard's heart "leaped for joy," as his fate announced itself by that "deep unparalleled voice, whose echoes were repeated from hill to hill. * * * When it ceased I shivered from head to foot." Of course the impression varies with the temperament and mental state of the listener; but at the same time its physical qualities must be positive, and indeed those of volume and intensity have been usually acknowledged. Leveson, Selous and others have described the trembling of the air and the feeling of immense power the lion's roar produces, though Andersson and Gordon Cumming are those who have portrayed it most completely, since they set before us the phenomenon, its general effects and the special circumstances under which that effect is most intensified.

The lion lives by hunting; how does he take his prey? Gérard says the Algerian lion has "great speed and an unequalled agility, but he is never known to chase his prey." It is easy to assert that this trait is characteristic of the cat-mammalia generally, and corresponds to their special structure; but the evidence does not sustain the conclusion. Cats are not formed to run, but nevertheless they do so. Wherever the lion exists he sometimes hunts in troops, and in India the troop pursues the game much like a pack of wild dogs, and with the same maneuvers. In Africa, hower, there is no coursing, the line of animals driving the game by allowing it to get their wind, so that others stationed by its run are enabled to seize it. Except when the lion may be said to storm a douar, or kraal, or camp, he stalks or ambushes his victims. This is in accordance with the statements of the majority of writers on this subject; although some, like Andersson and Delgorgue, look upon the attack by surprise as almost invariable. The latter, while insisting upon this, and affirming that the lion is as "abject a coward" as Sanderson ("Thirteen Years Among the Wild Beasts of India") declares the tiger to be, absurdly adds that he kills the white rhinoceros in this way, an animal formidably armed, and only second in bulk to the elephant. "Maintes fois trouvai-je des rhinocéros de la plus haute taille, que ni leur poids, ni leur force, ni leur fureur, n'avaient préserver de la mort." Dr. Jerdon recapitulates the methods mentioned, but states that the chase often combines the stalk and ambush, but not always; while Selous seems to have summed up the whole subject in saying he does "not think that lions have any fixed way of killing," but believes "they employ different tactics against different animals." Major Bevan ("Thirty Years in India") saw a tiger strike his claws through the skull of a bullock. Sir Samuel Baker ("Nile Tributaries of Abyssinia") witnessed the same in the case of his companion Florian, killed by a lion. Without multiplying references, the beast fights with talon, fang and forearm, and though contradictions are found in regard to the mode of assault and method of killing, these arise from improper generalization—the facts are all true, the inference only is false—viz., that limited individual experience represents an invariable procedure.

Buffon asserts that the lion bounds upon his prey with leaps of fourteen feet. Delgorgue increases this to eighteen, and Selous says that he comes with a rush of "such lightning-like rapidity" as no other animal can equal, but that the pace itself is "a clumsy-looking gallop." Thunberg ("A Description of the Cape") tells us that a lion will leap a fence four feet high with an ox in his mouth. Maj. Leveson has known him to clear the stockade of a kraal seven feet high similarly weighted. His bound "when about to spring upon his prey" Andesson estimates at from twenty-five to thirty feet, and

Drummond, Thompson, etc., give similar accounts of his leaping powers.

Every one of these statements is explicitly denied by different writers, because they had not happened to see the fact described, and therefore we may readily find authority for saying that lions do not spring upon their prey, that their leaps are inconsiderable, and that they never strike with the arm and claw, or bite through the vertebra by seizing the back of the neck, or dislocate it. The personal observations of Selous, however, have fortunately embraced specimens of all these methods of despatching creatures seized, and it may be regarded as certain that they are all practiced by the lion.

No civilized man, or at least none who has recorded his experience, knows much about the temper and habits of the wild lion, and under such circumstances the false doctrine of instinct vitiates conclusions from limited observations and places the reports of hunters at variance with each other. Lions are rarely seen by day, and at night, all but the inexperienced sportsman are perfectly aware that Gérard, Andersson, Leveson and Selous were right in regarding them as more than a match for a man, however armed. Successful study, therefore, would seem to require conditions little likely to be realized, and probably the best that can be done for descriptive zoology is to bring together everything that has been uttered on good authority and leave it to be interpreted in accordance with theoretical principles. No animals are more interesting than the great cats, or have more widely and powerfully excited the imaginations of different classes of mankind. It is not surprising that so many tales, such as Col. Pollok ("Sport in British Burmah") may well say that he "wonders at," should have been told about them; but it is unaccountable, except on the ground that the reasoning of these writers upon what they saw had been vitiated by the conception that an animal is a machine constructed to work in only one way, should have introduced so much which disfigures them into the pages of men who were incapable of a deliberate misstatement.

Biological and psychological studies were not needed to prevent an author from calling the lion a coward on one page, because he had learned the effect of improved firearms, and from telling in another of a desperate foray upon his camp; from enlarging in one part of a book upon the implanted instinct by which he stands in awe of men, and relating in a succeeding chapter how men are destroyed when poorly armed at his good pleasure.

So long as wild beasts are tacitly judged as if they were civilized men, the conclusions arrived at are likely to be obnoxious to criticism. What Prof. Robinson says of the lion is in all particulars true. "Life has but one end for him—enjoyment—and to this he gives all his magnificent energies, * * * without forgetting for an instant that he is only a huge cat, or flying in the face of nature by pretending to anything else." It is the hunters who have anthropomorphized him and heaped equally undeserved praise and reprobation upon his head. That lions must possess individuality may be inferred from the place which they hold in nature, and having this, the observed contrasts between them in severalty and in local groups follows as a matter of course. No more perfect combination of strength, agility and cunning than exists in the lion can elsewhere be found. "He makes no pretense to invincible courage; on the contrary, he prefers, as a rule, to enjoy life rather than die heroically. When death is inevitable he is always heroic, or even when danger presses him too closely. * * * A lion in the very shadow of death remains a lion still." He is upon the whole an animal with a very bad reputation, most of which he deserves. That he is monogamous, "of a very grave and dignified character," and that he will defend his mate and offspring, which the tiger deserts and destroys, in no sense justifies the superstructures which have been built up from fancy upon the basis of these facts. On the other hand there is quite enough in the solemnity of his murders, in the "supreme tragedies" of which he has been the hero, and in "the splendor of his ravages in many regions" to forestall imagination and preclude any necessity for the exercise of its powers. Nothing in the records of brute or human violence can surpass the deadly patience with which he compasses his victim's destruction, or the fierce valor with which the design is executed. From age to age he has maintained himself in Africa against the native man, and if he succumbs to the appliances of civilization and learns to appreciate the impotency of opposition, it is difficult to see how a process which, when wrought in a man, affords an argument for his intelligence, should, when it takes place in a brute, be otherwise interpreted. J. H. P.

THE YELLOW RAIL IN MICHIGAN.

IN a careful search of twenty years for rare birds I have never met with this species in Michigan, and it may be considered as rare throughout its range. Recently a fine specimen was brought to me in the flesh taken in this county, which I preserved. It was shot by two of our local gunners on Oct. 19, and was noticed to fly differently from other members of the same family. Another point of identification was a white spot on the wing plainly to be seen when the bird is flying.

In a review of all published lists in our State only four are found to embrace the yellow rail (*Porzana noveboracensis*), and careful study of catalogues and price lists throughout the Union indicates an almost universal scarcity of the species. Not many years ago the price of a skin of this pretty little bird was $8, and although at present skins are much cheaper, the eggs are unobtainable from dealers, which plainly shows their rarity in these days when money buys anything in the naturalist's line.

The range of the yellow rail is given as eastern North America from Nova Scotia and Hudson's Bay west to Utah and Nevada. It is strange that within such extensive boundaries there are not some localities where the species should be common, but it can be counted as common nowhere within its range. Its nesting habits, rarely observed, are quite similar to those of others of the same family; the eggs, said to be six or seven in number, being of a rich buffy-brown, marked at the larger end with a cluster of reddish-brown dots. Any of the readers of your paper who may have met with the nest of the yellow rail or have observed its habits will confer a favor on all ornithologists by presenting such notes.

HALF-HOURS IN THE SIERRA NEVADA

VII.—THE PINE SQUIRREL.

THE Douglas pine squirrel is fairly plentiful in this region, and has afforded me many an hour's pleasure in watching his interesting ways. "Pil-il-loo-eet" is the Indian name for this species of squirrel, and is an almost exact imitation, in human words, of his cry when alarmed. His powers of swimming I have already noted, also his courage and belligerency. The latter is shown against all animals and birds that invade his reservation, and extends to man himself. His ways resemble those of the common red squirrel, but he has none of the latter's bad habits, such as robbing small birds of their eggs and young, and similar low-down tricks. He is ardent in his loves, and fierce in his hates, and altogether is quite an aristocrat. I never knew him to eat anything but the seeds of the coniferæ, among which the seeds of the Douglas pine are his favorite. He will now and then come into camp, and nibble a little bacon or salt meat; but it is for the sake of the salt he does so.

No creature haunting the branches of the Douglas pine could well be otherwise than courageous and noble in its instincts. This tree, as it grows in the Sierra Nevada, is one of the noblest creations of Mother Nature. Straight as an arrow, hundreds of feet high, and many feet in diameter; with drooping branches, jeweled by its beautiful green cones; it rears its majestic gray-brown trunk to heaven in grandest majesty. The deep murmuring diapason of its voice awes the sensitive nature, as the summer winds play among its needles; while the winter's storms awaken its voice to tell of travelers lost and benighted in the snows, who have sought vain shelter behind its buttressed trunk. In this beautiful tree our little squirrel finds his home. Take your station under one of these trees after the sun has risen and watch with me. But don't sit or lie too near the outer ends of the branches. If you do you may get a cracked crown from a cone dropped 100 or 200ft. The cones are anywhere from 8 to 16in. long, 1½ to 3in. in diameter, and solid as a hickory branch. Now, if "pil-il-loo-eet" drops one of these upon you you will remember it (if you live) to your dying day. Well, then, sit down with your back against the trunk and wait. If you are in luck, and there be a squirrel up this tree, thud! you will presently hear a cone drop. Looking up, above where it dropped, you will see, at the very tip end of a waving branch, the face of our friend peering down to see where the cone landed. Then he scrambles out to the end of another branch, when the same performance is enacted. Thus he goes on cutting his cones and dropping them, until he believes he has cut his day's provisions, when he will descend and begin his breakfast. This he does by seizing a cone, which, by the way, is always far larger than himself, setting it on its tip, and thus holding it, cuts off chip after chip from the base, in a spiral manner, until he comes to the fruitful part of the cone, when he proceeds leisurely to eat his meal. He occasionally straightens up the cone with a jerk, flirts his tail, takes a rapid survey of the surroundings, and then returns to his work. All this he does with a free and jovial air, as though inviting you to his confidence. He almost says, "Just look at me eat my breakfast. Don't I handle this cone in a masterly way? Oh, I'm a daisy and don't you forget it!"

But if you want to see temper just go and pick up a cone when he is busy cutting them down. He will hang at the end of a branch, peering down to see what is going on, and as soon as he is satisfied that you are a thief and making away with his property he gives an angry snicker and comes racing down the tree. When within 10 or 20ft. of the bottom he will stop, head down, and hanging on with hind feet will spat the bark with his front ones, at the same time jerking his tail violently to and fro, scolding at the top of his voice. He will tell you in language plain as spoken words that you are a lazy, thieving scoundrel, and ought to be ashamed of yourself. He also tells you to go and take a fellow of your own size and not impose upon a little chap like him, robbing him of his hard-earned breakfast.

All this he tells you, interspersed with the choicest squirrel Billingsgate. If you approach a little nearer he will utter his name, "pil-il-loo-eet," at the same time running up the tree for a few feet in a spiral manner, forming a number of loops in his course, and then resume his former position and actions. This he will continue until you leave, when he will rapidly descend and commence searching for his cones, and will continue searching for a long time if the proper number are not there. I am satisfied that these squirrels know just how many cones they drop at a time and verify their tally when they come to the ground.

If the reader has followed me he will see that I take pleasure in many things besides making big catches of trout. It has been my privilege to angle in many waters, from New Brunswick to Mexico, but the catching of fish has always been but one of the pleasant memories of a trip.

AREFAR.

AUBURN, Cal.

RECENT ARRIVALS AT THE PHILADELPHIA ZOOLOGICAL GARDEN.—Received by purchase: Two brown capucins (*Cebus fatuellus*), one axis deer ♂ (*Cervus axis*), one ruffed lemur (*Lemur varius*), one black-headed conure (*Conurus nanday*), one tabuan parrakeet (*Pyrrhulopsis tabuensis*), two passerine parrakeets (*Psittacula passerina*), two gray-headed parrakeets (*Agapornis cana*), two crested ground parrakeets (*Calopsitta novæ-hollandiæ*), one hawfinch (*Coccothraustes vulgaris*), and two European tree frogs (*Hyla arborea*). Received by presentation: One opossum and five young (*Didelphys virginiana*), one white heron (*Ardea egretta*), one Salle's amazon (*Chrysotis salleï*), one great-horned owl (*Bubo virginianus*), two alligators (*Alligator mississippiensis*), one pine snake (*Pityophis melanoleucus*), three common hog-nosed snakes (*Heterodon platyrhinus*), one large-headed tree snake (*Dipsas cenchoa*), one common boa (*Boa constrictor*), one wave-lined lizard (*Sceloporus undulatus*), two Muhlenberg's terrapins (*Chelopus muhlenbergii*), one snapper terrapin (*Chelydra serpentina*), one mud turtle (*Cinosternum pennsylvanicum*), one hell bender (*Menopoma alleghenicnsis*), two menobranchus (*Menobranchus maculatus*) and one spotted salamander (*Amblystoma punctatum*). Born in the Garden: Three ground rattlesnakes (*Crotalophorus miliarius*) and eight brown water snakes (*Tropidonotus rhombifer*).

NAMES AND PORTRAITS OF BIRDS, by Gurdon Trumbull. A book particularly interesting to gunners, for by its use they can identify without question all the American game birds which they may kill. Cloth. 200 pages, price $2.50. For sale by FOREST AND STREAM.

A BOOK ABOUT INDIANS.—The FOREST AND STREAM will mail free on application a descriptive circular of Mr. Grinnell's book, "Pawnee Hero Stories and Folk-Tales," giving a table of contents and specimen illustrations from the volume.—*Adv.*

Game Bag and Gun.

THE FULL TEXTS of the game laws of all the States, Territories and British Provinces are given in the *Book of the Game Laws*.

CORNFIELD SNAP SHOOTING.

THE Illinois game law having improperly shortened the open season for chickens, there will be no doubt many readers of FOREST AND STREAM who will be unable to enjoy a successful hunt, as stubble shooting lasts but a few days, and a good many dear lovers of sport are unable to take advantage of the opportunity. There is another chance, however, and some good field shots already understand how to capture the wary prairie chicken after he has abandoned the stubble and buried himself in the labyinth of a luxuriant Illinois cornfield.

To the novice let me describe the manner in which it is accomplished. First the cornfield hunter must be a quick shot; he must learn to cover his game and pull trigger the instant the gun comes to his face, for he sees a prairie chicken but a moment, and the chances are that he will never see the bird again unless he acts promptly. A good dog is an absolute necessity, as many of the birds will fall among weeds, and being only winged will be hard to find.

Suppose now we are ready to start. Our dog must stay close by—thirty rows on each side, that is his limit; and whenever he gets further away a warning whistle must insure his return. We bend our course toward the high points or knobs in the field, avoiding weedy fields, for your prairie chicken detests weeds and seeks high, dry points, where the corn is not so rank, and where he may bask in the sunshine and wallow in the dust.

Carry your gun directly in front of your breast with the muzzle elevated and breech clasped close to your breast, so that you may command the field, and not catch your gun on the corn stalks when you want to shoot. As we draw nearer to the knoll, the wary motions of our dog warn us that he has winded the game, and we must be on the alert. We move carefully forward, taking care to step over fallen stalks without making noise enough to frighten our game. Our dog stops and almost the same instant up come the birds.

We are warned by a flutter of wings and clatter of leaves that they are coming, even before we can see them; here they are; and as they rise above the corn tops they make a barely perceptible pause to take the course of their flight. Now or never is the time. If the bird gets his course and is started on it you may as well bid him good day, for the chances are a hundred to one that he is gone. But if you are vigilant and catch him just as he reaches the height of his flight and before he starts on his journey he is yours. Two snap shots and two birds. But slip in another cartridge for a straggler. At the first move from yourself or the dog up he comes. Shoot quick! and there you have him! Three birds down and your dog must retrieve promptly, for an old cock with a broken wing will travel an amazing distance in a very short time.

This routine will be repeated through the day with some changes and varied success. You must anticipate hard work; a man will finish a day's sport thoroughly tired, but he ought to have a nice bag of birds to show for his day's work. My last effort in this line showed fourteen birds, where strict stubble hunting would not afford a man half a dozen shots.

One thing I can assure any sportsman of and that is that he will find snap shooting more exciting and more fun and more hard work than any field shooting he ever attempted; and it will furnish sport till the season closes. Get these directions impressed on your mind, follow them closely and you are sure to be successful.

ILLINOIS.

THE OZARK HILLS.

I MADE a flying trip to my old home among the Ozark hills of Missouri recently. Though called away within three days by imperative business, I managed to shake hands with a great many old friends and spend some hours in the field with master Bob White. What a rush of boyish memories came with the rustle of brown leaves, the sweet autumn odors, the sight of the golden and crimson and purple of the forest-clad hills, bathed in the mellow glory of an October sun! It is a long time since I have made a severer sacrifice than to tear myself away from these scenes and the clamorous friends of lang syne within three days after my arrival.

Quail were abundant, remarkably so. I found my close-choke gun a little annoying when shooting in cornstalks or other cover. I was obliged to wait till it was often too late in order to have anything left of my bird except the tips of his wings and his head. A friend who shot a venerable 10-bore muzzleloader and who would drive away as soon as the quail cleared the cornstalks, rather got the best of me on the score. If I had much such shooting to do I should certainly have one barrel cylinder bore. When we got among some snipe on the open marsh, however, the way I could tumble them at from 30 to 60yds. was interesting.

Another odd thing consoled me. Our old bob-tailed pointer was working some quail in a cornfield, and as we walked up to him on a point a fine turkey arose. Recovering from our astonishment we blazed away at him. We had been shooting No. 8 shot, but I had at that time a load of No. 10 in one barrel. No doubt all four of our shots struck him, but as my friend was some distance away and my final load was of No. 10s I relied especially on my second barrel, which was at short range. He got up over the high *bois d'arc* hedge and sailed away. We loaded, broke through the hedge, and followed. The old dog was greatly excited, and soon winded him. Following up about 200yds. we found him quite dead. He was a fine young gobbler.

AZTEC.

WHERE SPORTSMEN ABOUND.—South Norwalk, Conn.—Hunters around here are as the leaves of the forest. I have been out three times and started nothing. Every man owns a dog and gun, and this town boasts of three gun clubs.—E. H. F.

LAKE CHARLES, La., Nov. 10.—Geese and ducks are coming in, and some fair bags are being made.

THE COON HUNTERS.

YOU promise coon hunters a separate page next week. Will this go? Last summer, when we were returning from a camping trip in Bedford county, Pa., a coon dropped from a tree along the roadside, our noise evidently frightening him down. The great coon dog Path Finder (a full-blood great Dane) and beagle Topsey were soon in full cry on the trail. It was a race from start to finish. For about 200yds. the coon ran; then, as we thought, it was safely up a tree. Path Finder came up, and with a mighty jump caught the coon, when it was fully 8ft. up the tree. Dog and coon came down together, and the fun was over, for that awful back hold gave the coon no chance. ALLEGHENY.

PHILADELPHIA.

"BRE'R COON."

OUT here in western New York we do not shoot a coon when treed—unless in a very high tree—but he is shaken out and given a fair chance for his life and liberty with the dogs below, and they often outwit both dogs and men. I remember an instance where two dogs were fairly vanquished by one, and that a female, with four young cubs in attendance. Four of us had started out one evening early in the fall. There was quite a moon, and objects were dimly visible as shadows in the edge of the woods, but no further in. We had struck the edge of the woods and had stopped to listen. We heard the dogs below us yipping about in an excited way, and as we stood very quietly awaiting further developments, we heard the patter of feet on the leaves coming our way. I admonished the boys in a whisper to keep very still, when to our surprise within two rods of us we saw four young coons and their mother behind making all speed to a large maple growing close by. As the first youngster hustled up the tree urged on by repeated growls and spits of the old one, the dogs came bounding into the little space under the tree, and with howls of satisfaction prepared to "do up" the whole tribe.

Surprising events were taking place so rapidly that we had not stirred, and we waited to see the rest of the show. As the foremost dog bounded toward the coon, instead of her making a bolt for the tree she made a dive for his face, and raked both her sharp-clawed forefeet the whole length of his head. To say he was surprised, does not half tell it, as he was accustomed to seeing that game run unless cornered; and he turned tail with a howl. By this time the other dog had appeared on the scene—a young one, not yet versed in the arts of "coon," and he was treated to a surprise party greater than the other had been. With a growl and a spit she sprang right on to his head and commenced to scratch and bite. He made a bolt for home, accelerated by a dig in the back as he turned, and we never saw him again that night. The way he made the woods ring with his howls was a caution. All this had happened in less time than it takes to write it; and before the old dog could collect his senses enough to tackle such a fury, the young ones were up the tree, and with a bound she followed and was in the branches before you could say "scat."

"That old coon has earned her liberty and we won't touch her," said I; nor did we. Possibly the fact that the young were quite small had something to do with my magnanimity. She was fighting in defense of her young to give them an opportunity to escape, but she certainly conjured up more bravery and spunk than I have ever seen since in a coon that had a chance to run.

A good coon dog is a scarce article, and the mistakes of a young dog in trailing and fighting one are many. He only learns by experience. B. H. W.

BUFFALO, N. Y.

A PENNSYLVANIA NIGHT RUN.

"HOW are you, boys; we thought you would not come," were the greetings we received after riding about seven miles over a country road near Pittsburgh, to go coon hunting.

The party who received us were young men from the neighborhood, accompanied by all kinds of dogs of very uncertain parentage, while each particular owner was willing to swear that his cur was the best coon dog that had ever lived; but as we had been disappointed before in believing such assertions, we had brought three dogs upon which we could depend. We gave notice that all the dogs except our own should be tied and led until we had treed a coon, as we did not want ours to be led off by the others on a fox or a rabbit trail. This gave offense to the other owners of dogs, and they quietly dropped out of our party, except one who had a three-quarter bred foxhound which he wanted to teach to hunt coons. There were thirteen men in the company when we started to hunt, two or three going ahead with the dogs, while the rest followed at some distance, so as not to disturb the game.

The dogs were scarcely released when they struck a trail up a steep hill; a rail fence also led up this hill, and the coon had traveled on the top of the fence to mislead the dogs. But one of our dogs knew that trick well. He would jump on the rail fence, ascertain which way the coon went, then leap to the ground and run along the fence for about 100yds. and then repeat the maneuver.

In a short time we heard them baying in the distance, and the joyful cry, "We've got him, he's treed in that orchard," was heard by the leading men. We found the dogs howling and trying to climb an apple tree, while two of our party were up among the leafy branches with torches hunting for the coon. But we could not find him; the dogs would circle around the tree and then howl, but still no coon, while the owner of the dogs would swear that it was the first time they had ever fooled him. The coon had gone up the tree, walked out on a branch, and from there had gotten on a high paling fence, which the dogs could not reach, and by doing so had delayed the dogs long enough to escape further up the hill to an abandoned coal mine, where we could not follow with our dogs. It was an old trick of that coon, and we were not the first ones fooled. There we stood; our dogs were gone, we did not know where; occasionally we would hear a bark in the distance, which some said was ours, and others declared it was Farmer So-andso's.

The majority thought that our hunt was a failure, and we concluded to return to the house in a roundabout way. When we had traveled about three-fourths of a mile through the wet, cold dew, which drenched us to the skin and did not improve our spirits, we suddenly heard our dogs again, and in a style that told us they had treed a coon. Wet, cold and all discomforts were forgotten as we rushed down through the woods to a very large oak tree about 4ft. in diameter. When we had all arrived at the tree, a consultation was held to decide in which manner the coon should be taken.

Some suggested to go for an ax and cut down the tree, and inquiring if the owner would have no objection, the assuring answer was given that the owner lived 250 miles away.

Another allowed that Jake, one of our party, could climb that tree, to which one-half answered, "Impossible." They got to disputing over Jake's ability till they had worked Jake's feelings up to such an excitable pitch that he threw off his coat and declared he would "climb that 'ar tree" or break his neck in the attempt.

He was kindly helped in the rear by three of the party with fence rails until he reached the lowest limb. Up he climbed almost to the top, declaring he could not see the coon; up higher he went, and at last to our great relief he yelled that he saw the coon. "No; two, three—great Scott, boys! there are four coons on this tree." This was answered from below with a whoop that would have put to shame any Indian war cry. Jake was told to come further down and get behind the trunk, while we would try to shoot the coons, which we did, but did not hit the coons; neither did we hit Jake.

Jake was then given a long pole with instructions to poke them down, commencing with the lowest one. Below a circle was formed by a dozen men, six torches, and four dogs divided among the circle. The dog which I held had killed a skunk the night before, and the dew brought the aroma out wonderfully, and when he got excited he would snap at my hands to try and make me let him go. When all was in readiness Jake was told to poke one down, which he did without any trouble. Zip, zip he came down through the branches and landed with a thump on the leaves below. At the same time four dogs and twelve men were let loose, and such scrambling, yelling, and growling of dogs, coon and men with torches cannot be described, but as he was only three-fourths grown, he was easily dispatched. With the next one the same scene was repeated. While the dogs were fighting the third one, the fourth or old one, becoming alarmed at the proceedings, sprang down from the tree and made off down the hill, followed by the men but unnoticed by the dogs, which were tearing at the now nearly dead coon, and could not be called off. Heroic measures were necessary in such an important cause, and I rushed in and grabbed the dead coon from the snarling dogs and held it high above my head, while the calls of the others brought them on the trail of the old coon, and none too soon; she had almost reached her den, an immense dry tree which was hollow near the top, where she would have been comparatively safe. She showed much more fight than the other three, and the dogs had all they could do to finish her.

When the fray was over, Jake gathered the spoils and they disappeared into the unfathomable recess of his large overcoat, while the dogs started in quest of new game. We followed down the classic banks of Moon Run about one mile, when the dogs gave tongue again, raising our hopes of more coons; but alas! that three-fourth foxhound that Jake had brought along to learn the higher art of coon hunting had struck a fox trail, and away he went with our coon dogs over the hills and through the valley, at times so far away that we could not hear them, and then again, circling so near that if it had been daylight we could have shot the fox.

For more than two hours they kept us waiting, wet, cold and shivering, and trying to get the dogs off the trail, while near us a small screech-owl was seemingly laughing at our discomfort, and Jake was sitting in the wet grass, where he went peacefully to sleep snoring in all the different modulations of tone that were possible.

If the dogs had had their homes in the neighborhood we would have left them, but having brought them from Pittsburg we were afraid of losing them. All misery must have an end, and so it was with us. By a good chance and a ruse we caught the dogs, and wended our way homeward as the faint streaks of dawn began to show in the east, a tired, but satisfied party, as four coons caught in one night attested.

A "DANVIS" COON HUNT.

YEARS ago, along in the latter part of the fifties, I was a boy living at home, near the green hills of Vermont, and in close vicinity to the town of "Danvis," since become famous through "Uncle Lisha's Shop" and "Sam Lovel's Camps;" in fact, it was the ancient city of Vergennes mentioned in those unique works, a quiet, lovely spot, around which still lingers tales and legends of Ethan Allen, Seth Warner, Benedict Arnold, Commodore McDonough, and of the "days that stirred men's souls."

Among many intimate friends was one Geo. P., a young law student, with plenty of time on his hands and a strong appetite for something to take the musty flavor of the law out of his mouth. How he came to hit upon coon hunting as a means of moistening the arid wastes of Blackstone, Chitty and the rest of the worthies I can not for the life of me tell. Whether following a coon, routed from his nightly marauding in the farmer's cornfield, was suggested by the thought of tracing the devious ways of some hardened criminal to his final conviction and incarceration; or whether he had become so befogged and beclouded in the intricacies of the law, in fact so in the dark about the whole matter, that night hunting was the only way to illumine his mind, I don't know. But that fall he borrowed Uncle David Middlebrook's "old hound" and went coon hunting, and with the not unusual luck of tyros got one or two coons each night. It was at this time he approached me with an invitation to join him on a certain night. George said we were sure to tree a coon and equally sure to get him if we could only get him out of the tree. I laughed and told him I would agree to get down all the coons he got up in a tree. There was where I was rash.

Upon the night appointed we struck for the cornfield bordering Burrough's Swamp. Dark? Yes! I carrying my double-barrel and George handling the dog. We stumbled on for perhaps an hour when the dog gave tongue. We were then in the center of a cornfield, the chase led toward Meigs' Hill and soon from the sharp short notes we knew the coon was treed. Reaching the spot we found the dog at the foot of an immense hemlock, standing on a point of a limestone ledge, 30 or 40ft. high, which fell off abruptly to the level ground below. Scrambling up the ledge we found the hemlock quite 70ft. high, throwing out its straight horizontal branches at regular intervals, beginning quite close to the ground and making it quite easy to climb.

After scanning the tree as well as we could in the pitchy darkness and firing one or two random shots, George, half in jest, half in earnest, insisted that I should fulfill my promise and get the coon down. I then began to realize that I had been rash in making any promise. So mounting the tree, which was easy enough to a nimble boy of 16, I climbed up about half way, when I discovered his coonship stretched out on one of the horizontal limbs, facing the body of the tree, and five or six feet from it. The branches were about 3in. in diameter where they joined the body of the tree, tapering easily toward the ends. Seizing the one the coon was on with my hands, and putting my feet upon the next below, which just brought my chin on a level with my hands, I cautiously made my way out from the body of the tree to within a foot or so of the coon, who began snapping and snarling. My weight was bending the branch in an alarming manner, and strange to say the coon did not shake off worth a cent, while I became painfully conscious that there was but an inch and a half of twig between me and the foot of the ledge, some 80ft. below. So marking the height and general direction as well as I could, I scrambled back and down to the ground.

A few ineffectual shots in the direction I had marked, set George to browbeating me in good set terms for not getting down the coon, untile my ire and my courage (such as I had) were fully aroused.

Again I mounted the tree, and on reaching my former position found he had changed his quarters. As I could see to the end of each branch as I climbed past, I was in no danger of overrunning, or rather overclimbing, my quarry. Up and up I went, till the branches seemed like pipe stems, and the trunk itself a mere whipstock, while the fact that I was a hundred feet from the foot of the ledge would constantly thrust its unpleasant realization upon me. I had now reached a place where I had to grasp the main shaft of the tree; the branches were too small, and my slightest motion swayed it several inches out of perpendicular. But there, just above my head, sat the coon with his haunches on a little twig of a branch, his fore paws and head close to the tree, snarling and snapping. I tried to shake him off by swaying the top of that old hemlock back and forth, expecting every moment to hear it crack beneath me, but it was of no use; the coon had the best hold and the most confidence; and if it had not been for the dread of George's tongue I should have turned and gone down again.

As it was I stopped and considered the matter. After a bit a plan occured to me. I could easily reach him with my hand. Swaying the treetop again back and forth as far as I dared, I gave the coon all the business he could well attend to to hold on to his frail perch. Letting go with one hand but still keeping up the swaying motion I dealt him several blows with my fist in quick succession. The second rolled him over on the branch, the third loosened his fore feet, and the fourth sent him crashing through the branches to the ground below. Hastening down I reached the ground in time to see a fight of three or four minutes between the coon and hound before the former was killed. He weighed 23lbs. H.

INDIANA.

SOME POINTS ON COON HUNTING.

THERE are a great many "points" in coon hunting which are only gained by experience, and then only after a great deal of observation. There are many characteristics possessed by the old male coon which are entirely lacking in the younger members of the family. Many old coons become as sly and cunning as a fox, and are equally hard to take. I remember one case in particular. My hounds used to run hot trails in about the same locality every once in a while. They would take up the trail, run it for perhaps ten minutes and then lose it in a most unaccountable manner. This had happened several times in succession, until one night a good tracking snow fell. The next morning I went out to the same place and succeeded after many a twist and turn in tracking my old quarry to his den. We cut the tree and found him to be as I thought, an old male of quite large caliber. Another case I remember, where the hounds crossed and recrossed the creek several times, taking up the trail each time after crossing, running it a short distance and then crossing back again, finally treeing in a huge hickory.

One can easily distinguish an old coon by the size of the tree he climbs as a last resort to escape the hounds. I have no doubt that the motto of the young and inexperienced coon is "Any port in a storm." Not so, however, with the older ones, who have perhaps succeeded more than once in throwing the keenest hounds off the track. I remember one night in particular. The hounds took up a fresh trail, and after running it a short time treed in what is called in the West a bush, a small tree, about 5 or 6in. in diameter. On jumping the coon we found him to be a young one, and from all appearances hardly a year old.

We had hardly left the spot when the dogs took up a fresh trail and ran at full cry straight for the creek. Here they crossed, ran along on the opposite bank for some 200yds., crossed back again and struck out into the timber.

We followed them slowly for a while and then sat down on a fallen tree trunk to await further developments. I had made up my mind that they were running an old-timer by the way the trail led. We had not been seated long when we heard the hounds getting nearer, and presently we saw a dark object rush past and heard a scratching sound as it disappeared up the side of a large elm.

I think the coon had had this tree in mind from the time the hounds took up the trail. He had crossed the creek to throw the dogs off, struck out into the timber, circled and made for this tree, perhaps an old favorite with him, where it may be he had taken refuge before to escape his keen-scented pursuers. I have noticed in almost every case the old coons are treed in the largest

trees in the timber. Of course this does not always happen; in fact, I have known them to take to a tree so small that the dogs could almost reach them by jumping.

I have also noticed that an old coon seldom or never takes to the "den tree," unless he is very hard pressed and has no choice as to his retreat. More than once have I tracked them to their den in the morning over the snow, but I remember but one instance where I have treed in the deen tree, and that was just before dawn.

When a coon is "jumped" from a tree and comes down into the middle of a howling pack, he usually fights for dear life.

The female keeps up an incessant growling and snarling, while the "boar" seldom makes any noise whatever after the dogs have fastened on to him. I think the hardest fight I ever saw was made by an old female. It was just after weaning time, and she was lean and poor. The way she held out against the dogs was astonishing, and the way she made them yelp was something awful. This coon weighed in the neighborhood of 20lbs., which, I think, is quite large for a female.

The males as a general rule are fat, and although they fight with great zeal, yet they don't compare with the smaller females.

If your hounds tree in a hollow tree, the coon seldom jumps out when the tree is cut, but stays in the hollow until he is punched out with a stick. Of course you don't know when you fell the tree how many coons are on the inside, and one point very essential is after getting one coon out, pay no attention to him, the hounds will attend to his welfare, but watch the opening in the tree, for if there are any more coons inside, just as soon as the fight with the first coon begins they will make a break for the woods. They seem to know that the dogs are occupied and take this method as an only means of escape. I think it is without fail that as soon as the dogs have tackled the first coon, out pops the other occupant of the tree and he is off.

Note the place where he ran, drag a hound off, put his nose to the place where the fugitive disappeared, and, let me assure you, it will not be long before he is waiting for you in some tree top hard by with your hound at the foot of the tree. LOTOR.

NEW ENGLAND FOX HUNTING.

THE fox hunters are having considerable sport in this section of country, and some of the boys tell pretty good stories of the haps and mishaps of the chase. As a member of long standing in the "ancient and honorable guild," I think it my duty to give a bit of personal experience. My last run with the hounds was on a beautiful day in February. There was about eight inches of freshly fallen snow on the ground. The sky was clear, and a gentle breeze from the south gave us hopes of a glorious run. Starting from our goodly city of Springfield before the sun was fairly up, with Ed and John and our good dogs Ben and Kitty in the cutter, we were soon well on our way. Before we were out of the city limits we found a fresh trail that crossed the road to the left; and before our team had fairly come to a standstill the dogs were away in full cry. The probabilities were that the fox when started would turn to the east and cross in front of us, and Ed and John went on up the main road, while I, to make sure, turned down a cross road and followed in the direction the dogs had taken.

When I had gone about a half mile I saw an old lady coming whose dejected looks and halting steps betokened that she had had about enough of the heavy walking. As I approached her gallantry and humanity had a tussle with my fox hunting inclinations, but as has ever been the case in such matters humanity carried the day, and turning the team around I assisted the old lady to a seat and carried her back to a house near the main road.

If the reward for good deeds were always as sure and speedy as in this case, I venture to say that many of our non-fox-hunting friends would be better men. Just as I had resumed my seat and was about turning back there came a burst of melody from the dogs that set my nerves tingling again. Listening a moment, I found that the chase had turned to the east, and that the aforesaid humanity had saved me more than a mile of very rough road. Without going to thank the old lady for the good turn, I made for the main road at the best speed that whip and voice could extort from my not very gallant steedess—to tell the truth the old mare was decidedly lazy, and the amount of energy we expended in getting her along that day would, I fully believe, have carried us on foot over more ground than we covered. As I tore along up the road I met a jolly-looking farmer, who encouragingly shouted as we passed, "Hurry up! they are close arter him. Stop at my house ——," the remainder was lost in the distance; but I well knew that the last word was "cider:" and with renewed vigor I pushed on. Overtaking Ed and John, we listened a moment to the dogs, and found that they were making for "Stony Hill," some five miles distant; and getting under way we made a break for that famous runway. When we arrived at the base of the hill, we heard the dogs some three or four miles to the east, well up on the Wilbraham Mountains, driving the fox at a racing gait toward the south.

Again getting up steam we drove through the little village of Wilbraham, and a mile below we turned up a road that led over the mountain. At the foot of the last rise we found the trail which crossed the road, and John got out and followed it to the edge of the woods to cut off the fox in case he should come back that way, while Ed and I kept on to the top of the mountain, where Ed took his stand at the well-known runway by the big rock; and I, leaving the team just below, went down the road and took my stand at another crossing place, where many a glorious run had finished. Sitting there on the well-known stone in the bright sunlight I calmly awaited events. At the end of about an hour and a half I saw John step into the road a half mile below and come toward me. Just then Ed showed himself and beckoned for me, and as I came up to him he informed me that the dogs that had crossed below were not our dogs at all, but a brace that were owned by a man who had just crossed below in search of them, and that our dogs were after their fox on the plains to the west of us.

John then came along and said that there was a fresh track that crossed the road just below, and we all went down to investigate; and it caused a cold chill to run up my back when we discovered that just after I had vacated my stand the fox had crossed within ten feet of the very stone upon which I had been so long sitting. Any man has an undoubted right to his opinion regarding such an occurrence. I did not express mine, but Ed and John made a disgusting exhibition of themselves by dancing in the road and making a row that fairly drowned the roar of the dogs that shortly put in an appearance.

Cheering them on their way, we listened to the music until it grew faint in the distance, when we again manned the cutter and steered for the plains to find our dogs. I piloted the craft to the best of my ability down the mountain, but owing to the slow rate of speed I succeeded in landing Ed and John on their beam ends only twice. Of course I went out with them, but as they were two to my one, I had just twice the fun that they had out of it.

When we arrived on the plains we met a man who lived on Stony Hill, and he informed us that while we were crossing the hill our dogs were there hunting up the trail, which they had overrun; and not ten minutes after we left they found it and went at a racing gait straight south; and just then a man from Hazardville, Conn., came along and said that he saw the dogs with heads well up going at speed across a hill just south of Shaker Village, and that they had turned to the west. As this course would take them to the river, where they would probably turn back toward the city, we jogged on in that direction. Shortly after passing the village of Sixteen Acres, we heard the dogs coming from the southwest; and we soon saw the fox a half mile away, making for the crossing where we had laid on the dogs in the morni ng. Now commenced a race for life or death. Ed punched the old mare with his gun, John twisted her tail, while I plied the whip, and we soon were going at quite a fair rate of speed; indeed the pace was so hot that the old mare broke, and her lengthened stride brought her heels in contact with the crossbar and she laid back her ears and actually ran away; but as we were gaining on the fox we let her run; and each one grabbed for cartridges and loaded up to be in readiness when the climax came.

Just as we reached a level stretch of ground the fox suddenly broke cover to our left, and came straight for the road, with the evident intention of crossing our bow; but he miscalculated the speed at which we were going and he and the old mare reached the crossing at the same instant, and the fox crouched in the ditch within four feet of us to let us pass. Meantime Ed and John had begun to get out and shoot; one gun was fired straight in the air, for I have a distinct recollection of hearing the patter of the falling lead. Where the other three charges went I had no means of learning, as the first gun had swerved the old mare out of the road into the lot, and as the fox, evidently scared half out of his wits, took the back track, the old mare tore on after him with increased speed, I had had no time until now to get in my work; but as there was a bit of daylight between the horse and fox I cut loose at him with such success that the old mare dodged to one side so suddenly that her feet came out from under her and down she went all in a heap, and so badly was she demoralized that she never stirred. I crawled out of the wreck, and, the ruling passion still strong, raised my gun to put in the other barrel; but too much time had been lost; and when I got sight of the fox he was some 200yds. away sitting on his haunches and looking at us with the most astonished look on his countenance that I ever saw on a dumb animal. Silently we limbered up and silently we went home.

SHADOW.

WESTERN MASSACHUSETTS FOX HUNT

WESTFIELD, Mass., Nov. 13.—The 100 or more members and guests of the Western Massachusetts Fox Club who gathered Tuesday night in readiness for the first day's hunt, had just such weather for their sport as fox hunters delight in. Tuesday's rain removed old scents on the fox runs, and the wily reynards prowling about that night had lively times yesterday keeping out of the reach of dogs and guns.

Before daylight this morning the streets resounded with the baying of hounds, and the "ta-ra ta-ra ta-ra" of the melodious hunter's horn. Coaches rumbled about, adorned with flaming torches, of which an occasional one was left blazing in front of the house of some especially sound sleeper who failed to quickly respond to the bugle call for rising or the cornetist's musical "Johnny get your gun." Few people in the town failed to know that the hunters were about, and none of the nimrods were missing when, before 6 o'clock, after a hurried breakfast, the signal was given to start. Half a dozen 'buses and more private conveyances carried the enthusiasts to the hunting ground, distant four or five miles from Park Square. A few returned within three hours with faces, hands, fingers and toes half frozen, and their enthusiasm and interest in fox hunting considerably diminished; but the majority kept up the chase all day.

The hunters were divided into three squads, and the line extended from Western avenue southward along the base of the Russell, Granville and Southwick hills nearly to Sodom Mountain. For almost the whole five miles, highways ran parallel with the hunting grounds, allowing the active participants to easily reach and return from their assigned places. Scores of on-lookers, desirous of watching the chase and hearing the deep-mouthed baying of the bounds, drove from town during the morning and afternoon. Nearly all day the woods re-echoed with the music dear to the hunter's heart, cracks of guns, the horn's "new halloo," the hounds' deep-mouthed cry, and occasionally the hunters and spectators would catch a meteor-like glimpse of a fleeing fox, as for a moment he appeared in the open field or leaped a fence to escape his rapid pursuers. Much of the ground covered by the hunters would have permitted of following the dogs on horseback, but none attempted it, possibly for the reason that such a condition was unexpected, in view of previous meetings on the Chester Mountains, up which hardly a goat can scramble. Another reason, perhaps, was the liklihood that a rider closely following the dogs might get a charge of shot into his horse and himself from some excited nimrod hidden behind a rock or tree, who would in his eagerness shoot any live thing coming within range of his gun.

The squad under captaincy of Joel Fox had the extreme north of the line from Western avenue to West Parish and early in the morning H. F. Cowing bowled over a handsome silver-gray with a fine shot, after a pursuit of nearly two hours. The fox finally took refuge in a clump of woods, and was driven out by a farmer's dog and shot while crossing the road. Charles E. Owen, of East Granby, had charge of the squad located in the middle section and his party had the good luck before noon to bag a handsome pelt. The Sodom Mountain division met with equal success, although it came later in the day. A fine reynard was the trophy they proudly displayed on their return, shot by Charles Leyon, of Southampton. Besides these five others were shot during the day, the names of the successful hunters being: Joseph La Fleur, of Huntington, A. Burbank, of Pittsfield, P. P. Clapp, of Southampton, and Charles H. Merritt and P. B. Rumrill, of this town.

Charles Hatfield, Chicopee's well-known boniface, brought in high feather to the Park Square Hotel headquarters a monstrous coon, which he said he had treed and shot in the high-bridge ravine, but he looked very meek and asked everybody to "take something" when expert coon hunters, after sniffing the animal, suggested that it was lucky "Charlie" killed it as soon as he did, for the coon needed killing badly.

This evening the club banquet was held at the Gem Opera House, and proved the biggest and most successful in the history of the club. Fully 300 were present, and two-thirds were from out of town. The Westfield brass band did escort duty from the Park Square Hotel to the opera house, and afterward furnished music. The banquet was served by R. Tyler & Son, caterers, and was generally voted the best thing of the kind ever given in town. R. H. Kniel of this town was toast master at the after-dinner speaking, and among those who spoke were District Attorney Hibbard of Pittsfield, G. W. Roraback of Chester, president of the club, F. H. Gillett and Ephraim Perkins of your city, Ledyard Bill of Worcester, E. W. Dickerman of this place and John B. Bottum of Northampton. At the annual meeting of the club the old officers were re-elected.

Among the members or guests present besides those mentioned these may be mentioned: Bernard Alderman, of Suffield, Conn.; E. H. Allen, of Huntington; C. E. Brace, of Tyringham; Gurdon Bill, of Springfield; S. C. Burton, of Pittsfield; O. W. Beach, of Chester; F. O. Beach, of Worthington; R. E. Burbank, of Pittsfield; B. E. Campbell, of Chicopee: J. Cooper and C. E. Clark, of Chester; H. F. Cowing, of Northampton; Edward Demond, of Suffield, Conn.; L. M. Frost, of Leominster; C. F. Flagg, of Webster; Willis Guilford, of Williamsburgh; D. E. Goodloo, of Huntington; Geo. H. Hatch, of Pittsfield; N. A. Harwood, of Chester; Dr. O. J. Shepardson, of Chester; H. G. Hill, of Williamsburgh; Jas. Keefe, of Chester; Waldo Knox, Wallace Knox and Jas. Leonard, of Suffield, Conn.; J. R. Maguire, of Huntington; H. L. Niles, of Springfield; W. B. Orcutt, of Northampton; W. H. Plummer, of Huntington; H. P. Pomeroy, of Chester; M. J. Riley, of Chicopee; C. A. Rockwell, of Pittsfield; J. B. Ripley, of Granville; E. T. Slocum, of Pittsfield; C. D. Smith and J. W. Thomas, of Chester; H. N. Wilson, of Pittsfield; J. B. Wells, of Wellsville; R. M. Fairfield, of Fairfield; Chas. W. Butler, of Holyoke; W. C. Corbett and R. C. McQuillen, of Boston; S. H. Crittenden, of New Haven; A. Grouf, of Windsor; M. J. King, of Springfield; C. R. Kent, of New Haven; F. Lenoir, H. Lukes and A. A. Loomis, of Springfield and John H. Maxwell, of South Deerfield.

Nov. 13.—Between thirty and forty hunters scoured the mountains north of the Westfield River to the Holyoke and Southampton boundary lines yesterday with the result of bowling over four good-sized foxes. A fifth was closely pursued and the eager nimrods felt sure of their prey when they heard the report of a gun and the hounds' baying soon after ceased. Following the sound of the gun they found the dogs huddled together and sniffing the ground. Upon investigation traces of blood appeared on the dead leaves, but there was no fox in the neighborhood, and the probably correct conclusion of the disappointed hunters was that some one not of their party, and quite likely a horny-handed granger, had lain in wait along the runway and with a well-aimed shot toppled reynard over and hurried off with the carcass before the dogs or their owners arrived. Of the foxes shown as the result of the day's hunt, Landlord Hagar, of the Park Square Hotel, and Edward Williams killed one each on East Mountain, and M. J. Stevens, of this city, and E. E. McCann, of West Springfield, one each on Bear Hole Mountain. The meeting in interest, attendance and foxes secured was the most successful of any held, and the membership of the club was doubled, being now over 200. Last night the last of the visiting hunters went home profuse in praise of the pleasures enjoyed and hospitality extended.—*Springfield Republican.*

CARE OF DEAD GAME.

Editor Forest and Stream:

In answer to query by "Mc" I have learned, after long experience in Kansas, Indian Territory and Colorado, and both in hot and cold weather, especially hot weather, never to draw birds, squirrels or rabbits. If you desire sweet meat, bleed them well at once when shot, and dry the feathers and skin. I have very successfully kept game in hot weather by placing single birds in a paper sack and tie with a string, then hang up in as cool a place as possible. Always hang head up, as this manner takes the entrails away from the breast. Do not hang in "groups" at any season if expected to keep four or five days; hang singly in the shade. The only birds that it is desirable to draw at once are sage hens, found in the mountains west of the plains.

Kill fish at once by cutting the throat deep and let them bleed. Then wrap in a wet cloth and place in a basket. Don't wet them any more. Grass is good if sweet and clean. In packing game of any kind or fish don't let the ice touch or melt on it. Where necessary to use ice wrap it in papers and rubber in solid cakes; pack the game between the cakes. Trout and fine-flavored birds can be carried a thousand miles, and a week to go it in, if packed in this way. TILE.

KANSAS CITY, Missouri.

Editor Forest and Stream:

Your correspondent "Mc" asks for information as to the best manner of keeping dead game. From long experience I have adopted the following: Withdraw the entrails as soon as killed; place a stick in the orifice to keep it open to admit the air so it will dry. Do not put anything inside, as it will retain the moisture. Hang, head up, for twelve hours or so, after which it will keep better hanging head down, as the moisture escapes sooner. In this manner game will keep much longer than that which is undrawn. This applies to deer. MUSSET.

ADIRONDACKS.

ELK ON SNAKE RIVER.

[Continued from Page 330.]

NOV. 6.—Had an early breakfast this morning and Charley and I hitched up to one of the wagons and drove across the park to bring in the three elk killed by Hunt and myself yesterday morning. After loading them in the wagon, I was picking out a road for Charley to drive out through, as it was full of down timber in here, when I ran into a fine flock of grouse. I called to Charley to stop a moment and I would try my hand at shooting grouse. At first shot I took the head off of one up in a small tree; the second shot I cut a bunch of feathers off one's neck, but it flew away. My third shot was at one on the ground, and I took its head off clean. I was just going to quit at this when I saw two sitting on the ground, and by squatting down I could get their necks in range; I told Charley to watch me cut their necks both off at once; which I did, striking them both low down on the neck, and cutting them all off except a little skin. We now returned to camp and put the saddles on our hunting horses and struck out for a day's hunt. Some two miles from camp we came to a deep cañon. Here we left our horses. Charley tied his to a pine tree and I turned old Prince loose. We hunted hard all day; and saw a number of straggling bull tracks, but did not get a shot. On returning to our horses, I found Prince had left for camp. Taking a short cut I overtook him, and mounting rode leisurely along toward camp, Charley being half a mile or so behind me. As I came out in the park, half a mile or so from camp, I came suddenly upon twelve elk crossing the Park going west. They were not over 100yds. off, and I jumped off my horse thinking I could do better shooting; but as I raised my gun to fire, the old rascal threw up his tail and away he went down the trail, directly toward the elk and almost in the line of my fire. This of course frightened the elk and away they went, and I missed my game, but fired again and wounded a fine young spike bull, which Charley soon overtook on his horse and finished by a ball in the head. The rest of the band took the road leading down to the Snake River, and just beyond camp, then ran on to George and Stub coming up with their horses packed with provisions. Hunt's negro boy is gone to-night; has rode off Hunt's mule. They think he has started for Laramie City, as they had been teasing him about going, and told him he might take the mule; but had no idea the fool would attempt such a thing. Con is quite uneasy about him, for fear he starts across the range, where he would be sure to freeze to death now. Con will start after him early in the morning. I think he will be all right, for he has eaten up all the sweet cakes I and Charley had in camp, and most of the honey and crackers. Had a fine grouse stew for supper in both tents to-night.

Nov. 7.—Snowed again last night. Con got up his saddle horse and started on the hunt for the boy. Charley and I take a horse and skid in our elk killed last night. Having a good fresh tracking snow we all strike out east of camp and go up in the hills, expecting to find a band of elk in a short time; but we are disappointed, and after a long tramp we seperate, Charley and I going to the left and circling in toward camp. When we strike the edge of the park, where Hunt and I killed the three young elk, we cross a fresh bull elk trail. As it is some time yet until dark we conclude to follow it. After following about a mile down in a deep cañon we jump him up out of a bunch of willows. Charley is nearest to him and fires, but misses. I run up the side of the mountain to my right in order to get above the willow brush when I see the bull making good time up a well-worn trail on the opposite side of the gulch. I at once cover him and fire, when he comes rolling down the hillside some 50ft. to the bottom of the gulch. On going up to him we find he is an old "scab," or mangy bull, that has been driven out of the herd by the younger bulls and is not good for anything except his horns, which are a nice even pair of six points on each beam. I take his head, while Charley carries both guns, and we make for camp. It is a long hard pull up the cañon, but we arrive at camp at dark, tired and covered with blood from the elk head. Think this is the poorest, scabbiest old bull I ever saw; and no doubt it was a merciful act to kill him, as it saved him spreading the disease among the healthy elk. We found Con and the boy safe in camp. The boy had stopped at a ranch over night, down on Snake River, and when Con got there he was trying to get the mule on the ice and across the river. The boys have him badly scared to-night telling him "Hunt is going to have him arrested when he gets to Laramie City for stealing his mule."

Nov. 8.—Moved camp to-day about fifteen miles. Went across the Snake River and up in the hills beyond McIntoshe's horse ranch and went into camp at the foot of a huge cliff, known as "Gibraltar." Rather poor camp, with no grass for stock.

Nov. 9.—Saddled up old Prince early this morning and struck out for the head of Slater Fork. Followed down the fork a few miles, when I struck an old elk trail of about 100 elk heading back into the hills toward camp. Having seen no fresh sign on my way around I was satisfied the elk were still in there; so I took the trail, and in about a mile discovered a small band high up on a mountain side feeding, where the sun and wind had taken the snow off, and the elk grass was nice and green. Leaving my horse in a warm grassy cañon, where he could pick some grass, I attempted to make a sneak up the mountain and get in range of the game; but a wary old bull on picket duty soon discovered something not just suited to his notion and led the band over and around the south side of the ridge into a lot of timber. I followed slowly, and in about half an hour discovered them mostly lying down. I circled the hill and was crawling up on the ridge to the south of them, when looking up I saw about fifteen or twenty of them standing on the ridge looking at me. Knowing it was now or never I leveled my gun on what I thought was a young bull and fired. The elk all disappeared and went thundering down the mountain. I ran around the point of the ridge to see where they went, when I saw the entire band of about one hundred come out in a little park about 600yds. away, and form in a round bunch, just as if they were in a round-up corral. I think it was as fine a picture of a band of elk as I ever saw. Going over to the trail to look for blood I could not discover any, so I took the back track. It was quite a steep climb up the point to where the elk stood when I fired, and was thickly covered with small green pines and red spruces. When I got almost to where the elk stood I came suddenly on my elk stone dead, shot through the shoulders. He was a bull calf coming a yearling, and the largest I ever killed of his age. I pulled him through the snow a few feet to the edge of the ridge, when he went down for about 50ft. into a little basin clear of timber and with about 2ft. of snow. Here I soon had him dressed and turned over belly down to keep the magpies out of him. To get my horse was the next thing on the programme. I had about a half mile to go up the mountain and then it was all down hill. I made good time and was soon on my horse heading in what I thought was a direct line for camp. I soon found myself high up on the mountain in thick timber full of logs and poles. Up here I jumped another elk, but I was not elk hungry just now, for it was getting dark and I was in a strange country. Just as darkness had fully settled down I came out on a high point and could see our camp-fire far below me, with a lot of timber and small gulches between. After getting down into the timber I heard the boys firing their guns for me. I answer with a few shots, and was soon sitting down to a steaming supper of warm bread, elk steak and coffee.

Nov. 10.—No one saw anything yesterday except myself, so we concluded to move camp again to-day and try to get nearer to where the elk range. The hills between camp and where I killed the elk were full of elk beds and trails, and it appears as if game were plenty in here. Moved camp around to the southeast some five miles; have a good warm camp ground, but poor feed for stock. It is snowing great guns to-night. Stub lost his horse; it went off in the night, and he struck out on his trail this morning and is not in yet. Probably he is up at the horse ranch. We are now about 250 miles from home. Snow getting deep, oats getting scarce, and horses weak and thin. Looks rather gloomy to-night, and Charley and Con have not yet killed a hoof; don't like to go home empty. I have as much and more than I want for myself, but not enough for all. Will try it a few days more and then we will pull for home—game or no game. Am afraid the snow is now too deep on the range for us to go back the way we came over. Have good wood and our tent is warm and snug to-night; the horses have good warm blankets on, and are standing humped up with their backs to the driving storm. A. A. K.

NEW JERSEY DEER HUNTING.

THE open deer season in this State was ushered in on the 1st inst. by the hustling of buckshot and yelping of dogs all through Atlantic county. Several deer and one man have been killed. Same old exasperating story of rustling of bushes, shooting without view and slaughter of a companion. Now the shooter is reported to have become deranged. If his eyesight or buckshot had been deranged when he so thoughtlessly shot at a noise, how much happier the whole occasion. But it's so every year. If these men and boys (who have no more business with a gun than a child has with dynamite) were readers of sporting papers and could read therein repeated warnings against such criminality, it might be different. But it is just this class that don't read and never will. It is the kerosene servant girl, and the fellow who didn't know it was loaded, and the man who pulled his gun muzzle foremost through the fence or out of the wagon, and the man who shoots at a noise, who are doing all in their power to bring more misery into the world under the guise of sport.

It is positively dangerous to go deer hunting in Jersey. A party may go out with dogs, and by the time stands have been filled several more parties are likely to put in an appearance, all with dogs; and if a deer is started the best place for safety is up a tree or down in a hole in the ground. You see it is three years since there has been an open season on deer, and there is an awful fever on. Hunters are as plentiful in Atlantic county as the mosquitoes; and between them both, deer and everything else catch it. If a deer is started, it runs across some member of a second party, who mayhap breaks a leg, and some third or fourth party fellow kills it or wounds it again, and another party's man kills it. Then there are four packs of dogs and men mixed up in the claim, and if the matter is settled without serious dispute each man gets a pound or two of meat. If there is a dispute, maybe he loses all the deer meat and a pound or two of his own. Or it may be, as happened a few days since, that one party starts the deer, a second shoots it, when it runs away and dies, to be carried off by some other party. Then when the first two parties find it out there is gnashing of teeth and sulphurous canopy.

There are a few quail and hares hereabout, scattered widely, and forty-three men and some dozen boys to each head of game. Each hunter keeps a beagle or foxhound or two, and a hare's life is a miserable failure. The quail break for the oak thickets and swamps at the first blush, and by the time a person has poked and pushed through the dense covers an hour or two, got his face and hands well studded and lacerated with briers and stubs, he begins to think he has earned a thousandfold more than he gets.

Nevertheless there be spots where the bunnies do abound as I can bear witness. A friend and I and dogs started in the early gray of one of several mornings since, and riding several miles met at the rendezvous other hunters and dogs for a rabbit hunt. Seven men and six dogs there were. There ought to have been one more dog, but we couldn't fetch it. As it was, there was music in the air all that day. My cocker Toby jumped the game, or a number of them, and the hounds took up the tune where he left it. The dense thicket or the swamp was of no avail to cottontail. He had to keep moving until some gun spoke and he turned up his toes. At noon when we gathered at the farmhouse for an ample, appetizing dinner, eleven hares and one ruffed grouse were turned out of game pockets. At night seven more hares and a grouse showed up, and we rode home at twilight of a lovely Indian summer day well pleased and tired. O. O. S.

VINELAND, N. J.

Business and professional men do much toward making up the crowd of hunters and fishermen that yearly spend their brief vacation season in the woods, and on the lakes and streams. This is explained from the fact that prominent among the business and professional men of to-day are the men who were reared in the country and on the farms, many of them in the backwoods even, where the rod and line and the fowling piece were the principal sources of amusement. A love for the forest and the stream was thus acquired that lasts through life, and the short respite from the cares of the after busy life are all the more sweet, because they bring back the scenes of days gone by.

E. M. Gillam, commercial editor of the Boston *Advertiser*, has just returned from his annual vacation of two weeks. With his brother, A. M. Gillam, of the editorial staff of the Philadelphia *Record*, he has spent his vacation in New Jersey. The boys went home to the hallowed spot where the aged mother resides and made their hunting tours from there. They were joined for one day by M. M. Gillam, another brother, who is the manager of the advertising of the world-widely-known John Wanamaker, who puts some $30,000 a year in advertising, the most of which advertising is worded by Mr. Gillam. The brothers are as fond of the dog and the gun as they were when they were boys on the farm and dug out their first woodchuck. They also love the hounds as fondly as in days gone by, and they can scarcely take kindly to the idea that there is a better method for hunting the deer of to-day than hounding them. E. M. and A. M. Gillam both had their bird dogs with them and they found rare sport among the quail, which they found very abundant in Cumberland and Atlantic counties, though the frost had not yet rid the trees and brush of their foliage, and this made the hunting a little slow. They also had rare sport with rabbits. Duck shooting they tried at Avalon, near Cape May, where they found the bay covered with black duck and mallard. These ducks were wild and hard to approach. They tried them the second day with decoys, but the weather was so fine that the ducks did little flying.

The men had a pair of hounds with them. They were to try the deer. They tried over the same grounds where only a few days previous several deer had been shot. In fact eight or ten had been reported killed since the open season began. The dogs were put out by one of the brothers, and the others lay by the runways. All day they waited. The hounds were heard distinctly baying, but later they ceased. At nightfall the hunters wended their way homeward, but to find the brother there before them, with the report that he had lost the dogs early in the day, but when he reached the house he found them comfortably asleep by the fireside. E. M. Gillam says that the deer are wonderfully plenty in that State, where they had almost disappeared previous to the three-year close time. SPECIAL.

"ALL AROUND" THE GUN.

Editor Forest and Stream:

I have read from time to time during the last few years many articles giving the ideas of your readers on the perfect rifle or shotgun, also the "all-around" sporting weapon. There may have been two of all this number whose ideas coincided, but I do not recall them. Like most of the writers I have shot quite a number of rifles of different makes, muzzleloading and repeaters, and have been in "snaps" where I had a rifle and wanted a shotgun very badly, and again with a shotgun when I would have given a handful of nickels for a rifle. I have been all around the gun lots of times, and it has been all around with me on divers and sundry occasions. (Just here my black cocker Tobe pushed the door open, and, wagging his bud of a tail, as if to say "you'll consent of course," hopped up into my lap and lay down. What for? Why, he knew I was writing about the gun and wanted, as he always does, to get as near the subject as possible. Talk about the intelligence of animals! Well!)

As I was saying, we each have different notions about the ideal gun and always will have, still I think "Shongo" in your last is on a hot scent. Of course for an all-around gun the scatter gun and rifle is the weapon, the question being only as to the combination. I have always (since the manufacture) thought that the Daly three-barrel was about the thing, and for special adaptation why not have the right barrel cylinder bore or "straight cut" as "Shongo's," and the left either cylinder or medium choke? It seems to me that would beat "Shongo's" gun by one point. There you have your rifle, large ball, and if necessary buckshot, or rifle, ball and shot, or rifle and two shot. It might be that so many combinations would puzzle the shooter so that before he had decided which to use the game would be gone. I put this out as a feeler. The manufacturer of the Daly is welcome to it. I've gone out of the business. If I hadn't I should certainly make one for my own use and try to get together a deer and a bear and some ducks for experiment. O. O. S.

[We have for next week an interesting note from Mr. H. W. S. Cleveland, describing a combination arm invented years ago by Dr. Edward Maynard, of Maynard rifle fame.]

DEER IN MICHIGAN.

DAYTON, O., Nov. 15.—The last of the deer hunters of this vicinity returned from Michigan and Wisconsin to-day, and report that notwithstanding the fact that railroads have penetrated the forests and the number of hunters increases each year there is no perceptible decrease in the number of deer and skill required to hunt and kill them. A much larger number of big bucks have been killed this season than usual, and the hunters therefore come home with grand trophies of their sport.

While in some respects the presence of the Indians interfered with the whites because there were so many more skilled hunters they often were of service in directing a lost man to his own camp. They tanned deer and bear skins for the hunters and cured the venison. Five young Indians located about two miles from a logging camp out from Sagola, Michigan, and in two weeks killed thirty deer, one of them the largest buck reported this year, a magnificent six-pronged fellow that weighed 255lbs. after it was gutted. These Indians brought in another buck that weighed 230lbs.

The party from Eaton, O., Mose Thompson, Gus Potters, Jas. Wilson and Thos. Leach, killed twenty-two deer in the Wisconsin woods and brought eight home with them. The Sidney hunters, Hudson Gartley, Chris and Wm. Kingseed, Joseph Laughlin, John Bush, Nick Gross and Geo. Lentner, and Louis Myer, of Anna, were also very successful in Wisconsin. Hudson, who is cashier of the German National Bank of Sidney, killed three deer. Dr. B. F. Kiester, of Arcanum, took his wife with him on the Western hunt. The Doctor killed five deer and Mrs. Kiester killed a fine buck. BROWN.

SOUTHERN SHOOTING GROUNDS.

JANESVILLE, Wis., Nov. 13.—*Editor Forest and Stream:* I note your wish for information as to shooting in the South. I have shot a great deal in different parts of the South, being myself a native of Louisiana. Last winter, wishing to go to untried fields, that is, untried by myself, I spent five weeks at Mrs. Richardson's place, Lincolnton, N. C., accompanied by my family. I found there good accommodations, cultured people and cheap livery service. The shooting was fair, but only on quail. The birds were found plentiful by going a few miles away, but the cover is thick and one needs to hold straight and shoot quick to get them. A cylinder bore gun is the proper thing, in fact that is the sort of gun anywhere for cover shooting, and 12-gauge is the size most used. Other size shells are not to be had. If one wishes to be accompanied by his family, as I always do, he will be pleased with "Woodside," but by all means take along your own dogs.

This winter, if a law suit permits, I go to north Louisiana, and to my notion that is above all localities the best for the reason that it is little visited. I have a plantation near Bryan City, on the New Orleans and Northwestern railway, where I can shoot anything from quail to deer, and plenty of them. There is a small place called Delhi, forty miles west from Vicksburg, where I think a party could find as much sport as could be wished. When I was last there a lady, Mrs. Mason, kept a small tavern, one of the sort few and far between where the food is good and abundant and the beds good. Game is all about, and a gentleman will be overwhelmed with invitations to spend a few days at neighboring planters' houses. If I had no place of my own there is where I should go. Everything is cheap, too, and there are lots of good fellows to show you about. In fact if one keeps off the main routes of travel he can hardly go amiss south of the Ohio River. The trouble most people have is that they go to places advertised by railroads, only to find that pastures are greenest afar off. I will be glad to give any gentleman personal information.

ARTHUR M. VALENTINE.

P. S.—I have often thought it would be a good thing to organize a "Winter Club" which could buy a large tract of land, and I know where to buy it very cheap, erecting thereon a club house to which the members could go with a certainty of good shooting and good accommodations at a moderate expense, but business has heretofore kept me from carrying out my plan, besides I have my own place. A. M. V.

DEER HOUNDING IN WISCONSIN.

APPLETON, Wis., Nov. 10.—*Editor Forest and Stream:* Here is a suggestive item from our local paper: "Dr. Ellsworth returned home from his Pike River hunting expedition Monday evening, after an absence of three weeks. The remainder of the party, consisting of Ed. Eno, D. Fox, H. Verwey and P. Stenis, are still encamped in the vicinity of the river, where they will probably remain until the first of December. According to what the Doctor says, deer are more plentiful than they have been for years past, notwithstanding the number that are killed annually. His party has been quite successful, capturing seven, two of which he had the pleasure of shooting himself. A party encamped not far from where the Appletonians pitched their tents has succeeded, with the aid of five hounds, in capturing twenty-six. Any number of parties from this and neighboring States are slaughtering the timid animals by the wholesale."

Now, as you may learn from the *Book of the Game Laws*, it is forbidden to hound deer in this State. This report of Dr. Ellsworth's party gives a faint notion of what is being done among the deer in northern Wisconsin. Despite the law hounding is practiced openly. The Doctor might have added to his report that his party have one or more hounds with them: but of course they would not be guilty of hounding deer. You will notice there is no word of condemnation in the local paper in regard to the transgression of the game laws, and yet such people call themselves gentlemen sportsmen.

Some two weeks ago I took a few days' outing for partridges (ruffed grouse), and went to a section where two years ago there were thousands. With the aid of a pair of very lively cockers I could not find an average of three a day in the very finest of cover. The reason: Two years since a man running a little store up in the brush commenced buying and shipping; paid ten cents each first season, and told me he often got five to eight dozen a day. This year he pays twenty-five cents each, and his largest day's receipt was of fifteen birds. He said, "For some reason the birds were scarce." I should not be surprised if deer should be "scarce" in the near future.

C. V. Y.

OHIO QUAIL HUNTERS.

DAYTON, O., Nov. 17.—All through these first seven days of the open season for quail the woods have been filled with rattle from the battle with the birds; and reports from all sections of the country for a hundred miles around Dayton agree that there never was finer sport or such grand quail shooting as the hunters are enjoying now. Grass and ground are just wet enough to make superb conditions for the dogs. In the three States, Ohio, Indiana and Kentucky, 10,000 hunters have been in the field, and it would make a lightning calculator tired to estimate the number of quail that have been killed. Game stores have been overstocked at 75 cents a dozen, and Ohio may be said to be feasting on quail on toast.

Without attempting to record the great sport enjoyed by the hundreds of hunters who went out from this city, I report bags made by a half dozen parties of gentlemen who are well known in the community. In addition to quail, all of them brought in snipe, rabbits, and a few doves.

S. S. Troup of this city, and Mr. Bass Rankin of Washington C. H. opened the week with 52 quail in one day's shooting in Fayette county. Charles Whealen and G. W. Sander killed 41 quail in Mad River bottoms a few miles from this city. Michael Stockert, Charles Schaefer and Andy Fisher hunted on a section owned by David Nelson near South Charleston, and birds were so plenty that the party did not need to go out of a 20-acre field. Jarvis Dickerson, baggagemaster on the C. H. & D., brought dome 50 quail as the result of one day's shooting in Michigan. Reed Kiefer and Chas. G. Loury, amateurs, were hunting in Champaign county, separated in a thicket where they had a scattered covey, and Kiefer firing at a bird shot Loury in the face, injuring both eyes. Surgeons took out the right eye, but hope to save the other.

Rolla O. Heikes and Ed Rike, of this city, with William Wolstencroft and Wade Wilson, of Philadelphia, as their guests, are in northwestern Ohio pheasant and quail shooting, and a letter received to-night says that they struck a paradise for a week's hunting. They find the birds abundant without going far from the farm house at which they are stopping. Wolstencroft has his pointer dog Gunner with him, and Wilson is shooting over Gunner's son Sport. Wolstencroft is trying to buy Ed Sachs's young pointer Billy Bang, of this city. Wolstencroft and Wilson will probably hunt in Ohio all this month.

The Montgomery County Fish and Game Protective Club has issued invitations for their annual banquet that is to be given Friday evening of this week, with quail, pheasant, wild turkey, ducks, geese and venison on the *menu*. BROWN.

THE NEW YORK GAME PROTECTOR.

IN relation to the removal of Chief Game Protector Drew and the appointment in his place of Major J. Warren Pond, Gen. R. U. Sherman gave the following statement to a representative of the Utica *Herald*, in which journal it was published last Saturday:

Mr. Drew was appointed on my recommendation chief game protector in August, 1888. He had previously served three years as a member of the force, while it was under my direction as Fish Commissioner. The law under which he was appointed put the whole conduct of the work in his hands, and relieved the Commissioners of all details. When Mr. Drew assumed his position, the work was in a fair state of organization, but lacked the personal supervision which could be given only by an active officer, whose whole time could be spent in the service, and who could be properly compensated. From the start Mr. Drew proved himself the man for the place. He possessed rare sagacity, tireless energy, and was so thoroughly up in the game laws as to be able often to teach district attorneys and sometimes judges. I never knew him to fail in any case he took in charge. His detective qualities were unsurpassed. He possessed, too, a geographical knowledge of the State that was of great value. In short he was a beau ideal officer, and I have often remarked that there was not a man in the State so well qualified for this duty as he was.

While conducting a series of successful raids in Oneida Lake, that promise to exterminate the fish pirates, he was, to my great surprise, removed from office at a meeting of the Commission when it was known I could not be present. No notice of any kind was given to me that there was any charge or complaint against him.

Of course, the public have been curious to know the inwardness of such a strange proceeding. Till lately I have been as much in the dark as they. Commissioner Bowman when questioned about it professed ignorance and referred to Commissioner Blackford. FOREST AND STREAM, speaking in behalf of the latter, said it was because Mr. Drew spent time lobbying at Albany, when he should have been on duty elsewhere. But Mr. Blackford himself, in a letter to me bearing date of Nov. 8, says:

"For over a year there has been a settled dislike and dissatisfaction (with the exception of yourself) with Mr. Drew's manner and methods as chief game and fish protector. He has made the mistake often of disregarding the requests of other Commissioners; seeming to think that it was only necessary that suggestions or orders coming from you were worthy his attention. Mr. Burden and myself have often made requests which he has failed to notice or comply with."

The sum of this is that the majority had taken a personal dislike to Mr. Drew, and did not think he treated them with proper deference.

There does not seem to be any complaint here of his lobbying or of having failed to perform his duties honestly and efficiently.

As to what may be the fact about his disregarding the requests of Mr. Burden and Mr. Blackford I have no knowledge. The persons concerned must settle this for themselves. If it was true, as stated, that the chief gave preference to my council over that of the other Commissioners, it was not strange, as all that had been done in the department of protection, since it came in any way under the jurisdiction of the Commissioners, had been done by myself with their glad concurrence. It was not a labor that they seemed to covet. It will be found also to be true that I have made but few requests of Mr. Drew and have given him no orders whatever. I had the utmost confidence in his ability, integrity and efficiency, and left him, as the law intended, to use his own judgment in all cases. I have never given him even advice except it was asked, and it was never asked except it concerned his line of duty. My colleagues' jealousy of my influence with the chief was weak and silly.

I have no reason to believe that politics had anything to do with Mr. Drew's removal. He is a Democrat "dyed in the wool." So is his successor. Politics has never been made a test in the Commission. It chanced that most of the appointees for protectors were members of the old force, originally appointed by the Governor, and therefore Democrats; but there are nevertheless some Republicans in the force. It has not been the custom of Gov. Hill to dictate to the Commissioners. Since my retirement, however, a different practice has started. At the same time Mr. Drew was removed a man who chanced to be a Democrat—Mr. Bradley, of Fulton county—was removed, and also, by chance, a Republican was appointed, the Commissioners probably having no thought of the politics of either; but on appeal to the Governor by Mr. Bradley's political friends a peremptory order was issued for his restoration, and it was obeyed. Had such an instance of unauthorized dictation occurred while I was Commissioner there would have been at least one resignation.

The new protector, Major Pond, was originally appointed protector on my recommendation and has made a good record. He is honest and courageous, and if not hampered by orders, which his superiors have no right to give, will in time make a good chief. He lacks, however, the geographical knowledge of the interior of the State that is needed, and it will take a long time for him to make the acquaintance of persons and officials he must rely on to aid him in his work, and he lacks the qualities necessary to make him an adept detective.

I have noticed many suggestions in the newspapers that I should be reinstated as Commissioner. While I am gratified with these expressions of confidence, I must say that no earthly consideration could induce me to enter this service again. The acceptance or rejection of my resignation was not in the competence of the Governor. It was absolute, irrevocable and final. Those who know me ought to take in mind the fact that I am over 70 years of age, and that my health is much broken. I have a right at that age, as judges and military officers have, to be retired from public service. My distinguished predecessor, Governor Seymour, who also served twelve years as Commissioner, asked and was granted retirement at 65. I intended, in any case, to resign on the first of the coming January, and the recent events have only hastened my purpose two months.

I am happy to say, in conclusion, that my relations with my colleagues have been cordial and pleasant. Except in the last case they have treated me with probably more deference than I was entitled to; and I shall always remember them and the work in which we have been all so successfully engaged with pleasure.

Commissioner Blackford, being confined to his bed by illness, has given to the FOREST AND STREAM in response to inquiries a brief answer. He states that Mr. Drew was at the time of his appointment a compromise candidate, personally known only to Gen. Sherman; that from his first meeting with the other Commissioners he was personally objectionable to them; that he showed disrespect for the Commissioners in several instances, in the Staring appointment case, in the handling of the funds collected for attorney's fees in the netting case taken to the U. S. Supreme Court; that he spent all of last winter in Albany, neglecting his district, Mr. Burden finding him in constant attendance in the Senate and Assembly; that he demoralized the force by bringing district protectors long distances to act in his own district, compelling them to pay their expenses out of their own meagre allowances, but refusing to share with them the moieties received; that by the unanimous testimony of the district protectors results were accomplished in spite of rather than through his aid; that he failed to do the most important work of his office, *i. e.*, faithfully to report the condition of the force; that his reports of his own work were unsatisfactory, and he failed to make monthly reports.

ADIRONDACK DEER.

Editor Forest and Stream:

Deer in the Adirondacks are concentrated in certain localities. This is a fact beyond question. There is no doubt, taking the whole Adirondacks, that the deer are steadily diminishing. Deer have concentrated in places where they have been less disturbed. They have been driven in from the borders of the wilderness by persistent hounding.

The three deer killed and the one deer transportation provision of the law has been a good thing, as it prevents still-hunters from killing for the market. It is hard and uncertain business to still-hunt, and not one in a hundred that kill deer now by hounding could kill a deer in the whole season. But this provision of the law amounts to nothing with the hounders; there are always so many in the party that if each one had a deer the amount would be immense. One hundred and fifty could be taken out by the party that are here to-day without infringement on the law.

You will find that the cry of deer being plenty comes from those that are in a mortal fear that hounding will be prohibited. At least this is the case here; deer of the Adirondacks have fallen into the last places of refuge; and when once routed from here they will practicably be exterminated. Only now and then one can be scoured up by the hound. Guides that go through the woods this summer tell me they did not see a deer's track after they reached Tupper Lake until they got back on to Beaver River waters. The same will be the case here if hounding continues.

A prominent man who carries on a large lumber business at the mouth of Beaver River, and who has been in favor of hounding deer, came here yesterday from the woods where he has been looking up timber. He told me that this was his first opportunity of seeing deer hounding. He was the most disgusted man I ever saw, and says no more hounding deer for him. He says that every lake, pond and stream is watched, and every deer started by hounds is killed. "Why," he said, "if this goes on deer will not last three years."

I suppose that whatever the commission appointed last winter recommend will be likely to become a law. So it behooves us to use all due influence with them.

I can now figure up nearly two hundred deer killed this fall by hounding on the Beaver River alone, and this will doubtless increase to three hundred before the close of the season. Is this going to increase deer as the hounders would have us believe it does? Not much. All I would ask to make a convert of a hounding deer would be to have them here now and get one view of the gang of butchers that surround the place here now. I am sure it would be enough to any one that has any claim to humanity. NORTH WOODS.

THE COON HUNTERS OF CAPE ANN.—Last evening was an ideal one for the coon hunters, and both parties were out. The party from the Lower Parish, as usual, started for the 'Grout Heap,' but on arriving found that the Upper Parish party were there before them. The Upper Parishers soon started in the direction of the Four Corners, and the other party afterward soon heard the dog Ben barking way off in the direction of Turtle Pond Hill. They started immediately at a lively gait in the direction of the sound, visions of treed coon flitting before their excited eyes. They soon found the dog at the foot of a tree in which the shining eyes of Mr. Coon could be plainly seen. Now, just here a question arose. Whose coon was it? For when the party arrived Ben was not alone, for Pete, the dog of the other party, who soon came up, was there also. To be sure, Ben was at the foot of the tree and refused to allow Pete to come near. It was decided that the coon belonged to Ben, and as his coonship was dislodged from his lofty perch, Ben's molars fastened themselves into his throat, soon finishing him. The tree where the coon (which, by the way, was a 15-pounder) was treed was in the rear of the Bergen estate. A good-natured rivalry exists between the two parties, and each vie with the other in this exciting fun of cooning. At present the Lower Parish have the largest number of coons to their credit, but the Upper Parishers are stayers and may tie and even lead the other party before the season closes. —*Cape Ann Breeze.*

CHICAGO AND THE WEST.

CHICAGO, Oct. 8.—I suppose everybody has had one of those puzzling guns which suited him and yet didn't suit him, which fitted him and yet didn't fit. You throw it up the first time and you are not quite "on." You throw it up the second time and you are just about right. You go out in the field and make some brilliant kills, and some equally brilliant misses. In short, the gun doesn't fit you, but you don't know why and don't know what to do about it. I got a new gun this fall and it was just that kind of a fit. It shot all right, but left a sort of a taste in my mouth. The factory wanted me to send them back the gun, but how could I tell the factory what I wanted when I didn't know myself? The mere up and down and lengthwise measurements of a gun stock signify very little. Two guns may fit you whose measurements are altogether different. Any shooter knows this, and any shooter knows that you may order the finest kind of a fine gun, using the utmost care in giving your measurements and yet get one of those puzzling guns which fit you and yet don't fit.

This particular gun fits its owner absolutely and perfectly now, and this highly-desirable fact is the result of an interview with an intelligent gunsmith. Such an interview, unless the workman is one of known skill, is about the last thing to be advised, but Billy was a good one. He learned his trade under old Tommy Hasdell, of beloved memory.

"Aim at my eyes," said Billy, as he stepped off 20 or 30ft. from me. "Throw her up four or five times, quick. That's right. I can't see the rib at all. She's a little too straight for you." He then examined the stock.

"You can't bend this stock any more," said he, "for the grain of the wood won't stand it. We'll have to take it out of the comb and the toe. The toe comes back too far, anyhow. That's the trouble with a good many guns, they have a pretty stock, but not a sensible one. They have a long sharp toe to stick into the shoulder, and that keeps the whole butt from hitting the shoulder square. Then a good many of the fine imported guns have all the drop in the slope from the breech block clear on down to the heel of the stock, so that the whole top of the stock, from the comb back, slopes down. You change your clothing a little bit, or throw the gun up a little bit different, and your cheek don't hit on quite the same place. The drop of the gun then really changes on you, and the little difference there gets bigger at the end of the barrels, and bigger yet at 40yds. This is a wrong principle. Most of the drop of a stock ought to be in the neck, and the top of the stock ought to be nearly, if not quite, parallel to the line of the barrels. Then your cheek catches her just the same every time. Besides, for quick shooting, straight lines are the easiest for the mind to figure on. Your barrels point straight for the bird, and your stock ought to, too. It helps, and lots of our Western shooters know that a gun with the 'parallel stock' and the butt cut off rather square ain't so pretty as one with the rakish stock, but she's better. This American make of gun you've got here is better in that respect than any English gun. But the wood in this stock won't stand bending. We wrap the neck of a gun stock with rags soaked in hot oil, sometimes, and then gradually bend her up or down by set screws."

Billy now said little more, but jerked the stock off the barrels, screwed it in a vise, and grasping a huge rasp proceeded, as it seemed, to ruin my beautiful gun stock. After he had filed away for a while on the comb of the stock and had reduced it materially at the upper ridge, or "nose," he stopped, put the gun together, and had me try it again. Still it was not quite right. He resumed his fearless, and as it seemed to me careless, rasping, and presently said:

"That's all we can take her off now without spoiling the looks. Try her again." I did so. The effect was pleasing. The gun was getting better. The comb, originally quite high on the ridge, had been reduced nearly a quarter of an inch. The use of the straight-edge showed that the line of the stock was now much more nearly parallel with that of the barrels.

"We'll get the rest out of the toe," said Billy. "It's astonishing how much a little change at the toe will make in the fit of a gun. Off she comes." My heart stuck in my throat as he unscrewed the pretty butt-plate, and, catching up a little saw, began recklessly to saw the end off of my gun.

But Billy knew his business. The thin blade took but a thread of wood from the heel of the stock, and then bit in deeper and deeper, until it took off quite a slice of that long and rakish toe, which looked so pretty, but which stuck in my shoulder so disgustingly when I wanted to make a quick-dropping or low shot. Billy whistled as he screwed on the butt-plate again, but as for me, I was satisfied the gun was ruined, and wished I had sent it in to the factory. A trial at the shoulder, however, was electrical in effect. The gun was changing from the puzzling one that fitted and didn't fit, to one that fitted all the time! It only needed a little more.

"I didn't take her off all at once," said Billy, "'cause I wanted you to try it little by little. That's the way to fit a gun. Same's a coat. Tailor fits it on little by little, don't he?" So, little by little Billy filed down the toe with his big wood rasp. We must have screwed on and unscrewed that butt-plate four or five times, but at last we got it exactly right. There was no mistaking it. The gun came up right, not sometimes, but every time. It covered the point aimed at perfectly. The cast-off of the gun was already perfect, and the effect of "catching sight" now was that the front sight appeared to be a bright dot, directly in the middle of the extension rib and right close to the eye.

We measured the gun stock now and found that its drop was, at the comb 1⅞in., at the heel 2⅜in.; its length was from front trigger to middle of butt 14in., to top of butt, or heel, 14¼, to toe 14 3/16. My old gun, in order to get about the same results in aiming, I had to have changed to 3¼in. drop at heel and 2in. at comb, the stock being 14¼in. So much for different qualities in gun stocks. The fact seems to be that the measurement from the shoulder to the line of the eye is not any more important than that from the lower edge of the cheek bone to the line of the eye. This last factor remains constant, under all conditions.

Now, the question is, how are you going to get a gun that fits you? The mere measurements don't make much difference. Two guns measuring differently may both fit the same man, while the same gun will hardly fit any two men. Out of a dozen guns by the same maker, hardly any two will fit quite alike; but if you pick out a gun that does fit you, and ask the maker to duplicate it, probably he will come near it, but not do it exactly. You can screw yourself into a "try gun," and monkey around and measure yourself all out of shape, and then maybe your new gun fits, and maybe it doesn't. After all, the "little by little" process suggested by Billy is the best one I ever found, although to trust a fine gun stock into the hands of a country gun tinker, and not a good man like Billy, must certainly require a very heroic cast of mind. A man trusts himself to a tailor, and I suppose he must to his gunmaker; but thrice blessed be he who can go to the factory and see his gun stock in the rough, and try it on little by little. A gun that fits, unequivocally, unmistakeably, invariably, is a joy forever and a treasure none too often owned.

Billy told me to go home now, and call around in a week, when he would have the stock finished. I called around in a week, and Billy didn't have it done. They never do have it done. The stock now was simply raw wood, without a particle of finish on it. Billy took a finer file and smoothed down the ridges and cut down the butt plate where it now projected around the edge of the butt. Then he gave the stock a few swipes with some sand paper, and after that ran a wet rag over the surface.

"What did you do that for?" I asked him.

"Oh, that starts the grain in the wood. Wait till she dries and you can feel bark all over that stock. That's the trouble with these cheap guns."

When dry, the grain of the wood stood up, making the stock feel rough. Billy sandpapered it all over again, and then wetted it again. He repeated this three or four times, until the grain no longer showed.

"If I didn't do that," said he, "the first time you got you gun wet, the stock would feel like it was covered with fur."

A few thick coats of oil were now applied and rubbed in, and after that came an application of a hard varnish, which dried very quickly. "Oil finish is best," said Billy, "but that takes a good while. Worth about $7 to finish a stock in oil right. But this is good enough for you."

The entire time spent in changing and finishing the stock was about three hours. So far as the finish was concerned, no one could tell the stock had been touched. The whole process had been an interesting one, to me at least, and had served to give me a few ideas I never had before about gun stocks in general.

"Say!" called out Billy, as I was on my way up the stair. "Say, do you know what a gun salesman wanted me to do, the other day? No? Why, he sent for me and wanted me to measure a man for a gun. 'Where's your tape line?' says he. 'Wot tape line?' says I. 'Why,' says he, 'how're you a-goin' to measure the man without a tape line!' Say, he did, honest! I guess he thought the man wore the gun barrels on his legs. Say, he did, honest!"

Still another thing or two I learned during the visit to the gun shop, and that was about cleaning a gun. "Here, I'll make you a cleaning rod," said Billy, "one that won't hurt your barrels. He took a stout rod of hickory, six or eight inches longer than the barrels, and fitted on the end of it a common chisel handle, which he bored out at the lathe. The business end of this rod had no screw or any metal about it, nothing but a deep slot cut clear through it. This flattened the end of the rod a trifle.

"That's no good," said I, "you can't wind on a rag so it will be round if the rod is flat."

"Can't, can't I?" said Billy, and proceeded to show how you could do that very thing, by twisting the rag a trifle in the rolling.

"Now here you've got a rod such as gunsmiths use," said he. "There aint a ring, ferrule or screw on it to scratch your barrels, and it's better than all your patent contrivances of jointed rods. S'pose you want to get the lead out of your barrels. You go to a hardware store and get some emery cloth, not emery paper, but emery cloth. Take a piece about 4in. square, put some oil on it and work it between your hands till it gets soft. Then you take one corner of it, this way, and start to roll it in with your rag, around the stick. It looks easy, but you'll have to practice before you can do it. See, the rag and the emery cloth roll right in together, but the emery cloth rolls in a spiral and covers the rag all up; and now you have a sort of cone-shaped burr on the end of your rod and nothing but the emery cloth shows on the outside. You can put that in you gun and rub till your arm comes off, and neither rag nor emery cloth will ever slip or come off the rod. It makes the best polishing tool there is. And there you are."

E. HOUGH.

WILD TURKEYS IN NEW ENGLAND.—Macomb, Ill., Nov. 15.—*Editor Forest and Stream:* I see by the FOREST AND STREAM that the members of the Sporting Club of Massachusetts are talking about stocking a park near Lynn with wild turkeys. I am afraid wild turkeys will not stand the climate of Massachusetts. About five years ago I sent a pair of wild turkeys that had been domesticated here, to my brother in Hancock county, Maine, in the month of October. They seemed to be contented with their new home, and roosted in the barn at night on a high beam. When the temperature in January dropped to 33° below zero, they were both found frozen stiff on the beam. Of course the climate in Massachusetts is not quite so cold as eastern Maine, and they may be successful in raising them there.—W. O. BLAISDELL. [The wild turkey was indigenous to Massachusetts and stood the climate, but could not survive shot and ball and powder. It was exterminated by the turkey hunters.]

JEFFERSON, O., Nov. 11.—The quail season opened here yesterday, and I do not think any had been shot previously, for we have kept a watch for violators of the law. There are a good many quail here and in good condition. We have talked to farmers about posting their land, and so market-hunters would have hard work to do much hunting here. John A. Logan, Jr., of Youngstown, was arrested last week for shooting quail out of season.—W. D. HOWELLS, JR.

MEXICAN GAME.—San Luis Potosi, Mex., Nov. 7.—Ducks and geese have made their appearance in this section in good numbers. We have had a heavy rainfall this season, and the lakes and ponds are full of water. I have not been out to ascertain if there are any snipe. Deer are plentiful in the mountains. Hope to get a day off soon.—AZTEC.

MASSACHUSETTS FISH AND GAME PROTECTIVE ASSOCIATION.—The regular monthly meeting was held at Young's Hotel Nov. 13, 45 being present, Vice-Pres. Walter M. Brackett in the chair. Letters were read from different parts of the State, reporting the quail which were let loose as having mated and raised broods of young during the past close season. Messrs. Hardy, Thayer, Fottler and Stetson spoke at length on the subject of "Game Importation." Arrangements are being rapidly completed for the annual dinner of the association, to be held at Young's Hotel, Boston, Thursday evening, Dec. 11, at 6 P. M. Ex-Pres. Cleveland, Gov. Brackett, Gov.-elect Russell, Senators Frye, Hawley, and Aldrich, U. S. Fish Commissioner McDonald, the New England Commissioners of Fisheries and Game, W. H. H. Murray, and many other prominent gentlemen have been invited to attend. The following gentlemen were elected members of the association: Wm. G. Hoyt, S. N. Small, O. B. Gilman, Nath'l Glover, L. W. Smith, Jr., Jas. J. O'Brien, Edw. B. Hardy, Henry G. Perkins, Dr. W. A. Power, J. E. Selfe, R. M. Winfield, John H. Murphy, H. E. Haynes, and Griswold Stowe.—RICHARD O. HARDING, Sec'y.

ANOTHER WOODCOCK IN BROOKLYN.—New York, Nov. 16.—On Thursday morning at about 9 o'clock one of the members of my family in the back yard of the house discovered a bird lying on the ground panting, with its wings outspread. She picked it up, but it soon died. As soon as I saw it I discovered it to be a male woodcock, and as near as I could judge a young bird. I found it in a plump condition. Its plumage was unruffled and I could not find any evidence of its being hurt, and came to the conclusion that it was simply tired out if not scared to death. It is such a fine specimen I am having it mounted. My house is at 582 Herkimer street, Brooklyn. I remember about a year ago there was an account in the FOREST AND STREAM about woodcock in Brooklyn.—W. ARTHUR HALE.

POTOMAC DUCKS.—Citizens of Charles county, Md., says the Baltimore *Sun*, have organized an association for the purpose of preventing the violation of the State ducking laws. Mr. T. Canfield Jenkins, secretary of the association, has written to Gen. Seth, commander of the oyster navy, requesting his co-operation in the matter, with a view of protecting the ducking grounds, and asking that one of the State steamers be sent up the Potomac River as far as Glymont to look after the alleged violators. Mr. Jenkins says for the past year steam launches from Alexandria and Washington have been coming up regularly, principally on Sunday, loaded with men, supplied with shotguns and rifles, disturbing the ducks, driving them from place to place, and eventually from the river.

MONGOLIAN PHEASANTS FOR STOCKING.—Portland, Oregon, Nov. 11.—*Editor Forest and Stream:* Should any of the readers of the FOREST AND STREAM wish to import some of the beautiful Mongolian pheasants which have been such a great success in Oregon, I think I can help them in that laudable undertaking. If any sportsman, game association or club will write me, inclosing a stamped and self-addressed envelope, I will mail them the address of different individuals in this State who can furnish either the birds or their eggs. They are a magnificent and beautiful game bird, and I would like to see them in every State in the Union.—THOS. G. FARRELL.

NEWFOUNDLAND CARIBOU.—New York, Nov. 15.—I have just returned from the wilds of Newfoundland. I had a very rough but successful trip, and visited the caribou in their own home. Just think of walking up to a herd of does. The loss of their lord and master, a monster stag I had just killed, so bewildered them that they let me approach to within 50yds. before they went trotting off. I could have killed every one of them, had I been a game butcher. I saw 21 caribou that day alone, and was back in camp by 3 P. M. Will give you further details later on.—WAKEMAN HOLBERTON.

DONE IN A THOROUGH MANNER.

ONE of the most useful publications which has appeared this year is the *Book of the Game Laws*, published by the Forest and Stream Publishing Company at No. 318 Broadway, New York. FOREST AND STREAM is the recognized sportsman's journal; its pages are always clean and bright, and during the many days when a sportsman cannot go either hunting or fishing it serves to provide many a pleasant hour; no agency in this country has done more toward the elevation of sport in its true term than has this publication. For the purpose of disseminating a knowledge of the game laws of this country the Forest and Stream Company has just issued a pamphlet of 228 pages, giving in full all the laws pertaining to game and game fish in the United States and the Canadas. In order to secure accuracy the important sections are given in full as they appear on the statute books, and there are no abbreviations except in the case of minor or local laws. The publication will appear four times a year, on the first days of January, April, July, and October and the first number has just made its appearance. The price of subscription is two dollars a year, but for the sum of one dollar one complete number and three subsequent quarterly supplements will be sent to any address. The work has been done in a thorough manner and none but those who have had some experience in going through conflicting laws can have any idea of the patience and work required to make the book complete. As a money-making project the publication will in all probability prove a failure, for there is too much work to be compensated in the collection and publication, but as a help to sports men the work will be an unqualified success. The laws of New Jersey occupy nine pages of closely printed matter; the arrangement is excellent and leaves nothing to be desired. If the rest of the publication is as accurate and complete as the portion devoted to New Jersey—and there is no reason to doubt this, for the whole book was prepared under one management—the publication is a monument of patience and conscientious work for which the compiler and publishers deserve the unqualified praise of the sportsmen of this country.—*Paterson (N. J.) Press.*

The Emperor Francis Joseph and the King of Saxony both beat the Emperor William's sporting record at Mürzsteg. They each brought down six chamois against the four shot by the imperial guest. The expedition yielded five head of big game and thirty-two chamois. The Emperor William before leaving presented his host with a splendidly-mounted pair of antlers, and decorated several of the huntsmen in attendance.—*London World.*

Sea and River Fishing.

THE FULL TEXTS of the game fish laws of all the States, Territories and British Provinces are given in the *Book of the Game Laws.*

VERMONT TROUT.

WATERBURY, Vt., Nov. 17.—*Editor Forest and Stream:* I am pleased to note the communication, "More About Vermont Trout," in your issue of the 13th, and I am glad to have any of my views indorsed by such good authority. Perhaps your correspondent did not understand that my remarks applied to this section of the State only, and for his benefit I explain that I am, as earnestly as he can be, in favor of any means that will protect our trout and increase the supply, if possible, but I do not think we are ready for some of the means proposed. I should favor the hatchery if the trout it turned out could be protected, but at present I think the money used for the hatchery would do more good if every cent were expended in enforcing the law. If the present law can be enforced, give us the hatchery by all means.

Of course your correspondent knows the season has been changed, making it from May 1 to Sept. 1, and I agree with him in thinking this a most unwise thing to do. I may be wrong, but I think our Vermont trout spawn much earlier than is usual in other sections; and I believe two-thirds of all the trout taken after Aug. 15 will be found nearly ready to spawn. I have taken many as early as July 30 that were full of nearly ripe eggs, and other anglers in this section have had the same experience. Of course this means that millions of eggs will be destroyed by August fishing. However; our legislators may provide for this by making it unlawful for trout to spawn before Jan. 1, and trusting to providence that the measure will be enforced, as they have in case of the 6in. law. I think it is all wrong to allow August fishing at present. It was urged that by changing the season fishing through the ice in April would be prevented, but I am sure that for one trout so taken fifty trout nearly ready to spawn will be taken during the last week of August.

In conversation with one of the commissioners, I was informed that the hatchery would be established, and, with your correspondent, I hope that having gone so far they will try and do something toward enforcing the 6-inch law, as this is the only thing that will save our trout.

"Ompumpamoosuc's" suggestions are very good, and I wish they could be carried out, but I know of but two newspapers in the State that take any interest in the subject, and they are too busy in the interest of Lake Champlain bass to say much for the trout. But the people in the back towns cannot be "educated" to look favorably on any law that would prevent them from taking all the trout they could get, of any size, or at any time. It is this class who are doing the most of the illegal fishing, and they can't be reached, in many cases, by newspaper articles. The only way to touch this class is through their pockets, and a few arrests would do more good than any amount of "preaching." They should be made to understand that the law is a law, with a big L, and that it would cost them something to disregard it.

I do not know who will do this, certainly not the local wardens. They seem to see little glory or fun in their business, and they have small chance of getting anything else. Speaking for this section, the local warden system is a failure. I never heard of a complaint or an arrest made by one of them, and they could not lack for work if they wanted it, as the law is openly violated every day. I think if the present Legislature would stop tinkering the law and try and devise some means of enforcing such as we have, it would be a benefit to the State and a credit to themselves. LANCEWOOD.

A NEW HYBRID TROUT.

ON Oct. 12, while at the Sunapee Lake Hatchery, of the New Hampshire Fish Commission, Col. Elliott B. Hodge showed me some very beautiful and fertile hybrid trout. The cross was produced by impregnating eggs of the golden trout (*Salvelinus aureolus*) with milt of the brook trout (*Salvelinus fontinalis*), and the examples studied were three years old. The observations were made upon the living fish.

A male fifteen inches long had the following characters: The upper parts dark grayish olive. Reticulations much fainter than in *fontinalis* and showing along the entire length. The lower two-thirds of the dorsal are mottled, while the upper third is plain, as in *aureolus*. Caudal fin like dorsal, with a broad dusky margin. The caudal peduncle is thick and roundish as in *aureolus*. The pectoral, ventral and anal fins are all larger than in *fontinalis*, the spread of the first being not far from 5¼in. The milky-white margins of the ventral and anal fins are limited by a black line as in *fontinalis;* the rest of the ventrals is vermilion, the anal also, but not quite so intense. Sides of body with numerous small crimson spots, above and below the lateral line, much more plentiful below. The lower parts are very much as in the dark-colored male *fontinalis*, peculiar to Sunapee Lake, with a mixture of the orange of *aureolus*. The branchiostegal membrane is very dark, intermingled with whitish on the portion covering the rays. Caudal fin as in *fontinalis*, but somewhat larger. Hyoid teeth well developed. Gill-rakers not curled at the tip.

The female is 18¼in. long and the colors of the living fish, in water, were as follows: The ground color a brownish gray, about as in *aureolus*. Sides of body with numerous pale spots both above and below the lateral line. Back with indistinct reticulations all over resembling those of *fontinalis*. Belly and lower third of sides, to end of anal, orange with a pink tinge. The dorsal fin is dusky as in *aureolus*, and is without bands or mottlings. Caudal fin dusky as in *aureolus*. Pectoral, ventral and anal fins exactly as in *aureolus;* the broad milky-white margins are not limited by the black streak of *fontinalis*. The shape of all the fins and the form of the body are the same as in *aureolus*. There is a well developed patch of hyoid teeth.

From the above descriptions it will be evident that the hybrid shows very little trace of its relation to the brook trout, in which it follows the rule in hybridity as far as my own investigations may be taken as a guide, all the essential characters being derived from the female when crosses are made between two species of the same genus. There is scarcely anything but the reticulations to indicate a mixture of brook trout, while the general coloration, form of body, size of the scales, shape of fins and structure of the teeth follow the female parent. In this case both parents are small-scaled fish and the hybrid has small scales. When a large-scaled species is crossed with a small-scaled form the result will be a large scaled fish whichever way the cross is made.

It appears to me a matter of great importance that fish-culturists should put on record their experiments in hybridization and give complete details of such operations. This is especially desirable in dealing with that most difficult of all families of fresh-water and anadromous fishes, the salmon family. T. H. BEAN.

ANGLING NOTES.

DR. R. W. ELLS, of the Geological Survey of the Dominion of Canada, has probably had better opportunities of judging of the merits of the different trouting waters in that country than any other living man. There is not a river or lake throughout the Province that he has not floated his canoe on or cast a fly over. He is an excellent angler, and his duties keep him in the wilds of Canada at least five months out of the twelve. In a recent conversation he stated that for large speckled trout the Gaspé region went ahead of all others. Sea trout weighing from 4 to 7lbs. were as plentiful in July and August as the most exacting angler could desire, and river trout up to 5lbs. in weight were equally common.

After the latter part of June the Newfoundland coast swarms with salmon and sea trout. In Hall's Bay they can be seen in great schools. The settlers there do not bother with hooks and lines, but use small nets. They catch all they want to use on the table and salt down a supply for the winter. Salmon can be bought along the coast when they are running for seven cents a pound.

Few, if any of the streams that empty in the bays on the east coast of Newfoundland have ever been fished in by anglers. Once in a while officers from the British men-of-war try them with considerable success. The Red Cross line of steamers that sail from New York to Newfoundland ports stop at Pilley's Island at the mouth of Hall's Bay, and their officers say that they often enjoy fine trout fishing, though the steamer does not stop long enough to enable them to go far. The best way would be to stop over one steamer and try the different streams. At Pilley's Island the angler can hire a man to take him up to Richard Goodyear's at the head of Hall's Bay, where he will be made welcome and have comfortable quarters. If he stays until Sept. 1 he can enjoy good willow grouse shooting, though that is better further south nearer St. Johns; and after Oct. 1 caribou are in season and very plentiful a few miles back from the coast. If it were not for the great quantities of cod, salmon, trout, capelin and herring, the settlers on the coast (and there are none in the interior) could not exist. These, with caribou in the fall and winter furnish their food supply. Pigs, cows and, in fact, all stock feed on fish very freely; and their flesh tastes very strongly of fish.

Does the reader ever stop to think at what a fearful cost of human life we enjoy our codfish cakes? Just to think, eighty-nine lives lost from Gloucester alone this past year, to say nothing of the terrible hardships these fishermen must suffer. The writer passed two of them while going to Newfoundland a few weeks ago. It was a terrible night, blowing a gale, great seas running and as dark as Egypt. All we saw were two little gleaming lights, but we knew each light represented a fishing schooner, riding at anchor, far from land and in great danger both from weather and passing steamers.

The captain said that on the last voyage during a dense fog he was hailed by a dory which they nearly ran down. They had gotten lost from their schooner, and had been without food or water for over twenty-four hours. The captain offered to take them to Halifax, but they refused, saying they would lose their share of the catch if they did not find her again. Whether they did or whether they were lost he never knew. SCARLET-IBIS.

SOME TEXAS FISHES.

MR. ALBERT TURPE, writing from Brackettsville, Texas, about the fishes of his vicinity, states that they have various kinds of catfishes, including a slender fish of 80 to 100lbs., the clumsy mud-cat of the same weight and some smaller sorts. A small black perch, too, is among the native species. Of the gar pikes (*Lepidosteus*) he recognized four different kinds. They have also the sucker, a fish resembling the German fresh-water *barbe*, and another resembling the mirror carp. The barbe-like fish has flesh of good flavor, but is so bony that it is impossible to eat it. Mr. Turpe mentions a speckled trout, which resembles the German *hecht* (pike, *Esox lucius*) in shape, but does not exceed 1lb. in weight. This is probably the small pickerel of the region, *Esox vermiculatus*. The black bass grows to a weight of 6lbs. A silvery fish reaching 3lbs. in weight, is thin-bodied, has a deeply-forked tail-fin, and in form resembles the German *bley*, known in England as the bream. Mr. Turpe describes it as being more compressed than the bream. It has well-flavored flesh, but is so full of small bones that it is not used for food. This may be a species of carp-sucker (*Carpiodes*).

The cold season sets in about Nov. 1 and the fish ceases to bite, but in the spring the sport with hook and line will be renewed.

UTAH FISHING.—Ogden City, Utah.—Carp were placed in a few private ponds several years ago, now they are found in every slough and stream not too salt for them, but the anglers do not care to fish for carp, trout are good enough for most sportsmen. We have two streams here and good trout fishing at our doors. There are two kinds of trout, one of them called the brook trout and the other known as salmon, which grows to a weight of 5 or 6lbs., the brook trout not exceeding 1lb. We have, also, a herring in the rivers; this does not readily take the fly; it is fished for mostly with bottom bait. The herring reaches 2lbs. in weight. There are some deer back in the mountains and a bear is seen once in a while.—W. D. C. [The herring referred to is doubtless Williamson's whitefish (*Coregonus williamsoni*), sometimes called grayling; it has been mentioned in these columns as a fish that sometimes takes the fly.]

"GRANNY SHEPARD."

WHEN I was a boy about twelve years of age I lived in a little town in southwest Georgia, right in the midst of a fine fishing ground surrounded on all sides by large bold running streams, well stocked with all kinds of fish peculiar to that section. One of the noted characters of the village was Old Mother Shepard. "Granny Shepard," as she was usually called, was about 80 years old at that time, and had from childhood spent the most of her life in the wildwood or on the bank of some familiar stream with her rod and line. She always walked on these expeditions, often tripping her way lightly for five or six miles through some narrow path with her long bamboo rod and a well-filled sack of tackle and lunch slung across her shoulder. Sometimes she was accompanied by other disciples of Walton, but as often alone.

Granny was a believer in the signs of the moon and would never venture off with the intention of catching any fish unless the moon was right.

One Saturday during vacation, having got the consent of our parents, my younger brother and I repaired to Granny's house and persuaded her to go with us over to the Natchaway Creek, about three miles, for a fish. But the moon was not right, Granny said, and it was with great difficulty that we persuaded her off, and then she went more to pacify us than anything else. We arrived at the creek about 9 o'clock and Granny led the way down the creek to one of her favorite holes, which she said she had kept baited for suckers. Everything was ready in a few minutes, and the old lady had a hard time keeping us boys from running around, as we were like young deer just turned loose, and wanted exercise. Granny settled herself snugly on a cypress tree, drew forth her long pipe and began fishing for suckers, while my brother and I fished along the bank with short poles for trout and pike. In a few minutes I brought to hand a nice 2½lbs. trout (bass) with my minnow hook while fishing for bait. The next was a large jack fish flirted out by my brother; he had started the pole with a jerk which sent the fish some ten steps back in the brush. We kept up this lick for about two hours, when we had about all the fish we could carry on a pole laid across our shoulders, and returned to where Granny was still patiently waiting for a sucker bite, but really not expecting it, for the moon was not right. We had caught all the fish needed, so the party returned home by one o'clock. But Granny never could explain how the two "fidgety" boys caught so many fish on that day. Nor can I account for it. They seemed so eager to bite that they would almost jump out of the water after the bait, and although I have wet my hook in many waters since then, I have never caught so nice a string in so short a time, and my memory will ever cherish good old Grandma Shepard, the south Georgia waters, and the Saturday's fishing. T. J. SKAGGS.

BEEVILLE, Texas.

STRIPED BASS ON THE PACIFIC COAST.

SAN FRANCISCO, Nov. 7, 1890.—*Editor Forest and Stream:* The noble striped bass planted in the Bay of San Francisco near Vallejo several years ago, have recently made their appearance in the tributaries of the Bay. In the Sacramento River and Sonoma and Lagunitas creeks large numbers of young striped bass averaging from 6 to 9in. are reported from so many different sources that their presence in these waters no longer remains doubtful. On the 4th or 5th of this month Mr. Cullandan, of the Fish Commission, arrested a Chinaman with twenty or more of these young fish in his possession, he having taken them in a net. He is now in custody awaiting trial, and as the evidence is absolutely positive and the Commission has the opportunity to make an example of him, it is highly probable much good will be accomplished.

The law provides that no striped bass of less than 8lbs. weight shall be offered for sale in California. As a most vigilant watch is kept on the San Francisco markets, the Italian and Chinese fishermen have been sending the young striped bass to small inland towns during the present season; and now that they know the Commission is informed of their doings, and will punish them to the full extent of the law, the illegal fishing will be practically abandoned.

During the past two years several very large striped bass have been sent to this city by the market fishermen (one weighing 40lbs.). The sight of these carried many of our local sportsmen back to their youthful days on the Atlantic coast and fairly electrified them with enthusiasm. With hastily improvised rigs—and every kind of bait they could think of—each of them selected what seemed to him to be the most favorable water and fished it with a faithfulness fully worthy of the object—out of view. They tried it on all the quarters and between all the quarters of the moon, at mid-day, night and early morn, at ebb tide, flood tide, slack tide, high tide large and low tide small, caught and landed some of everything in these waters, from a bullhead to a skate, but never had a strike from the prince of game fishes.

The only one known to have been taken with hook and line was caught about a week ago in Russian River near Guerniville (about fifty miles above tide water), by Dr. Dean of this city. This was a landlocked fish weighing about 4lbs., and measured about 15in. in length. The Doctor was casting a live minnow for black bass and had out about 60ft. of line. He credits this pioneer victim with the skillful use of all tactics known to his kind, and says it was the gamest fish he ever killed.

The rocky shores on each side of the Golden Gate, and around the islands in the bay furnish an abundance of "lively" water, and the natural stands for casting being all that can be desired, we anticipate royal sport within a year or two—when the present stock of young bass has matured. HARRY ELWOOD.

FISHING ABOUT WASHINGTON.—The black bass fishing this fall has been so poor in the upper Potomac that many anglers have turned their attention to less pretentious waters nearer Washington city. In Rock Creek considerable sport has been obtained above Pierce's mill in fishing for fall fish (*Semotilus bullaris*). According to the *Evening Star* a party of fishermen recently caught twenty-three of these fish in a day, the largest of them measuring 16in. in length. The baits used were grubworms and grasshoppers, and the fish were pronounced to have as good game qualities as the black bass. A pickerel 16in. long was taken in the eastern branch of the Potomac, at Benning's bridge, a few days ago.

THE YOUNG EEL.—Mr. L. G. Harron, who has had charge of the shad seining at the Fort Washington station of the U. S. Fish Commission for several years, and who has been a fisherman for the greater part of his life, says that he has frequently dug up great knots or clusters of young eels out of the mud in the spring of the year. Some of these young were not longer than two inches. Mr. D. W. Kenly, formerly employed at the Battery Island station, near Havre de Grace, Md., confirms Mr. Harron's statement and further says that he has known the pet cocks in the hatchery at that station to be choked up during the shad hatching season by young eels ranging from one inch to two inches in length. These localities it will be observed, are in fresh water and the facts noted would seem to indicate that the eel does not always go into salt water to deposit its eggs. These statements are important also inasmuch as they approximately fix the spawning season of the eel. The shad hatching season at Havre de Grace opens in May and eels measuring only one inch in length were probably not more than a few months old at the utmost. This would indicate that the species breeds in some localities in mid-winter.

A CHANNEL BASS ASTRAY.—There was taken in a gill-net this morning at Fortescue, in the Delaware Bay, about twenty-five miles above Cape May, a channel bass (locally called red drum) weighing 14½lbs. This seems to me remarkable enough to be put on record. I have never known a channel bass in New Jersey waters of a less weight than 20lbs., and have never in these waters heard of one being taken so far from the ocean.—F. S. J. C. (Nov. 14).

SALT-WATER FISHING.—At Provincetown, Mass., small mackerel and the common salt-water smelt were abundant Nov. 10, and the hook and line fishermen were enjoying rare sport fishing for them from the wharves.—B.

THE AMERICAN FISH HOOK CO., of New Haven, Conn., have just issued a new revised catalogue and price list of their goods, which will be of interest to all anglers and dealers in anglers' supplies. There are hooks of all kinds; spear-pointed hooks, hollow-pointed hooks, trout hooks, bass and salmon hooks, blue-fish and halibut hooks. The Allord & Berkele Co., 77 Chambers street, N. Y., whose advertisement appears in another column, are the selling agents.—*Adv.*

Fishculture.

GEORGIA FISHCULTURE.

THE report of the Commissioner of Agriculture of the State of Georgia for the year 1889-'90 includes that of the Superintendent of Fisheries, Dr. H. H. Cary, of La Grange. Under date of Oct. 20, 1890, Dr. Cary briefly reviews the operations of the Fish Commission. Remarkable success has attended the artificial propagation of the shad during the last decade. Ten years ago none of the Georgia streams emptying into the Gulf of Mexico contained shad, but now the species is well established in rivers belonging to that watershed and there is no scarcity of spawning fish for the purposes of artifical propagation, if the State Legislature would only appropriate money to carry on the work. The shad fry deposited in Georgia rivers have been obtained from the U. S. Fish Commission, and during the last two years 12,848,000 have come from that source. A notable increase in the catch of shad was observed since the last report. In the Withlacoochee, a river of lower Georgia, which passes through Florida and empties into the Gulf of Mexico, the introduced shad have recently made their appearance.

Dr. Cary states that over 5,000 ponds have been stocked with carp during the last ten years. They are increasing rapidly and are very popular. A drainage apparatus devised by the doctor for use in carp ponds is illustrated in this report. The attempt to introduce California salmon into Georgia waters has been unsuccessful, and Dr. Cary doubts the probability of success with brook trout, except in a few of the most northern counties, and even there it is not known if the streams contain suitable food.

LAKE AUBURN FISH PROTECTIVE ASSOCIATION.—*Editor Forest and Stream:* Since my last letter I have made a brief visit to the Lake Auburn fish hatchery, and find the work progressing admirably. Results have been beyond the expectations of us all. As the Maine Fish Commissioner, Mr. Henry O. Stanley, expressed it, the success has thus far been wonderful for so small a stream. The ova after being fertilized are taken to the Lake Auburn spring house to be hatched. The hatching house at East Auburn is nearly completed and will be ready to receive a portion of the trout eggs and what salmon eggs the State can send. No doubt some errors will result from inexperience, but our men are earnest and enthusiastic, and with the aid Mr. Stanley and Mr. Wright can give our association has a good prospect of success in our first year's undertaking. Would you kindly give the titles of latest and most reliable works upon fishculture? When the season has closed I will give you the exact results as to number of eggs, size and number of fish.—A. G. WHITMAN. [The best known American works on fishculture are advertised on page vi. of the cover of FOREST AND STREAM. The best German work is Max von dem Borne's "Fischzucht." Standard English books are Dr. Day's "British and Irish Salmonidæ" and Sir James Maitland's "History of Howietoun."]

TROUT REARING IN COLORADO.—At the new station of the U. S. Fish Commission, near Leadville, Colorado, the work of taking eggs from the brook trout is now in progress. About 8,000 breeders, of the two sexes, are available. The new hatchery building will receive its inside equipment within the next sixty days, and an additional water supply will be brought in from Evergreen Lakes. The buildings will accommodate 15,000,000 eggs. Dr. John Law, the prominent fishculturist, of Colorado, has completed a new hatchery for various species of trout near the Evergreen Lakes. This is a private enterprise which has achieved remarkable success.

A woman entered a grocery on Michigan avenue one day last week in something of a hurry and said to the proprietor: "I want a glass fruit jar holding a quart, and you may put half a pound of gunpowder into it." "Yes'm. New way to do up late peaches?" "No sir. It's a way to do up a dog." "How?" "My boy Willie has got a dog under our barn and he won't come out. Willie is going to blow him up." "Great Scott, ma'am, but if you explode this powder under the barn you'll set the building on fire!" "Would it really?" "Of course it would." "Willie will be terribly disappointed." "But you'll save the barn." "Well," she said as she picked up her money, "I'll have to change my plans. I'll buy him an auger and let him bore holes in the floor and pour hot water down on the dog."—*Detroit Free Press.*

The Kennel.

All communications must reach us by Tuesday of the week they are to be published; and should be sent as much earlier as may be convenient.

FIXTURES.

DOG SHOWS.

Dec. 30 to Jan. 3, 1891.—First Dog Show of the Buckeye Poultry and Pet Stock Association, at Canton, O. James Sterling, Sec'y, 39 North Market street.

1891.

Jan. 6 to 9.—Delaware and Susquehanna Poultry and Pet Stock Association, at Binghamton, N. Y.

Jan. 13 to 17.—Third Annual Dog Show of the South Carolina Poultry and Pet Stock Association, at Charleston, S. C. Benj. McInness, Jr., Secretary.

Jan. 20 to 25.—First Annual Dog Show of the Louisiana Poultry and Pet Stock Association, at New Orleans, La. A. E. Shaw, Secretary, Box 1658.

Jan. 20 to 25.—Dog Show of the Georgia Poultry and Pet Stock Association, at Augusta, Ga. A. H. Vonderleith, Secretary.

Jan. 21 to 26.—Dog Show of the Elmira Poultry and Pet Stock Association, at Elmira, N. Y. Carl Hart, Secretary.

Jan. 27 to 30.—Inaugural Dog Show of the South Carolina Kennel Association, at Greenville, S. C. F. F. Capers, Secretary.

Feb. 24 to 27.—Fifteenth Annual Dog Show of the Westminster Kennel Club, at New York. James Mortimer, Superintendent.

March 3 to 6.—Second Annual Dog Show of the Maryland Kennel Club, at Baltimore, Md. W. Stewart Diffenderffer, Secretary.

March 10 to 13.—First Annual Dog Show of the Duquesne Kennel Club, at Pittsburg, Pa. W. E. Littell, Secretary.

March 16 to 19.—Inaugural Dog Show of the Washington City Kennel Club, at Washington, D. C.

March 24 to 27.—Second Annual Dog Show of the Massachusetts Kennel Club, Lynn, Mass. D. A. Williams, Secretary.

March 31 to April 3.—Seventh Annual Dog Show of the New England Kennel Club, at Boston, Mass. E. H. Moore, Secretary.

April 8 to 11.—Third Annual Dog Show of the Mascoutah Kennel Club, at Chicago, Ill. John L. Lincoln, Jr., Secretary.

April 14 to 17.—Fourth Dog Show of the Cleveland Kennel Club, at Cleveland, O. C. M. Munhall, Secretary.

Sept. 1 to 4.—Dog Show of the Youngstown Kennel Club, at Youngstown, O.

FIELD TRIALS.

Dec. 1.—Second Annual Field Trials of the Central Field Trials Club, at Lexington, N. C. C. H. Odell, Mills Building, New York, Secretary.

1891.

Jan. 19.—Eighth Annual Field Trials of the Pacific Kennel Club, at Bakersfield, Cal. H. H. Briggs, Secretary.

Feb. 2.—Third Annual Field Trials of the Southern Field Trials Club. T. M. Brunby, Secretary, Marietta, Ga.

INDIANA KENNEL CLUB'S FIELD TRIALS.

THE fourth annual field trials of the Indiana Kennel Club closed with the All-Aged Setter Stake Thursday, Nov. 6. The grounds were not nearly so good as they were last year. The birds were found very plentiful, and the work of the dogs, as a whole, was of a very high order. Some of the handlers displayed great judgment in handling their dogs. The veterans, Morgan, Barker and Gleason, need no praise from me, as they are well and favorably known throughout the country. Among the younger men I desire to mention, Messrs. Frank Richards, of Stewart, Me.; T. H. Poindexter, of Stanton Depot, Tenn.; Geo. A. McLin, of Bicknell, Ind.; Robert Riley, of Indianapolis, Ind.; and John Gude, of Appleton, Minn., as gentlemen well versed in their chosen profession, and I bespeak for them all a bright future. A large number of visitors were present from different parts of the country, and all seemed to enjoy the sport hugely. The accommodations were ample, and every one praised the good wholesome food furnished by Uncle Joe Buckles, of the Central Hotel, his luuches were the best I have ever seen at a field trial, and were brought to the grounds steaming hot. The weather was very favorable throughout the trials, and added greatly to the pleasure of those present. The judging of the Puppy Stake was done by Dr. J. B. Alexander, of Louisville, Ky.; Mr. G. D. Jay, of Kokomo, Ind.; and Mr. W. M. Kerr, of Indianapolis, Ind. All the other stakes were judged by Dr. Alexander and Mr. Jay. In criticising the decisions of the judges, I wish it distinctly understood that I am not questioning their integrity, as they are my friends, and their character is above reproach. Of the winners in the different stakes I will speak briefly.

Marie Bur, the first prize winner in the Puppy Stake, is a small liver and white English setter bitch weighing about 35lbs. In all of her heats, except the last one, she showed considerable merit, and ought in another year to show up well. Effie K., the winner of second, is a sappy little English setter, black and white in color, and, although she is not as brilliant as Marie Bur, she in another year will, in my opinion, make a dog hard to beat. Nutwood, the third prize winner, is a large-sized liver and white pointer with an old head on a young body, he goes with great dash for a dog of his age, and should be live and start in an All-Aged Stake next year he will make the winner very tired.

Lone Jack, the first prize winner of the Members' Stake, is a large-sized black and white English setter, with a good nose, and a dog that will last all day. Mr. Robinson, his owner, uses him for his own private shooting; had this dog been put in the hands of a professional handler when he was young, he would have made a dog hard to beat in any company. Rosaline Wilkes, the second prize winner, is a medium-sized black and white pointer, and judging from the work done by her in her heat with Jubilee, is the best pointer bitch I have ever seen start. Jubilee, the third prize winner, is a very handsome blue belton and tan English setter, with plenty of speed and range, but he seemed stale on game. Hoosier Harry, the fourth prize winner, is a large-sized liver and white pointer, who will give a gentleman plenty of shooting, he is slow when in the vicinity of game, and would rarely get lost from his handler.

Reveler, the first prize winner in the Derby, is a medium-sized black, white and tan English setter, with considerable speed and range, and is very stylish and accurate in his work; he will be a hard dog to beat in the Eastern circuit. Trap, Jr., the second prize winner, is a small-sized lemon and white English setter bitch, that is very quick in her movements and has a very good nose; she is very good on single birds. Coyote, the third prize winner, is a handsome black, white and tan English setter bitch, with more speed and range than any dog that started in the stake, but she needs work on game to make her a sure winner. Jubilee, the fourth prize winner, is described above.

Lass of Bloomo, the first prize winner in the Pointer Stake, is a handsome liver and white bitch of medium size; she has a good nose, and is a dangerous dog in any stake. Dolly C., the second prize winner, is a large-sized liver and white bitch, with more speed and range than any dog that started in the stake; she is very stylish and snappy in her work, and was by far the best dog that ran in the stake. Croxlill, the third prize winner, is a very handsome liver and white bitch of about 55lbs. weight. While she is not as snappy in her work as the other winners, she is a very reliable dog, and one that would furnish a gentleman a nice day's shooting.

Lilly Burges, the first prize winner in the Setter Stake, was the Derby winner last year, and was fully described at that time. She has lost none of her ardor, and I warn the boys East to look out for her; she is a good one. Prince Lucifer, the second prize winner, is a large-sized, up-headed, wide-ranging black, white and tan English setter that stops for no obstruction. When Barker gets him just right in his work on birds, it will take a corker to beat him. Nannie B., the third prize winner, is a light-weight lemon and white English setter, who performs very nicely on birds, and is liable to get into the money in any stake.

The following sales were made during the trials: Mr. C. W. Barker to Mr. G. D. Jay, of Kokoma, Ind., a black, white and tan unbroken bitch for $50. Mr. A. J. Gleason sold to Mr. H. C. Pearce, of St. Lous, Mo., the liver and white pointer dog puppy Paxico, 10½ months old, by Ossian out of Nellie E., for $375. Mr. Frank Richards sold to Mr. H. Hulman, Jr., of Terre Haute, Ind., the orange and white English setter bitch Lilly Burges, by Gath's Mark out of Esther, for $700 cash and a $75 hammerless shotgun.

THE DERBY.

The Derby of the Indiana Kennel Club began at Bicknell, Ind., Monday, Nov. 3, and was judged by Dr. J. B. Alexander, of Louisville, Ky., and Mr. Gib. D. Jay, of Kokomo, Ind. The dogs were drawn to run as follows, viz.:

IVAN (R. B. Morgan), black, white and tan English setter dog (Gath's Mark—Esther),

against

CRICKET (Harry S. New), orange and white English setter bitch (Rush Gladstone—Quail).

SUNOL (E. Cadman), liver and white pointer bitch (Cornerstone—Dinorah),

against

QUEEN VIC (J. I. Case, Jr.), black, white and tan English setter bitch (King Noble—Queen Vashti).

JUBILEE (J. M. Freeman), blue belton and tan English setter dog (Gath's Mark—Esther),

against

QUAIL II. (Harry S. New), black, white and tan English setter bitch (Rush Gladstone—Quail).

RANCHO (F. H. Perry), red Irish setter dog (Claremont Patsy—Nino),

against

CANADIAN QUEEN (G. G. Pabst), black, white and tan English setter bitch (Locksley—Liddersdale).

REVELER (W. B. Hill), black, white and tan English setter dog (Gath's Mark—Esther),

against

SPOTTED BOY (Chas. Proctor), liver and white pointer dog (Trinket's Bang—Nellie Bow).

PENELOPE (Lebanon Kennels), lemon and white pointer bitch (Lebanon—Penelope),

against

TRAP, JR. (Samuel Grant), lemon and white English setter bitch (Ruby's Druid—Trap).

COYOTE (J. I. Case, Jr.), black, white and tan English setter bitch (King Noble—Cricket), *a bye.*

First Series.

IVAN AND CRICKET.

Mr. R. B. Morgan's English setter dog Ivan, handled by owner, and Hon. Harry S. New's orange and white English setter bitch Cricket, handled by Robert Riley, were put down in a large open weed field on the E. Horn farm at 9 A. M. Cricket went away like a shot, and showed great range and speed, while Ivan seemed to be without energy. Cricket flushed some feeding birds which she should have pointed. Nothing more being done the dogs were taken up at 9:26.

SUNOL AND QUEEN VIC.

Mr. E. Cadman's liver and white pointer bitch Sunol, handled by A. J. Gleason, and Mr. J. I. Case, Jr.'s black, white and tan bitch Queen Vic, handled by C. W. Barker, were put down in stubble at 9:30. Sunol soon pointed, then moved, and Queen did the same. In corn Queen Vic flushed a bevy and gave a short chase. Gleason called point for Sunol. Queen Vic at same instant flushed the birds. The dogs were taken up at 10:03. Queen Vic showed the most speed and range, but Sunol had more judgment. Neither dog, however, showed much merit.

JUBILEE AND QUAIL II.

Mr. J. M. Freeman's blue belton and tan English setter dog Jubilee, handled by G. A. McLin, and Hon. Harry S. New's black, white and tan English setter bitch Quail II., handled by Robert Riley, were put down in a stubble field at 10:17. Quail found and pointed a bevy nicely, and dropped when Riley flushed the birds. Sent on Jubilee flushed two birds, then he pointed a single and was steady to shot. They were taken up at 10:25. In style, speed and range they were about equal.

RANCHO AND CANADIAN QUEEN.

Mr. F. H. Perry's red Irish setter Rancho, handled by A. J. Gleason, and Mr. G. G. Pabst's black, white and tan English setter bitch Canadian Queen, handled by Frank Richards, were put down in stubble at 10:32. Queen made one point on a single bird near a fence. Neither dog showed much disposition to hunt and should never have been started. They were taken up at 10:45.

REVELER AND SPOTTED BOY.

Mr. W. B. Hill's black, white and tan English setter dog Reveler, handled by Frank Richards, and Mr. Chas. Proctor's liver and white pointer dog Spotted Boy, handled by owner, were put down in stubble at 10:50. Reveler pointed a bevy near a fence, Mr. Proctor also claimed a point on same birds. The dogs were steady to wing. They were taken up at 11:19. In style, speed and range, they were about equal.

PENELOPE AND TRAP, JR.

Lebanon Kennels' lemon and white pointer bitch Penelope, handled by C. W. Barker, and Mr. Samuel Grant's lemon and white English setter bitch Trap, Jr., handled by John Gude, were put down in stubble at 11:25. Trap soon pointed and Penelope backed. Mr. Gude not going far enough ahead of his dog thought she was false pointing and ordered her on, when she flushed a bevy. The birds were followed. The dogs secured two points each on singles and were steady. They were taken up at 11:33. In style, range and speed they were both good, and they behaved very nicely on scattered birds.

Coyote, a bye, ran a side heat, and showed herself to be a good one.

An adjournment was now taken for lunch. After dinner the judges consulted and selected the following named dogs to continue the running: Cricket against Jubilee, Quail II. against Reveler, Spotted Boy against Trap, Jr., Coyote a bye. Penelope having shown as much merit as Trap, Jr., should have been given another chance.

Second Series.

CRICKET AND JUBILEE.

This brace was put down in stubble at 12:30. Jubilee was first to find. He pointed a single nicely and was steady to shot. Then Cricken pointed two birds well and was steady to wing. Jubilee next pointed a small bevy and was steady to wing. Cricket then flushed a single, and Jubilee pointed one and won. They were taken up at 12:44. In style, range and speed they were both good; Jubilee was best on game.

QUAIL II. AND REVELER.

This pair was cast off in a stubble at 12:50. Quail pointed a single and was steady to wing; then she pointed a single just in time to save being charged with a flush. Then both dogs pointed falsely. Reveler then nailed a single handsomely and was steady; then he pointed, but nothing was

found. The dogs were then taken up and the heat given to Reveler. The dogs were down only fifteen minutes. While the final result of the heat might not have been changed, the bitch was not beaten when the heat ended. Both dogs were going well, and a few moments more would have shown their merits much better.

SPOTTED BOY AND TRAP, JR.

This brace was put down in stubble where last brace finished at 1:10. Trap soon pointed a single and was steady to shot. The pointer then secured two points on singles, and Trap flushed a single, then each dog scored a flush. Sent on, Trap pointed a single, when Gude went in to flush the bird the bitch left the point and moved away in another direction; Gude, however, flushed the bird. Trap soon made another single point and was steady. The dogs were taken up at 1:20 and the heat given to Trap, Jr. I also think this an unjust decision; while the bitch had a very slight advantage at this time, the dog was going well and the heat should have been continued. I do not think that any heat should be decided in ten minutes, especially where two dogs are so evenly matched.

Coyote, a bye, ran a side heat.

Third Series.

COYOTE AND JUBILEE.

This brace was cast off in a stubble on the Wampler farm at 1:57. Jubilee pointed a bevy in the top of a fallen tree, and was steady to wing. Barker called point for his dog about the same time. When I got where I could see them Mr. Barker's dog was moving. A bevy, however, flushed in front of her. Coyote's birds went into an orchard and the other bevy to the woods. The handlers here got separated and several minutes were consumed in getting them together. Mr. Barker was instructed to bring his dog into the woods, Jubilee in the mean time being held in check. When Barker got up with his dog the judges sent them on after the scattered birds. Jubilee pointed and moved on and flushed several birds. After hunting out the woods the dogs were sent into the orchard. Coyote pointed and was slightly unsteady to shot. The judges consulted a few minutes, sent the dogs back in the stubble, but nothing more being found, the judges ordered the dogs up at 2:43 and gave the heat to Coyote. I approve this decision; Coyote was best in range and speed, Jubilee best in style. Jubilee appeared stale on his birds.

REVELER AND TRAP, JR.

This brace was put down in a large stubble field at 2:55. Trap, Jr., pointed a bevy before she had gone 75yds., Reveler backed handsomely, both dogs steady. Trap then pointed a single in briers, then he repeated the dose. He next pointed a single. Then Trap false pointed. Reveler pointed a single near a ditch, when his handler went in to flush the dog moved up. Trap pointed where a bird had been seen to flush from. Reveler pointed a single and Trap backed. Reveler then flushed a single down wind, then pointed a single, and Trap pointed a bevy, then she pointed a single, then both dogs pointed the same bevy. Trap pointed and moved on. Reveler pointed a single. The dogs were taken up at 3:30 and the heat given to Reveler. In style and action Reveler was best, but on point I liked Trap. They were about equal in range and speed. If Trap had not shown a disposition to false point she surely would have won.

Fourth Series.

REVELER AND COYOTE.

This brace was put down in a stubble on the Wampler farm, to run for first prize, at 3:38. They had gone but a short distance when both began pointing and roading feeding birds. Reveler established a point on a single and was steady. Coyote kept on roading and pointing until she flushed a bevy, and was very unsteady to wing, making several jumps after the flying birds. Reveler then pointed, nothing found. Coyote then flushed a single. Reveler then pointed a bevy and was steady to wing, then he pointed a single. The birds were followed to an orchard, where Reveler secured two points on singles, and Coyote flushed a bevy. They were taken up at 3:56 and the heat rightly given to Reveler. Coyote did very poorly in this heat, while Reveler continued his good work. This finished the work of the day.

TUESDAY.

Fifth Series.

The judges selected Trap, Jr., Jubilee and Coyote to run for the remaining prizes.

TRAP, JR., AND JUBILEE.

This brace was put down in a stubble on the Wampler farm at 8:56 A. M. The field notes of this heat were kindly furnished by Mr. B. Waters, as the judges requested the writer to accompany the bye dog Coyote in his side heat. The dogs had only gone a few yards when Trap pointed, moved up and located a bevy, and was steady to wing, Jubilee not near enough to back. Jubilee then flushed a single. The birds were followed. Trap pointed, roaded and pointed staunchly. Jubilee backed. Trap next pointed two birds. Jubilee further on was roading. Trap came up and flushed the birds. Then she pointed a single nicely and won. She was superior in range and speed. Up at 9:05.

Coyote a bye ran a side heat.

Sixth Series.

TRAP, JR., AND COYOTE.

This brace was put down in an old weed field on the C. Horn farm at 9:28. Trap soon pointed and moved on; later she pointed a bevy. Coyote came up and flushed the birds. Then both dogs made a false point, then repeated the dose. Trap then pointed a few birds, but followed her handler when he went in to flush; she was, however, steady to wing. Trap then secured two more single points and won. They were taken up at 9:48.

The judges then placed Coyote third and Jubilee fourth, So ended the Derby.

ALL-AGED POINTER STAKE.

Immediately after the Derby was finished the All-Aged Pointer Stake was started. The drawing brought out the following named dogs, which were judged by Messrs. Alexander and Jay:

CROXLILL (W. J. Smith), liver and white bitch (Croxteth—Daisy).

against

THOMASTONE (W. H. Holmes), liver and white dog (Cornerstone—Firenzi),

LASS OF BLOOMO (W. T. Hunter), liver and white bitch (Lad of Bow—Bloomo),

against

BOUNCE (G. W. Amory), liver and white dog (Bob—Sal).

DOLLY C. (Joseph Crugom), liver and white bitch (Graphic—Marguerite),

against

BERTRALDRO (J. E. Guinotte), liver, white and ticked dog (Cornerstone—Bessie Bufort).

First Series.

CROXLILL AND THOMASTONE.

Mr. H. J. Smith's liver and white bitch Croxlill, handled by Mr. T. H. Poindexter, and Mr. W. H. Holmes's liver and white dog Thomastone, handled by Mr. A. J. Gleason, were put down in an old weed field on the C. Horn farm at 10 A. M. Thomastone soon was found pointing a bevy. He retrieved nicely to Gleason's kill, Lill not near enough to back. Being sent on he pointed another bevy and dropped to shot. Sent on, Croxlill pointed a single and retrieved nicely to Poindexter's kill. The dogs were taken up at 10:09. The work done in this heat was of a very high order.

LASS OF BLOOMO AND BOUNCE.

Mr. W. T. Hunter's liver and white bitch Lass of Bloomo, handled by Mr. Frank Richards, and Mr. G. W. Amory's liver and white dog Bounce, handled by Poindexter, were cast off in a stubble field at 10:21. Lass pointed, moved up and pointed a bevy nicely. Bounce backed, both dogs steady to shot. On singles Bounce secured two points. They were taken up at 10:42. In range, speed and style Lass was much the best.

BERTRALDRO AND DOLLY C.

Hon. J. E. Guinotte's liver, white and ticked dog Bertraldro, handled by Gleason, and Mr. Joseph Crugom's liver and white bitch Dolly C., handled by Richards, were cast off in a large stubble field at 10:57 that allowed the dogs to display their range and speed, which was of a very high order; Dolly C. showing the most speed, but Bertraldro had better style, as he carried a higher head than Dolly. Bertraldro was first to find; he located and pointed a small bevy in the center of the field and was steady to wing. Dolly backed handsomely. Sent on, Dolly flushed a bevy and dropped to wing. Then she false pointed. Bertraldro then flushed a single. The dogs were taken up at 11:15.

Second Series.

The judges decided that all were good enough to run, therefore the first brace was put down again.

CROXLILL AND THOMASTONE.

This brace was put down in stubble at 11:32. Gleason soon called point; I saw the bird go, but could not see whether it was a point or a flush. The spectators coming up, flushed a bevy. The dogs both pointed and roaded where the birds had been running. Lill pointed a bevy and was steady to shot. She next flushed a single. The birds were followed to an orchard, where Thomastone pointed a single and dropped to shot. The dogs were taken up at 12:07 and an adjournment had for lunch. The dogs were taken to the E. Howe farm and turned loose in a stubble at 1:12, which was drawn blank. In another stubble field Thomastone pointed, moved up and flushed a single. Lill then pointed a single. Thomastone then pointed a single, then he flushed one. Lill then made two false points. Both dogs roaded running birds. Lill pointed a single and was steady to shot. Thomastone pointed a single and dropped to shot. The dogs were taken up at 1:39 and Croxlill declared the winner. In speed and range in the early part of the heat Thomastone was superior, but as the heat progressed he seemed to lose his courage, while on the other hand Croxill improved, and was going much better at the last than when she started.

LASS OF BLOOMO AND BOUNCE.

This brace was put down where the last brace finished at 1:42. A bevy soon flushed from weeds in near proximity to the dogs. The birds were followed, and Lass pointed a single and dropped to shot. She retrieved nicely to Richard's kill; Bounce pointed a single. Poindexter killed the bird, which fell in heavy briers, and the dog did not find it. Richards called point, but it proved to be a rabbit. The judges consulted and sent the dogs on. Lass pointed a single and dropped to wing. The dogs were taken up at 2:02 and the heat given to Lass of Bloomo. She was best in style, range and speed, and won deservedly.

BERTRALDRO AND DOLLY C.

This brace was put down in same field in which the last brace finished at 2:06. Dolly soon pointed a single near the fence. On, both dogs wheeled to a point on open ground near a pile of rails. Both handlers claimed and insisted on the point belonging to his dog. The point, however, proved to be false. The spectators then had a good laugh at the handlers' expense. Dolly then pointed in stubble and Bertraldro backed; nothing was found to the point. Quite an amount of ground was then passed over without finding any birds; but just as the handlers were leaving the field Dolly made a cast to the right about 75yds., and pointed a bevy nicely near the fence and was steady to wing; Bertraldro backed nicely. The birds were followed to a thicket, where each dog got a point. Bertraldro retrieved nicely to Gleason's kill. The dogs were taken up at 3:22 and the heat given to Dolly C. I think she was rightly placed, as she had better range and speed and was entitled to a great deal of credit for finding this bevy.

Third Series.

LASS OF BLOOMO AND CROXLILL.

This brace was put down in a cornfield at 3:37. Both dogs roaded through corn to a patch of weeds, where Croxlill located and pointed a bevy and was steady to shot. The birds were followed to stubble, where Lass pointed a single nicely. On, Lass pointed, and three birds were flushed to the point. At the same time Lill pointed a single and was steady to shot. Then Lass pointed a single. On, Lill pointed a single, then Lass got three single points and won. The dogs were taken up at 3:49. Lass was more rapid than Lill in execution and was clearly entitled to the heat.

Dolly C., a bye, ran a side heat while the other dogs were down.

Fourth Series.

DOLLY C. AND LASS OF BLOOMO.

This brace was put down at 4:04 where the last brace finished, to run for first prize. The dogs had only gone a few yards when Dolly pointed a rabbit, then she flushed a single bird in briers near a fence. Passed to a cornfield Lass flushed a single and Dolly pointed a single nicely. Then she next pointed a bevy. Lass pointed a single and flushed one. The dogs were taken up at 4:26 and the heat unjustly given to Lass of Bloomo. In this heat Dolly was quicker and more accurate in her work than Lass, found and pointed the most birds, and was in my judgment a much better dog in every respect, and was clearly entitled to the heat.

Fifth Series.

DOLLY C. AND CROXLILL.

This brace was put down in stubble at 4:32, to work on a scattered bevy that had been flushed from the corn. Dolly pointed and the birds got up all around her; she was perfectly steady to wing. The birds went to the woods and were followed. In the woods Lill pointed where a bird had been seen to flush from, Dolly backed. On, Dolly secured three handsome points in one, two, three order, and won. Lill backed all these points. The dogs were taken up at 4:42. The judges then placed Croxlill third.

ALL-AGED SETTER STAKES.

The drawing of the All-Aged Setter Stake resulted as follows:

DON'S NELLIE (A. H. Fowler), black and white English setter bitch (McDuff—Fame),

against

QUAIL (Hon. Harry S. New), black, white and tan English setter bitch (Change—Flora).

JERRY MANDAN (R. B. Morgan), black and white English setter dog (Mandan—Prairie Belle),

against

NANNIE B. (Dr. J. H. McLeod), lemon and white English setter bitch (King Noble—Queen Vashti),

LILLY BURGES (G. A. Day), orange and white English setter bitch (Gath's Mark—Esther),

against

DAN FOREMAN (H. H. Fowler), black, white and tan English setter dog (Foreman—Miss Elsie).

PRINCE LUCIFER (J. I. Case, Jr.), black, white and tan English setter dog (King Noble—Elsie Belton),

against

SAM WELLER (W. T. Hunter), black, white and tan English setter dog (Roderigo—Dixie).

WEDNESDAY.

First Series.

DON'S NELLIE AND QUAIL.

Mr. A. H. Fowler's black and white bitch Don's Nellie, handled by Gleason, and Hon. Harry S. New's black, white and tan bitch Quail, handled by Riley, were put down in a stubble field at 8:27. The field was drawn blank; worked through another field without finding. The judges ordered the dogs up at 8:54. Both dogs showed considerable speed and range.

PRINCE LUCIFER AND SAM WELLER.

Mr. J. I. Case, Jr.'s black, white and tan dog Prince Lucifer, handled by Barker, and Mr. W. T. Hunter's black, white and tan dog Sam Weller, handled by Richards, were put down in a stubble field at 9:00, which was drawn blank, passed to another stubble Prince, going down wind, flushed two birds and stopped to wing, then he moved up and pointed a single and retrieved to Barker's kill. The dogs were taken up at 9:19. In style, range and speed Prince was much the best, Sam, however, showed considerable merit and satisfied the judges that she was good enough to start again.

JERRY MANDAN AND NANNIE B.

Mr. R. B. Morgan's black and white dog Jerry Mandan, handled by owner, and Dr. J. A. McLeod's liver and white bitch Nannie B., handled by Barker, were cast off where the last brace finished, at 9:23. Passed into corn Nannie pointed, moved up and soon dropped to a point on a bevy, just as she did this Jerry pointed the same birds. Nannie retrieved nicely to Barker's kill, both dogs were steady to shot. On, in stubble, Nannie pointed; Jerry refused to recognize the point, went in ahead and pointed a single, and retrieved to Morgan's kill. The dogs were taken up at 9:32. In range and speed Nannie was superior.

LILLY BURGES AND DAN FOREMAN.

Mr. G. A. Day's orange and white bitch Lilly Burges, handled by Richards, and Mr. A. H. Fowler's black, white and tan dog Dan Foreman, handled by Gleason, were put down in stubble where last brace finished at 9:47. Dan pointed a single and Lilly backed, both were steady to wing; the dogs were taken up at 9:47. Both showed good speed, range and style.

Second Series.

The judges decided that all the dogs were good enough to start again.

DON'S NELLIE AND QUAIL.

This brace was put down in stubble on the Freeman farm at 9:52. Nellie soon pointed a rabbit. A bevy soon flushed wild and settled in another field. The birds were followed. Quail pointed a single, and was steady, then she flushed one and dropped to wing, then she pointed a single, broke shot and retrieved the bird. On, she flushed a single. On, she secured two more single points and won. The dogs were taken up at 10:26.

PRINCE LUCIFER AND SAM WELLER.

This brace was put down where last brace finished at 10:30. Prince soon pointed, and Sam backed. The point proved barren. In going through a cornfield to another stubble a bevy flushed wild and went to the woods. The birds were followed. Sam pointed a bevy, Prince flushed a single, then he backed Sam. On, Prince pointed near a thicket, nothing found. In heavy brush and briers Prince pointed a rabbit. Sam pointed a single in corn. Prince pointed, moved up and flushed a single. In corn Prince pointed, moved up and pointed again apparently on running birds, nothing was found to the point. Crossed the road to another field, Prince located and pointed a bevy very nicely, but moved up a little when Barker went in to flush, Barker shot and killed, and Prince retrieved. Part of the birds went down a draw where they were followed, Prince got two single points. On going down wind Sam got into a bevy before he hardly knew it, he dropped to a point and remained flat on the ground apparently afraid to move lest he should flush the birds, he remained in this position until Richards flushed and shot. This was a very pretty piece of work. The birds were followed, Prince made two points which proved barren. The dogs were taken up at 11:55, and an adjournment had for lunch. The dogs after lunch were taken to the Bunting farm and put down in a cornfield at 12:52, and were taken up at 1:07, and the heat given to Prince Lucifer. This was a long tiresome heat, run in the middle of the day, when it was a very hard matter to get any very brilliant work out of the dogs. In style, range and speed Prince was the best, but on game Sam was far superior. I think the heat should have been given to Sam before lunch, and as nothing was done when they were down the second time to warrant the judges in giving the heat to Prince, they should have reversed the decision or given the dogs more time.

NANNIE AND JERRY MANDAN.

This brace was put down in a stubble field at 1:05. A bevy flushed wild and went to cover. Jerry soon pointed a single in the corn and retrieved nicely to Morgan's kill. Sent on each dog got a single and behaved nicely. Then Nannie pointed, Jerry backed poorly, nothing was found to the point. Jerry then got a point on a single. Next he flushed a bevy, then Nannie flushed a single, then she pointed a single and retrieved to Barker's kill. Jerry then false pointed, then he pointed a single. Sent on Nannie pointed a single, then she nailed another and won. The dogs were taken up at 2:14. In style, speed and range Nannie was superior, and the heat was rightly given to her.

LILLY BURGES AND DAN FOREMAN.

This brace was put down in an old weed field on the C. Horn farm at 3:08. Lilly pointed near the fence, nothing found to the point. Sent on she pointed a bevy, next she flushed an outlying bird, then the bevy went. The birds alighted in a stubble and were followed, Lilly flushed a single, then she pointed and was steady to shot, she retrieved the bird to Richard's kill. Both dogs then roaded and pointed, until Dan drew up on a single and was steady to wing. Lilly then flushed a single. The dogs were taken up at 3:30 and the heat given to Lilly Burges. The running should have been continued as the work done by Lilly was not sufficiently brilliant to justify the judges in deciding the heat in her favor at this time. In style Lilly was the best, but in range and speed they were about equal.

Third Series.

PRINCE LUCIFER AND QUAIL.

This brace was put down in the same field where the other brace finished at 3:39. Prince pointed a bevy and retrieved to Barker's kill. On, Prince pointed, moved up and flushed a single. Then he pointed a bevy and Quail flushed a single. The dogs were taken up at 3:59 and the heat justly given to Prince Lucifer, who was superior to Quail in speed, range and style, and who really had her beaten from the start.

LILLY BURGES AND NANNIE B.

This brace was put down in an old weed field at 4:10,

Lilly soon pointed a bevy of feeding birds and Nannie backed. Lilly then pointed a single and was slightly unsteady to shot. Then both pointed singles and were steady to wing. Next Nannie pointed a small bevy, she then pointed a single and retrieved to Barker's kill. Then she nailed another single. The judges then consulted a few minutes, and sent the dogs on. Lilly soon located and pointed a new bevy and retrieved nicely to Richard's kill. The dogs were then taken up and the heat given to Lilly Burges. The dogs were taken up at 4:49. In style Lilly was superior, but in range and speed they were about equal. This was one of the prettiest heats of the trials.

THURSDAY.

Fourth Series.

PRINCE LUCIFER AND LILLY BURGES.

This brace was put down in a large stubble field on the Bunting farm at 7:33 A. M. to run for first prize. Lilly Burges had cut her foot very badly and gamely worked out this heat with a boot on the injured member. Lilly soon pointed, moved to locate the birds, when Prince came in ahead and flushed the bevy. On, Lilly soon located and pointed another bevy nicely and was steady. Prince next pointed and Lilly backed; nothing was found to the point. Lilly next pointed a rabbit. Prince then made three false points. On, Lilly roaded and pointed another bevy and retrieved to Richard's kill. The dogs were taken up and the heat and first money rightly awarded to Lilly Burges.

Fifth Series.

PRINCE LUCIFER AND NANNIE B.

As Mr. Barker was the handler of both of these dogs, at his request Mr. A. J. Gleason kindly assisted him in handling the dogs. They were cast off in the same field at 7:57, to run for second money. Prince soon pointed and Nannie backed. Nothing was found to the point. Then he repeated the dose. Nannie pointed near the fence and Prince backed; nothing found. The dogs were now taken to the woods across the railroad and put down to find some scattered birds. Prince soon pointed and Nannie backed; the point proved false. On, Nannie pointed a bevy nicely and Prince backed; both dogs were steady to shot. Prince then pointed a single and Nannie backed. Then the dogs pointed and moved on. On, Prince pointed, moved up and the birds flushed. The dogs were then, at 8:40, taken up, and the heat unjustly given to Prince Lucifer. Prince had more style, speed and range than Nannie, but his work on game was very unsatisfactory; he was very unsteady at times, and his chronic false pointing alone was sufficient to have convinced the judges that he was inferior to Nannie B. She should have had the heat. The judges then placed Nannie B. third.

P. T. MADISON.

[The summaries of the stakes were published in last week's issue.]

THE A. K. C. CONSTITUTION.

Editor Forest and Stream:

A note to Secretary Vredenburgh procured from him by return the necessary information whereby it is possible for me to set forth the proposed changes in the A. K. C. constitution and by-laws, in a form which will be readily understood. I have taken from the *Kennel Gazette* the proposed constitution and by-laws as given in the October issue, giving in italics the amendments and within brackets what is proposed to be omitted from their present reading.

In the comments which follow the altered articles and by-laws, I will draw attention to what may seem trivial matters, using throughout the same phraseology where there is any repetition of phrases. I can see evidence that such was Mr. Vredenburgh's desire, and I feel he will accept all such suggestions in the spirit in which they are offered—a desire to make the constitution better perfect. Beyond these, there are suggestions caused by a difference of opinion, and others with a desire to make Mr. Vredenburgh's amendments more clear. It is possible, and I think probable, he may coincide with some of these suggestions and alter his amendments, giving notice thereof in time to have them acted upon at the December meeting. In other cases he will differ from me, I have no doubt, but where he concludes that there is reasonable grounds for a difference of opinion among the delegates, it might be well for him to have a substitution offered either in his own name or by some other delegate, and give due notice thereof.

ARTICLE I.

The name of this association shall be "The American Kennel Club."

ARTICLE II.

The object of this association shall be the protection of the mutual interest of its members. *It shall admit such clubs or persons as it may deem desirable, and shall exclude such as it may consider objectionable. It shall adopt and enforce* [and the adoption and enforcement of] such rules as shall tend to *the* uniformity, and *to* the proper conduct of *individuals interested in the breeding or sale of dogs, also to the proper regulation* of bench shows and field trials [and the publication of]. *Furthermore it shall publish* an official Stud Book and *a* Kennel Gazette.

Taking the word "persons" to refer to associate members and only as such can individuals be admitted, delegates being otherwise provided for, it is to be noted they are not "admitted" by the club, but by the indorsement of the two presidents, the use of the second "it" in the italicised sentence is not suitable. The second part of that sentence "*and shall exclude,*" etc., is tautological, because if they are not desirable and admitted they are as a matter of course excluded. I would suggest this reading: "*It shall admit such clubs to membership or persons as associate members as may be deemed desirable.*" And stop there.

The next sentence I criticised last week upon its construction alone, and I would now further say that it is to my mind questionable policy to say, "or sale of dogs." It sounds like legislating for dog dealers. But I will not press that point and content myself with the construction of the sentence which I think can be very materially improved by being made to read as follows:

"It shall adopt and enforce such rules as shall tend to uniformity in the regulations governing bench shows and field trials, and to the proper conduct of persons interested in the exhibition, breeding or sale of dogs."

I suppose it is unnecessary for me to add that it is quite out of place for the A. K. C. to presume to adopt and enforce field trial rules with but one such club a member and all the others with different systems regulating their trials and taking no notice of the A. K. C. I would like to see the words "field trials" omitted altogether from the article under consideration, as assuming a power the A. K. C. has not and never will have.

ARTICLE III.

All regularly organized clubs or associations in the United States or British-American Provinces which have held bench shows or field trials or are formed for the purpose of holding bench shows or field trials, or for the improvement of any breed of dogs, and associate members as hereinafter provided, shall be eligible to membership.

ARTICLE IV.

Sec. 1. The regular annual meeting of this association shall be held [during the spring of the] *on some day in February, March or April of each* year at such time and place as shall be designated by the president; thirty days' notice whereof shall be given and published in the Gazette.

Would it not be well to specify that the annual meeting be held on the Thursday of the New York show week or failing the holding of such show during the months of February, March or April, then at such time and place during those months as shall be designated by the president, thirty days notice, etc. It is always advisable to have a definite date named if possible and there is none so suitable as Thursday of the New York show week. I think all will agree on that point

Sec. 2. Each member of the association shall have the right to be represented by one delegate duly authorized and his appointment certified to by his club secretary, excepting the delegates of the associate members provided for in Article XI. Before such delegate[s] shall be entitled to qualify in th[is]e association [they] *he* must be accepted by *the association or its* executive committee.

The suggestion for Section 2 is to insert after the word represented "at the meetings of the association or of the executive committee." This will make it read in unison with the concluding clause. I congratulate Mr. Vredenburgh for seeking to remove that mammoth absurdity, that the executive committee was bigger than the association, and could say who should be permitted to legislate for it. It was one thing I never ceased to kick against.

Section 3 might, perhaps, be amended by adding after the word association "or of executive committee." In opposition to this it may be said that Article IV. refers only to association meetings, but on looking at Article V., which treats of the executive committee and its meetings, it will be noted in Section 5 that "the association" is dragged in there with much less license.

I think a section might well be added to Article IV. providing for special meetings by request. Indeed, that Section 5 of Article V. would be much better placed under Article IV., just as it is with this very important exception, that the request be signed not by three only, but by whatever number constitutes a quorum. A call of this kind is imperative, and three members could, if so minded, keep the association in continual hot water with special meetings. Then it will be noted that there is no limit upon the president, and if he was doing the kicking act, he could set the whole association at defiance in this way. Suppose at the December meeting some action is taken by a small majority of the delegates present which is distasteful to the association at large, but agrees with the president's views, he could do this—upon a legal request being made for a special meeting, he could name Feb. 22 as the date for it. Now the plain intent of the rule is that a meeting is to be called within about ten days, in other words, that the president at once notify the secretary to call such meeting, giving ten days' notice. But the rule does not say so, and Mr. Vredenburgh should make the necesary change by specifying a limit of say fifteen days, which the president must not exceed.

Sec. 3. At any special or regular meeting of this association, nine members shall constitute a quorum.

If the foregoing suggestions are accepted it would be well to add after the word association "or of the executive committee." But anyway I would call attention to a quorum of nine being necessary for an association meeting, while an executive committee meeting can be run by seven members (see Section 6, Article V.).

ARTICLE V.

Sec. 1. The management of this association shall be intrusted to an executive committee consisting of one delegate from each club and the delegates of the associate members: and no delegate shall represent more than one club.

Sec. 2. The association shall elect a president and vice-president.

Sec. 3. The executive committee shall appoint a secretary-treasurer, who shall, under the direction and supervision of the [executive] *advisory* committee, perform the duties pertaining to the office.

Compare this altered rule with Section 1 of Article VII., and it will be seen that they do not agree. They should be made to do so.

Sec. 4. Regular meetings of the executive committee shall be held at the time of the annual meeting, and quarterly thereafter, on such dates as may be designated by the president, twenty days' notice of which shall be given tomembers.

Sec. 5. The president may call a special meeting of the executive committee *or of the association* at such time as he may deem expedient; and he shall call a special meeting upon the written request of three members. [Note. This clause now has the words "call a special meeting" at the end.] At [such] special meetings no *other* business shall be transacted [other] than that for which [such meeting shall be] *they were* called; and *such business shall be* specified on the calls, [ten days' notice of which shall be given] *which shall be sent out ten days previous to the time appointed for the meetings.*

Sec. 6. At any regular or special meeting of the executive committee seven members shall constitute a quorum.

These two sections are discussed in connection with Section 2 of Article IV.

ARTICLE VI.

The president shall preside at all meetings of this association, [and] of the executive committee, *and of the advisory committee.* [He shall have power to call a special meeting of the association at any time, and must do so on the written request of five members; ten days' notice must be given of such special meeting.]

The vice-president shall in the absence of the president perform the duties pertaining to that office.

ARTICLE VII.

Sec. 1. The secretary-treasurer shall keep records of all meetings of this association, also of the executive committee and of the advisory committee: and he shall issue calls for such meetings. He shall keep a roll of membership, and take charge of all papers belonging to the association, he shall, moreover, collect all moneys belonging to the association, and dispense the same under the direction of the executive committee. Furthermore he shall transact all other business, and fulfill all further duties of his office, or others which may be directed by the executive committee.

[The old rule read as follows: "The secretary-treasurer shall keep records of all meetings of this association and the executive committee, make all calls for such meetings, take charge of and keep a roll of membership, and of all papers belonging to the association, and shall collect all moneys belonging to the association, and dispense same under the direction of the executive committee, and do any other business proper to his office, or as directed by the executive committee."]

This section is sufficiently referred to in connection with Section 3 of Article V.

Sec. 2. He shall have the supervision of the publication of the stud book and Gazette, subject, however, to instructions from the committees responsible for said publications.

There is no Gazette committee, and in that publication the secretary can execute his own sweet will. There ought to be one, however.

Sec. 3. His remuneration from the association shall be fixed and determined upon by the advisory committee.

This I do object to most strongly on principle. It is not the province of the advisory committee to decide upon any one's salary, but of the executive committee, if not of the association itself. The advisory committee has no control whatever of the finances. It is simply a committee to take charge during the intervals between the executive committee meetings, and all its actions must be approved by the executive committee. It is not as if there was any secret about this salary. It appears in the annual statement of accounts, is made public to the world at large, and it is so entirely foreign to what is customary in all associations to allow an *ad interim* committee, as it may be called, to decide such a question, that I hope Mr. Vredenburgh will change this article of his own volition.

Sec. 4. He shall be required to execute a bond of indemnity in favor of the president of the association to an amount not less than $2,500 before assuming office. Such bond must be satisfactory to the president of the association.

This section I referred to last week, and then said that the bond should be satisfactory to the executive committee as well as to the president. Indeed, it is not necessary to be satisfactory to the president at all, for there is no hold upon him if he accepts "straw bail." It is not a business proposition at all. I think the bond should be for $5,000, for if I mistake not there is often more than $2,500 in the treasury. I don't see why the association does not of itself pay the premium on an indemnity bond for the proper amount to be given by one of the companies which does that kind of business.

ARTICLE VIII.

Applications of clubs for membership shall be made in writing to the secretary of th[is]e association, accompanied by a copy of the applicant's constitution and by-laws, a list of officers, and [first] a full year's dues, and an election shall be held at the next meeting of the executive committee, provided said application shall have been filed with the secretary at least ten (10) days previous to said election. It shall require two-thirds of members voting to elect.

ARTICLE IX.

Sec. 1. The executive committee shall have power by a two-thirds vote to suspend for a stated period or to expel any club or delegate *or individual* whose membership it may deem prejudicial to the welfare of the association.

I take it that "individual" means an associate member, for it cannot mean anything else and mean anything at all. If it does, then it would be well to use the words "associate member," and if it doesn't, then strike "or individual" out.

Sec. 2. *Any person may, in the interests of the association, prefer charges against another person before the American Kennel Club. Or charges may be preferred before said club when the conduct of any individual has been, or is, questionable, provided such charges are made in writing. Except in matters pertaining to registration, which must be heard in the first instance by the stud book committee, all such charges shall be heard at the first opportunity by the advisory committe; from whose decision an appeal may be taken to the full executive committee.*

No person shall, however, be disqualified or deprived of any privileges without due notice, and formal charges with specifications have been made and an opportunity has been given him to be heard in his own defense. The American Kennel Club will not recognize any ex parte proceedings on the part of any club.

The last sentence of the first paragraph is ambiguous, for it may be stretched to mean that after the stud book committee had decided a case, the advisory committee took it in hand, passed upon it, and then it went before the executive committee. Such is not the case, the stud book committee being coequal in power with the advisory and has dealings direct with the executive committee. To render this distinction clear, it would be well to make a change such as this after the words "made in writing." All such charges, except matters within the province of the stud book committee to investigate, "shall be heard at the first opportunity by the advisory committee," etc.

I am at a loss to understand what the concluding sentence means. "The American Kennel Club will not recognize any *ex parte* proceedings on the part of any club."

In this section the usual phraseology of "this association" is departed from, and "the American Kennel Club" used in its place.

ARTICLE X.

Sec. 1. The annual dues of clubs shall be $10, payable [at] *on* or before Jan. 1. Failure to pay said dues shall *be to* forfeit all right to representation in *this Association, and* such club [and] may be suspended or dropped from the roll.

Sec. 2. The executive committee shall have the right to make one assessment during the year not to exceed $10.

The old Section 1 was about as tough a piecee of ungrammatical English or printer's blunders as was ever strung together. The new one is a slight improvement. I don't know what "be to" wants in there at all, unless the sentence is altered to read: "The result of failure to pay such dues shall be to forfeit," etc.

ARTICLE XI.

Sec. 1. Any person *who is* vouched for in writing [to the secretary of the American Kennel Club] by not less than two members of any club a member of this association, or by two associate members, shall, upon payment of $5 annual dues, *to the secretary of the American Kennel Club* and the indorsement of his application by the president[s] of the American Kennel Club [and] *or the president* of the associate members, become an associate member and be announced as such in the next issue of the Kennel Gazette.

Sec. 2. An associate member shall be entitled to the Kennel Gazette and Stud Book for [one] *the current* year for which his dues are paid, [and] *also* to two free registrations in the Stud Book *during said year.*

Sec. 3. The annual dues of $5 shall be payable to the secretary of the American Kennel Club, on the first of January of each year, and any person whose dues are not paid on or before Jan. 20 shall thereby forfeit his right to be included in the list of members eligible for election to office and *entitled* to vote for officers for the ensuing year; and if his dues shall remain unpaid at the next annual meeting of the associate members his name [shall] *may* be stricken from the roll, provided, however, that upon remitting the $5 dues with an application of membership he shall be reinstated upon the indorsement of his application by *either of* the two presidents as hereinbefore provided.

Sec. 4. The annual meeting of the associate members shall be held on the day preceding the annual meeting of the American Kennel Club. At [which] *said* meeting the reports of the retiring officers shall be presented, which, together with a copy of the official minutes of the meeting, shall be filed with the secretary of the American Kennel Club.

Sec. 5. The officers of the associate members shall be a president, *a* vice-president and *a* secretary. The president shall be a member of the advisory committee. The associate members shall have the right to be represented by three delegates; to which position the officers may be elected. And for every one hundred members over three hundred they shall elect an additional delegate.

[Sec. 6. No associate member shall be eligible to hold office or act as delegate who is a member of any club or member of this association other than a specialty club.]

Sec. 6. That all elections shall be by mail vote, and the annual election of officers and delegates shall be conducted as follows:

On Jan. 21 of each year the secretary of the American Kennel Club shall forward to each and every associate member in good standing a printed list of all members eligible to hold office, together with an addressed envelope for return, on which the word "vote" is legibly printed or written. The members receiving [such] *said* printed list shall mark thereon, *in such manner as may be requested*, [his] *their* choice for president, vice-president and secretary, and the delegates to which the [club is] *associate members are* entitled [in such manner as may be indicated] and return the same in the envelopes provided.

Fifteen full days after the mailing of such [slips] *printed list* to the associate members, the secretary of the American Kennel Club shall, in the presence of [the] presidents of the American Kennel Club and associate members, or such persons as [either of them] *they* may deputize to represent [him] *them*, open all such mail votes; and the result of the [election] *counts* shall be certified to by the three officials present.

Immediately upon the signing of such certificate the secretary of the American Kennel Club shall notify [each and every person of his election] *all who have been elected;* and *shall* also send [notice thereof] *the results of the ballot* to the president of the associate members.

In the case of a tie vote for any office, the tie shall be decided by a majority vote of the members present at the annual meeting; and in [the] event [of] an officer [elected declining] *declines* to serve, the member receiving the next highest number of votes shall at the annual meeting be declared elected.

[Votes for] *The election of* additional delegates *to which the associate members shall be entitled, as hereinbefore provided, shall be taken as soon* as each *additional* quota [of one hundred additional members] is filed; *and it* shall be conducted [on the same principle as the annual mail vote for officers and delegates, the vote being taken as soon as the one hundred additional members have qualified] *by mail vote, the same formalities being observed as when the annual election of officers and delegates takes place. Identically this same method shall be employed in electing delegates to fill vacancies which occur among the officials or delegates.* [The same rule shall also hold good in event of a vacancy in the ranks of officers or delegates.]

There are a great many alterations in this long article, but the vast majority are simply changes in construction of the sentences, some of which are improvements, while others of doubtful expediency. These may be well left to the judgment of the delegates who will pass upon them. There are others, however, which demand careful consideration, and these I will now treat.

The first occurs in Section 1, which at present provides for the indorsement of an application for associate membership by both presidents. Mr. Vredenburgh's proposition is that the indorsement of either one is sufficient. Let us see how this will work. An application in proper form comes to Mr. Vredenburgh, and what will he do with it? Naturally he will refer it to Mr. Belmont. Should that gentleman know of no reason for doing otherwise he will indorse the application, and thereby the applicant becomes a member. If Mr. Belmont declines to indorse it, for some reason to him sufficient, it then goes to Dr. Perry, and he is placed in a somewhat peculiar position. He is really asked to check the action of the A. K. C. president; and suppose he sees no reason for following Mr. Belmont's lead, the applicant becomes a member. Now, it is possible that Dr. Perry may know of something detrimental to an applicant's character that Mr. Belmont does not, but he can have no say in the matter, because by Mr. Belmont's indorsement he has no opportunity to take action. Practically it makes Mr. Belmont the autocrat of the situation. Not that I consider he would abuse his power, but he might err from lack of knowledge; and I am decidedly of the opinion that the rule as it now is is by far the best and safest.

Section 2 is improved by making it clear that the privileges of associate members for each year are for that year only, and that free registrations are not accumulative and can be used in any subsequent year.

Section 3 contains two important changes. The first is the substitution of "may" for "shall" in regard to striking delinquent members' names from the roll. I feel certain in my own mind that this is not advisable. The only reason in its favor, and it is a poor one, is that the present rule would show a shrinkage in the list of members at the beginning of each year. I don't think the associate membership needs any such fictitious bolstering as that. A member now gets $7 for his annual dues of $5, and no one will care about missing that. It is suficient of itself to attract prompt payment, particularly as the early numbers of the *Gazette* are the most valuable of the year, on account of the show reports. The present wording is much more likely to bring about prompt settlement of the annual dues than any leniency on the part of the club. Then again the fact of being an associate member in good standing is of itself something in the way of indorsement, and the A. K. C. should not so indorse tardy subscribers.

The old Section 6 is stricken out entirely. I do not know that I am so specially pledged to this as I formerly was, but I do object to one thing, and Mr. Vredenburgh will believe me that I am not aiming at him individually, when I say it is in my opinion decidedly out of place for a salaried official of the club to be a delegate, such as he is for the associate members. It is not necessary to expatiate on this point, for the objections must be too obvious to all.

In the fifth paragraph of Section 6 there is surely something omitted from Mr. Vredenburgh's proposed reading when it says, "and in event an officer declines," etc.

ARTICLE XII.

Sec. 1. An advisory committee of five [of which the executive officers shall be ex-officio members, shall be appointed at each annual meeting, which shall have power to act upon cases of protest and appeal pending the final action of the executive committee], *consisting of the president and vice-president of the association, the president of the associate members and two other delegates of the association shall be members, shall be elected at each annual meeting.*

Sec. 2. *It shall have the power to act upon all cases of protest and appeal; to investigate and act upon all charges preferred against active or associate members, or individuals; and shall be vested with the powers of the executive committee during the interval between the regular quarterly meetings of the association, subject, however, to the final action of the executive committee.*

Some time ago I wrote a screed about my having been asked to go through the constitution with a view to making it more perfect, and I then stated that I had concluded not to touch it, because I believed in a change I felt was too radical for adoption. It was to transfer the entire management of the club to a committee of say nine, of which three the senior should retire at each meeting. One reason for this suggestion was the time wasted at executive meetings, owing to the number of delegates present.

A caustic correspondent in a contemporary said something about my having been aptly described as a brake that always slipped. I don't seem to have slipped so very much in this case, for here we have the principle if not the entirety. It is proposed to have the advisory committee of five do the duty for which I suggested the committee of nine. Certainly I will not now object to the principle of the change, but I am not in favor of the abridged committee. Five is too small a number to act in such an important capacity, for we must remember that of that number three is a quorum, so that two men may thus legislate for the whole club. And there is one other very faulty part of this article, where in Section 2 it is provided that the advisory committee shall be clothed with all the power of the executive committee *ad interim*, but nevertheless their rulings are subject to the indorsement of the executive committee.

If we are giving power to a committee, let us give the power freely and without reserve. This we can safely do if we make the committee sufficiently large to be truly representative. Let me offer this suggestion, make the advisory committee the same number as the quorum of our association meeting, strike from it as an officer *ex-officio* the vice-president and make the associate members' president the vice-president of the committee, and elect all the other members.

With such a committee to conduct the association, the executive committee could be dispensed with. The club might hold semi-annual meetings as a legislative body and elect members for the committee. My idea, that I previously dilated upon, was to have rotation in office without election. That is, starting with the clubs by age, let the first six provide members in addition to three *ex-officio*, and of these let three retire at stated periods, the vacancies to be filled by the next three clubs who desire representation on the committee.

The present proposition is not adequate enough. For instance, take the case of Dr. Cryer's appeal against the Cincinnati Club ruling. The advisory committee decided in favor of Dr. Cryer, and Mr. Vredenburgh so advised him and returned his $10 sent with the appeal. Now, under the present rule, and also under the proposed one, Mr. Vredenburgh was wrong, for there had been no final action of the executive committee. The power the advisory committee now has and will have is really an absurdity, and I think all who read over Article XII. carefully will agree with me. Both have the same faulty terminal sentence.

ARTICLE XIII.

The business management of the [A. K. C.] Stud Book shall be subject to the direction of a committee of three, elected by a majority of the delegates present at the annual meeting of the club, and shall render account to the association annually at such meeting.

As a member of the Stud Book committee I say that this gives us quite too much power. We have to decide questions affecting persons' standing, and ought to report more frequently and subject to approval by some power. At present we can disqualify a person and he must remain under the ban for a whole year perhaps, and until the committee makes its annual report. Our powers and duties on that point ought to be clearly specified.

ARTICLE XIV.

This constitution and the by-laws and rules may be revised or amended [after] *provided* thirty days' notice has been given to all members of such proposed *revision or* amendment, by a two-thirds vote at any meeting of this association where at least two-thirds of the members are represented, or by obtaining [a ratification] within thirty days, through the secretary of the club, of at least two-thirds of the members of this association, *a ratification* of any enactment of any revision or amendment of the constitution, by-laws or rules, duly proposed and carried by a two-thirds vote of any meeting of the association.

In this article "this association" is used in place of "the association," the changed phraseology everywhere else.

BY-LAWS.

Sec. 1. The following order of business shall be observed at the meetings of this association:

1. Roll call.
2. Reading minutes of previous meeting.
3. Secretary's report.
4. Treasurer's report.
[5. Report of executive committee.]
5. Election of officers and committees.
6. General business.
7. Adjournment.

Sec. 2. The following order of business shall be observed at the meetings of the executive committee of this association.

1. Roll call.
2. Reading of minutes of previous meeting.
3. Secretary's report.
4. Treasurer's report.
5. Report of standing committees.
6. Report of special committees.
7. Unfinished business.
8. Election of [officers] secretary-treasurer.
9. New business.
10. Adjournment.

Sec. 3. In the event of an appeal from an order of suspension imposed by a show committee, *or by the president, or by the advisory committee*, it must be heard at the next regular or special meeting of the executive committee, and any person who is proved to the satisfaction of the committee to have been guilty of any fraudulent or discreditable conduct [in connection with dogs, dog shows or field trials] *of any kind* may be declared [incapable of competing for or winning] *ineligible to compete, or win* a prize at any show held under the rules of this association for such period as the executive committee may decide.

All complaints or disputes among members of this association shall be decided by those members of the executive committee [as] *who* are in no way connected with the clubs interested.

Sec. 4. The president shall appoint from the executive committee [a committee on credentials, whose duties shall be to investigate the qualifications of all candidates for membership, and report the same to the executive committee; he shall also appoint] such [other] *special* committees as shall be found necessary.

Sec. 5. These by-laws may be altered, amended or suspended *without notice* at any regular meeting of the executive committee by two-thirds vote of the members present [without notice], or at any special meeting on notice.

In Section 3 of the by-laws it will be seen that it is proposed to go beyond any connection with dogs in investigation regarding power to compete. It is a pretty wide field that, to throw open to be followed simply by the possibility that a man "may be declared ineligible." Better stick to the old limit, and add *shall* be declared ineligible.

All of which is respectfully submitted for the careful consideration of any one who has the welfare of the A. K. C. at heart.

J. W.

CENTRAL FIELD TRIAL ENTRIES.

FREE FOR ALL, FOUR HOUR HEAT STAKE.

CHANCE (J. M. Avent), Roderigo—Bo Peep.
RIP RAP (Charlottesville Field Trial Kennels), King of Kent—Hops.
NOBLE COUNT (S. A. Elliott), Mac D.—Lady Mac.
ROWDY ROD (Elmwood Kennels), Roderigo—Juno A.
HARRY C. (Elmwood Kennels), Roderigo—Countess House.
GATH'S MARK (H. Hulman, Jr.), Gath—Gem.
PITTI SING (Thos. Johnson), Baron Doveridge—Norah.
NANNIE B. (J. A. McLeod), King Noble—Queen Vashti.
REVERDY (P. Henry O'Bannon), Gath's Mark—Rosa.
LILLY BURGES (Frank Richards), Gath's Mark—Esther.
KING'S MARK (B. Ridgway), King Noble—Belle Belton.
DAISY'S HOPE (W. W. Titus), Gath's Hope—Daisy F.
Twelve entries; eleven English setters and one pointer.

C. H. ODELL, Sec. and Treas.

BRUNSWICK FUR CLUB.

THE second annual field trials of the Brunswick Fur Club began at Brunswick, Maine, on Nov. 10, and continued till the afternoon of the 15th. There were about one hundred members and guests present, and 18 foxhounds, 4 puppies and 4 fox beagles were entered for competition in the various classes. The weather proved fine throughout the entire week, and the large attendance and fine hounds entered made the trials the most brilliant meet the club has held. Besides the money prizes awarded in the general classes, several special prizes were contested for and some of them won.

The judges were Mr. H. E. Burkman, chairman; Mr. E. L. Toothaker, Mr. Evan H. Bragg, Mr. Cohan Jordan and Mr. Edward Thomas. The judging was a most difficult task, owing to the quickness with which the foxes sought their holes and the dense cover in many parts, but the chairman managed the computing of averages to the satisfaction of all.

The puppy class was run off on Tuesday, and all of them worked well. One of them made a strike and drove for a short while, but lost before the others could pack in. The rabbits were plentiful and tempting to the youngsters, but they behaved very well notwithstanding.

On Wednesday the trial of the general classes began, but though likely covers were drawn one after another till nearly dark, no fox was found. Thursday another section of country was drawn and four starts were obtained, all the hounds getting a chance at reynard, so that judges and members were flying in all directions taking notes. Two of the foxes were run to earth before ten o'clock, one was lost, and the fourth was driven until nearly four in the afternoon.

Friday two starts were obtained on the same grounds drawn Thursday. A few of the hounds went inland after one fox, but the great majority of the pack were put on together after a traveling fox, and the greatest race of the trials was had. This fox ran eight miles in a straight line through fields where the race could be seen from the highway, and some who had buggies and wagons ran their horses the entire distance to witness the chase. The fox finally went to earth to save his brush. In this race New England, Avent and Wild Goose hounds were about equal in numbers and three fox beagles filled out the pack. They were all in it, beagles as well as foxhounds, and packed so well that they might have been covered with the traditional blanket.

Saturday morning the trials closed at 10 o'clock, and a short run was obtained before that time. The short time reynard could be induced to stay out of his den made it impossible to award prizes in the endurance class, the special medal for endurance or the American Field cup. The prizes awarded were as follows, viz.:

GENERAL CLASSES.

Hunting.

1. Dr. A. C. Heffenger's black, white and tan dog Joe Forester.
2. Mr. R. D. Perry's tan and ticked dog Major O'Rourke.
3. Mr. A. McDonald's black, tan and ticked bitch Nelly Ripley.

Trailing.

1. Mr. M. Thomas's black and tan dog Bugle.
2. Dr. A. C. Heffenger's black, white and tan dog Joe Forester.
3. Mr. A. McDonald's black, tan and ticked bitch Nelly Ripley.

Speed.

1. Mr. R. D. Perry's black and tan dog Clinker.
2. Mr. A. McDonald's black, tan and ticked bitch Nelly Ripley.
3. Mr. M. Thomas's black and tan dog Bugle.

Barking.

1. Mr. A. McDonald's black, white and ticked dog Diamond.
2. Dr. A. C. Heffenger's black, white and tan dog Joe Forester.
3. Mr. A. McDonald's black, tan and ticked bitch Nelly Ripley.

Style.

1. Dr. A. C. Heffenger's black, white and tan dog Joe Forester.
2. Mr. R. D. Perry's black and tan dog Clinker.
3. Dr. A. C. Heffenger's black, white and tan dog Drive III.

Foxhound having highest general average winning silver medal of club: Dr. A. C. Heffenger's black, white and tan dog Joe Forester.

Special prize, steel engraving, "A Promising Litter," awarded to Southern bred foxhound having most speed and endurance; to be held till next trials: Mr. R. D. Perry's black and tan dog Clinker.

PUPPY CLASS.

1. Mr. W. Russell's black and tan dog Fleet.

Second and third withheld.

FOX BEAGLE CLASS.

1. Mr. W. N. Walling's black, white and tan bitch Belle Dimond.
2. Mr. W. N. Walling's black, white and tan dog Little Drive.
3. Mr. W. N. Walling's black, white and tan bitch Lucille.

PISCATAQUA.

CANADIAN TRIALS.

THE International Field Trials at Chatham, Ont., passed off pleasantly, the order of running and awards being as follows:

THE DERBY.

Jos. Kime's Lady Spot (setter) against A. P. H. Lonsdale's Tyke (pointer).

T. G. Davey's Westminster Drake (pointer) against A. P. H. Lonsdale's Phœness (setter).

Sheriff Mercer's Mingo II. (setter) against A. P. H. Lonsdale's Ian (setter).

A. P. H. Lonsdale's Beacon (pointer) against Thos. Johnson's Upton (pointer).

Jos. Kime's Lady Patch (setter) against Dodds & Mather's Dart (setter).

J. H. Hilsenden's Dan O'Connell (Irish setter) against Forest Kennels' Sport (setter).

The awards were made in the following order:

First, Ightfield Tyke; second, Mingo II.; third, Ightfield Phœness; fourth, Ightfield Upton.

ALL-AGED STAKE.

W. B. Wells' Matane (setter) against Thomas Gutridge's Belle of Kent (setter).

A. P. H. Lonsdale's Ranger (setter) against Thos. Johnson's Blithe (pointer).

Dr. Totten's Carry J. (setter) against T. H. Nelson's Clinker (setter).

Dr. Totten's Speculator (setter) against W. B. Wells' Dinah C. (setter).

A. P. H. Lonsdale's Dick (pointer) against J. L. Campbell's Gordo (Gordon setter).

F. W. Eddy's Maggy Bee (setter) against W. B. Wells' Cambriana (setter).

R. G. Harvey's Breezo (pointer) against T. G. Davy's Canadian Jester (setter).

A. P. H. Lonsdale's Deuce (pointer) against John Mercer's Mingo II. (setter).

A. P. H. Lonsdale's Rosa (setter) a bye.

The awards were made in the following order: Ightfield Dick first, Ightfield Rosa second, Ightfield Blithe third, Ightfield Deuce fourth.

A DAY WITH THE RADNOR HUNT.

WHAT old memories the above heading stirs up. Runs with the old Radnor Hunt on the borders of South Wales, when Col. Price filled the saddle as M. F. H.; days when my joints were more lissome and tumbles were taken as very ordinary contretemps, and not as now with fear and trembling. Like many other things a tumble is a good deal worse in the anticipation than in reality. But to my tale. Mr. Harrison's kind invitation could not be withstood despite the fact that several years of city life, though it had not dulled my enthusiasm, had made me somewhat dubious as to what sort of a caper I should cut in the hunting field. Saturday dawned like a veritable hunting morn, and though I failed to feel the southerly wind, the cloudy skies were all there and proclaimed a day that would help to hold the scent. One of that prince of railroads', the Pennsylvania, express trains soon whirled me to the city of Brotherly Love. On the way, early as it was, the shooters were out in force, taking advantage of the opening day, to fill their gaping game bags with the frolicsome Jersey quail, it being the close season for mosquitoes.

Arrived at the Quaker City, I thought a visit to our contemporary, the *Fanciers' Journal* and brother Haldeman, would nicely fill the hour till train time. With a review of "the men of dogdom" and their dogs, current topics which are exciting the minds of many members of our kennel world, the hour seemed shod with wings and flew all too fast, for what a lot of dog chat two men can cram into sixty minutes, to be sure.

A short run past imposing villas and pretty suburban villages brought me to Chestnut Hill, where, calling cabby, he soon whirled me to Mr. Harrison's world-renowned farm on the "Hill." World-renowned it is, for who has not heard of the giants of colliedom, Dublin Scot, Scotilla, Flurry II., The Squire, Christopher, Maney Trefoil and Roslyn Wilkes. A hearty welcome was received from Mr. Harrison, who, got up in correct fox hunting toggery, even down to the safety pin in the tie, was flitting here, there and everywhere, doing the honors of the occasion and making every one feel at home and eager for the fun in store. Like a true dogman I gravitated instinctively to the handsome kennels and friend Jarrett. After a look at some of the future cracks, daughters and sons of the kings of colliedom on both sides of the water, a move was made to don a more horsey rig, and all being ready we adjourned to the bounteous lunch table and tried to infuse a little Dutch courage into our quaking limbs through the medium of lobster salads and other things. Honored be the man that invented the hunt breakfast, no one knows the many quaking spirits it has served to soothe and brought that effervescent pluck which lasts till the music of the hounds in full cry serves to keep the courage up to boiling point, when five-barred gates seem obstacles bereft of all significance.

Mounted on a young horse that our host had kindly put at my disposal, I took a look around at the gallant assembly. Shades of William Penn! Had he come to earth again and viewed the goodly gathering of handsome women, men in pink, and horseflesh which could hold its own for clever looks the world over, he would indeed have stood aghast and thought that after all he had not lived in vain. Several four-in-hands, tandems and numerous stylish turnouts filled with bright women, added materially to the beauty of the scene, and this combined with one of the most charming views of some twenty miles of distant country, made a scene that in after years will revert to my mind as one of the most beautiful it has been my lot to see. The master, Mr. Madder, horn in hand, followed by eager hounds, came trooping out of the yard, and followed by a dozen men in pink, cast round a field above the farm house. Then a start was made at 3:05 P. M. for a field on Mr. Morris Bisbing's farm just above the home farm, from which the course had been laid. This was seven and a half miles of fine galloping country, straight across to another hill, on the summit of which Mr. Fell's mansion could just be discerned in the hazy distance.

Mr. Bisbing's farm, where the hounds cast off, commands one of the finest views around Philadelphia, and from this point scores of people were able to watch the run from start to finish. Mr. Bisbing has several of Mr. Harrison's collie pups at walk.

About forty horsemen assembled for the start and half of them being in pink, the scene was indeed a stirring one. Away the hounds trotted, and making a cast, they soon struck the scent, which was the litter of a bed of foxes owned by the Radnor Hunt at Bryn-Mawr. The hounds were fresh, and hounds and riders started off at a lively pace. Visions of cutting out the field flashed across my excited brain; but alas! the best laid plans, etc., the very first fence saw my vaunted aspirations dashed to earth, as well as horse and self. If the horse had risen to the occasion with the same enthusiasm as myself all would have been well—but he didn't, and over and over we toppled, but an indulgent providence evidently had its eye on me, and scrambling up from among the abbreviated cornstalks, I tried to reach the horse before he got up, but I found it as much as I could do to catch my breath, never name the horse, which went off in wild career after the fast disappearing crowd of huntsmen. The ever proverbial boy caught my steed, and quickly mounting I found that there is no truer saying, that a stern chase is a long one, and two fields in a drag hunt is a good bit of ground to make up. Luckily for my self-respect others were soon doing the tumbling act, and my turn came to give that pitying glance which every poor fellow who comes a cropper has experienced.

Ahead of me I could see several scarlet coats rising and falling with machine-like regularity as fence after fence was topped. By the way, these were all post and rails, thick, uncompromising looking obstacles, too, it was either over or around them; no crashing here. There were no hedges, but two or three water jumps broke the monotony somewhat and cooled the ardor of some. The figure of Miss Smith on Mr. Harrison's handsome Dobbin, a weight carrier, was to be seen well in front and nerved me to desperation. But that sickly looking water jump proved too much for the courage of my Rosinante, and swerving sharply to the left, when I thought we had come to a full understanding that it had to be gotten over somehow, she landed me fair and square on my feet. I pretended to fix the bridle and was soon in the saddle again, when turning short around, over she went this time, much to the astonishment of several gaping yokels who were evidently divided between pity and a sense of the ridiculous.

Beyond the water I found it pretty plain sailing, and outside a refusal or two my horse carried me nicely, though that black habit kept tantalizingly in front. Man is a funny creature at best, and the satisfaction he experiences in seeing some one else come a cropper is only excelled by the satisfaction of being in at the finish. This was my experience when I saw that heavily-got-up gentleman in the chamois skins come a cropper on the five bars. Horses were getting blown and headers were frequent, for familiarty had bred a certain contempt for the fences and led many to attempt a flourish they could not sustain. Catching up with the leaders, I am glad to say for the honor of this office, that we were in just behind Dobbin, and as the newspapers, which are always known to be truthful, said Miss Smith was fourth, my number was not very big. Mr. Harrison, on a clinking good chestnut, was in first, Mr. St. John Boycott, the manager of the farm, and who, by the way, is a son of the famous Colonel Boycott, whose excommunication by the Irish tenantry gave rise to a word that has now become universally used, was just behind him; several others coming up in a bunch.

On the lawn of Mr. Fell's handsome residence, which gave us a view of many miles of country that laid far below us, the panting horses and men formed a pleasing picture. Blankets for the horses were at a premium. A delightful luncheon was served in the dining room of the mansion and was duly appreciated by all. With all the tumbles no one got even a bruise. The pace was a hot one from start to finish, with only one check, and a welcome one it was for the writer. Time about 35 minutes. A start was now made for the Chestnut Hill farm again. I met several very pleasant men, members of the Radnor Hunt, and was given cordial invitation to join them in their Thanksgiving run after the real article.

This was the first meet at this place, and was given by Mr. Harrison to allow the farmers a chance to participate and see for themselves that hunting across country does not do the harm they believed it did. Every one was satisfied with the day's doings, and the pleasant adjournment to the farmhouse, after the ladies had driven home, by the rollicking set of the hunt, was not the least enjoyable part. Toasts were given to Mr. Harrison, Mr. Boycott, and pretty nearly every one else, and coupled with songs of the good "Old John Peel" and "A Hunting we will go" type, an hour passed quickly and jovially away. My only wish was that such a jolly lot of fellows could only be set down for a week or two with the Pytchley or Quorn and enjoy the real thing every time, for they deserve it. Though they do have their meets at 3 P. M., they can ride nevertheless.

Darkness was setting in when we walked across to the kennels to look at the collies, and one by one the members of the hunt turned their faces homeward, till the farm once more resumed its wonted quietness. To name those who were present would be impossible, suffice to say that Philadelphia's best and bravest were well represented, and such a turnout must indeed have been gratifying to Mr. Harrison. One has only to meet this gentleman on his own ground to admit that the opinion formed of him by casually meeting him at a dog show is entirely erroneous, and I can only repeat the refrain of the chorus in the dining-room of the farmhouse, "For he's a jolly good fellow."

BLACK AND TAN TERRIER COLOR.

Editor Forest and Stream:

The black and tan terrier derives his name from his coloring, and in no breed are color and markings so essential or considered of the same importance in regarding merit. In the table of points, 25, or ¼ of the whole number (100), are allowed to color and markings, so that we have to consider at the outset, in viewing a black and tan, that ¼ of his value is only skin deep. In England great attention has been paid to this point, and for a dog to have a successful bench career he must be lacking but little in the lines of his black and tan, the deepness of the former and the richness of the latter. Until comparatively recently, so few of this breed have been shown in the country, and furthermore so few of these have presented anything like good form, that judges have perhaps been excusable in disregarding color and markings; but now that many good specimens are being shown and form and character are more nearly approaching the proper degree, I believe my brother breeders will indorse me in demanding that judges acquaint themselves with the paragraph that terminates this letter, and allow for color and markings the consideration, great as it may be, that they are entitled to. It is a most difficult thing in the first place to get good color and markings, and when these are combined with type and character, the gauntlet of puppy diseases and cropping have been safely gone through and a typical specimen results, those who fancy this breed, may appreciate the rarity of good black and tans and the value that should be attached to one that approaches perfection, a goal that is more distant and difficult to reach with this breed than with any other known to dogdom. Considering these facts, judges should be more careful to avoid injustice, and without a proper idea of the color and markings they are bound to err in their decisions.

From points of the black and tan terrier, as set forth by the Black and Tan Terrier Club of England: *Color.*—Black and tan as distinct as possible, the tan should be a rich mahogany color. A tan spot over each eye, and another on each cheek, the latter as small as possible; the lips of the upper and lower jaws should be tanned, the tan extending under the jaw to the throat ending in the shape of the letter V; the inside of the ear is partly tanned; the fore leg is tanned to the knee, with a black patch "thumb mark" between the pastern and the knee; the toes have a distinct black mark running up each, called the "pencil-mark;" the tan on the hind legs should continue from the penciling on the feet up the inside of the legs to a little below the stifle joint, and the outside of the legs should be perfectly black. There should be tan under the tail and on the vent, but only of such size as to be covered by the tail. In every case the tan should meet the black abruptly.

H. T. FOOTE, M. D. V. S.

NEW ROCHELLE, N. Y., Nov. 14.

DAMAGES FOR KILLING A DOG.

THE Newark *Call* reports this case: "In the Circuit Court last week an interesting suit to recover the value of a St. Bernard dog, which was shot by the defendants, was tried before Judge Depue. The plaintiff was Gerald Collingwood, of Glen Ridge. He bought the dog for $600, and on April 27 last it was shot by John Pierson, a son of Dr. William H. Pierson, who resides near Mr. Collingwood, in Forest avenue. Mr. Collingwood spent a great deal of money in trying to save the dog's life, but after a month of nursing it died. He sued for $2,000 damages, and the jury gave him a verdict of $500. The testimony concerning the spot where the shooting was done was conflicting, the Piersons alleging that he was on their ground at the time, while Mr. Collingwood's counsel contended that he was in the highway.

"Judge Depue's charge was interesting and important. He said at the outset, 'The evidence shows that the killing was done by John alone, the father at the time being in a place of safety, and having no knowledge of the act done by his son. In order to fix the liability on the father, the plaintiff refers to certain interrogatories that were served upon him. Dr. Pierson said: "I believe the shooting of the dog preserved me from attack, and that such shooting was necessary for my continued safety, and to that extent I approve of the shooting." The effect of this evidence is to connect Dr. Pierson with the act of the shooting, and to hold him responsible for the act of John. My instruction to you, gentlemen, is that if it be found that the act of John was not justified in law your verdict should be against both defendants."

"The Judge next said that a dog is recognized in law as property, and the law confers on the owner a right to recover damages for the invasion of that property. It also imposes on the owner certain obligations and it invests other parties with certain rights.

"Reviewing the evidence the Judge said the proof was that in the family of the owner the dog was docile and affectionate, and toward persons in the habit of going to the house he had never exhibited any disposition to bite. Yet if he attacked other persons and his running at large was an injury to the community, he became a public nuisance. The Judge added that the jury must decide from the testimony whether the presence of this dog in the community was a public injury. If it was, then the defendant was justified in taking his life.

"But another principle of law, said the Judge, is applicable to a case of this kind. It gives a right to a person attacked by a dog to resort to violence as a means of defense. No man is bound to wait until he is bitten. He may resort to violence to protect himself from the attack of the dog, but it must appear that he had reasonable grounds to believe that he was in danger. The evidence shows that on several occasions Dr. Pierson had had an altercation with the dog, and that he was afraid of receiving injury from it. But this does not complete the defense. The jury must be satisfied that he had reasonable grounds for the apprehension and that the disposition of the dog toward him was not occasioned by his own conduct. If there was no reasonable ground for fear, or the conduct of the dog was occasioned by the Doctor's own conduct in dealing with the animal, then the defense has no foundation whatever.

"The defense is a justification of the act of John as the agent of his father; that the animal was on the Doctor's grounds, under such circumstances as to give to John reasonable grounds to believe that he was there for the purpose of misdoing. It is important to determine where the dog had been when he was shot. If he had gone to the yard he was trespassing, but a trespass is not a justification. If he had withdrawn from the yard and was apparently on his way home, indicating no purpose to inflict injury, then the shooting was not justifiable. If, on the other hand, the shooting was within the premises of the Doctor, and he was in such a position as to indicate that his purpose was to pass into the yard where the father was, and John acted under a reasonable apprehension that if he did not kill the animal his father might be in danger, why then the case is closed.

"The Judge said in fixing the damage, if any, the jury must ascertain the market value of the dog, and added that if the dog's disposition was such that he would have to be confined, this would lessen his value. A man will not give as much for a dog which he must keep in safety."

COCKER SPANIELS OF 1890.

Editor Forest and Stream:

It has been with the sincerest pleasure that I have noted the general improvement in the cocker spaniel classes during the past year. Instead of whole classes of the "long and low" monstrosities, some very nice sensibly-bodied dogs have taken prominent positions. Faulty in head as he undoubtedly is, Rabbi has a very nice body indeed, cobby and well set up. A cocker body, in short, not a miniature field spaniel. Although Dolly Obo is not the thing, she is undoubtedly nearer the true cocker type than Bene Silk, whom she defeated at New York. I don't know what Mr. Wilmerding could have been about to place the Irish setter-headed, cheeky, shallow-bodied and overlong Brantford Red Jacket over the nice-bodied and fair-headed Cherry Boy. Mr. West proved himself, in my estimation, the better judge of cockers by reversing the award at Boston later on, and strengthened the good impression by placing the rather cloddy, but for all that, grand little cocker, champion Doc, at the same place, over the fish-headed, sway-backed, weak-jointed, almost coatless and lifeless Jersey and Dolly Obo. Mr. Willey himself seemed to be trimming his sails, for at Boston he showed one of the sweetest bitches imaginable in Little Nell, who, though a trifle short in head, is very, very nice. Another good cocker to appear for the first time in this country, though I understand he was shown a year ago in Canada, was Black Duke. It is a pity this dog is so timid, for, though by no means right in head, in body and size he is a cocker through and through.

A beautiful bodied bitch came out at Toronto in Idea, though she is by no means right in head. Indeed I was much impressed by the nice bodies the bitches shown by Mr. Bell, of Toronto, exhibited. They were cobby, level throughout, covered just enough ground and well barreled. A hardly used dog at Toronto was Brock, a dog pretty close to the limit in weight, but a very nicely shaped and put together animal, that had he been in decent condition, should have been first or second. I never saw spaniels judged so badly as at Toronto by Mr. Oldham. About his worst of all the many very bad mistakes was putting a wretched, wrong all over puppy, Bambo, first in any other color dogs, and sending out unnoticed a very good, though oversized dog, Rufus. Then in open black dogs a nice puppy, Kildare, got nothing whatever. This is so promising a dog that I feel sure under his new name, Obadiah, he will appear prominently in the prize lists of future shows.

I think the milleuium for cockers has come, and that within two or three years the Black Pete, Jersey, Brantford Red Jacket type will have disappeared from our show benches for good and all. Our spaniel men have learnt by now what a cocker spaniel should be, and will no longer allow themselves to be led by the nose by Masons and Watsons, who really started the "long and low" craze. The reason was that six or eight years ago they were to all intents novices and readily followed the lead of the self-assured gentlemen from England, who posed as authorities. Our cocker spaniel of the future will not be of the Fellows type, but it will be well able to jump across the street gutters or on to the bench. Mr. F. Mercer, in his book just published by you, deals with the spaniel question in a way that I think is just about right, though certainly it is very severe.

GOTHAMITE.

NEW YORK CITY, Nov. 9.

SHOW DATES.

NEW YORK, Nov. 5.—*Editor Forest and Stream:* The Massachusetts Kennel Club, of Lynn, Mass., has filed its claim for March 24 to 27, 1891, for its second bench show. The Cleveland Kennel Club has courteously withdrawn its former claim for April 1 to 4 and has changed its dates to April 14 to 17, 1891. By this action the New England Kennel Club is entitled to its claim for March 31 to April 3, 1891. —A. P. VREDENBURGH, Sec'y.

CLEVELAND, O., Nov. 14.—*Editor Forest and Stream:* At the request of the New England Kennel Club the Cleveland Kennel Club withdraw their claim for the first week in April next and claim April 14, 15, 16 and 17, 1891, as dates for our fourth bench show.—C. M. MUNHALL, Sec'y.

BALTIMORE, Nov. 15.—*Editor Forest and Stream:* At a special meeting of the board of governors of the Maryland Kennel Club, held this day, the following resolution was offered and adopted: "That it is the sense of the board of governors of the Maryland Kennel Club that they greatly appreciate the kindness of the Pittsburgh Kennel Club in exchanging with the Maryland Kennel Club bench show dates, and we hereby tender the Pittsburgh Kennel Club our sincere thanks for their fraternal feeling in the matter. W. SEWART DIFFENDERFFER, Sec'y.

BOSTON, Nov. 17.—*Editor Forest and Stream:* The beagle show committee of the New England Kennel Club wish to publicly thank the Cleveland Kennel Club for the courtesy shown them in withdrawing their claim to the dates April 1 to 4 in our favor. We trust all Eastern exhibitors will support the Cleveland show handsomely, as it is composed of thorough gentlemen sportsmen.—E. H. MOORE, Sec'y.

HORNELLSVILLE, N. Y., Nov. 16.—*Editor Forest and Stream:* The Delaware and Susquehanna Poultry and Pet Stock Association claim the dates Jan. 6 to 9, 1891, for their third annual show, which will be held in Binghamton, N. Y. J. Otis Fellows will judge all classes of dogs except greyhounds, beagles and wolfhounds. They have applied for membership, and this show will be under A. K. C. rules.—J. OTIS FELLOWS, per order of President.

MR. MALCOLM STAYS IN.—Mr. H. Malcolm writes, under date of Nov. 16: In the issue of your paper of Nov. 10 appeared a letter by me. That portion of it where I stated "that in a short time I shall resign as president of the Maryland K. C. and as a member also," I withdraw.

EASTERN FIELD TRIALS.

THE Members' Stake was run at Otterburn Springs, Va., Nov. 13. The drawing was: Capt. Chas. Gray's Miss Monarch with Geo. T. Leach's Guy. H. Hulman, Jr.'s Gath's Mark with F. R. Hitchcock's Annie F. H. Hulman, Jr.'s Fannie M. with Herbert Merriam's Whitie. Highland Kennels' Betty with Jack Modoc. The awards were as follows: Gath's Mark first, Betty S. second, Jack Modoc third. A detailed report of the running will be given in our next issue.

The conclusion of this stake brought the trials, so far as Otterburn Springs were concerned, to a sudden close. The weather being so damp and misty drove the birds to cover, and though this is all right for pleasure shooting it is not wanted in a field trial. It was therefore decided to make a move for the old ground at High Point, N. C., where the trials are usually held.

Monday night at High Point the Derby drawing resulted as follows: Rowdy II. with Coyote, Paul Bo with Zigzag, Nellie Bly with Tapster. Dill with Reveler, Rupert with Phœness. William H. with Tory Lieutenant, Whyte Bedford with Sam R., Vanity Fair with Ian, Queen Vic with Pearline, Razzle with Tyke, Trap, Jr., with Maid of Kent.

HIGH POINT, N. C., Nov. 19.—[*Special to Forest and Stream.*]—The Derby began this morning; first brace down at 8:35. Weather bright; toward noon became very warm. Birds were fairly plentiful. The first nine braces in first series were run during the day, leaving two for to-morrow. Following dogs ran to-day: Ready II. against Coyote, Paul Bo against Zigzag, Nellie Bly against Tapster, Dill against Reveler, Rupert against Phœness, William H. against Tory Lieutenant, Whyte against Sam R., Vanity Fair against Ian, Queen Vic against Pearline. To-morrow: Razzle against Tyke, and Trap, Jr. against Maid of Kent.

ACTIONS, NOT WORDS.

Editor Forest and Stream:

"Brittle" alias "Busted Britisher" or "Blarsted Britisher" (I forget which) alias R. F. Mayhew has written to a Philadelphia paper that Mr. George R. Krehl, the talented editor of the *Stock-Keeper*, is a "trickster" and that he (Mayhew) is a very honorable gentleman. This charge against Mr. Krehl is a most serious one for a man like Mr. Mayhew to bring against anybody, never to speak of an honorable man, a gentleman and a scholar. It seems to me that before we even listen to vile slander about an old and well-tried servant like Mr. Krehl, we ought to look deep into the record of the man whose vicious temper, lack of self-control and ignorance have led him into writing more "deadly rot" and untruthful statements than have ever been evolved from the pen of any other writer on dog matters in this country, Whitford, "Our Special Commissioner" and the Canada "official" not excepted.

A few weeks ago Mr. R. F. Mayhew recommended "iodide of potass" as a remedy for distemper in ferrets. Mr. Mayhew is familiar with the diseases and habits of animals of the weasel kind. The week after Mr. Mayhew had given this valuable prescription to the public and after having had time to read up, he enlightened the residents of Philadelphia with the following "sparks:" "How I could have written this, goodness only knows, for it is, or should be (the editor said it was'nt) chlorate of potass." Then came the silly statement that Blemton Rubicon (now known as the "robber dog") had fined down wonderfully in skull. Your able correspondent, "Mephisto," soon had Mayhew in a corner for making such a stupid blunder, and then the man who is not a trickster at once changed skull into head. Following this came the astounding statement that the "robber dog" is the exact "counterpart" of his dam Rachel Mr. Mayhew's explanation of this is that the "robber dog" is the exact "counterpart" of Rachel, but not at all her equal. In other words, "counterpart" means "the reverse," "not alike," "something different," etc. This is not all. I am in possession of documentary evidence which proves beyond question that Mr. R. F. Mayhew writes and says exactly the the opposite to what he means. Now sir, in view of the facts stated above, and with the documentary evidence to which I have alluded before me, is it unreasonable to assume that Mr. Mayhew intended to say that Mr. Krehl is not a trickster and that Mr. Mayhew is? C. H. MASON.

MARYLAND KENNEL CLUB.—*Editor Forest and Stream:* A meeting of the board of governors of the Maryland Kennel Club was called for Friday evening at 8:30 P. M. The call was at the request of Messrs. W. Stewart Diffenderffer, C. R. Diffenderffer, W. C. Farber, Thos. J. Sheubrooks and James Thompson, of the Maryland Kennel Club, to act on several matters, the only one which is of interest to your readers was this: "To recall and make apologies for the vote of censure passed on the American Kennel Club." There were present at the meeting ten members of the board. As the board of governors had no right to take the matter up, the censure vote to the A. K. C. having been acted upon by the whole club, quite a discussion followed. Messrs. W. Stewart Diffenderffer, C. R. Diffenderffer, W. C. Farber, James Thompson and Geo. W. Massamore on the one side desiring to apologize, and claiming that the board of governors had the power to act and not the club as a body who passed the censure vote. In opposition to the above five, and who would not apologize and withdraw the censure vote, and who justly claimed that the board of governors had no say in the matter as a board, but must with all the members of the Maryland K. C. take the matter up, were J. D. Mallory, Crichton Malcolm, H. R. Vonderborst, R. B. Glanville and H. Malcolm. On motion the meeting adjourned, nothing on the censure business being in order. If it had been legally called up before a members' meeting, you can rest assured it would have been flatly sat upon, as all such high-handed acts of the A. K. C. should be.—H. MALCOLM.

THE BULLDOG CLUB OF AMERICA.—President, John E. Thayer; Vice-President, Trenor L. Park; Secretary and Treasurer, Chas. D. Cugle. Officers: John E. Thayer, Lancaster, Mass.; Trenor L. Park, New York city; Chas. D. Cugle, Baltimore, Md.; John H. Mathews, New York city; E. Sheffield Porter, New Haven, Conn.; Edwin A. Woodward, Chicago, Ill.; H. D. Kendall, Lowell, Mass.

BEAGLE LOST.—The beagle bitch Baby Deane strayed from my place Nov. 10 and has not turned up yet. Any brother sportsman hearing any word from her will confer a great favor by notifying me. She is white, black and tan, and stands about 11½in. high.—W. S. CLARK (Linden, Mass.)

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

☞ **Prepared Blanks sent free on application.**

Jack Ellison. By J. H. Winslow, Philadelphia, Pa., for liver and white pointer dog, whelped November, 1889, by Victor the Blue Stocking (champion Beaufort—Zuba) out of Charlotte Corday (Sang—Vandalia).

Charlie Heath. By J. H. Winslow, Philadelphia, Pa., for liver and white pointer dog, whelped April 24, 1890, by champion Graphic (Bonos Sancho—Fursdon's Juno) out of Golden Rod (champion Beaufort—Zuba).

Beatrice. By Edward Lever, for brindle great Dane bitch, whelped June 4, 1890, by Marco out of Beauty (Marco—Flora).

Beau Brummel and Flash Light. By W. H. Case, Lockport, N. Y., for black, white and ticked pointer dog and bitch, whelped Oct. 14, 1890, by Staunch Bob (Hickory's Staunch—Dora) out of Flash (Wink—Judy).

Tailor Bob and Duke of Warsaw. By Eberhart Pug Kennels, Cincinnati, O., for silver fawn and apricot fawn pug dogs, whelped March 9, 1890, by Sniffles (Leo II.—Flossie II.) out of Toodles III. (Leo II.—Toodles II.).

Warsaw Dick. By Eberhart Pug Kennels, Cincinnati, O., for silver fawn pug dog, whelped Sept. 13, 1890, by Sniffles (Leo II.—Flossie II.) out of Nanette.

Scud. By C. S. Hanks, Manchester-by-the-Sea, Mass., for white, with black markings, fox-terrier dog, whelped June 13, 1890, by Bones (Dusky Trap—Nina) out of Nina (Mixture—Shame).

BRED.

☞ **Prepared Blanks sent free on application.**

Genesta—Dick of Delphos. J. W. M. Cardeza's (Philadelphia, Pa.) pointer bitch Genesta (King of Kent—Hops) to his Dick of Delphos (Dick—Floss), Nov. 8.

Sandy—Mars. Edward Lever's Irish terrier bitch Sandy (Dennis—Sandycroft Vim) to W. J. Comstock's Mars (Benedict—Irene), Nov. 13.

WHELPS.

☞ **Prepared Blanks sent free on application.**

Flash. W. H. Case's (Lockport, N. Y.) pointer bitch Flash (Wink—Judy), Oct. 14, eight (four dogs), by J. R. Fanning's Staunch Bob (Hickory's Staunch—Dora).

Flirt. W. F. Murphy's (New Haven, Conn.) cocker spaniel bitch Flirt (champion Black Pete————), Nov. 11, five (two dogs), by J. Storr's Master Bob (Obo II.—Critic).

Dilly & Jones. C. Jones's (Emporia, Kan.) cocker spaniel bitch Dilly J. (Prince Obo III.—Black Beauty), Oct. 10, six (four dogs), by his Colonel J. (Captain Stubbs—Maud S. II.).

SALES.

☞ **Prepared Blanks sent free on application.**

Count Howard—Donna Juanita whelp. Blue belton English setter dog, whelped Sept. 23, 1890, by Jas. W. Wood, Poughkeepsie, N. Y., to R. W. Boyle, Toronto, Can.

Chief—Bizreena whelp. Red Irish setter bitch, whelped Oct. 29, 1889, by F. L. Cheney, Pittsfield, Mass., to E. B. Hume, Silver Creek, Ky.

Henmore Shamrock—Bizreena whelps. Red Irish setters, whelped July 6, 1890, by F. L. Cheney, Pittsfield, Mass., a dog to W. N. Wise, Penn Yan, N. Y., and a bitch to C. H. Zellinsky, Flatbush, N. Y.

Zanita. Silver fawn pug bitch, whelped Aug. 5, 1890, by Spokane out of Lady Verne, by Eberhart Pug Kennels, Cincinnati, O., to T. W. Brake, Warsaw, Ind.

Warsaw Dick. Silver fawn pug dog, whelped Sept. 13, 1890, by Sniffles out of Nanette, by Eberhart Pug Kennels, Cincinnati, O., to Louis W. Irwin, same place.

Tailor Bob. Apricot fawn pug dog, whelped March 9, 1890, by Sniffles out of Toodles III., by Eberhart Pug Kennels, Cincinnati, O., to J. K. Enghers, same place.

Flossie. Red Irish setter bitch, whelped Oct. 7, 1890, by Don III. out of Clarissa, by R. H. Burr, Middletown, Conn., to Alfred Neff, Higganum, Conn.

Black Duke—Lady Stanley whelp. Black cocker spaniel dog, whelped May 6, 1889, by Woodland Kennels, Woodstock, Ont., to Reuben Failing, Fort Plain, N. Y.

Black Duke—Lady Nell whelp. Black cocker spaniel dog, whelped Aug. 9, 1889, by Woodland Kennels, Woodstock, Ont., to F. C. Wheeler, London, Ont.

Black Duke———whelp. Black cocker spaniel dog, whelped Aug. 9, 1890, by Woodland Kennels, Woodstock, Ont., to Andrew Laidlaw, same place.

Nellie. Black cocker spaniel bitch, whelped Aug. 9, 1889, by Black Duke out of Lady Nell, by Woodland Kennels, Woodstock, Ont., to John Hopf, same place.

Martha Washington. Black cocker spaniel bitch, whelped May 9, 1889, by Black Duke out of Lady Stanley, by Woodland Kennels, Woodstock, Ont., to W. A. McCartney, Texarkana, Tex.

Obo II.—Woodland Queen whelp. Black cocker spaniel dog, whelped Aug. 15, 1890, by Woodland Kennels, Woodstock, Ont., to W. C. Boyle, Toronto, Ont.

Nell Bright. White bull-terrier bitch, whelped 1887, by Bendigo out of Darsie, by Christ. Trostrail, Philadelphia, Pa., to Edward Lever, same place.

Scud. White, with black markings, fox-terrier dog, whelped June 13, 1890, by Bones out of Nina, by C. S. Hanks, Manchester-by-the-Sea, Mass., to G. L. Huntress, Winchester, Mass.

Bedlam. White, with black markings, fox-terrier bitch, whelped April 16, 1887, by Mephisto out of Trifle, by C. S. Hanks, Manchester-by-the-Sea, Mass., to E. B. Conant, Lowell, Mass.

Hillside Jaunty. White, with tan markings, fox-terrier bitch, whelped June 21, 1888, by Raby Mixer out of Jaunty, by C. S. Hanks, Manchester-by-the-Sea, Mass., to E. B. Conant, Lowell, Mass.

Bones. White, with black markings, fox-terrier dog, whelped July 13, 1889, by Dusky Trap out of Nina, by C. S. Hanks, Manchester-by-the-Sea, Mass., to E. B. Conant, Lowell, Mass.

Nina. White, with black markings, fox-terrier bitch, whelped February, 1885, by Mixture out of Shame, by C. S. Hanks, Manchester-by-the-Sea, Mass., to E. B. Conant, Lowell, Mass.

KENNEL MANAGEMENT.

There is no charge for answering questions under this head; we are always glad to give advice on the care and management of dogs; and we shall make this a special feature.

F. C. S., Vicksburg, Mich.—A hound, one year old, has had a bad case of distemper; is running at nose a little yet. When he was partially over it he began to twitch and jerk his legs and head. Our family doctor calls it St. Anthony's dance. What shall I do for him? Please answer in next issue. Ans. Your dog has chorea. Keep his strength up by nutritious food, and give the following:

℞ Strychniæ sulph.....gr. ij
Aquæ.....℥i

Mix. Sig. Dose three drops twice a day. Increase the dose by one drop daily till you detect a stiffening of the legs and neck, when you must at once reduce again to three drops and increase again as before. This medicine must be given regularly without fail to have the desired effect. Let us know the result.

Rifle and Trap Shooting.

RANGE AND GALLERY.

EPHRATA, Pa.—The members of the North End Rifle Club met on their range, a short distance south of Ephrata last Friday afternoon, to engage in the contest for their several class medals. There were four classes, and a medal for each class, one being of gold, two silver, and a bronze. The distance was 200yds. off-hand, standard American target, best out of a possible 100, 10 shots to each man, and resulted as follows, L. M. Wiest not entering the contest as he was the only member in the first class, and received the champion gold medal.

Second Class.

C S Wenger	10	6	10	5	9	3	4	6	7	8—68
W Carpenter	6	4	7	4	8	8	4	9	7	0—57

Third Class.

W D Winters	9	3	9	5	6	9	8	8	7	5—69
J M Sheaffer	8	7	7	8	3	6	8	5	3	0—55
J A Stober	6	5	6	0	6	3	6	5	4	5—46

Fourth Class.

C Konigmaker	0	9	7	0	4	5	7	6	5	4—47
D B Lefever	5	3	5	3	4	5	6	5	5	5—46

C. S. Wenger making the highest score in the second class was entitled to the first silver medal. W. D. Winters won the second silver medal in the third class, and Chas. Konigmaker the bronze medal in the fourth class. After the medals had been contested for and won by the several members the following scores were made at rest shooting, 200yds.:

L M Wiest	8	8	9	10	7	9	10	10	7	9—87
J A Stober	7	6	7	8	7	10	10	10	7	10—82
D B Lefever	8	9	10	7	6	6	8	5	8	5—72
W Carpenter	7	8	8	9	8	7	7	6	6	5—71

This shooting ended the target practice on the Ephrata range for this season.

NEWARK, N. J., Nov. 6.—The third season's tournament of the United Amateur Rifle Association, of New Jersey, promises to be fully as successful as those of former seasons. While the number of clubs is smaller than last season, the ability of those that have entered is such as to preclude any chance of guessing the probable winner. It was decided that two matches should be shot on Monday and Friday night of each week, and each club should shoot a home-and-home match against every other club. The association has adopted a rule to the effect that once a man's name appears on the team of any club he shall be debarred from shooting on the team of any other club during the season. A special prize will be awarded to the man making the highest average for all matches. An extra inducement to clubs will be the fact that the club winning first prize will also be entitled to hold the "Our Own Trophy"—a silver water set presented to the association by the Our Own Rifle Club—for one year. The schedule of matches in detail is appended:

Nov. 10—North Ward	vs. Monroe	Jan. 26
Nov. 10—Essex	vs. Newark	Jan. 26
Nov. 14—Independent	vs. Lakeside	Jan. 30
Nov. 14—Oakland	vs. Puritan	Jan. 30
Nov. 17—Lakeside	vs. North Ward	Feb. 3
Nov. 17—Howard	vs. Essex	Feb. 3
Nov. 21—Monroe	vs. Independent	Feb. 7
Nov. 21—Newark	vs. Oakland	Feb. 7
Nov. 24—Puritan	vs. Monroe	Feb. 10
Nov. 24—Essex	vs. Lakeside	Feb. 10
Nov. 28—Independent	vs. Newark	Feb. 14
Nov. 28—North Ward	vs. Howard	Feb. 14
Dec. 1—Oakland	vs. Independent	Feb. 17
Dec. 1—Monroe	vs. Essex	Feb. 17
Dec. 5—Newark	vs. North Ward	Feb. 21
Dec. 5—Howard	vs. Puritan	Feb. 21
Dec. 8—Lakeside	vs. Monroe	Feb. 24
Dec. 8—North Ward	vs. Oakland	Feb. 24
Dec. 12—Independent	vs. Howard	Feb. 28
Dec. 12—Puritan	vs. Newark	Feb. 28
Dec. 15—Essex	vs. North Ward	March 3
Dec. 15—Howard	vs. Lakeside	March 3
Dec. 19—Puritan	vs. Essex	March 7
Dec. 19—Oakland	vs. Monroe	March 7
Jan. 5—Northward	vs. Puritan	March 10
Jan. 5—Lakeside	vs. Oakland	March 10
Jan. 9—Howard	vs. Newark	March 14
Jan. 9—Independent	vs. Essex	March 14
Jan. 12—Newark	vs. Lakeside	March 17
Jan. 12—Essex	vs. Oakland	March 17
Jan. 16—Puritan	vs. Independent	March 21
Jan. 16—Monroe	vs. Howard	March 21
Jan. 19—Newark	vs. Monroe	March 24
Jan. 19—Oakland	vs. Howard	March 24
Jan. 23—Lakeside	vs. Puritan	March 28
Jan. 23—North Ward	vs. Independent	March 28

BOSTON, Nov. 15.—The Massachusetts Rifle Association held its regular weekly shoot to-day, with a good attendance of riflemen. Lieut. G. F. Hall won the bronze and silver military medal. Following are the best scores made, distance 200yds., standard American target:

All-comers' Off-hand Match.

J B Fellows	84	D Martin	73	F S Ham	71
H L Lee	78	I B Thomas	73	A L Stevens	68

All-comers' Military Match.

C E Horton	48	J B Hobbs	44	J S Mills	41
J A Frye	46	A S Hunt	43	H F Gray	40
M T Day	45	D Martin	41		

SMOKELESS POWDER.—Washington, Nov. 12.—Gen. S. V. Benét, Chief of the Bureau of Ordnance, has submitted his annual report to the Secetary of War. On the subject of smokeless powder he says: "During the past year extensive experiments have been carried on abroad with smokeless powders in field guns and in guns of large caliber, as well as in small arms, but, though some astonishing results have been obtained, the attendant difficulties have been many and it cannot yet be said with certainty that these new explosives will eventually supersede the present service powders. This department has been able to procure very small samples only and our tests have hence been limited exclusively to small arms. In this direction experiments have been actively prosecuted at the national armory, using a small-caliber arm, and a large number of powders, both American and foreign, were tried during the past twelve months, with, in most cases, unsatisfactory results. The performance of the Maxim (American) and Wotteron (Belgian) powders have, however, been fairly comparable with those claimed to be obtained abroad, and it is hoped that one of these can be developed in time to a thoroughly satisfactory small-arms powder."

SMALL BORES.—Gen. Benet, in his annual report, touches upon the question of small calibers and magazine action as follows: "The lack of a sufficient quantity of suitable smokeless powder has prevented the perfecting of all the details of the 30-caliber barrel, but as soon as the cartridges in process of manufacture at Frankford Arsenal are supplied work will be diligently carried on, and it can be safely said that the barrel will be complete in all its details by the time a magazine mechanism is selected. The improvement in magazine mechanisms has been rapid, and it seems peculiarly necessary, now that a change in caliber is contemplated, that our present Springfield single-loading system should be replaced if possible by an equally efficient magazine system. Accordingly, this office will recommend that a board be convened to select a suitable magazine mechanism, after a full and free competition among all the best existing systems, as soon as the necessary preparations can be made."

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

FIXTURES.

If you want your shoot to be announced here send in notice like the following:

Nov. 25-28.—Tournament of the Newark Gun Club, at Erb's Park, Newark, N. J. Two days at inanimate targets and two days at live birds. Jacob Pentz, Secretary.

WATSON'S PARK.

BURNSIDE, Ill., Nov. 4.—Chicago Shooting Club, medal shoot, Illinois State rules:

John Watson	2011121110122—10	Nels Lydston	2011122211001— 9
Ed Steck	1122011111111—11	P F Rock	1122100111112—10
Hy Ehlers	1112121212121—12		

Same day at 25 Peoria blackbirds: E. Steck 20, B. Rock 19, Nels Lydston withdrew.

Nov. 6.—Audubon Shooting Club, Illinois State rules, for club medal:

C Kern	1212121210110112—14	A Torkington	2212121212101101—13

J. E. Price, R. B. Wadsworth, N. Rowe, W. W. Foss, J. J. Kleinman and C. B. Dicks withdrew.

Nov. 6.—Fort Dearborn Shooting Club, Illinois State rules, for club medal:

A Kleinman	1111121112112111—15	H Smith	0111212122202202—12
H Ehlers	1021091202222212—11	Geo Airey	2122111221212022—14
W P Mussey	2220011202222122—12	J E Price	1210111032012020—11
Geo Kleinman	1112122211111112—15	C E Willard	0111220212121111—13
C S Burton	1000110111111111—11	W H Skinner	2212222211112221—15

C. B. Dicks, C. D. Gammon, H. W. Loveday, J. M. Hutchinson and J. H. Robbins withdrew. Abe Kleinman won medal for last shoot as he and Ehlers were tie. George and Abe Kleiman will shoot off tie next shoot. Mr. Skinner is not a member.

Same day, at 20 Peoria blackbirds: A. Kleinman 15, G. Airey 15, G. Kleinman 14, C. Burton 13, C. E. Willard and H. Smith withdrew. Ties: A. Kleinman 2, G. Airey 3 and won medal.

Nov. 7.—Some of the members of the Kansas City team, at 20 singles, A. S. A. rules:

A Price	19	H Ehlers	16 H Kleinman 15
W E Phillips	20	Geo Kleinman	18 A W Reeves 14
C E Felton	19	B Rock	20 R B Wadsworth 20
M J Eich	18	G Hoffman	15 W P Mussey 16
Geo Hoffman	17	Capt Anson	19 C B Dicks 15
J E Price	18	Dukes	17 W L Wells 1
	17	G Holden	12

Nov. 14.—The Gun Club, Illinois State rules:

C E Willard	1111121121—10	*J W Dukes	1001111022—
F E Willard	1221211001— 8	*J Watson	1101221101—8

Same day, at 20 Peoria blackbirds:

C E Willard	16	F E Willard	19 *J W Dukes 13

*Not members. F. E. Willard won medal. RAYELRIGG.

CHICAGO—KANSAS CITY,

AND THE ELLIOTT TOURNAMENT.

KANSAS CITY, Mo., Nov. 10.—The Chicago contingent for the great inter-State match and all-week shooting tournament billed for this city Nov. 10-15, arrived sorely after 9 o'clock this morning, by the fast "Eli" train of the "Q." road. There were registered at the Midland Hotel the following names, which do not embrace quite all of the party, which nearly filled two sleepers and made a company of between thirty and forty persons: Chas. Kern, Geo. T. Farmer, C. D. Gammon, C. E. Felton, Wolfred N. Low, J. E. Price and family, H. W. Jenney, J. H. Robbins, W. L. Shepard, A. C. Anson, W. E. Phillips, A. W. Reeves, M. T. Hart, Abner Price, John Watson, M. J. Eich, E. M. Steck, G. A. Airey, Henry Ehlers, C. B. Dicks, L. M. Hamline, Geo. W. Andrews, H. H. Kleinman, Geo. B. Kleinman, H. D. Nicholls and wife, P. F. Stone and wife, W. P. Mussey, I. W. Budd, Dr. J. M. Hutchinson, P. C. Waldron, Geo. Hoffman, W. Hoffman, F. York, B. F. Cummins.

It is expected that to-morrow morning's train will bring down Mr. and Mrs. C. S. Burton, Mr. and Mrs. Henry Smith, Messrs. F. C. Donald, C. E. Willard, Al and Val Hoffman, Abe Kleinman, Harry Loveday, and others.

There are at the Midland to-day also for tournament purposes Messrs. H. McMurchy, of the L. C. Smith gun; A. Jackson Courtney, of the Lefever gun; S. A. Tucker, of the Parker gun, and to-morrow will probably see H. W. Skinner, of the Whitney gun, and Dick Colville Swiveller, of the new Baker gun. Charlie Budd is here from Des Moines, O'Neill is on from Danville, Rable is here and a number of other regular attendants, besides a few whose names are not so familiar. It is quite a gathering of the clans.

A misfortune—little short of actual calamity—befell the Chicago team while on the way down. Mr. R. B. Organ, who has all along been the life and soul of this enterprise, was obliged to leave the party and return to Chicago preparatory to a journey East. Mr. Organ was with the company till bedtime on the run out, but in the morning it was found he had left the train. With the self-restraint of a natural general he had refrained till the last from mentioning a fact which might well prove demoralizing to his troops, and left the party by the first train he could get as he could and starting them on their way toward what he hoped was victory. The following letter from Mr. Organ to Mr. Low, chairman of the company, will explain Mr. Organ's position:

"*Wolfred N. Low, Chairman*—DEAR SIR: With many regrets I am compelled to inform you that it will be impossible for me to take part in the contest, Chicago vs. Kansas City, for the following reason: I am summoned to appear at New York on Wednesday, Nov. 12, at 11 A. M., in the United States Court, as a witness before the Interstate Commerce Commissioners. To say that this is a great disappointment to me hardly expresses it. I write this and ask you to explain my position to the teams, and say to them that I have known that I could not attend for three of the longest days I ever experienced, but I had not the heart to inform you before this, as I lived in hopes that a postponement might occur, but alas! it came not. The inclosed message needs no explanation. Believe me when I say that my whole heart was interested in this match, having tried hard to make it a success. I may have erred in some ways, but I assure you that I believe we have the best team and will certainly win. All I ask of the man that fills my place on the team is to try as hard to win as I would were I permitted to shoot. Thanking you and all for the great assistance rendered in the coming contest, I am, with many wishes for your success, yours truly, R. B. ORGAN."

Here is the telegram mentioned: "CLEVELAND, Nov. 6.—R. B. Organ, Chicago: The hearing in the Shamberg case is fixed for 11 o'clock on Wednesday, Nov. 12, in the United States Court rooms at the General Post-Office, New York city. Please arrange to attend on time and answer that you will do so.—G. B. SPRIGGS."

Mr. Organ left the train at Galesburg. Mrs. Organ, who accompanied him, continued the journey with the other ladies of the party. When the news was made known that their captain and main reliance was gone, considerable gloom fell upon the boys. Action was deferred until arrival at Kansas City.

Out of respect to the memory of Drury Underwood, of Kansas City, lately deceased, the Chicago men all wore an appropriate mourning badge, signifying their sense of loss in the death of a man whose sportsmanship was catholic and national. The club house has been properly draped in mourning, and the Kansas City teams also wear mourning badges.

The Chicago party was met at the depot this morning by a line of twenty-two carriages, which conveyed them to their hotels. The reception committee consisted of Mr. Benj. Holmes, mayor of Kansas City; Capt. J. H. McGee, J. E. Riley, Andy Thomas, B. Twitchell, D. S. Gordon, Jas. Bolen, Ed. Hickman, W. Ends, A. A. Whippell, W. A. Alderson, E. W. Humes and John Thomson. Mayor Holmes and Mr. McGee boarded the train in the middle of the big Burlington bridge over the Missouri River. The Mayor assured the boys that if they got into any trouble while in Kansas City he would see them out.

The reception was hearty and jovial. Elaborate arrangements have been made for the entertainment of the visitors, which will include a theatre party on Wednesday night and a banquet Thursday night, at which latter there will be present as speakers many men prominent in Missouri and Kansas and of wide reputation. The Kansas City men may or may not be beaten by Chicago on the field to-morrow and day after, but certainly they can never be vanquished by Chicago in any contest of courtesy and hospitality. In very many ways, it may already be seen, the gathering here is perhaps the most notable assemblage of the kind every known in the country, and will live as a standing rebuke to those who do not see the dignity and importance the sport of trap-shooting may and has attained.

Little or no shooting was done at the grounds until after dinner. The scores will show that the Chicago boys fell down a little against Jim Elliott's hill in the practice sweep at live birds. The arrangements of the traps for inanimates are very good, the traps being nicely put out, and a deep ditch protecting the trappers. An additional man or two at the scoring and cashier's desk would have added smoothness to the inanimate tournament to-day. Following are the scores:

Programme shoot No. 1, 10 live birds, $7.50:

J B Porter	2211111111—10	M J Eich	2100011012—6
Lone Jack	1111212101—9	M T Hart	1012112200—7

Shepard	101111001011111—11		

Rock and Ruble div. first, Steck, Courtney, Hart, L. Jack and Geo. Kleinman div. second, Rickmers third.

Special No. 3, 10 tins, $1: Razzell 7, Moore 3, Kleiman 8, Eich 8, Courtney 10, Blackburn 7, Stevenson 8, Rock 9, Dickson 6, Allen 5, Cave 7, Shepard 7, Rickmers 8, Low 6, Hart 6, C. W. Budd 9, Moore 6, Andrews 6, Hamline 9, A. Dickson 5, C. Dickson 5, Weaver 6, O'Neill 7, Ruble 10, McMurchy 8, W. Low 6, Robbins 1, H. W. Jenney 1. First div. by Ruble and Courtney, second div. by Rock, Budd and Hamline, third won by G. Kleinman.

Special No. 4, 25 bluerocks, $3: Hart 23, Steck 18, Kleinman 23, Rickers 18, Razell 20, Moore 20, McMurchy 24, Stice 22, Courtney 24, Kern 6, Harris 22, Dickson 16, Hamline 16, Budd 24, Andrews 15, Ruble 23, Bingham 16, Riley 13, Lone Jack 18, Underwood 9, Rock 19, Hale 20, Keen 19, Cornett 16, Ehlers 16.

Special No. 5, 10 tins, $1: Ben Dicks 6, W. N. Low 8, Jenney 6, Robbins 4, Dickson 6, Scott 5, Andrews 7, Blackburn 7, Stevenson 4. Low won first, second and third div.

Special No 6, 10 tins, $1: W. N. Low 5, Moore 3. Rickmers 8, Hart 10, Robbins 0, Courtney 7, Porter 5, Doran 9, Cave 7, Keene 9, Hallowell 8, Carnot 6, C. W. Budd 10. All ties div.

Special No. 7, 10 tins, $1: Budd 10, Rickmers 10, Hart 9, Low 6, Dixon 5, Robbins 2. Budd and Rickmers div. first, Hart second, Low third.

The programmes issued by Mr. Elliott are models of neatness and typographical excellence. The target programme is left blank, for the pleasure of the shooters. The live-bird programme is the feature altogether, and one which will be watched all over the country. In the scores guarantees and divided surplus moneys are abandoned as being unsuccessful in the opinion of the promoter of this shoot. In regard to the old war between professional and amateur, Mr. Elliott has the following to say:

"We now believe from this season's results, that the only system that will harmonize the amateurs and professionals on one ground is that of allowing the amateur to draw his per cent. of the stakes when they will equal his entrance or more. Since presenting this plan in our last year's tournament, we have noticed a number of successful shoots this year under these conditions, and shall adopt them for our fourth annual shoot, as we know this to be the only idea yet advanced that will protect the amateur shot when he tries with the professional, or a person whom he knows to be more skilled than himself."

A meeting of the Chicago Company was held with closed doors to-night at the Midland, Mr. Wolfrod N. Low in the chair. Mr. Low made an eloquent and sensible speech, paying high tribute to the late Drury Underwood. Mr. Low, while present at Mr. Underwood's funeral, had been asked by the Kansas City men to present the question of shooting the second team race merely in a friendly way and not for money. Out of respect to the grief of Mr. Underwood's friends, it would seem that money interest should be held in abeyance. Mr. Low would think it finer and more delicate to accede to the slightest hint of our Kansas City hosts, and if they like, to waive money consideration in the match of the second teams. What was the wish of the meeting?

Col. Felton—"I hope no misapprehension will go out through the press or elsewhere to the effect that we Chicago men are gamblers or insisters on a match for money. We are first of all gentlemen sportsmen and guests of this city. I would prefer to see all races shot for nothing more than the birds. We will not offend the sorrow of men whose house is now draped in mourning for a departed brother by any open betting or offering to bet. And I move you, sir, that we waive money consideration in the matches, not only of the second, but also of the first team."

Dr. Hutchinson—"If in the second, why not also in the first?"

Mr. Nicholls—"I would like to state it as our position that we shoot both matches for money or both for nothing."

Mr. Price seconded.

Col. Felton—"Let us be very careful. Let us not unwittingly frame any menace in our resolution. Let us offer to waive money in both matches. If Kansas City then wants money in one match and not in the other theirs will be the responsibility of that position. We are here before the eyes of all to make a record for or against the cleanest and noblest kind of sportsmanship."

Col. Felton's motion in form was lost. The Nicholls motion, after prolonged and not very clear general discussion, was carried to read in effect that Chicago would prefer to shoot both matches on the basis for or against money, nothing preferred.

At this time a Kansas City committee, consisting of Mr. H. McGee and Mr. W. S. Halliwell, asked entrance to confer on the subject of appointing speakers for Thursday night's banquet. The chair appointed Messrs. Chas. Kern, C. D. Felton and H. D. Nicholls as committee on details for this, and their report was made later.

On motion of Mr. Mussey, amended by Mr. Hart, a committee to select the first team was appointed, the same consisting of Messrs. Abner Price, C. E. Felton and John Watson, they to choose 7 men, and that 7 to choose the remaining 3. The committee shortly reported the first 7 in the following order: George Kleinman, Henry Kleinman, Abe Kleinman, M. J. Eich, W. P. Mussey, P. F. Stone, Geo. Airey. The above as represented retired and reported for the remaining 3: Abner Price, C. E. Felton, and J. E. Price. The first team will consist as above. Election of second team was postponed until to-morrow evening. It was arranged that each team select its own captain, and fill any chance vacancies by its own choice. Captain A. C. Anson, of the Chicago National League Base Ball Club, who came down with the shooting party, was chosen to captain the first team in the field. It may not be generally known, but "Old Anse" is a good deal of a shooter himself. He lately made 19 out of 20, live birds, at Watson's Park, in Chicago, and has been in the shooting here to-day. The selection early proved a good one. Captain Anson unceremoniously hurried his men all off to bed, robbing them of the pleasures of a delightful little champagne party, which the ever-thoughtful and hospitable Kansas City men shortly inaugurated on the scene of the late meeting. The members of the Chicago party and a number of prominent shooters about the hotel remained, and it was midnight before these sought their couches. "Old Anse" tucked each of his novel team in bed with his own hands, locked all the doors, put all the keys in his own pocket, left a call for each room for 7:30 the next morning, and stood guard in the hall himself all night, to see that no one broke in and hoodooed his ten darlings. Captain McGee expressed a wish that the shooting begin about 9 A. M.

Tuesday, Second Day, Nov. 11.

The day was bright and fairly pleasant. Shooting began at 9:15. It was announced that the race was to be without money consideration on either side or for either team, but for the birds only. This is all for the best. Not the least trace of gambling spirit was evident from first to last, and a more courteous, pleasant and thoroughly gentlemanly match was never shot. Throughout the day the sportsmanship displayed by both teams has been of the very highest type, and praise enough could not be spent upon it.

The veteran John Watson, of Chicago, was chosen as referee, and no complaint was uttered against him.

The rules governing the race were the American Association rules, 50yds. boundary and dead line, 1¼oz. shot for 12-gauges. The official scorers chosen were Messrs. W. L. Shepard, of Chicago; Jos. Whitfield, of the *Globe*, Kansas City, and the representative of FOREST AND STREAM.

The uniform worn by the Chicago men was a blue jersey jacket, with "Chicago" displayed in white letters across the breast. The Kansas City men wore white knit sweaters, with the letters "K. C." in blue upon the breast.

The attendance was the best ever seen on these grounds, and the character of the spectators was of the best, many representative people being present and the number of ladies exceptionally large. The event is recognized to-day as the most important that has occurred in shooting circles in this portion of the country. The best of order was maintained, although the excitement has been of the intensest sort all day long. The strain upon the shooters was great, but all kept their nerve and shot in highly creditable form. The birds were unquestionably a good average lot, especially in the morning. The puzzling hill which slopes up to the left made these grounds a bit awkward at first to Chicago, but most of her men had seen feathers fly in a good many ways before they came down here.

STONE—BINGHAM.

The first match was between P. F. Stone, of Chicago, and Ed Bingham, of Kansas City. The birds had wheels on 'em, and one after another went out hit with both barrels. Mr. Bingham had 23 drivers. He shot a wonderful score, and if another of either team can equal it at birds as hard he will do well indeed. Mr. Stone had 22 driveas. He kept his nerve, but when the 50th bird had been shot Chicago was 6 birds behind. Score:

Ed Bingham..... 12121211222122122122220111111222222232221121—47
Percy Stone..... 02022122122222211c2211102220222111111202e02110221—41
o Dead out of bounds.

MUSSEY—HALLIWELL.

Mr. W. P. Mussey, of Chicago, and W. S. Halliwell, of Kansas City, now went down. Mr. Halliwell shot in good, clear style, but it is a fact that Billy Mussey had a big rabbit's foot in his pocket, and he charmed down one bird too many for his opponent, and shot nervily enough to cut down the lead of Kansas City by one bird. Score:

W P Mussey..... 2220022o12112221212122122122oo12111121212112121111—44
W S Halliwell..... 2112o11o12122011222211221222222022o12112200l2—43

EICH—CHOTEAU.

And now came a revelation, a surprise, and a nightmare for the Kansas City boys. Mary Jane Eich, the same with smooth hair, a gold tooth, a smooth voice and an innocent unassuming air, dawned on the scene even as a cyclone dawns. Mary rose and shone, looked, lowered and fell on the Kansas City pigeons with a dull, shivering, sluddering thud. The victim in this match was Ed. Choteau, of Kansas City, who ordinarily isn't anybody's victim. He only lost 6 birds, which means good work, but look at Mary Jane's 48! Mary used her second barrel only 5 times in the air, and shot a brilliant race, running 26 straight in one string. Score:

M J Eich..... 1111112111211122121111112011211021112121111112112—48
E E Choteau..... 2201122211211111022121111111o2111012202012211122—44

J. E. PRICE—TWITCHELL.

Kansas City was only one bird ahead when the next race was called, J. E. Price for Chicago and W. B. Twitchell for Kansas City. Mr. Price had just had an accident with his gun, the sight being knocked of. He was a bit flustrated and couldn't find 'em, letting two out of his first three get away. Then Henry Kleinman made him a sight out of a piece of Yucatan chewing gum, and he hobbled along. Mr. Twitchell kept Chicago thinking mighty hard, although he made Kansas City think pretty hard too, for he only got 43, and had he had a crowding opponent, Chicago would here had walked out ahead. Mr. Price touched low water mark at 39. Score:

J E Price..... c2011222221112102022o012212212222211c012211c0c—39
W B Twitchell..... 0121221110221201o1c2212022221011c2102122221112212—41

GEO. KLEINMAN—GUINNOTTE.

Kansas City is three birds ahead, Chicago perspiring profusely. Capt. Anson called out Br'er George Kleinman for Chicago, and Capt. McGee ordered out Karl Guinnotte. The latter shot a splendid race, and remained cool and nervy clear to the last. His judgment was good, and while at his score will show him a clever two-handed fighter. He always used his second, swinging it with telling force many times after the bird was dead on the ground. But he didn't hurry with his second. He waited till the bird was dead, then took careful aim and fired, usually hitting it or coming close to it. George shot as all the Kleinmans do, with absolute concentration of purpose, perfectly cool and thinking of nothing but the work in hand. He didn't rattle, but his gun did. His gun is a remarkable affair. It is a nameless gun of unknown parentage, marked in plain letters "Prize Machine Gun," and that is all. George gave $25 for it, 25, 12, 10 and 5 per cent. off. It won't shoot No. 7's in the left barrel, so George shoots No. 8, his finest shot, in his second barrel, which the same he also loads with a handful of the Kleinman steady, Dead Shot, of the blackest dye. Yet George with his combination, himself sick and with a swimming head got at the hands of the old ailment which has been pulling him down for the past year, showed the old training of the Calumet marshes, beat his man three birds and tied the total score. George could have had anything he wanted then. Score:

ABE KLEINMAN—VORIES.

Kansas City now was ready to perspire. Another Kleinman, known as Abraham, trod the cinders aside for Chicago, and Mr. L. H. Vories was his victim. Abe's new Scott troubled him with repeated misfires. His left failed him on his second bird. The referee gave him another bird, he to shoot a blank shell first. He fired the loaded barrel first, and the bird was scored lost. On his 10th, 37th and 38th birds Abe's right barrel snapped. He couldn't tell when he was going to shoot and when he wasn't, but he was patient and worried out 46, with the longest run yet, 38 straight. Mr. Vories did not shoot up to his regular form, got to thinking, fell to talking, dwelt a trifle too long on some of the fast ones, and went away with only 39. This tied Mr. Price's Chicago score. Chicago now was in the lead 7 birds. The excitement ran high. Score:

A Kleinman..... 1011222112111212122111121212222211121010122021- 46

FELTON—RILEY.

Col. C. E. Felton, whose name in the land will now henceforth be Annie Laurie Felton, because that is what the band played when he quit, now tripped lightly to the score for Chicago, bearing his beautiful Scott premier, $700, 6½lbs., 12-gauge, under his arm. The Colonel is over 60, smooth shaven, with a face like that of Blackhawk, the Indian chieftain, but with no more expression in it than a cigar stub when he is in the act of shooting. A very notable figure at the trap is Col. Annie Laurie. To him, after Jim Riley, the imperturbable, portly and jolly. Next to Elliott, Kansas City couldn't better Jim Riley much. "Jim'll beat Charlie Felton about two or three birds," everybody said, "and Kansas City will get a chance to pull up." But again and again Scott challenged Greener, and Greener spoke to Scott. Jim Riley let two get over the rails. Col. Felton also let two go, though only a few could ever get out of reach of his left barrel, which carries the large No. 6 shot in a way simply wonderful. This match was the most interesting of any in the whole series. Both men were perfectly cool. Col. Felton always fitted his natty kids a trifle closer to his hands, adjusted his hat, leaned forward, waited a bit and then called "pull." If the puller had failed to go to go through the whole performance again. Jim Riley was cool and unconcerned throughout, and chewed gum with the utmost *sang froid*, if gum ever has any *sang froid*. Both men were cheerful and courteous, each shaking his opponent by the hand when he had made an exceptionally clever stop. It was a pretty contest, a very, very pretty one, and shows what sport at the trap may be among gentlemen who are not skinners, rounders and out for pecuniary reasons only. On the 28th bird they were a tie, to the surprise of all Kansas City. "We will shoot two more and quit for to-night," said Col. Felton. "All right," said Jim Riley. It was now nearly dusk. Two shots more and a cheer went up as the men still went back tied on 28 out of 30. Unfinished score:

C E Felton..... 2212121201111212112112112222—28
J E Riley..... 2212222121101212121112222o2212—28

THE TARGET TOURNAMENT.

The excitement at the live bird traps was so intense that the target-shooting stands were nearly idle. A few of the inanimate lovers, however, burned a little powder. Following are the scores of the day:

Special No. 1, 15 bluerocks, $1.50: S. S. Hale 13, H. McMurchy 14, A. G. Courtney 14, C. W. Budd 15, Cornett 10, E. M. Steck 11, Geo. Kleinman 13, W. B. Cosby 14, C. Dickson 8, J. A. Ruble 14, W. E. Phillips 11. Budd first. Ties on second shot out, and Cosby and Courtney div. Hale and Kleinman div. third.

Special No. 2, 15 bluerocks, entrance $2.50: McMurchy 12, W. B. Cosby 14, Riley 8, G. Kleinman 11, W. Moore 6, Gordon 8, Halcombe 14, Stice 13, H. Dixon 10, S. S. Hale 15, C. Budd 12, Hart 14, A. Harris 8, Steck 11, Durkee 8, Skinner 15, L. Harrison 11, Courtney 12, Reeves 5, Weber 11, "Lone Jack" 15, Ruble 15, Scoville 13, Cave 15, I. W. Budd 13, Young 15, O'Niel 13, Cornett 13. Ties on 15 and 14 div. first and second respectively; Stice, Scoville, O'Niel and Cornett third.

Special No. 3, 25 bluerocks, $2.50: G. Kleinman 13, McMurchy 24, M. T. Hart 22, H. Dixon 17, O'Neill 17, Carnett 24, Hickman 14, Courtney 21, Ruble 25, Jim Stice 24, Rickmers 22, Gordon 14, C. W. Budd 25, Keene 19, Cosby 25, Hale 22, Harrison 21. All ties div.

Special No. 4, 15 bluerocks, entrance $2.50: Gordon 12, Rickmers 13, Hale 14, Harrison 15, Hart 8, Ruble 14, Cosby 13, Stice 15, H. Dixon 11, G. Kleinman 9, Dixon 10, McMurchy 14, C. W. Budd 14, Courtney 13, Cornett 12. Three moneys; all ties div.

Special No. 5, 10 bluerocks, $1.50: Cosby 8, Durkee 5, Hale 7, Harris 5, Kearns 7, Gordon 5, Chance 4, C. W. Budd 10, Skinner 9, Hart 8, Preston 4, Rickmers 9, McMurchy 10, C. Dixon 9, Young 8, Keene 9, Stice 7. Four moneys, all ties were div.

Special No. 6, 10 bluerocks, $1.50: C. W. Budd 9, G. Kleinman 9, Skinner 8, Cosby 8, Hart 10, Durkee 6, Dixon 6, McMurchy 10, Ruble 6, Cornett 7, Steck 5, Hale 7, Courtney 9, Harris 6, Lew Harrison 9, Phillips 6, H. Dixon 7, Cameo 6, Hale 8, Kissed 5. Hart and McMurchy div. first, Budd, Kleinman, Ruble, Courtney and Harrison shot out and Budd and Courtney div., remaining ties div.

Special No. 7, 10 tins, $1.50 entrance: Steck 4, Hart 7, Dickson 6, G. Kleinman 10, Cosley 8, C. W. Budd 9, Courtney 7, McMurchy 10, Dixon 7, Skinner 3, Cornett 9, Hale 8, Ruble 8, Phillips 8, Harris 7, Durkee 5. Ties on 10 and 9 div.; Cosley, Ruble and Hale third; ties on 7 div. fourth.

Special No. 8, 10 bluerocks, entrance $1.50: McMurchy 9, Cosley 9, Scoville 6, Moore 4, Gordon 8, Smith 7, C. Dixon 7, Skinner 7, Young 10, Stice 10, E. Hickman 5, "Lone Jack" 8, Blackburn 6, Stevenson 3, H. Dixon 8, Cornett 8, Cane 7, Kearns 7, Durkee 7, C. W. Budd 9. Hart 10, Ruble 10. Four moneys, all ties div.

Special No. 9, 10 tins, $1: Stice 10, Cosby 10, McMurchy 9, Hart 10, Ruble 8, Steck 9, Harris 7, Cornett 6, Lone Jack 9, C. Dixon 6, Budd 8, Hethman 6, Cameo 4, Holcomb 6, Scott 4, Kleinman 10, Gordon 8, Hill 5, Courtney 6, Hale 6, H. Dixon 5, J. Riley 6. All ties div.

A meeting was held at the Midland parlors to-night for the purpose of selecting the second team of 10 men. This team was chosen as the first, by committee. Capt. Anson was asked to second the "polls" also, and accepted gracefully. Anse is a good careful field

captain. The team was chosen as follows: John Watson, E. M. Steck, Henry Ehlers, Geo. Hoffman, W. E. Phillips, C. D. Gammon, A. W. Reeves, Dr. J. M. Hutchinson, Geo. Airey, Geo. T. Farmer.

Geo. Airey has been sick and in bed for two days, and as this left his place on the first team vacant Mr. C. B. Dicks was chosen to shoot in his stead. Mr. Airey thought he would be well enough to shoot by Thursday.

The Kansas City second team is announced as follows: F. J. Smith, D. S. Gordon, J. Lee Porter, Geo. Schroeder, Geo. W. Youmans, Con. F. Holmes, W. B. Cosley, Geo. Stockwell, W. G. Eads, Ed Hickman.

Wednesday, Third Day, Nov. 12.

The weather was clear, warm and pleasant. The attendance was so large that the balconies of the club house, the walls and all points near the score were uncomfortably crowded. Many shooters of prominence were on hand from a distance. Mr. L. M. Harrison came down from Minneapolis, Messrs. Eli Young, W. Woodnutt and Will Allen are in from Hutchinson, Kas., and from all the country about the representation is good.

FELTON—RILEY. (Continued).

At an early hour the contestants of the unfinished match of yesterday were at the score. Col. Felton as imperturbable and Mr. Riley as unconcerned as ever. There was question whether Col. Felton could keep the gait till the close, and it was thought that his big antagonist would beat him out still by two or three, but the event showed otherwise. One after another each man grassed his birds and when it came to the last five birds the race was still a tie, each having dropped two in the morning's work. Shot after shot, and still it was a tie. Col. Felton cut down his fiftieth bird in good shape, and left the score amid continued cheers. Jim Riley grinned, stepped up and slashed down his last bird in his inimitable style, and the race was still a tie. The enthusiasm was immense. Col. Felton threw his arms around Jim Riley's waist, or about half way around, for it is a good deal of a waist, and lifted him from the ground. "I'd rather tie you than beat you, Jim," said he. And Jim grinned and chewed gum. Score of last 20:

C E Felton.....122110211121201121—18
J E Riley.....2o2222222121l1o12222—18

AB. PRICE—PORTER.

A brilliant and highly interesting contest was that of Ab. Price for Chicago and J. B. Porter for Kansas City. The latter was expected to walk out of this easily three birds winner, but your old Uncle Abner kept sawing wood and got in his best work toward the close. Porter is one of the Kansas City reliables, and they think him their best on hard birds. This opinion is unwarranted and at fast birds he shoots a losing game. He has a 10-gauge Greener, which is the longest-reaching gun of which any record is at hand in the minds of the shooters here, and he killed pigeons with his second barrel, cutting them down clean and dead at distances beyond the hope of the average gun at this shoot. Geo. Kleinman, on whose judgment we should place much reliance, says that Porter killed several birds at 75yds. at least. Nothing like it was seen at the shoot. Porter's 5th, 12th, 16th, 18th, 19th and 23d birds were stopped after they were out of all sort of shotgun range, and that is all of it. But this was not pigeon shooting and was a losing game, as witness the loss of the 31st and 33d birds. Porter is a very slow and deliberate shooter, both with right and left. This is a style in which the percentage is all against the shooter. Mr. Price's style at times, and he missed some soft incoming quarterers in a way which would have let a quicker shot than Porter in to beat him. As it was, this pair also quit a tie, and the city of the hills looked down her nose. Score:

Ab Price.....21112o2112202212102221122102102o11121021211212222—43
J B Porter.....11212211110221222122102110c2211o2012222101121101c221—43

DICKS—THOMAS.

Chicago still 7 birds ahead and only two races to shoot. "Well here's Andy Thomas," said Kansas City, "and he's safe to beat your Ben Dicks about 3 birds, and Elliott'll do the rest." But Ben did not look worried. He was just about as fat and big and good natured as Andy Thomas. "Ben is something of a bad man himself," said Chicago, with some slight feeling of satisfaction as that florid 400-pounder trod the mark. This was a nice little race. The Chicago boys watched Ben until they saw he was about normal in temperature, and then they hove a sigh of content, and began to ask the Kansas City boys when they wanted to shoot the saw-off match. Ben and Andy fell on the birds hard. They found their curves, as Capt. Anson would say, and hit them for 46 each, finishing the third tied race at a stage when the shooting was getting to be mighty nervous work. Cheers greeted this plucky pair as they left the score. The Chicago team would have carried Ben Dicks on their shoulders, but they couldn't because he was too heavy. Same way with Andy Thomas. Score;

Ben Dicks.....22212222110212212101o1210121o2212212221222211222—46
A E Thomas.....22212222101220122212212221222222o2222222221222o2—46

H. KLEINMAN—ELLIOTT.

It was now generally conceded that Jim Elliott could not beat Henry Kleinman 7 birds in a 50 bird race. This he would have to do in order to tie the totals. Both Chicago and Kansas City had saved what each thought its most reliable man till the last. Henry went into the race with all the advantage in his favor by way of the lead in total score. The old duck shooter, however, appeared to be a bit nervous for some reason, and his fourth and eleventh birds got away from him, amid many Kansas City yells from the uncultured crowd of spectators. The reason for most of the veteran's uneasiness began to be apparent. His left barrel, when shot on the ground, could be seen to be doing very loose and scattering work. Moreover, the gun missed fire several times. It missed fire with the right barrel on the very first bird, which Harry, showing poor judgment, too, killed with the left at once. The gun was so worn or so mis-made in the chambers that the shells fairly rattled around in the breech. "I never will risk beating my team by shooting this gun in another pigeon match," said Henry, as he turned from the score. The gun is an old, old Tommy Hasdell heavy 12-gauge, and is no longer a modern arm. It kept Chicago on the ragged edge for one-half hour to-day, as bird after bird skinned through its meager left, while Elliott was cutting down his birds neat, swift and clean, as only he can do.

Elliott's style is too well known to need description. He shoots a grand-stand second barrel, bang-bang, which often does him no service, but his is the best style for a winning pigeon race. Elliott missed clean with his second on his 1st, 2d, 3d, 7th, 10th and 14th and the latter one went on over the line, too. He missed clean with his second also his 19th and 32d birds, but made great second-barrel stops on his 36th, 41st and 42d birds, meeting prolonged applause. He failed to hit his 45th with the second, but got it all right, though his 46th, hit hard and full with both barrels, went over the line. For Elliott's shooting it can only be said that he added another to his brilliant performances at the trap and once more impressed all with the fact that he is a hard man to beat. He all but pulled his team out ahead, and cut down the lead until it left a very meager victory for Chicago.

Henry Kleinman, under the circumstances above related, which are given in the interest of justice only, and not with the idea of explaining anything in Chicago's favor, did better than almost any other man would have done. He lost 7 birds to Elliott's 2, and admitted to Elliott during the last few rounds of the shoot that if the birds had been a little harder he would have lost the race for Chicago. It was nervous work toward the last, when Henry's 47th bird fell dead out, but he got the next two and saved the race. On the 50th bird, as on his 1st, Henry's right barrel snapped, but once more he showed his carelessness, or his overconfidence, by swinging right on and killing it clean with his left. Elliott then killed his last in elegant style. Chicago heaved a great sigh of relief, and a mighty shout went up over the battle ended. Capt. McGee proposed three cheers for the Chicago team, and they were given with a will, and returned by Chicago in kind with hearty accord and a formal vote of thanks for courteous treatment. Below is the score of the last pair:

H Kleinman.....222o121112o22222212122o1122111101120112220122o121—43
J A R Elliott....2222122222211o2222222222221212112112122222o1112—48

The grand total was announced to be:

Chicago.....442 Kansas City.....440

This is certainly close work and shows how hard the fight has been. It is wonderful how closely these two cities are matched in this team shooting. Last spring, when Kansas City won the first match, the score was Kansas City 420, Chicago 416. The visitors of to-day are therefore still 2 birds behind in actual number killed.

So closed the return match. It was as pretty and pleasant an affair as ever was shot. It was a clean, fine gentlemanly shoot.

No fault was found with the decisions of the referee, except that some infant on the daily press here saw fit to call "erroneous" one of John Watson's very best decisions, and one which showed him a real referee. This was in the Price-Porter race. A bird was caught by the foot and tail when the trap was sprung, and fluttered unable to rise. Mr. Watson called "No bird," and shortly after the bird freed itself and was killed by Porter. Mr. Watson made him shoot another bird, which he also killed. This, in the mind of the critic, caused Porter to miss 2 birds later on in the race, which is certainly an amusing view to take for any one who will look at the scattering of his misses, or who knows how very little likely Porter is to get rattled at all. It was said that no rule is found to cover this decision. This is true. Neither is there anything in the rules to cover except by construction the decision in the Abe Atkinson case, where Abe by mistake pulled the loaded barrel and not the blank one first; yet Mr. Watson scored this bird lost for Chicago and not a "No bird." Mr. Watson uses common sense and justice where rules fail, and any shooter knows that no set of rules yet framed covers all the exigencies which can arise in a pigeon match. But none of this matter had any prominence at all at the shoot, and everything was perfectly smooth and courteous.

In one matter the Kansas City team had an advantage in this shoot. They out-gunned Chicago altogether, as was clearly proved by the execution shown on the field. Following is the table showing description of the guns of both teams:

KANSAS CITY TEAM.

	Make of Gun.	Gauge.	Weight.
Ed Bingham	Greener	12	7lbs. 12oz.
W S Halliwell	Greener	12	7lbs. 8oz.
F E Choteau	Greener	12	7lbs. 8oz.
W B Twitchell	Greener	12	7lbs. 15oz.
J K Guinnotte	Greener	12	7lbs. 10oz.
J E Riley	Greener	12	7lbs. 12oz.
A E Thomas	Greener	12	7lbs. 8oz.
J A R Elliott	Greener	12	7lbs. 12oz.
J B Porter	Greener	10	10lbs.
L H Vories	L C Smith	12	7lbs. 12oz.

CHICAGO TEAM.

P F Stone	Greener	12	7lbs. 8oz.
M J Eich	Greener	12	7lbs. 8oz.
W P Mussey	Daly	10	10lbs.
J E Price	Daly	10	9lbs. 10oz.
Geo Kleinman	"Prize Machine Gun"	12	7lbs. 8oz.
Abe Kleinman	W & C Scott	12	9lbs.
Henry Kleinman	T R Hasdell	12	9lbs. 6oz.
Ab Price	Westley Richards	10	10lbs.
C E Felton	Scott Premier	12	6lbs. 10oz.
C B Dicks	Parker (Lifter action)	10	10lbs.

The loading followed by the two teams was also different. All but two men of the Kansas City team shot with what is known as the "New York load," put up by Von Lengerke & Detmold expressly for pigeon shooting. This is E. C. powder (not Schultze, as was reported by some of the papers) and No. 7½ shot. The wadding is a black-faced special, a pink edge heavy special and a card over the powder, with light paper over shot. The powder is loaded loosely and not crowded apparently. Vories and Twitchell shot Schultze, the former using 8s in both barrels.

The loading of the Chicago team was briefly as follows: Stone, Schultze and No. 7s; Mussey, Schultze, 8s and 7s; Eich, Schultze and 7s; J. E. Price, Schultze, 8s and 7s; Geo. Kleinman, Schultze and 7s in right barrel, Dead Shot and 8s in left; Abe Kleinman, Schultze, 8s and 7s; Henry Kleinman, Schultze and Dead Shot, 8s and 7s; Ab. Price, Schultze, 8s and 7s; Felton, Schultze, 7s and 6s; Dicks, Schultze and 7s.

The following is a summary of the flights of each shooter. It gives briefly the conditions of each race. Attention should be called to the fact of the necessary length of such a report as this, which renders it impossible to give in this issue the full detail, number of trap, number of birds, etc., of each shooter's performance. FOREST AND STREAM is, however, in possession of absolutely the only full, perfect and accurate score of this kind in existence, no other sporting paper having enterprise or hustle enough to get it. Next week, or as soon as possible, this full and detailed summary will be published, not only for the first team match but for the second. It is a matter of over 2,000 lines of space, and although the copy is in it can not possibly find space this week, although it will eventually be given to complete the chronicle of a shoot which has warranted the best and fullest effort possible at the hands of any sporting journal claiming to give the shooting news.

SUMMARY IN BRIEF.

Chicago Team.

	R.Q.	L.Q.	R.I.	L.I.	R.D.	L.D.	T.	D.	I.	Total.

Grand team total										440

Messrs. Eich, of Chicago, and Elliott, of Kansas City, remain tied for the individual championship badge offered by the Jaccard Jewelry Company.

Shooting in the matches of the second team began about 3 P.M., the first pair at the score being Geo. T. Farmer for Chicago and D. S. Gordon for Kansas City. Mr. B. F. Buzard, of St. Joe, acted as referee. The shooting in the second team race was interesting in itself, and would have been absorbing had not the main event of the first team taken so much with it. Score of first pair:

G Farmer.....222121012221220201222011221020111o10101122121200221—37
D S Gordon.....11211022011221022202212221222o112oo11222020121122—41

Dr. J. M. Hutchinson next represented Chicago and George Schroeder Kansas City. Another case of Kansas City glory. Score:

J M Hutchinson12121112202o122o11212o0111101201120011o21o2222221022—38
G Schroeder.....10222221221221221011121100o2222210120221122221212—41

Geo. Hoffman and F. J. Smith now trod the bloody sands respectively for Chicago and Kansas City. Hoffman surprised himself and his friends by one run of 30 straight, but his opponent was one too good for him. Score:

G Hoffman.....01202222221211212122221111121221200211222112o0122—44

Darkness closed down with Chicago's colts rapidly bearing the market.

Below are the scores of the

TARGET TOURNAMENT.

Special No. 1, 6 single and 3 pairs bluerocks, $2.50: Crosby 8, Hart 9, McMurchy 10, Hickman 10, H. Dickson 10, Payne 10, Stice 8, Harrison 9, Bowen 9, Hale 11, Budd 12, Riley 9, Keene 8, Harris 7, Kleinman 10, Van Ess 6, Courtney 10, Hoffman 5, Jack 8, Mulligan 10, Rickmers 7, Cornett 10. All ties div.

Special No. 2, 20 bluerocks, entrance $2.50: Mulligan 14, Harrison 15, Courtney 17, Hale 20, Bower 18, Rickmers 20, Hart 13, C. W. Budd 18, Riley 19, Cosby 19, S. Kleinman 20, Payne 16, Gordon 12, Leavens 9, Skinner 19, Ruble 19, McMurchy 17, Stice 19, Tracey 18, Cave 18, Scoville 18, Lone Jack 17, J. E. Price 13, Young 19, Eldred 12, Steck 17, Halcombe 16, Van Ness 16, Cornett 17, Dickson 17, Keene 19, Eads 19, Bluerock 19. Four moneys, all ties div.

Special No. 3, 15 bluerocks, $2: Cosby 12, G. Kleinman 13, Hale 13, Cornett 13, Holcomb 12, C. W. Budd 15, McMurchy 14, Young 9, Van Ess 7, Payne 13. All ties div.

A few other small and uninteresting events were run off at the target stands, but the main interest still clung to the live-bird shooting.

In the evening the generous Kansas City hosts laid their visitors under one more obligation by taking them in a body, forty odd in all, to a theatrical performance at the Warder Grand Opera House. They will follow up the hospitalities to-morrow evening by a banquet of state. This is a great week, and a pretty hot pace is set for the boys.

Thursday, Fourth Day, Nov. 13.

The weather was fair and warm, and the attendance held up well. A number of new faces were seen among those of the visiting sportsmen of the country about, among others the burly and jovial Paul Francke, of St. Joseph. Mr. C. W. Budd refereed the first two races, Mr. Francke officiating from that on out. Andy Thomas captained the Kansas City team. Shooting began at an early hour, the matches of the second teams being resumed.

Kansas City sent W. G. Eads to the score against A. W. Reeves, of Chicago. Score:

REEVES—EADS.

A W Reeves.....11112o22112202210112222o1112012102102111202111l0—41
W G Eads.....11220120210211102122122122112111o1122110122122222—44

AIREY—PORTER.

Kansas City was now 11 birds in the lead. Geo. Airey went up for Chicago and J. Lee Porter for Kansas City. The latter is a brother to Long Range Porter of the first team. He increased the lead of Kansas City to 17 birds, beating his opponent as all the other Kansas City men had done. Airey's late sickness may have unfitted him. Score:

Geo Airey.....2101102122121202201o1122122122o20100101122211222—39
J L Porter.....01112122110212122122122o22122111221111122202o1122212—45

STECK—MAEGLEY.

When Mr. Maegley got done with Mr. Steck Kansas City was 24 birds in the lead, and Chicago was thanking her stars that she had not insisted on shooting the whole 20 men as a team instead of 10. Score:

E M Steck.....2122121o1210022211221121210111112101o1202021220112o—40
F C Maegley.....22211112201112122222212121210o2201211221221221—47

PHILLIPS—YOUMANS.

W. E. Phillips, the young Naperville shot, succeeded in breaking the spell a trifle by tieing his opponent, Geo. Youmans, of Kansas City. Score:

W E Phillips.....1021021122o2110o11o211221112122121212112022012111l2—42
Geo Youmans.....01212122012222222221111102222220220212212122o22210—42

EHLERS—HOLMES.

Henry Ehlers, of Chicago, was bigger and older than Con. Holmes, of Kansas City, shot a bigger gun, and for a wonder made a bigger score, tieing top score of the day, and reducing the lead to 19. Score:

Henry Ehlers.....22201121222222212222211221121212o2212122212212222—47
C F Holmes.....11101110o2012102112212o212202o21212111112111211221—42

GAMMON—STOCKWELL.

Charlie had his new Daly, and it tore up the earth in great style, but not enough for him to be quite in it with George Stockwell, of Kansas City. Score:

C D Gammon.....2102211002212221121112220o21o02012222202212222210l1—40
Geo Stockwell.....11222120211201112122222o2000111121121012012222112—42

WATSON—M'GEE.

It was nearly dark when the last race of the day closed, that between the veteran John Watson, of Chicago, and Capt. J. H. McGee, manager-in-chief of the Kansas City forces. Capt. McGee shot Col. Felton's Scott Premier, and the 42 grains of Schultze made the 6⅝lbs. little gun pound his shoulder (which has never been over-strong since a fracture it once sustained) so severely that he was fairly in misery by the close of the match, and his score therefore went to pieces. At the 30th bird he tried two shots with Elliott's gun, then he tried the Scott again with Elliott's load, then at the 42d bird he gave them all up and took up his own 16-gauge Greener, with which he shot out the race, doing work that was a bit easier on his shoulder. John Watson shot a steady race till toward the close, when some several birds bade him good bye. Score:

John Watson.....22113211120112111122o2011222211122220o001201o2210211—40
J H McGee.....22121210111101111011121121110100120101o2201022112—38

And now the second team match was over and Chicago, the jubilant, was 16 birds the worst of it. Such is life. When Chicago came down here she was sure of winning the second team race than the first, and would have been willing to pit the total 20 scores against the Kansas City 20. As it is, Chicago has won the match she feared she could not win and lost the one on which she thought she had a certainty. A study of the summary given below will show that the percentage all goes to point that Kansas City can just about beat Chicago at any kind of a pigeon match she wants to name. Before she shoots another match with these people Chicago wants to sit down and do a whole lot of thinking. As Capt. McGee says, Kansas City will shoot any sort of a team race; she will back a man to kill more birds inside of a boundary of 5yds. (meaning Jim Elliot), or she will back a man to kill more birds outside of a 40 or 50yds. boundary (meaning long-range Porter). But has it all not been interesting study?

It should go on record that Percy Stone and M. J. Eich did the gathering for Chicago and Lil. Scott for Kansas City. Mike Eich is the best retriever, his method being to flash his gold tooth in the eyes of the bird and pick it up before it recovers. The following is the

SUMMARY, SECOND TEAMS.

Kansas City.		Chicago.	
D S Gordon	41	George T Farmer	37
George Schroeder	41	J M Hutchinson	38
F J Smith	45	George Hofman	44

THE BANQUET.

The banquet in the vast dining hall of the Midland to-night was a sumptuous and elegant affair, and by its magnificence Kansas City fairly and completely vanquished Chicago again. The assemblage was a tremendous one, and it is probable that in all the history of similar events, in the West at least, there has never been such another. The list of names of those in attendance is given in full. To give the residence of each would occupy too much space. They came from all over the country, and made this assemblage one whose equal every man present confessed he had never seen in the history of sportsmanship. The following were present: C. T. Allcutt, Fred Allen, Dr. Anderson, A. C. Anson, G. A. Airey, George W. Andrews, Will Allen, W. A. Alderson, Ed Bingham, Bell Thomas, Charles Bassett, Thomas W. Butler, J. A. Bolen, A. A. Bombeck, E. J. Berker, J. W. Budd, Charles Budd, C. S. Burton, W. T. Best, Joseph Bachelor, A. B. Bryant, E. A. Bower, W. Breddall, H. N. Burke, E. M. Bronnick, John T. Crisp, Frank Chase, W. Cosby, Tim Cotter, Ed Cadman, A. B. Cross, Ed Choteau, Dr. L. C. Choteau, E. F. Cummings, A. J. Courtney, J. Childs, W. N. Crellian, W. B. Cave, R. W. Cunningham, I. L. Cornett, W. H. Dickinson, J. S. Davenport, Harry Dickinson, Fred Deuser, C. B. Dicks, E. A. Dow, H. Dickson, A. Dickson, C. Dickson, Geo. Dugan, Robert Dinsmore, W. K. Everinghead, W. H. Eads, J. A. R. Elliott, M. J. Eich, Henry Ehlers, J. T. Easter, William Eldred, Robert Forester, Andrew Forester, Paul Francke, C. E. Felton, Geo. T. Farmer, F. A. Fodde, James Gibson, E. S. Gordon, S. C. Graham, J. E. Guinotte, J. K. Guinotte, M. Gordon, Chas. B. Gammon, C. F. Grant, Chas. Hilliker, W. B. Hauworth, Henry Henn, James Heyden, Frank K. Hoover, W. S. Halliwell, L. Huggins, Benjamin Holmes, Conn. F. Holmes, Walton Holmes, Scott Harrison, E. W. Hume, J. Hughes, Ed Hickman, C. H. Hagedorn, M. T. Hart, M. R. Hart, S. B. Hough, L. M. Lamline, Dr. James M. Hutchinson, L. Harrison, T. J. Higgins, Geo. Hoffman, Val. Hoffman, Geo. Holmes, R. Hart, D. Halcomb, S. S. Hall, Frank Jones, H. W. Jenny, F. H. Kumpf, Geo. Kumpf, H. B. Kleinman, Geo. B. Kleinman, A. Kleinman, Chas. Kern, L. Kunz, A. W. Knox, Frank Klett, Geo. Kearney, F. K. Lewers, Chas. Lockridge, Fred Lampe, Wolfred N. Low, Dr. Lesch, G. W. Lacey, E. E. Menges, Col. Moonlight, Harvey McMurchy, H. J. McGowan, W. P. Mussey, J. A. Marks, Thomas McGee, James McGee, F. C. Macgley, C. E. McGee, By. Nephler, H. D. Nicholls, James Nave, T. F. Norton, Thomas Orr, Geo. E. Orr, Dr. Oliver, J. L. Porter, J. B. Porter, Chas. N. Collak, Wm. Petters, Chas. Perrin, J. E. Price, W. E. Phillips, Abner Price, J. R. Pennyman, Geo. Proth, Geo. Payne, C. F. Payne, L. E. Riley, Robert Ricketts, Gus Rickmers, W. B. Rieger, J. C. Rieger, J. H. Robbinson, A. W. Reeves, J. A. Ruble, Dr. Rowe, Harry Reeter, J. J. Rieger, E. W. Chandler, J. K. Stark, W. T. Stark, C. F. Schaeffer, Allen Schaeffer, Ralph Stout, R. Slater, Chas. Schmelzer, Herman Schmelzer, J. S. Schmelzer, Henry P. Stewart, Geo. Stockwell, D. G. Stockwell, F. J. Smith, W. Scott, W. S. Sirlington, J. Steipel, John Salf, W. J. Sheppard, E. M. Steck, P. F. Stone, Henry Smith, W. H. Skinner, R. E. Street, J. R. Stice, A. L. Scoville, H. Sloat, Wright Smith, Chas. Schneider, James Stevenson, A. E. Thomas, D. S. Twitchell, D. T. Thomson, J. J. Thompson, Wm. Tanner, W. W. Trailer, W. B. Twitchell, S. A. Tucker, W. H. Towne, Judge Teasdale, Eli Titus, Sam Underwood, Joe Underwood, R. W. Vaughn, Nat H. Vincent, L. H. Vories, H. R. V. Van Cleave, Y. L. Woodson, Chas. Whiting, James Whitfield, W. D. Womack, A. W. Wood, A. A. Whipple, John Watson, R. G. Wallace, S. M. Wood, G. W. Wells, Dora Williams, F. D. Woodnutt, Geo. Youman, Eli Young, F. York, C. C. Hathaway, J. H. Rich, Frank E. Johnson.

The menu was elegant and extensive, and over its discussion he guests lingered until midnight. The chairman of the evening, Mr. J. H. McGee, then called for order and introduced the first speaker, Col. D. S. Twitchell, of Kansas, who made an eloquent address of welcome and paid a touching tribute to the memory of the honored and beloved sportsman, Drury Underwood. Mr. Wolfred N. Low, of Chicago, replied in a speech of all his usual eloquence, dignity and fitness. Mr. Low said that all Chicago mourned Drury Underwood as a type of the highest and noblest sportsmanship. He confessed Chicago abashed by the magnificence of the reception Kansas City had extended to her. Mr. Low was greeted with ringing applause, and received the extreme courtesy of a rising salute from the Kansas City men.

It was announced by the chair that the Hon. J. C. Tarsney, who was to have replied to the toast "Our Guests," was absent, unavoidably, as was also Maj. Wm. Warner, proponent of the toast "Kansas City and Chicago," reply to which was to have been made by that well known and esteemed gentleman, Mr. Charles Kern, of Chicago, whose remarks would doubtless have been a feature of the evening.

Maj. B. L. Woodson, of Kansas City, spoke to the toast "The Chicago Team," and was felicitous to a degree in his remarks, making the Chicago boys feel pretty proud of themselves. Acting for Chairman McGee, Mr. Low introduced for reply Col. C. E. Felton, "the Chevalier Bayard of sportsmanship;" and he named him right. Col. Felton responded feelingly and well, and was greeted by the utmost enthusiasm by the old and new friends who all have learned to love him. Col. Felton was asked also to speak upon the enforcement of the game laws; and in the course of his remarks he referred to facts and accomplishments in game protection in a telling way.

Col. John T. Crisp, of Kansas City, made a thrilling address about the World's Fair and the Kansas City team, to which the FOREST AND STREAM representative was assigned for reply.

Col. Thos. Moonlight, ex-Governor of Wyoming, made the speech of the hour in his remarks upon "The Sportsman's Aim in Life." Col. Moonlight outlined graphically the nobility and generosity of the typical sportsman, and extolled the beautifully sportsmanlike character of the contests just closed. He gave the pot-hunter and game seller a good "roasting," and cautioned the shooters against shooting for mercenary motives. Shoot for honor, gentlemen, said Col. Moonlight, and not for the money there is in it. That is the better aim. Money is the destroying element in sport. Col. Moonlight sat down amid prolonged applause. Replying to his address, Dr. N. Rowe said: "The sportsman's real aim in life is to kill. Col. Moonlight is a real sportsman. He has so thoroughly covered the ground in his remarks that he has killed for me all possibility of making a speech. Will the reporters please say it was killed by Moonlight, with an upper case M?" They did.

Ex-Governor T. T. Crittenden, of Kentucky, spoke to the toast "Missouri and Illinois," and made of it absolutely a polished and finished oration, whose effect was electrical even at 2:30 in the morning. Gen. Crittenden is a noble and dignified looking man, a statesman, orator and happy thinker, and his presence would grace any board and any assemblage in the land, as certainly it did this. Dr. J. M. Hutchinson responded for Chicago in his customary droll quaint way.

The ex-Mayor of Kansas City, Hon. Joseph J. Davenport, a singularly distinguished looking young man, spoke for "The True Sportsman," and did it well. Mr. Abner Price of Chicago was to have replied, but no one could find him. The Hon. William H. Wallace, who was billed to appear in the rôle of "Good Night," was also absent. It was now time for "good morning." The company dispersed. The last act of the sportsmen assembled was to drink a silent toast to the memory of Drury Underwood, the well-beloved brother, friend and chief among the craft.

Friday, Fifth Day, Nov. 14.

The heavens were weeping over the dissipation of the night before. Most of the shooting company were content to linger about the hotel until a late hour, and a 12 o'clock breakfast was the rule. The rain continued throughout the day, and shooting was very disagreeable. Score:

Shoot No. 1, 7 live birds, $5:

All ties div.

During the progress of the banquet a very pleasant and graceful event occurred. Mr. J. A. R. Elliott, of Kansas City, and Mr. M. J. Eich, of Chicago, it will be remembered, were tied on the highest score of 48 for the Jaccard diamond medal offered for the best individual score. Mr Elliott called Mr. Eich to the head of the table and publicly withdrew from the tie, thus giving the medal to Mr. Eich. This delicate act was received with deafening cheers. Mr. Elliott knew he could shoot Mr. Eich out, and that he declined to do so is but another proof of the rare courtesy with which Kansas City has treated her guests throughout.

At the close of the banquet a formal resolution was adopted desiring the Illinois State Sportsmen's Association to set on foot a plan for coöperation in the matter of more efficient laws for game protection and for a greater extension of the park system of game preservation.

Saturday, Sixth Day, Nov. 15.

The rain continued and the day was disagreeable. There was a little desultory work at the traps, but it amounted to little. The first event at live birds was run off rapidly.

Single-barrel race, 5 live birds, $3:

Steck	00001—1	C Dickson	11001—3
Francke	11111—5	Eldred	10101—3
Budd	11011—4	H Dickson	01100—2
McMurchy	11011—4	Harris	01111—4
Keene	11101—4	Scott	00111—3
Batchelor	10111—4		

Francke first, Batchelor second, Eldred third.

Shooting now began in the most important sweepstakes of the meeting, the 25 live birds, $25 a man event, for which several shooters had lingered later in the week than they had at first intended. There were 21 entries in this shoot, and it took high-class work to be in at the finish. It was nearly dark at the close of the shooting, and those who had dropped too many birds to get a place, by request withdrew in order to give those who were still in it a chance to finish before dark. When the accounting was made it was found that Carl Guinnotte, champion Elliott and Charlie Budd each had 'em all. Each of these men had done clever work. Charlie Budd making some startling kills with his little Smith, four near the boundary flags. Charlie is evidently envious of Long Range Porter. Harvey McMurchy split second with Col. Felton, who shot Jim Elliott's gun and beat his friend and opponent Jim Riley, out by one bird. Score:

Twenty-five live birds, $25:

H McMurchy	2121201211212121222111222—24
Paul Francke	2201222211101212212221210—22

A E Thomas	2222102212200220223w
F J Smith	2020202221001222222w

Guinnotte, Elliott and Budd div. first, $157.50. McMurchy and Felton div. second, $118.12. Scott, Riley and Stice div. third, $78.75. Francke and Porter div. fourth, $29.37.

A handsome silk quilt and bed set was offered as a special to first man on this shoot, but the tie was not shot out. Mr. Guinnotte and Mr. Budd united and presented their claims to the wife of Mr. Elliott, who accepted the gift with thanks.

During the afternoon Mr. Riley, of Kansas City, took advantage of the services of a skillful card carver, who was plying his unique craft upon the grounds, and presented with his compliments to his friend Col. Felton, of Chicago, a large and ornamentally embossed card bearing the words "Compliments of J. E. Riley to Chas. E. Felton; Chicago-Kansas City. Score, 45—46. Nov. 14 and 15, 1890." The score was also cut into the sheet in detail, and the whole made a pretty memento, which Col. Felton will probably cherish as long as he lives. Appropriate speeches and hearty cheers accompanied this little bit of by-play.

It was dark when the party arrived at the hotel. The 6:45 "Q." for the north bore away some of the Chicago party. Others still remained, and what plans the boundless hospitality of the Kansas City men may have on them is not yet to be said.

So closed the great shoot. It is great in nothing so much as in the era it has established of cleanness, generosity, nobleness and magnanimity in the sport it so well represented. Surely the spirit of Drury Underwood was over it all. E. HOUGH.

THE NEW YORK STATE SHOOT.

ROME, N. Y., Nov. 10.—This town is doing itself proud in respect to the June meeting of the State Association.

The attendance will be large and will include marksmen from all parts of the State. At the convention last June in Lyons there were about 500 sportsmen in attendance. This number will be increased at the next meeting. Heretofore the bulk of the prizes offered has been in the shape of merchandise contributed by the business men of the towns where the conventions have been held. At the last meeting it was decided that only one merchandise prize should hereafter be given. This necessitated a guarantee fund of $1,800 for prizes. This is $600 more than usual. The Rome Gun Club has guaranteed this amount. Heretofore a few of the crack shots in attendance at the meetings have been able to control the big money prizes and divide the proceeds, leaving the others little or nothing. This has now been changed, so as to give all a fair chance.

Thomas H. Stryker, of Rome, the president of the State Sportsmen's Association, has the fixing of the dates for the shoot. He will probably decide on the second week in June. The tournament proper begins on Tuesday morning and closes on Friday evening. Twenty five traps will be in use, and it will require 40,000 clay-pigeons to supply the demand. The shoot will be held on the range of the Rome Gun Club, Bissell farm, Floyd avenue.

At the Lyons convention a committee was appointed to revise the rules and regulations governing the shoot. The committee held a meeting in this city a few days since. The meeting was called to order by chairman T. H. Stryker. The following gentlemen comprising the committee were present: T. H. Stryker, Rome; E. D. Hicks, Rochester; H. L. Gates, Utica; Harry Ayling, Syracuse; Jacob Koch, Buffalo. There were also present W. M. Richmond of Charlotte, G. Dexter of Utica, and W. R. Hunnington, A. H. Golly, Charles Carmichael and M. R. Bingham of Rome.

On motion M. R. Bingham was made secretary. Harry Ayling of Syracuse was allowed to act on the committee in place of Mr. Chase, absent.

After a general discussion on the power of the committee and the interests of the association, it was decided that at the next annual tournament of the New York State Association, to be held at Rome in 1891, contests Nos. 1, 2, 3, 5, 6 and 7 be for cash prizes, and that contest No. 4 be for merchandise prizes.

Mr. Hicks moved that the cash prizes in Nos. 1, 2, 3, 5 and 6 be divided equally and consist of $320 in each contest, and contest No. 7 (race for team championship) be $200.

Mr. Gates moved that a uniform entrance fee of $4 be charged in contests Nos. 1, 2, 3, 5 and 6. Also that contest No. 7 (race for team championship) be governed by the same rules and conditions as in 1890.

Mr. Hicks moved that contests Nos. 1, 2, 3, 5 and 6 consist of 15 single birds.

Mr. Gates moved that the condition and arrangement of contest No. 4 (the merchandise contest) be left with the Rome Gun Club.

Mr. Hicks moved that each cash purse be divided into five prizes, as follows: First prize 25 per cent., second prize 25 per cent., third prize 20 per cent., fourth prize 15 per cent., fifth prize 15 per cent., and that each contestant in ties be allowed to draw his proportion of money at the end of each contest.

Mr. Koch moved that all contests be shot from 5 traps, set level, and at unknown angles, 2yds. apart and in a segment of a circle, the radius of which shall be 18yds., and that the traps be numbered from No. 1 on the left to No. 5 on the right consecutively.

The question of rules under which the shooting should be carried on was brought before the committee. All rules not amended are to remain as prescribed by the American Shooting Association.

The conditions and arrangements of the Dean Richmond Trophy contest will be duly announced as soon as the committee appointed for that purpose shall meet and decide.

NEWARK VS. LEHIGH.—Allentown, Pa., Nov. 16.—The Newark and Lehigh Gun Clubs met for the second time in a friendly contest, the Newark being winner for the second time. It may be remembered that at the first contest, last April at Leo's Park, the Newarks make the remarkable score of 96 out of 100, a score never equaled by a club of ten men. The birds were not what they ought to be, as we had no place to keep them, and had to start too early to get birds owing to the scarcity. The match was at 10 birds, 30yds., Hurlingham rules:

Newark.		Lehigh.	
Hedden	1221200113— 8	Nettles	1212121121—10
Mack	1211011111— 9	Geisinger	1120211110— 8
Green	1211110111— 9	Huffort	2012112221— 9
Freche	2012012121— 8	Bell	1111212110— 9

Wheaton	1123122012— 9—51	Blank	0102112001— 6—46

NEWARK GUN CLUB.

THE members of this crack live bird club assembled on Thursday last at Erb's Shooting Park for their regular monthly meet. The attendance was much smaller than usual. As the game season is now open this is easily accounted for. There is not a member of this club who is not a lover of field shooting, and a majority of them are now scattered about the country in search of the game. Those that were in attendance were favored with a perfect day, and, as is always the case at Erb's, had a grand lot of birds for targets. Before the shooting began a meeting was held and a governing committee consisting of Messrs. Brientnall, Erb, Howke, Castle and Pentz were elected to have full control of all club affairs. The committee appointed to manage the coming tournament are making great preparations, and everything points to a most successful meeting, a large number of requests for programmes have come in, many of which are from shooters that have not been in the habit of attending tournaments. This is the result of barring out the top sawyers, and it is expected that a large number of the amateurs will be in attendance. The committee will strive to make things pleasant for all that may attend. Special rates at Newark's best hotel, the Continental, have been secured, and a hot dinner will be served each day upon the grounds. Keystone targets are to be thrown, and one set of ten traps will be used for all events.

Sweep No. 1, 4 birds, $3 entrance, two moneys:

F Class	2121—4	Dr Zeglis	2011—3
J Erb	2112—4	J H Brientnall	c011—2

Ties all div. Brientnall not in sweep. } TEE KAY.

WALNUT HILL, Nov. 12.—A dozen shotgun experts reported at this range to-day, and in spite of the raw weather put up some very high scores in the various events. In the 14th competition for the diamond pins the shooting was remarkably even, Messrs. Barret and Bradbury tieing for top place. The former waived his right to a shoot-off, and Mr. Bradbury wore home the club champion medal. In the contest for the Keystone trophy, also, the leadership was left in doubt, for Messrs. Bradbury and Nichols rolled up the same totals.

Diamond pin match, 14th competition, 20 Keystone targets, firing by squads, and 5 pairs of Standard targets:

Barret	11111101111111111111—19	01 10 10 00 10—4—23	
Bradbury	10111011111111110111—17	11 11 10 00 01—6—23

Hunt	6 6		

Live bird sweeps, at 5 birds, $3 entrance:

Sigler	11112—5	21111—5	Mead 12101—5
Quimby	01212—4	22122—5	Maud 22120—4
Johnson	11122—5	22211—5	Pierson 12120—4 11022—4
Lindsley	10100—2	22112—5	Du Bray 10211—4 12121—5
Collins	12221—5	11101—4	Hathaway 20201—3
Hunt	22121—5	11022—4	Macatee 22012—4
Miller	21111—5	02002—2	

NEW YORK, Nov. 12.—Monthly shoot of the Manhattan Gun Club, at Feldman's Driving Park, Maspeth, L. I.:

M Liebtenberger	3	H Flegenheimer	4
Geo Fohrenkopf	5	H Bailer	4
R Schmidt	2	F Lambrecut	5
John Bayer	4	E Klein	3
J A Hoffman	6	Jos Schreck	2
		Messerschmitt	6
		Eibl	2
		J N Gennerich	4

Shoot off won by Messerschmitt with 2 straight.

NEWARK, N. J., Nov. 6.—At Erb's to-day the attraction was a match between George Raynor, of Orange, and John Harrison, of Chatham, each man shooting at 25 birds, for $50 a side. The match resulted in favor of Raynor by 18 to 17. Next Thursday the monthly shoot of the Newark Gun Club will take place, and a score of members are expected to be on hand. Beside the regular club trophy contest at 10 live birds per man there will be open-to-all sweepstakes. During the day Robert Schrafft, one of the most promising young shots of this city, will shoot a match at 50 live birds each against Caris Reinhardt, and another also at 50 birds each against Gus Griffen. The stak in each match will be $100 a side, and Newark Gun Club rules will govern.

Nov. 8.—To-day a big crowd was on Erb's grounds to witness a match at 25 live birds each between William Hollis, of Kearny, and F. Perment, of this city, the stake being $50 a side. The birds were a hard lot of flyers, and were made still faster by a strong wind from the left quarter. The match resulted, Hollis 18, Perment 15.

WOODSIDE, N. J.—The formal opening of the new grounds of the Woodside Gun Club, on the banks of the Passaic River, on Nov. 18 and 19, is expected to be a feature of the trap-shooting season, and expert shooters from far and near will be on hand to try to capture the pots. Shooting will begin at 9 o'clock each day and open sweepstakes will be arranged on an extra set of traps to accommodate the contestants. The programme, which will be the same each day, is as follows, bluerock targets being used in each event: No. 1, 5 singles, 50 cents; No. 2, 10 singles, $1; No. 3, 15 singles, $1.50; No. 4, 20 singles, $2; No. 5, 15 singles, $1.50; No. 6, 10 singles, $1; No. 7, 25 singles, $30 guarantee, $2.50; No. 8, two-men team, 10 singles per man, entrance per team $2; No. 9, 5 pairs, $1; No. 10, 20 singles, $2; No. 11, 15 singles, $1.50; No. 12, 10 singles, $1. The shooting will be governed by A. S. A. rules. All purses will be divided into 40, 30, 20 and 10 per cent.

CLEVELAND, O., Nov. 6.—To-day was not such a bad day for shooting, and the members of the East End Gun Club took advantage of the fine weather to make some scores that on the average were not particularly good. After L. O. Jones had virtually won the Smith gun for the second time a fresh detachment of shooters arrived, among them a gentleman by the name of Poplowsky, who tied Mr. Jones's score. Considering the conditions under which Poplowsky shot he did some meritorious work. It was very dark and almost impossible to distinguish the birds against the background of trees. Black, Poplowsky and Murray tied for first badge, and Black won. For second badge Sweetman and "Maygo" shot off a tie, the latter winning. The following is the score of the shoot, the first 30 birds counting in the regular club shoot:

Sweetman	45	L O Jones	48
Wherry	39	Baker	36
Reynolds	43	Maygo	47
Bloom	31	Martin	43
Murray	42	Corryell	37
		A B Jones	44
		Phare	38
		Poplowsky	48
		Black	47

ASBURY PARK, N. J., Nov. 7.—The second live bird match between Philip Daly, Jr., of the Central Gun Club of Long Branch, and Capt. Money, of London, England, was shot to-day on the new grounds of the Central Club at Pleasure Bay. The conditions were 30yds. rise, 21yds. boundary, 100 birds each, and use of both barrels allowed. The match was for $350 a side and a new gun valued at $800. The birds were strong flyers. Daly won, killing 87 birds to Capt. Money's 82.

WELLINGTON, Mass., Nov. 8.—The mildness of the weather to-day brought to the Wellington range several new sportsmen who entered in the 20 events shot. In the merchandise match Perry led with 28 broken birds. The other scores of 14 and over were made as follows: Stone 24, Bradbury 19, Stanton 23, Gore 23, Hooper 14, Bond 21, Purdy 14, Dill 20.

HIGHLAND GUN CLUB, of Des Moines, Ia.—Description of the new grounds and house next week.

Yachting.

Yachtsmen who do not see what they want under this heading will please look under the hatches of the *Canoe*, peep into the *Kennel*, squint down the barrel of the *Rifle*, open the *Fish Car* and *Game Bag*, inquire of the *Sportsman Tourist*, and if their yearnings are still unsatisfied, push their explorations into the *Editorial* and *Advertising Departments*.

THE LAKE Y. R. A.

WE are indebted to the Toronto *Globe* for the following complete report of the eighth annual general meeting of the Lake Yacht Racing Association, held at the Queen's Hotel, on Nov. 8. President A. R. Boswell, commodore of the Royal Canadian Y. C., was in the chair, and there were delegates present from all the circuit clubs, excepting Belleville, Mr. W. H. Biggar, commodore of the club, having telegraphed that it would be impossible to send a representative. The delegates were:

Oswego Y. C.—E. B. Mott, Karl Kellogg and A. Ames (per proxy).

Rochester Y. C.—Matt Cartwright, E. N. Wallbridge and W. H. Briggs.

Kingston Y. C.—J. B. Carruthers, Geo. E. Evans (per proxy).

Hamilton Y. C.—Æ. Jarvis, J. F. Monck and H. Lee.

Royal Canadian Y. C.—Hume Blake, C. A. B. Brown and L. B. Percival.

Queen City Y. C.—J. Allan, T. E. World and O. Martin.

The minutes of the meeting of Nov. 9, 1889, were read by the secretary and confirmed by the meeting. Mr. C. A. B. Brown in welcoming the delegates to Toronto, reviewed the success of the yachting season just past, and congratulated the association on the same. He said they had experienced some rough weather at Kingston, but the circuit regattas as a whole were most gratifying. He was glad to see that the other clubs by their representation here were determined to still further advance the splendid sport of yachting.

The treasurer's report was then read and passed, showing the finances of the association to be in a healthy condition. Notices of proposed amendments to the constitution, in accordance with article 13, were taken up and discussed. The Hamilton Y. C. gave notice (1) that the following be inserted in paragraph 3 of article 5, after the words "shall keep the yacht register provided for by article 11, section 2," namely: "Shall keep a record of the names and times of the starters in each race held under the auspices of the association in a book provided for that purpose." (2) That the following be added to paragraph 2 of article 6: "But no delegate shall give a proxy to any person who is not a co-delegate with him from the same club."

The first clause was adopted, but, after some discussion, the second clause was amended so as to read "co-member" instead of "co-delegate with him from."

(3) That the words "other than the assessment mentioned in Rule 1 of the sailing regulations" shall be inserted in article 3, between the words "no other assessment," and "shall be levied." Carried.

(4) That the words "and in good standing therein" at the end of paragraph 1 of article 11 be struck out. Carried.

(5) That the following be inserted as Article 13 under the heading of "Arrears": "A club which is in arrears for any assessment shall be entitled to be represented at any meeting of the Association, nor shall any of its fleet be allowed to compete in any race held under the auspices of the Association. (b) No yacht, the owner of which is not in good standing in the club to which he is supposed to belong, shall be entitled to compete in any race held under the auspices of the Association. Mr. Brown, R. C. Y. C., objected to the latter clause and gave his reasons for so doing. He did not think it just to shut out a yacht because she was not entirely owned by members of a club of the Association, but the other delegates thought this a most necessary clause. It was, however, amended so as to read "any owner" in place of "the owner," and the article adopted.

(6) That in Rule 1 of the sailing regulations the following shall be inserted after the first paragraph:

"The executive committee shall, however, at least one month prior to the first race of the annual circuit, appoint an officer, at such remuneration as they shall see fit, whose duty it shall be to attend all regattas held under the auspices of the Association and (under the direction of the officers of the club giving the regatta) superintend the laying and logging of courses and laying of buoys, calculate the time allowances in the different classes, fire the guns at proper times, take and correct the times of the competing yachts and generally do such work in connection with the management of the regattas as may be reasonably required of him. He shall keep a record of the names and times of the starters in each race and after the close of each circuit shall send such record to the honorary secretary of the Association. The executive committee shall have power to levy an assessment on each club of the Association sufficient in the whole to pay the expense incurred by the employment of such officer."

Mr. Mott, Oswego Y. C., said that the expense was so great in securing such an officer that he had been instructed by his club to vote against this amendment, but whatever was done by the meeting would be regarded by the Oswego club. It was felt that the matter should be left within the discretion of the executive, and, on motion of Mr. Monck, seconded by Mr. Blake, the first four words of the clause were made to read, "the executive committee may" instead of "the executive committee shall." The clause in this form was then adopted.

(7) That the following be added to the last paragraph of Rule 2: "But shall be classed and have crews allowed at their full rating." Carried.

(8) That the words "the day before the day" in Rule 3 be struck out and the words "24 hours at least before the time" be substituted therefor. That the last two sentences of the said rule be struck out and the following substituted therefor: "Sundays shall not be computed." Mr. Jarvis, Hamilton Y. C., explained that the reason for this amendment was to prevent yachts from entering other than their own class. Many yachts, by a slight lowering of their topsail, could do this, and, when they were allowed to post their entries on the morning of the regatta, it was to their interest to sometimes change from one class to another, according to the condition of the wind. Compelling entries to be made 24 hours in advance would overcome this difficulty. The members considered this a good idea and the amendment was unanimously adopted.

That the following be added to the said rule as paragraph 2 thereof: Prior to the first race in which a yacht may compete in any circuit its owner shall deposit a certificate of measurement with the association officer mentioned in Rule 1, which certificate shall be in the form following or to the like effect: "We hereby certify that ——, the owner of the —— rigged yacht ——, is at present a member of the —— yacht club in good standing, and that the measurements of said yacht, in accordance with Rule 2, are as follows: To end of boom, ——; topsail halyard sheave to top of boom or under side of gooseneck, ——; eyes of rigging to top of boom or under side of gooseneck, ——; gaff, ——; waterline, ——; corrected length, ——; time allowance for one knot, ——. ——, measurer; ——, secretary. ——, 189—.

"Should any change be made in the rig or measurement of a yacht during a circuit a new certificate shall be deposited with such officer before such yacht shall be allowed to compete in any subsequent race." All of the clauses except the last one, which was struck out, were adopted.

(9) That in the form of entry mentioned in Rule 4 the words "her association number is ——" be inserted between the words "her distinguishing flag is ——" and "her rig is ——," and that the words "her time allowance for one knot is ——" be inserted after the words "and her corrected length in accordance with Rule 2 is —ft." Carried.

(10) That the words "when the number of entries required have been made and shall, at the direction of the sailing committee, be entitled to the prize, subject, however, to Rule 5" in Rule 6, be struck out and the following substituted therefor, "when two entries have been made and shall be entitled to the prize, subject, however, to Rule 5." Carried.

(11) That paragraph 1 of Rule 3, relating to distinguishing flags, be struck out. Carried.

(12) That the words "no one shall be allowed, however, to steer a yacht in any race unless he be a member of a club belonging to the Association," in Rule 11, be struck out.

This last proposed amendment brought about a prolonged discussion, in which nearly all of the delegates took part. Some of the members thought that the amendment should not be adopted, as it would give the wealthier yachtsmen an advantage over other competitors in a race, as they could engage professional men to steer their boats. President Boswell said that if the amendment was not adopted the very best yachts in the Association would be handicapped in not being sufficiently manned. He believed that the very best men should be placed at the helm. It was the same as a racehorse exactly, and the question was, How can we make the greatest speed? They were sailing for money, and it would be unjust to place an inferior boat in a position to win through inability to have the better one properly handled. Besides this, he did not think that a man present could define an amateur yachtsman. Any man who had made money through sailing could not be classed as an amateur. There was a case down at Cobourg (a little town that deserved credit for giving them a regatta). He referred to Cuthbert, a boatbuilder and yachtsman, who made his living in that way, and yet it could not be said that he was either a professional or an amateur. A man purchasing a boat should be allowed to get the utmost speed out of that boat. There was not a club in England that would tolerate such a rule.

Mr. Blake thought that some distinction should be made between the yachts in order not to affect the interests of either the large or smaller boats. He therefore moved, seconded by Mr. Wallbridge, that the amendment only apply to boats of 35ft. and over. Mr. Brown said that if this were carried there would only be three boats affected by it, the Oriole, Vreda and Aileen, and perhaps the Cygnet. Mr. Blake's motion was put and declared lost for want of a two-thirds majority. In view of this Mr. World moved, seconded by Mr. Lee, that Mr. Blake's amendment, changed so as to read 30 instead of 35ft., be adopted, which was carried by a two-thirds vote.

(13) That the words "the distinguishing flag" in line six of Rule 20 be struck out, and the words "a flag" be substituted therefor.

(14) That the following be added to Rule 24 at the end thereof, "and no yacht shall be allowed to alter her rig or ballast to enable her to sail in a different class than the one for which she was originally measured, unless her owner can show to the satisfaction of the sailing committee that it is his intention to sail permanently in the class to which he is altering his yacht."

"When there is no race for a yacht in the class to which she belongs she shall be allowed to sail in the class above, time allowance to be computed to her corrected length."

(15) That the words "to which said yacht belongs," in line 4 of Rule 25 be struck out, and the words "belonging to the association" be substituted therefor. Carried.

(16) That in the table of time allowances the words "can be expressed in hundredths" be substituted for the words "can be expressed in tenths" in the second line of page 37, and that all the words after "the next higher number" in the same sentence be struck out. Carried.

The Rochester Y. C. gave notice of the following amendment:

That instead of the words "40 per cent." on the last line of page 25 the words "50 per cent." be inserted, and that the table of time allowance be altered in accordance therewith. Carried.

The Royal Canadian Y. C. gave notice of the following amendments:

(1) That the words on page 21 from "bee hole" to "jibboom" be struck out and the words "bowsprit end" be substituted therefor, and that the words "or bowsprit" be added after the word "boom" where it occurs on line 13 of same page. That the word "or" on the next line be struck out and the word "bowsprit" be inserted after the word "boom."

(2) That the words from "a member" to the end of Rule 11 be struck out, and the words "an amateur" be substituted therefor.

(3) That at the end of Rule 24 there be added "and in no race shall any two or more classes be combined."

Not one of the Royal Canadian amendments were adopted. The first was withdrawn and the second and third were lost by vote of the meeting. This concluded the notices of amendments, and the chairman said the meeting was open to hear any suggestions or new ideas from the delegates. Mr. C. A. B. Brown, who, it was expected, would propose some change in the usual circuit, said that he had promised during the regattas of the past season to make a move for the shortening of the circuit. It appeared to him to be all work and no play. He thought that four places at which to hold regattas, namely, Toronto, Hamilton, Oswego and Rochester, would form a sufficiently large circuit. In some of the places it was felt a hardship to give a regatta each year, and it cost the club a considerable sum of money. If it was intended to give regattas this year he believed that some move should be made to shorten the circuit, or to discuss how the circuit should be divided up. He was not objecting on his own behalf, but he believed there was a feeling in that direction and had brought the matter up before the meeting in order to have it ventilated. Mr. Mott of the Oswego Y. C. said that the matter had been talked over a good deal in their club since the last summer's regatta, and their members were getting tired of soliciting subscriptions. They were also getting tired of contributing so freely. After looking at the matter well they had concluded that it would be a good idea to unite Oswego and Rochester and give two or three day's racing at Great Sodus Bay where there are ample accommodations. He believed if this suggestion were acted upon they could have the greatest races of the circuit and would receive enough subscriptions from the railways and hotels at that resort to satisfy all. Mr. Cartwright, Rochester Y. C., stated that their club favored the union races at Great Sodus Bay outlined by Mr. Mott. He thought if they did this they could have an excellent regatta and a general cruise as well. He would be in favor of holding the regatta inside the piers on the bay, as there was plenty of water and the attraction would be greater to the public. Visitors would come from Oswego and Rochester, and he thought the railroad would render willing assistance. His club would much rather have a three of four days' meet than a race at Oswego and Rochester. Mr. Jarvis, Hamilton Y. C., was not very sure that this scheme would be a successful one. He pointed out that the Inter-State Yacht Association was killed in one year by these meets. It was more of a cruising general good time with little racing.

The Oswego and Rochester delegates were unanimous, however, in expressing a belief that it would lessen expenses and facilitate matters in both of the New York clubs. They thought the scheme should be adopted for a year to see how it would work.

Mr. Monck, Hamilton Y. C., moved that the Tuesday nearest July 15 be the day for the first regatta. He gave his reasons for desiring that the regattas begin earlier than last season. He considered July a better racing month than September, as it was not so cold, and he believed there was little if any difference in the velocity of the wind. It would also enable business men to get back to their work at an earlier day, which was very desirable. If the scheme for the holding of the Rochester-Oswego meet at Sodus Bay was carried out, he would suggest that that regatta be the last of the circuit, as the yachtsmen would not be able to do any sailing afterward. The question of holding a regatta at Cobourg was discussed, and the president and Mr. Brown concurred in the opinion that the matter should be left in the hands the executive. If Cobourg expresses a desire to come in, they can choose a day after the circuit had been completed and nearly all of the clubs would go there. Acting upon Mr. Monck's motion, the schedule for next summer's regattas was formulated as follows:

Tuesday, July 14, at Hamilton. Thursday, July 16, at Toronto R.C.Y.C. Friday, July 17, at Toronto Q.C.Y.C. Monday, July 20, at Rochester. Thursday, July 23, at Oswego.

Mr. Wallbridge, Rochester Y. C., said that in view of the fact that the regatta committees had arduous duties to perform in the raising of money for prizes, he would suggest that trophies be given instead of cash. He believes this would relieve matters to some extent, and wished to hear the expression of the meeting. Mr. Monck thought that the clubs had been giving too much money in prizes. He saw no necessity for any club giving $1,000 in prizes. The majority of yachtsmen sailed for the love of the sport and not for the money there was in it. He would not, however, favor giving trophies, as he believed they would cost the club more than is expended at present.

Mr. Martin, Q. C. Y. C., expressed regret on behalf of his club that they had been unable to give a regatta last year. It was a rule of their club to raise no moneys for prizes outside of their own members. This year they had a guarantee from the members and expected to give a good regatta.

Mr. Mott moved that the connection of the Bay of Quinte Y. C. cease with the Association, but the chairman referring to the constitution declared that such a motion was out of order. Several of the delegates wished to have the Bay of Quinte club expelled forthwith. Others thought that a meeting should be called in Hamilton on the day of the first regatta, at which Belleville would be allowed to explain her position, while some of the more thoughtful members felt that the Association could not be too lenient in the matter, as it was most desirable that Belleville should retain a position in the Association. It was moved by Mr. Jarvis, seconded by Mr. Monck, that the next meeting of the Association be held in Oswego. (Carried unanimously.) Officers for the ensuing year was then elected as follows: President, J. T. Mott, Oswego Y. C.; Vice-President, Matt Cartwright, Rochester Y. C.; Honorary Secretary, Geo. E. Evans, R. C. Y. C., Toronto; Executive Committee, Com. Allan, Q. C. Y. C., Toronto; J. F. Monck, ex-commodore Hamilton Y. C.; J. B. Carruthers, commodore Kingston Y. C.

A vote of thanks was tendered to the retiring officers, also to ex-Com. McGaw and the meeting adjourned.

In the evening the visiting delegates were banqueted by the members of the Royal Canadian Y. C. Many fraternal speeches were made, in which the gentlemen from New York State complimented their Royal Canadian brethren on their ability to entertain visiting yachtsmen.

AN AMERICAN DESIGN IN DUTCH WATERS.

IN 1889 Mr. A. Cary Smith, of New York, sent the drawings and full specifications for building a centerboard yacht to Mr. J. A. Vos Van Hagenstein, a Dutch sportsman. The craft was named Stella, and her dimensions were: Length over all, 13.26m.; waterline, 11.25m.; beam, 4.27m.; draft, 1.22m. The ship was built in Amsterdam by the firm of H. Bernhard, Hull and frames made from German oak, deck from white pine. The spars were Norwegian pine, made by Gebet Schauter; sails and blocks by Ratsey & Lapthorn, Cowes. The craft has very good headroom in the cabin and ample accommodations.

Capt. Tom Sloan came from England to rig her and to take the helm in her maiden race, which took place on June 22, with a nice S.W. breeze. Her rivals were Girofla, an old flat centerboard boat of Belgian origin, and Nellie, a more modern and deep centerboard boat, built in 1888 in Amsterdam, also by Mr. Bernhard. At the start Stella's spinaker broke out too soon, causing a very bad start and delaying her considerably.

During the race the wind increased and she proved to have too little ballast, and hung so as to lose all headway. Course, 18 miles. The result was:

	Racing tons.	Elapsed.	Corrected.
Stella	13.0	3 04 03	3 04 03
Girofla	12.5	3 02 57	3 02 32
Nellie	11.6	3 03 38	3 02 26

After having shipped some more ballast, she took part in the annual cruise of the Koninkligt Nederlandsche Zeil en Roeiver-eeniging upon the Zuiderzee, during which three matches were sailed.

FIRST MATCH.

	Racing tons.	Elapsed.	Corrected.
Sirene, centerboard	28	3 32 26	3 32 26
Miage, centerboard	26	3 23 44	3 21 59
Isis, keel	14	3 47 01	3 39 40
Stella, centerboard	13	3 38 54	3 30 42
Girofla, centerboard	12.5	4 01 32	3 52 53
Nellie, centerboard	11.6	3 39 22	3 29 53

Course 19 miles, wind W.N.W., topsail breeze. Girofla parted a backstay, causing her much delay.

SECOND MATCH.

Sirene	3 09 36	3 09 36
Miage	3 23 46	3 22 06
Isis	3 27 28	3 20 30
Stella	3 08 24	3 00 38
Girofla	3 21 13	3 13 02
Nellie	3 19 51	3 10 52

Course 18 miles, wind S.W., feeble, afterward powerful.

THIRD MATCH.

Sirene	4 23 45	4 23 45
Miage	4 38 24	4 36 22
Isis	4 21 57	4 13 26
Stella	4 14 02	4 04 33
Girofla	5 38 30	5 28 29
Nellie	4 31 52	4 20 53

Course 22 miles, wind W., light.

Sirene and Miage are both powerful boats with cruising rigs, and would have done better with more wind and sea. Isis, the new Fife cutter, had just arrived from Scotland and was handicapped by bad handling and lack of additional sails. She is 40ft. l.w.l., 12ft. beam and 6ft. draft. The next race took place on Aug. 24 near Antwerp, upon the river Schelde.

	Racing tons.	Corrected.
Osiris	14	9 33 17
Stella	13	8 39 25
Girofla	12.5	Not timed.

Course 46 miles with stream. Wind light and very fluky, making the race a mere drift. Osiris, a new Fife cutter, equal to Isis, sailed all day without light sails. The race was not a show of the merits of the boats.

Her sixth and last race she sailed on Sept. 27, near Rotterdam, on the River Meuse. Course, 20 miles, down stream with ebb, up stream with flood:

	Racing tons.	Allows.	Down stream.
Zwerver, cutter	15.	Allows.	2 37 33
Osiris, cutter	14.	0 00 52	2 42 59
Stella, centerboard	13.	0 01 48	2 46 52
Girofla, centerboard	12.5	0 02 17	2 54 39
Dauntless (Nellie), centerboard	11.6	0 03 13	2 48 26

At 12 o'clock the flood came in and the fleet started up stream before the wind with all sails possible set:

Zwerver	1 55 01	Girofla	2 02 59
Osiris	1 54 35	Dauntless	2 01 46
Stella	1 58 07		

Stella tore her mainsail just before starting. It was repaired so that she could start on time, and as the course was with the wind aft it did little or no harm. Full times:

	Elapsed.	Corrected.
Zwerver	4 32 34	4 32 34
Osiris	4 37 34	4 36 42
Stella	4 44 59	4 43 11
Girofla	4 57 38	4 55 21
Dauntless	4 50 06	4 46 53

Zwerver is a new Fife cutter like Isis and Osiris, but a little larger, and arrived in August from Scotland after a very stormy voyage. The race was fair and the wind good and of equal strength. The craft were all very well handled. As yet Stella has proved to be a very fast and safe boat, but the Fife boats have showed themselves fully her equal. Much interest is felt as to which next year will lead their class, which runs from 10 to 20 racing tons according to French rules: $T = \frac{\left(\frac{P}{4}\right)^2 \times (L - \frac{1}{2}B)}{5.5}$

P=girth + largest beam in metres.

ROWING AND SCULLING, SAILING, SWIMMING.—The second volume of the "Handbook of Athletic Sports," lately issued by Scribner & Welford of New York, covers these three kindred subjects, each being treated by a recognized expert. Mr. W. B. Woodgate, who writes on rowing and sculling, is too well known as an oarsman and an author to need an introduction, his present work is comprehensive and clearly written, being brought down to date. It covers all branches of rowing and sculling, including in particular the history and use of the sliding seat. The author of the treatise on sailing, Mr. E. F. Knight, is well known to yachtsmen through his venturous cruises in the Falcon, and as might be expected he has dealt out some interesting and practical instruction to the young sailor. His explanations and directions are clear and explicit and cover, as far as the space permits the whole field of yachting. While the book will not take the place of a library of larger and more costly volumes, the reader will find a great deal that is valuable concerning the choice and handling of boats and yachts, the fitting and laying up, the rules of the road, the principles of navigation and similar matters. The third section of the book, on swimming, is by Messrs. M. and J. R. Corbett and includes a thorough analysis of the various motions, with descriptions of the different methods of swimming and much information on bathing in fresh and salt waters. The volume makes a very useful compendium for young athletes whose tastes tend toward the water.

INTERNATIONAL TROPHIES.—The London *Field*, which announces the fact that the Royal Victoria Club has established a £500 challenge cup, open to all nations, says: "English yachtsmen are getting so sick of the name, America's Cup, and the interminable and irritable discussion it has caused, that they have at last set up an international challenge cup of their own." We are selfish enough not to regard this as good news. We thoroughly believe in international yacht racing, but we want the racing done on this side the Atlantic. It would be better, however, for our yachtsmen to go abroad rather than not have any race at all. It is all very well to say that the America's Cup is bound to be the only one; that is all nonsense. There is a good deal of honest sentiment about this cup, and it will be a long time before another will mean as much; but, notwithstanding its precious history, it is not a necessity. If the New York Y. C. propose to so hedge it about that it cannot reasonably be got at, it will soon cease to be an imperative condition.—*Marine Journal.*

THE TWO DEEDS OF GIFT.—As we last week foretold, the Boston *Herald* has attempted to misapply the conditions of the new Royal Victoria Y. C. cup as an indorsement of the new deed of the America's Cup. By means of the omission of the time allowance clause and of some unfair and specious comparisons, the *Herald* tries to prove that the Royal Victoria conditions are but a copy of the new deed, but less fair and liberal.

CLARA.—Dr. J. C. Barron has sold his cutter Clara to Mr. C. C. Monroe, owner of Mona. Mr. Munroe had in view the purchase of the Fife 20-rater Dragon, but it is now likely that she will go to Lake Ontario as the property of Messrs. Monck and Stewart, of Hamilton.

NAPHTHA LAUNCHES ON THE PACIFIC.—The increasing business of the Gas Engine and Power Co. has led to the establishment of a branch at Tacoma, Washington, under the name of the Pacific Naphtha Launch Co. Mr. Wm. B. Hull will be the general manager.

CONSTELLATION.—Mr. Burgess has completed the plans for changing the schooner Constellation to a cutter, and if the yacht is not sold the change will be made during the winter.

LLOYDS YACHT REGISTER.—We have just received the supplement to Lloyds Yacht Register, containing alterations and additions to Sept. 30, 1890.

STRANGER, steam yacht, has been sold by Geo. S. Scott to J. G. Hoagland, former owner of the steamer Lagonda. The price is stated as $75,000.

Canoeing.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

AMERICAN CANOE ASSOCIATION.

OFFICERS, 1890-91.

COMMODORE: WALTER U. LAWSON, Boston, Mass.
SECRETARY-TREASURER: RALPH F. BRAZER, 47 Central street, Lowell, Mass.
REGATTA COMMITTEE: J. A. Gage, Lowell, Mass.; W. G. MacKendrick, Toronto; L. B. Palmer, Newark, N. J.

CENTRAL DIVISION.

Officers:

VICE-COM.: C.V.Winne, Albany, N.Y.
REAR-COM.: T. P. Gaddis, Dayton, O.
PURSER: Howard Brown, Albany, NY
EX. COM.: J. K. Bakewell and H. M. Stewart.

NORTHERN DIVISION.

Officers:

VICE-COM.: W. H. Cotton, Kingston.
REAR-COM.: J. C. Edwards, Lindsay.
PURSER:
EX. COM.: Colin Fraser and F. H. Gisborne.

EASTERN DIVISION.

Officers:

VICE-COM.: J. W. Cartwright, Jr.
REAR-COM.: G. L. Parmele, Hartford.
PURSER: R. Appolonio, Winchester.
EX. COM.: Paul Butler, E. S. Towne and Sidney Bishop.

ATLANTIC DIVISION.

Officers:

VICE-COM.: I. V. Dorland, Arlington.
REAR-COM.: E. D. Anderson, Trenton.
PURSER: R. Hobart, Newark, N. J.
EX. COM.: H. L. Quick and H. M. Kreamer.

Applications for membership must be made to division pursers, accompanied by the recommendation of an active member and the sum of $2.00 for entrance fee and dues for current year. Every member attending the general A. C. A. camp shall pay $1.00 for camp expenses. Application sent to the Sec'y-Treas. will be forwarded by him to the proper Division.

Persons residing in any Division and wishing to become members of the A. C. A., will be furnished with printed forms of application by addressing the Purser.

WESTERN CANOE ASSOCIATION.

Commodore—D. H. Crane, Chicago, Ill.
Vice-Commodore—N. B. Cook, Chicago, Ill.
Rear-Commodore—O. A. Woodruff, Dayton, O.
Secretary-Treasurer—J. H. Ware, 130 Rialto Building, Chicago, Ill.

Applications for membership should be made to the Sec.-Treas., on blanks which may be obtained from him, and should be accompanied by $2 as initiation fee and dues for the current year.

A. C. A. EXECUTIVE COMMITTEE MEETING.

THE annual meeting of the executive committee was held at the Thorndike, Boston, on Nov. 15, Com. Lawson presiding. The following members were present from the various Divisions, besides the Sec'y-Treas., Mr. R. F. Brazer. Eastern Division, Vice-Com. J. W. Cartright, Boston; Rear-Com. G. L. Parmele, Hartford; Purser R. Appolonio, Winchester: Messrs. Paul Butler, Lowell; Sidney Bishop, Bridgeport, and E. S. Towne, Holyoke. Central Division, Vice-Com. C. V. Winne, Albany; Rear-Com. T. P. Gaddis, Dayton, Ohio; Purser W. Howard Brown, Albany; Mr. H. M. Stewart, Rochester. Atlantic Division, Vice-Com. I. V. Dorland, Arlington, N. J.; H. L. Quick, Yonkers, while Rear-Com. Anderson was represented by M. V. Brokaw as proxy; Purser R. D. Hobart by W. J. Stewart, and H. M. Kreamer by W. P. Stephens. The Northern Division sent no representatives. The total number of the executive committee is 23, of whom 14 were present in person and 3 were represented by proxies, leaving 6 absent. There were also present Mr. Burchard, of the camp site committee of 1889; Messrs. Gage and Palmer, of the new regatta committee; Mr. Hand, of the transportation committee; the retiring sec'y-treas. Mr. Dunnell, and Mr. C. D. Mead, of Dayton, Ohio, and Mr. C. B. Vaux, of New York.

The meeting was called to order at 10:30 A. M., the minutes of the previous meetings at camp being read and approved. The reports of the secretary-treasurer and also of the Division pursers were then read, the latter showing a membership of 935, distributed as follows: Central Division 162, Atlantic 297, Eastern 296 and Northern 180. The financial reports of the Divisions, which will be published later, were very satisfactory, except in the case of the Northern Division, which reports a deficit of $75, which it is unable to pay. Letters were read from Vice-Com. White and Purser Whitlaw, stating the condition of the Division and requesting that the indebtedness to the general treasury might be allowed to stand until next year. Mr. Burchard read a very full report of the camp site committee, showing the receipts and expenditures, the latter being about $123 in excess of the former. With the receipt of the money due from the Northern Division this would leave a balance of $48, which Mr. Burchard offered to arrange himself. It was suggested that the Atlantic Division should make loan from its surplus to the Northern Division. A conference of the Atlantic Division was held, at which it was decided to make an offer to advance the whole sum of $123 to the general treasury on account of future payments for 1891-2, which offer, on motion of Mr. Butler, seconded by Vice-Com. Parmele, was accepted.

The following report of the regatta committee, submitted by the chairman, Mr. French, was then read. The report was not signed by Mr. MacKendrick, not having been completed in time to mail to him, and a separate letter was received from him, recommending the establishment of a class for the general purpose canoe.

A. C. A. REGATTA COMMITTEE REPORT.

The by-laws of the American Canoe Association define the duties of the regatta committee in Article IX., and following will be found under the head of each prescribed duty an account of what was done by the regatta committee of 1890:

(1) "To prepare and publish not later than June 1 an order of races, including the sailing and paddling trophy races, the three record races for each class of canoe, and such other events as they deem advisable."

The programme was published in the FOREST AND STREAM April 17 and also on May 15.

Event No. 14 * * *

The amendment mentioned in above note was passed by the executive committee and so published in FOREST AND STREAM, May 22, 1890.

At the meet several extra events were called—a ladies' paddling race, a swimming race, and a mile paddling race for a silver cup presented by Mr. H. C. F. Randolph. For a detailed report of the races and names of winners see Exhibit A. Also form of entry blank, Exhibit B.

(2) "To superintend the laying out and buoying of courses."

Through the courtesy of Mr. C. V. Schuyler, of the Atlantic Division regatta committee, the buoys owned by that Division were sent to camp and marked out the triangular course.

Through the courtesy of Com. B. H. Nadal the N. Y. C. C. buoys were also sent to camp, and were used to mark off the paddling course, which lay parallel to the shore. Owing to the high wind and sea which prevailed during one night and the next day, the buoys of the N. Y. C. C. filled and sank—so it is supposed, for they were not seen again. Consequently two were afterward made to replace them at a cost of about $7.

The triangular course was a very excellent one, affording, as it always did, a start to windward.

The paddling course of one mile, with a buoy at the half mile, was necessarily laid straightaway at right angles from the dock, so that a good finishing line could be had; and it proved to be a good one, for people on shore could see each entire paddling race from start to finish.

The relative position of all buoys is shown in the diagram below.

* * * * * * * * *

(3) "To provide the prizes:"

The prizes were as fine as any ever given at an A. C. A. meet, and were almost all contributed by clubs and members who generously responded to a circular that was sent to each club represented in the Association. (For form of circular see exhibit "C.")

As the rules provide that bunting flags, with the year on each, shall be given the five honor men of the record, the committee had the flags made of a color and size denoting precedence; thus the highest record man receives a blue bunting flag, size 36×24in.; second receives a red bunting flag, size 33×22in.; third receives a white bunting flag, size 30×20in.; fourth receives an orange bunting flag, size 27×18in.; fifth receives a black bunting flag, size 24×16in. All with the letter "R" and "90" sewn into the flag.

Com. Henry Stanton presented two handsome cups for first and second prizes in the combined races, and Mr. H. C. F. Randolph presented a cup to commemorate a cruise in the adjacent waters. This latter for a special paddling race.

The sailing and paddling trophy winners were each given a large blue bunting flag, as the rule also provides, of the same size and color as the highest record flag, with the lettering changed to correspond to the event.

The only flags purchased were these bunting flags and two flags for second prizes in the tandem race, making in all but $40, which the A. C. A. spent for prizes.

Now that the Association is growing so large and has two quite valuable silver trophies that are raced for each year, as a matter of security and justice to all it was considered only proper that the winners each year be required to give a bond for the safe-keeping and the return of the trophies to the A. C. A. at the meet of the following year.

The winner of each prize was given a card signed by the members of the committee certifying that he had won —— place in —— race and was awarded prize presented by ——. This is a good idea to continue, and enough cards are on hand to meet the requirements for the next two years. (For names of donors of prizes and the winners, also form of card see exhibit "D.")

(4) "To secure such assistance as is needed to run the regatta."

The assistance of Mr. Edward Brown, the chief signal officer, was of utmost importance, as through him were all announcements made to the camp of the time of sailing each event on the programme. The start for all sailing races was also signaled both by the gun and the flag code under the supervision of the chief signal officer.

Mr. Chas. D. Mead devoted his entire time to assisting the committee in a most able manner, for without him the results of the races and record would not have been posted so quickly. The committee are also greatly indebted to Gen. R. S. Oliver for a launch which he tendered for the use of the regatta committee on three days.

(5) "To decide all protests."

No protests were made (a communication was received, however, from a club purser the day following an event in which two of his club members participated, which was not even considered, as it was not made by either contestant in the manner provided for in the rules).

(6) "They shall post the course and conditions of each race on the bulletin board at least one hour before the race is called, and shall have entire control of all the races at the camp."

This was complied with in all races except the unimportant ones, as upset paddling, for they had to be called at times when it was impossible to foresee where a course could be had on account of the wind and the yachts which landed visitors and then anchored off close together. So that the committee used the authority given them in clause 6 and notified those entered in those races to be in readiness at a certain time, and before the start they were instructed in regard to the course and the finishing line.

(7) "They shall take charge of all the A. C. A. regatta property when they assume office, and shall turn the same over to their successors when appointed."

At the conclusion of the meet the property was taken in charge by Mr. Goddard, who is a member of the same club as the com.-elect, and they will see that the logs, flags, etc., are turned over to the next committee.

(8) "They shall submit a full report to the commodore before the executive committee meeting and a condensed report to the secretary for publication in the Year Book."

The report has been sent to the secretary, and this with the appended account of the races and expenses (Exhibit E) forms the report.

EDWIN L. FRENCH, Chairman,
D. S. GODDARD,
} Regatta Committee.

Exhibit E.

STATEMENT OF EXPENSES, A. C. A. REGATTA COMMITTEE.

S. Hemmenway for trophy and club flags	$15 00
5 bunting record flags	15 00
2 silk flags	10 00
Printing numbers on cloth	12 00
Printing cards and entry blanks	4 00
Printing circulars and envelopes	2 75
79 stamps for circulars	1 58
50 stamps	1 00
Red and white cloth for buoys	2 00
Boat-hook, lost while placing buoys	1 56
Rope	30
Book for records	60
Express charges	2 50
	$68 23
Less cash contributed by Jas. R. Steers, Jr. for the purchase of flags	5 00
Amount paid out of A. C. A. treasury	$63 23

Correct. EDWIN L. FRENCH, Chairman.

It has been customary for the regatta committee to recommend any changes in the rules that have seemed to them essential and also to submit to the executive committee any amendments that have been offered affecting the sailing regulations.

This has been done heretofore in accordance with Rule XXII., which has recently been repealed; however, it is earnestly hoped that the present executive committee will good-naturedly receive this communication, and carefully consider the proposed changes and recommendations herein contained.

In the first place it is presumed that the (old) Rule XXII. will be restored, with a slight modification, as the wisdom of that rule has been but recently shown to the members of the A. C. A.

At present there is no provision made for the payment of any sum to the regatta committee to meet the expenses necessarily incurred, and it would be but right that a sum be set aside for that purpose and paid to them, say by Aug. 1 of each year, so that all bills can be paid and settled promptly. The expenses of the last two years show that about the same amount is annually required and the Association can well afford to appropriate $100 for the annual regatta, which sum should pay all bills and also provide a launch for three or four days.

The present conditions of the paddling trophy race are quite satisfactory, at least no objections were heard at the meet, nor since.

The rule awarding but bunting flags to the record winners was strictly adhered to, and although each flag was different in size and color, still considerable surprise was expressed, as it has always been the practice to award the five best flags to those five men, it might be better to return to the original way and give but the blue bunting flag to the highest record winner in addition to his other flag.

A way has been suggested to prevent the canoe from degenerating into a machine entirely. It is this, that all races of the A. C. A., except the trophy sailing and trophy paddling races, shall be confined to a class known as "the general purpose canoe," which, besides complying with the present rule of measurement, shall have no deck seat projecting beyond the sides of the canoe, no centerboard that projects above the deck when housed, and shall have a cockpit not under 16in. wide for a length of 4ft., with a sleeping space of 6ft., of which 5ft. must be entirely clear. This shall not bar any canoe built prior to Dec. 31, 1890.

Of course, such a rule, if adopted, would be for the benefit of cruising canoes only, while the same result, that of giving more prominence to "all-around canoes and canoeists," might be obtained by not restricting the appliances and internal arrangement of a canoe; but by simply saying that a canoe cannot enter the sailing record and paddling record races unless it had previously entered and finished in the combined with the same sails. The combined race would then be necessarily the first race on the programme.

By thus confining the record races to only those that enter all three races (for it is obvious that a man who finishes in the combined race is working for a record), it will stimulate more entries in those events and at the same time be doing only justice to all-around canoeists. For will not the extreme sailors and paddlers have their own classes in the two trophy races?

There has always been too long a programme of races, and if it can be cut down any why so much the better, leaving the minor events to be called at camp at any time when there is a calm or

during visitors' day. The present rules require the three record races which are for the all-around canoeists; the sailing trophy and Pecowsic Cup races for the extreme sailors, and the paddling trophy for the extreme paddlers. So no other races are absolutely necessary except for the sport they afford spectators as well as contestants.

The novice race might well be a race by itself, say once around the triangle, for nowadays they lose sight of one another and are lost sight of themselves by being obliged to take chances in the large sailing race.

The innovation this year was the signal code, so ably conducted, and it should be continued, if possible, as it facilitates matters very materially, especially in the announcement of races.

It is desired that the proposed amendments submitted herewith will be carefully considered at the executive meeting, as they embody the different views that have been expressed.

EDWIN L. FRENCH, Chairman.

PROPOSED CHANGES TO THE SAILING REGULATIONS. A. C. A.

Change title to Racing Rules.

(Change recommended by Mr. MacKendrick and not by Messrs. Goddard and French.)

Rule I. After the paragraph on measurements, insert instead of last paragraph:

"The general-purpose canoe shall be one which conforms to the above conditions and in addition has a well not less than 16in. wide for a length of four feet, with a sleeping space of six feet, of which at least five feet shall be clear, there must be no projecting centerboard when housed and no sliding seats or standing sails. The regatta committee may rule out any canoe which in their opinion does not conform to the spirit of these regulations.

"The foregoing rules of measurement shall not be interpreted to disqualify any canoe built prior to Jan. 1, 1891, which conforms to the rules prior to that date."

(By Mr. Mackendrick.)

Rule II. Change second paragraph to read:

"A member can enter but one canoe for races at any one meet, except for the sailing and paddling trophies and Pecowsic Cup, and no other member shall be permitted to enter the same canoe."

(Proposed change to Rule V. recommended by Mr. Goddard and Mr. French.)

Rule V. should read:

Flags shall be given for prizes as follows: A first prize in each race and a second in each race where more than two finish. The winners of the paddling trophy, the sailing trophy and the highest record score shall be given blue bunting flags (36×24in.) with the race and year sewn in white letters in each flag. And the five highest record men shall be given the five best flags in the gift of the committee. A large A. C. A. flag, size 36×24in., with the word "club" and the year sewn in white letters on the red field shall be given to the club whose three members win the largest aggregate number of points of the record. Prizes donated for special races or competitions may be accepted at the discretion of the regatta committee, but no prizes of money shall be raced for.

(a) Races.—There shall be three record races. No. 1, combined paddling and sailing; No. 2, Paddling; No. 3, Sailing; and the combined race shall be contested for first. To obtain a place on the record, a contestant must enter and finish in all three record races, using the same sails in both races. Should any accident occur, however, the committee may permit another suit of sails to be used if necessary. And such contestant shall receive a credit number according to position, relative to each other in each race. Thus, the highest number given in each race, being equal to the number of contestants finishing, the next one less, and so on; the three numbers being added together give the credit amount of the record. The contestant obtaining the highest aggregation of points becomes the leading honor man of the year.

(b) There shall be a race for the paddling trophy, distance one mile, straightaway. The number of entries shall be unlimited. This race shall be exempt from the provision in Rule II., that a member can enter but one canoe for races at any one meet.

(c) There shall be a race for the sailing trophy, distance 7½ miles on the triangle, with a time limit of three hours. No limit to rig or ballast. This race shall be exempt from the provision in Rule II., that a member can enter but one canoe for races at any one meet.

Accredited representatives of foreign clubs, not exceeding five in number, shall be eligible. The total number of starters shall not exceed fifteen, and the ten or more vacancies (after deducting the foreign entries) shall be filled by competitors in a trial sailing race over the course. The first ten at the finish and the balance if any shall be selected by the regatta committee.

Rule XII.—Omit words "for back strokes to leeward in tacking."

Rule XXII. should read:

These rules may be amended by a majority vote of the entire executive committee, provided the proposed amendment has been reported on by the regatta committee, and has been published for four weeks in the official organs.

This last amendment is strongly recommended.

EDWIN L. FRENCH, Chairman,
D. S. GODDARD,
} Regatta Committee.

A letter to the executive committee from the Ianthe C. C., appealing from the decision of the regatta committee in regard to the paddling upset race, was then read, and on motion of Rear Com. Parmele, seconded by Mr. Stephens, the appeal and the report were both laid on the table. The following report of the librarian was then read and accepted:

REPORT OF THE LIBRARIAN.

To the Commodore and Executive Committee of the American Canoe Association:

GENTLEMEN—As the work allotted to your librarian on his appointment last year was merely the custody of the records of the Association, there is little for him to report. It would occupy unnecessary time to enumerate in detail the property turned over to his custody by Sec'y-Treas. Dunnell, but it may be briefly summarized as follows: Old record and account books, various dates from 1880 downward; applications for membership and votes on same; vouchers and cancelled checks; reports of pursers; reports of standing and special committees; private signals and club books of 1881 and '82; old year books; old camp programmes; old camp badges; printed copies of former constitution; blank envelopes; blank steamboat certificates, 1887; blank receipt and measurer's books; general correspondence and reports, of various dates; and lastly cruises reported by members. This somewhat miscellaneous collection, constituting the archives of the Association, is now stored by your librarian at his home, the various documents being neatly assorted and docketed.

As your librarian has been severely criticised in regard to the conduct of his office, a brief statement in reply may not be out of place. It has been stated that he has done nothing toward carrying out the work indicated in Art. II. of the Constitution; and the abolition of the office is suggested. A sufficient answer to this is found in the motion under which the office of librarian was created at the annual meeting of 1889, which read as follows: Resolved, That Mr. W. P. Stephens be appointed librarian of the A. C. A., to put records, etc., of the Association, and other papers belonging to the A. C. A. in proper shape, and to take custody of them. The minute book further states "The usual compensation was granted Mr. Stephens." Art. II. specifies as one of the objects of the Association the "keeping of logs of voyages, records of water ways and routes, details, drawings and dimensions of boats, and collections of maps, charts and books."

Beyond the cruises mentioned in the first portion of this report, the A. C. A. possesses none of the property enumerated in Art. II., there are no records of water ways, drawings of boats, nor collections of maps and charts. In defining the duties of the librarian, no mention of Art. II. was made, no appropriations were made for the purchase of books or charts, nor was the librarian authorized or instructed to establish a library at his own cost or on an eleemosynary basis. His duties, as in the motion above quoted, were purely those of a custodian, and these he respectfully submits he has endeavored to fulfil, and is willing to lay down or undertake further at the pleasure of the Association.

There is undoubtedly a wide field indicated in the last clause of Art. II. which the Association has never properly taken up, but which might be productive of much benefit to members. At the same time the experience of your librarian for a number of years in a similar work of collecting and distributing gratuitous information leads to the belief that such work can only be thoroughly done by a salaried official, and at some cost, unless the Association should be fortunate enough to find a member with the leisure and means to carry it out at his own expense, or unless some of the journals devoted to canoeing will generously undertake the task. The only scheme yet suggested for meeting the salary of the librarian and the expenses of the office is noticeable solely from its novelty and not from its merit, being to the effect that the librarian should advertise himself as a dispenser of information on the plan of the familiar and humble "nickel in the slot" machine; put a quarter in the slot and hear the librarian inform.

While certain work might be done, there is much of that indicated in Art. II. which is now unnecessary. The collection and publication of drawings of canoes, an expensive detail, is very fully covered by the canoeing journals; a library of books and charts, which would necessarily be fixed in one locality, would prove of little use to such a body as the A. C. A., whose membership is so widely scattered, and might become a source of discord and jealousy between various sections. The collection and publication of logs of cruises depends much on the individual members who have with hardly an exception neglected it. To obtain such cruises in a form that would make them of any value, would require a large amount of correspondence on the part of the officer, which would be greatly increased by the labor of arranging and classifying all the information acquired, and the accompanying task of imparting his information to inquirers.

Should it be deemed desirable at this time to endeavor to carry out the work indicated in Art. II., your librarian would suggest that in the first place this work be limited solely to the collection, preservation and, if possible, distribution of information relating to the inland water ways of the country; and that further, this work should be placed in the hands of an officer in each Division, who should be appointed for a term of several years. Two years since, when Vice-Com. of the Atlantic Division, your librarian undertook on his own responsibility a work of this kind, securing good maps of the Atlantic Division and making a classified list of all canoeable waters, arranged under various heads, as lakes, rivers, canals, etc. Each of these was traced on the map and colored in a way to indicate whether suitable for sailing or paddling, the plan possessing other details which would take too long to describe now. Unfortunately this work was stopped by other Division duties, and has never been resumed. There is a vast field here for the A. C. A. to carry out one of the favorite ideas of its founder, Mr. N. H. Bishop, in the collection of information, both technical and historical, concerning American rivers and watercourses; and should such a task be put into successful operation the good results will not only redound to the benefit of the Association, but will in the future be useful alike to the historian and the student.

W. P. STEPHENS, Librarian, A. C. A.

At 1 P. M. a recess was taken, the entire party visiting the house of the Boston Athletic Club as the guests of Com. Lawson. After a lunch and an inspection of the elegant club house, the party returned to the hotel, and the business was resumed at 3 P. M.

The first subject introduced was that of an increased membership of the Association, Com. Lawson outlining a scheme for the publication of six supplements per year to the *Sail and Paddle*, containing all A. C. A. news, and mailed to every member of the Association. It is proposed to include in each a blank proposal for membership, with a request that each member will endeavor to interest other canoeists. A very full discussion followed, the members all approving of the plan. The question of expense of mailing the supplements, and also the year books, was also discussed, and in view of the small percentage paid by each Division to the general treasury, 30 per cent., it was decided that this expense should be borne by the Divisions. On motion of Vice-Com. Dorland, seconded by Mr. W. J. Stewart, Com. Lawson was empowered to arrange for the supplements, the expense of mailing them and the year books being defrayed by the divisions.

The next matter brought up was that of the dues of members joining after the close of the canoeing season, and after discussion Messrs. W. J. Stewart and W. P. Stephens were appointed to draw up an amendment to Art. I of the By-Laws, Sec. 2. The committee reported the following amendment, which was adopted: Members joining the Association after Sept. 30 shall pay no dues for the current year.

The question of amendments and by-laws was next taken up, and after discussing a number of proposed changes a motion was made by Mr. Brokaw, seconded by Mr. W. J. Stewart, for the appointment of a committee to arrange the various proposals. Messrs. Brokaw, Stewart and Cartright were appointed by the commodore.

A petition for the rescinding of the late motion concerning the standing sail was then read and laid on the table. A letter from Ex-Com. Stanton was then read, in which he strongly recommended a permanent camp site. Letters were read from Vice-Com. White and from the new purser of the Northern Division, Mr. Porteous, announcing the latter's inability to serve, and on motion of Mr. Towne, seconded by Vice-Com. Winne, to the following effect, was passed: "Resolved, that the executive committee of the Northern Division be vested with the power to elect a successor to Mr. Porteous, as purser."

The committee on amendments reported a number of amendments to the constitution and by-laws in brief as follows, which were carried: To add the word librarian to the list of officers in Art. V., making his term of office for three years and defining his duties; providing that in the absence of the commodore the other officers shall take command in order of rank; providing that the pursers shall forward money to the secretary-treasurer before the general meet, and changing the wording of Art. XII. in regard to publication in the official organs. In the by-laws a change was made in accordance with a motion by Mr. Stephens, inserting in the book an amendment passed in 1888 in regard to visitors in camp, a change, however, being made on motion of Mr. Brokaw by making the limit one instead of two nights. On motion of Mr. Stephens Art. IX., defining the duties of the regatta committee, was amended to accord with the amendment of Rule XXII. of the racing rules. A clause in regard to the secretary's badge was inserted in Art. X. The words "or librarian" was added in Art. XI. after the words "official organs."

Mr. Stephens was then nominated for the office of librarian for three years, but declined to accept the office save as a custodian of the records of the Association. An effort was made to induce Mr. Vaux to accept the nomination, but he declined, and Mr. Stephens was unanimously elected.

Mr. Buddington, camp site committee, had promised to be present, but did not appear. Mr. Butler, also of the committee, reported on Willsborough Point, just below Port Kent, on Lake Champlain, a spot lately visited by him in company with Com. Lawson and Messrs. Buddington and Winné. The site promised so well from the reports of these gentlemen, backed by Mr. Mead, that a motion was made by Vice-Com. Cortright, amended and seconded by Mr. Stephens, to the effect that the commodore and camp site committee should be instructed to hold the meet here if all satisfactory arrangements could be made; if not, to select another spot without securing a vote from the committee. After some discussion, the date of the meet was set for three weeks, as lately proposed by Mr. Wilkin, or from Aug. 6 to 27. A number of lady members were then elected. On motion of Vice-Com. Winné, seconded by Vice-Com. Dorland, the sum of $100 was appropriated for the use of the regatta committee.

Messrs. Gage and Palmer, of the new regatta committee, now reported on the proposed changes of the rules, based upon the report of Mr. French and the letter of Mr. MacKendrick. As it was nearing the hour for the dinner there was not time to decide on the many important points, but they were discussed as fully as possible in order to bring out the views of the members, the task of putting the amendments into proper form being left to the new committee, to be voted on finally by mail. We cannot give the discussion in full, but the leading points were as follows: The recommendation of Mr. MacKendrick in regard to a general purpose canoe, with a cruising well, a centerboard that houses within the canoe, a sliding seat limited to the beam of the canoe, and a rig that can be hoisted and lowered, was generally favored, Com. Lawson stating that out of a very large number of letters from canoeists received by him on the matter of the racing rules, nearly all favored the recognition of such a boat. The question of the races into which such a canoe might enter brought out many opinions, Mr. Quick pointing out that it would be very unjust to limit certain of the present races to this new class and to the existing canoes or those built before Jan. 1, 1891, as proposed by Mr. MacKendrick; as in such a case, while it inflicted no injury on the present racers, depriving them of no races, it would work to exclude all new racers, the result being that the present sailing canoes, which would almost to a certainty win from the general purpose canoes in most races, would be without any new competitors, no new racers being allowed to enter against them. In this way the present racers would have a monopoly of the racing, being practically unlimited. The final decision of the members was in favor of leaving the racers in possession of the present programme for next year, but at the same time establishing the limits of a class of general purpose canoe, one or two races for which should be arranged by the regatta committee.

Mr. Stephens then moved that the limits for the racing canoes be made only 16ft. long and 30in. beam, with the present sliding scale, and that the present limits to drop of board, depth of keel and keel band, weight of centerboards, depth of keel, weight of board and ballast, should be removed; which motion was lost. Mr. Butler then moved that a special race should be given at the meet for a canoe under such limits as proposed by Mr. Stephens, in order to allow full scope for all experiments in the direction of speed alone; which motion was carried. Dr. Gage proposed a limitation of depth, in order to prevent the building of a cutter canoe, his suggestion being that the lowest point of the keel should not be more than 15in. below the level of the lowest point of the sheerline; thus in a canoe having 5in. freeboard a draft of 10in. would be allowed. The suggestion was approved by the meeting, but was not incorporated in the racing rules. The minor changes proposed in the committee's report, the change of title to racing rules, the dropping of the clause concerning the use of the paddle, and the amendment to Rule XXII., were generally approved of. In regard to Rule XXII. there is an unanimous feeling that the recent unauthorized change should be remedied at once, and the rule restored in a more stringent form than it originally had. The protest of the Ianthe C. C. was next considered, and on motion of Dr. Gage the race was declared void, the conditions not having been properly posted.

The following petition was then taken from the table:

To the Executive Committee of the American Canoe Association:

GENTLEMEN—We, the undersigned, respectfully petition your body to reconsider the motion passed at the meeting of the executive committee on Aug. 18 in regard to standing sails. Our primary reason for asking for this reconsideration is that we believe it prejudicial to the interests of the Association that any change of importance should be made in the sailing regulations without some notice being given of the proposed change. In our opinion the passage, without due publicity, of any rule that antagonizes a considerable number, tends to destroy the confidence that has always been placed in the executive committee. We therefore consider it desirable that the motion herein referred to be rescinded, and that the question be taken up at the executive committee meeting in October, after a publication in general terms of the proposed change.

W. P. Stephens,	Paul Butler,	H. C. Ward,
R. W. Gibson,	M. G. Foster,	J. K. Bakewell,
B. H. Nadal,	D. S. Goddard,	T. G. Buddington.
R. W. Bailey,	H. O. Bailey,	Wm. Whitlock,
Jas. R. Steers, Jr.,	L. G. Seavey,	R. N. Dennison,
H. E. Rice,	E. W. Brown,	C. L. Norton,
F. W. Kitchell,	G. L. Parmele,	L. B. Palmer,
E. C. Knappe,	W. B. Davidson,	F. F. Andrews,
E. H. Barney,	J. N. McKendrick,	F. L. Mix,
F. A. Nickerson,	W. G. McKendrick,	R. S. Oliver,
	W. B. Wackerhagen.	

Mr. Butler moved that all legislation in regard to the standing sail and sliding seat should be declared void, which motion was seconded by Mr. Quick. The question of the vote of 1889 was first taken up, Com. Lawson ruling that as this vote was not recorded in the minutes of the Association and only appeared in the form of letters from the members of the executive committee, the present meeting could take no cognizance of it. Mr. Butler then moved that the resolution passed at the meeting of Aug. 18 be rescinded, as requested in the petition. On this point the commodore ruled that as the motion in question was made without a recommendation of the regatta committee, and as it was not made as an amendment to the sailing rules, it was inoperative, and no reason existed for its repeal, it being in fact but an expression of opinion on the part of the committee. In answer to a question, the commodore stated that the motion was simply a part of the minutes and would not appear in the year book. A great deal of discussion took place, a very strong statement on the part of a member of the Northern Division being quoted, to the effect that the rescinding by the present committee of the motion passed by the preceding one would give offense to the Northern Division and might lead to a separation. The result of the discussion was that Mr. Butler's motion was dropped, no vote being taken, and a motion to lay the petition on the table was immediately carried, after which the meeting adjourned.

It was nearly 7:30 by this time and all repaired to the dining hall of the Thorndike, where tables were laid for about 50, including delegations from the surrounding boat and canoe clubs, Vesper, Newton, Union, Holyoke, Shuh Shuh Gah, Puritan, Lawrence and Springfield. The evening passed pleasantly with songs and stories, the party breaking up at 10:30.

On Sunday morning about fifteen of the visitors took an early train to Lowell under the pilotage of Com. Lawson and other members of the Vesper B. C., as the guests of the club and of Mr. Butler. The first visit was to the Vesper B. C. house, which, with its new canoe house and bowling alley is probably the finest canoe house in the country. The canoe room makes in the largest sails without lowering, while in the large basement in the rear are racks for dozens of canoes. From the club house the party went to Mr. Stevens's shop near by, where a very handsome new canoe for Mr. Butler was inspected. This canoe, which is one of the most beautiful specimens of light construction we have yet seen, is very different from the well-known Vesper boats, being not unlike Mr. Walter Stewart's Charm. The midship section shows a straight deadrise, a V floor, with a very hard bilge. The bow is sharp and beautifully moulded, but very long, and the stern is proportionately short and round, being fuller than any of the present canoes above water. The planking was a most difficult matter on account of the quick turns. The skin is of Spanish cedar, a little over $^{1}/_{32}$in. thick, but before being put in place each plank is backed on the inside with thin canvas laid in a cement compounded by Mr. Stevens. After leaving the shop the party were driven through the suburbs of Lowell, visiting the park and enjoying the magnificent view of the city and the Merrimac River, stopping at Mr. Butler's for lunch and a chat, and finally returning to Boston in time to take the evening trains.

A great deal of work was disposed of in the course of the meeting, but the time was too short for a full consideration of all questions, and the amendments to the racing rules were of necessity turned over to the regatta committee for completion. We must defer to a future issue the full text of the reports and amendments, as they are still in the hands of the secretary-treasurer. Throughout the whole meeting the question of the standing sail was not once touched on save in connection with the two attempts to prohibit it. No attempt to argue the case on its technical merits was made by any one, but in all the discussions there was an unanimous agreement as to the propriety of leaving the rig untrammeled in the principal races of the Association, save as it is limited by the conditions of the combined race and similar natural restrictions. The feeling was also unanimous that the new general purpose canoe should be restricted to lowering sails; but outside of this no action was taken.

THE A. C. A. MEET OF 1890.—IV.

Proposed Changes in the Meets.—Before proceeding to a consideration of the canoes and racing there are two or three new questions that were broached this year for the first time concerning the location and duration of the camp, which are at least worth a little discussion. The first of these is a proposition that the Association shall purchase a piece of land and establish a permanent camp, the suggestion being called forth by the difficulty and expense attending the selection and preparation of the present site. It is clear that there are some very great advantages in such a scheme, the transportation arrangements, made over the same route every year, would be far better, while the boat service between camp and the railway would be on a more permanent basis, the negotiations for the mess, the camp store, the supply of lumber and other material would be carried on with the same set of tradesmen, more or less known to the officers, instead of exploring an entirely new territory each year, and the very heavy investment for wharf, underbrushing, docks, skids and kitchen and mess building would be lessened very materially in an average of five years.

In following out such a plan the grounds would be underbrushed and graded, a strong and permanent dock, a substantial kitchen, an icehouse, servants' quarters and a large mess shed, to be used for meetings and in rainy weather, with a photographic laboratory would be built by the Association. All this would be very much more convenient than the present temporary arrangements, and the whole outlay would probably not exceed that of two years of the present camps; but even if the scheme went no further it would give a set character to the camp that would detract from it in the estimation of genuine canoeists. It would be impossible, however, to stop the advance of civilization in a permanent camp at any fixed point. The buildings would soon include a Troy laundry, a telegraph office, some sort of a hotel, and probably an alleged Eastern bazar for the sale of Oriental and Japanese goods made in Connecticut. If the business part of the camp partook of this character, the residential portion, if the term is admissible, would be even worse in a very few years. The canvas tent with a board floor, now the height of luxury, would very soon give place to samples of the cheap and convenient portable houses, these being followed by such cottages as abound in Cottage City, on Martha's Vineyard, while the ornate summer villa of the Thousand Islands and Lake George would spring up. Such a "camp" might be popular with many as a novelty in the way of summer resorts, but so far as the rank and file of the A. C. A. is concerned we should be greatly mistaken and disappointed in them if they did not with common consent pack their blankets and tents, scour up the disused frying pan, lay in a store of bacon and hard tack and flock by themselves in some locality wilder and more isolated than any in which a meet has yet been held.

There can be no harmony between the spirit of canoeing and camp life on the one hand, and on the other such a summer resort as a permanent camp would soon become; a fact that is pretty well proved by the experience of the Western Canoe Association. The W. C. A. started in 1885 in a permanent camp, a spot possessing every possible advantage, but already occupied as a private summer resort, with cottages, dining hall, wharf and other conveniences. To-day the W. C. A. is a very pleasant little

community, it spends a couple of weeks very enjoyably in a nominal camp among the cottages of Ballast Island, it does not hold many races, especially in Class B canoes, but there is plenty of fun to be had among the islands, easily reached by steam launches, and the annual ball is a great success. All this may do for those who like it, or who have known no better, but there are still a great many canoeists who would by far choose a 6×6 cotton tent on the hillside at Grindstone, with the privilege of doing their own cooking and even dish washing over a pile of chips beside it. An experiment of this kind is too dangerous for the A. C. A. to risk; better the strength and vigor that comes from the most primitive camp in the wilderness than the lassitude which, from somewhat similar causes, has characterized the other two attemps to establish canoe associations in the Western and British C. A.

There is a material modification of this plan which would possess many advantages and still preserve the primitive character of the camp. This is to select a good central location, leasing the ground from year to year, building a dock, kitchen and icehouse as cheaply as possible, but fairly permanent, and then using the site as long as it seems desirable, quitting it for another as soon as there are any indications of cottages or permanent dwellings. With this plan the first outlay would be the main expense for probably four or five years, and if by this time the camp were too much built up, or the neighborhood too thickly settled, the plant could be abandoned with little loss. Arrangements might be made to store all camp floors and skids in the mess shed during the year, and a rule might be enforced to the effect that no structure of wood should be allowed save those for common use, such as the kitchen, mess shed and servants' quarters. This would compel all to live in tents, and prevent the invasion of portable houses and cheap cottages.

At one time, four years since, the Association was in an excellent position to carry out this scheme; it had the best location in the country, Grindstone Island, and could have retained it indefinitely at a nominal rental. The owners of the land had proved amply capable of solving the mess question, and were very anxious to secure the further custom of the Association; while the experience of 1884 and 1885, before "Uncle Mike" was allowed to constitute himself King of Grindstone Island, showed that the Delaneys could and would deal fairly with the canoeists. At the end of the meet of 1886, the third on the same camp ground, we, in common with many others, were in favor of remaining there for an indefinite time, until some good reason for a change was evident; but this course was opposed by others on the ground that they wished to see a new place and were tired of the old one, and the camp was finally located at Bow Arrow Point, on Lake Champlain. In a combination of advantages, accessibility from all sections, sailing waters and camp site, weather conditions, and especially in regard to supplies of ice, fresh meat, milk, butter and vegetables, Grindstone was far ahead of any other site ever visited, and as it stands to day precisely as in 1886, the last four camps might have been held there at a net cost but little greater than that of the present meet.

But for one objection we should favor a return to Grindstone, a rebuilding of the dock and building of a few cheap kitchen and mess sheds, and a stay there for one year or ten, according to circumstances. The obstacle in the way is the expansion of the Division scheme, then in its infancy, but now in full operation, a meet having been held in turn in three out of the four Divisions. It would be a difficult matter now to disturb the existing order of things and make a new arrangement based on four Division meets in place of three each year, with a general A. C. A. meet at the same central point. While this might have been practicable in the first inception of the Division scheme, it is hardly possible now, and failing it all question of a permanent camp is likely to fall to the ground.

We have already spoken of one way of decreasing the proportionate expense of the meet by means of a larger membership of the Association and a fuller attendance at camp, the cost of a meet being largely independent of the attendance, but there is another new proposal bearing on the same point. It is proposed to increase the attendance in a measure by lengthening the duration of the meet from two to three weeks, the subject being brought up by Mr. Wilkin. While there are some difficulties, they are not very serious, and could probably be removed, and the extra week would undoubtedly give opportunities for many more to be present, while the expense would be no more for three or four weeks than for two, save in the item of a steam launch.

The wharf, wells and all the arrangements of the camp are independent of the factor of time; the only items which cost a certain sum per day are the steamer, and in a way the mess tent and camp store; it might not be practicable to keep either open for the small attendance during the first or last three days of the meet, though even this is by no means certain. With the camp once in running order the meet might last three weeks as easily as two, the programme being a little extended and perhaps lengthened, so as to offer certain features in the first as well as the last week. There are many who cannot get away from business in the two weeks who would be glad to come during the extra week. In order that the commodore and secretary need not be compelled to spend the whole three weeks in camp, an arrangement might be made by which the Division officers should be in charge of the camp for the first week, the A. C. A. officers taking command for the balance of the time. In the same way the early portion might be specially devoted to short cruises or cruising races, the principal events being reserved for the latter part of the meet. In fact, there are enough officers to manage a three-weeks' camp, and a sufficient variety of events to make every day a pleasant one to those who stay for the whole time; the only question is to arrange the details. The attendance would probably be increased so much as to make it worth trying. Everything which adds to the importance and prominence of the meets adds to the net membership of the Association and the attendance, and these in turn operate to lessen the cost per head.

There is a point in regard to the date of the meet, which has become apparent about New York of late years, and probably in other parts of the country. The meet serves as a general stimulus to canoeing and especially to racing, those who have attended it separate to their homes in all parts of the country, and infuse new life into the local canoeing, as is seen in the many fall races. Unfortunately the season is so far gone by the time that the last canoe is home from camp that there is little time for races, this being especially the case about New York, where the many canoe clubs want a Saturday for a regatta. Then, too, Labor Day, the first Monday in September, is a general holiday for canoeists, races and regattas are held everywhere, but the date is so close to the end of the meet that many canoes are still on their way home. It would greatly aid the fall racing if the A. C. A. meet could be over by the end of the first week in August, giving plenty of time to get the boats home and in shape for Labor Day, and then a number of Saturdays for the various club races before cold weather sets in. A canoe race about New York in October is sometimes not only cold but dangerous sport. There may be some difficulty in arranging an earlier date without clashing with the Division meets, but if this can be done we believe that the latter half of July and the first week in August would be preferable so far as vacations are concerned in Canada, if not in the States, and the fall racing all over the country would be greatly improved.

THE STANDING SAIL.

As a result of the recent meeting of the executive committee the standing sail question is at last definitely and, in all probability, finally settled. While the actual decision of the meeting was but a compromise, the practical effect of it, in connection with other measures passed by the executive committee, is to leave the standing sail as free as it was last year or the year before; while the new amendment to Rule XXII., which was indorsed by the meeting, will make such hasty action as that of last August impossible in the future. The feeling of the majority of those members of the A. C. A. who take any active interest in its rules and legislation is very thoroughly shown in the petition in another column, the plain and emphatic wording being backed up by such men as Ex-Commodores Gibson, Oliver and Nickerson, and by others like Butler, Bailey, Whitlock, Rice, Barney and McKendrick, who have been foremost both in the racing and in the law making of the Association. Of all to whom the petition was presented but half a dozen declined to sign it, most of these on the ground that they were opposed to the standing sail.

The discussion of the petition and the issues involved in it was not reached until the end of the afternoon session, after a hard day's work and when the men were arriving for the dinner, and little time was left for the remaining business. Of those present a number were in favor of Mr. Butler's motion, but after the ruling of the chair was heard there was no disposition to appeal or to press the question to a vote. One matter that carried weight with a number was the very positive statement on the part of a member of the Northern Division that the rescinding of the motion with which this Division has been specially identified for two years would possibly lead to a breach between it and the main body of the Association. In view of the present condition of the Northern Division in regard to its meet and finances, many were unwilling to push the issue of the rescinding of the motion relating to the standing sail.

So far as this statement is concerned, we believe that it does not represent the attitude of the Northern Division on the standing sail question itself or toward the general body. The largest and most objectionable standing sails in the whole Association are those of Canada's representative sailor, the sails which have taken the sailing trophy to Canada for two seasons, together with the unlimited prize for 1890, and that may yet take the New York C. C. cup in 1891. The prohibition of the standing sail means the withdrawal of Mr. Ford Jones and the Canuck from the A. C. A. races, and would prevent the carrying out of his intention to challenge for the New York C. C. cup next year, unless these latter races could be arranged to be sailed under other than A. C. A. rules. These facts are well known to Canadian canoeists; and we do not believe that any action of the executive committee which would keep the Canuck in the A. C. A. races would create dissatisfaction; and further, we have no idea that any such action of the executive committee, passed fairly at an open meeting, even if disapproved by the Northern members, would lead to any suggestions for a separation. It is very unfortunate that no representatives of the Division were present to speak for it, and that there was no guide to the feeling save a letter from a member specially interested in the retention of the motion.

It had so happened that before the question of rescinding the motion had been reached the whole matter had been practically settled in another way, the amendments to the racing rules, which were approved in their general details by the executive committee, permitting the use of the standing sail save on a specified class of canoe. No proposal was made to amend Rule 1 in such a way as to prohibit standing sails, and failing this they can be used as freely as before save in the new class and in races such as the combined, in which they are prohibited not by any specific enactment, but by the conditions of the race, that sails must be lowered on one leg and hoisted on the next in alternation over six legs.

The motion of last August has not been rescinded; it is still on the minutes of the Association, but in so far as it hinders in any way the use of the standing sail, it is placed by the ruling of the commodore on a footing with the former ill-managed and abortive attempt of 1889, and both will soon be buried together in the dusty archives of the Association.

As has been urged by so many, the standing sail will work its own cure. Mr. Brokaw, who won his victories with it, has condemned it; Mr. Quick, who has used it largely, stated at the meeting that he had done with it, and was fitting up a new hoisting rig for next season in addition to that he used in the combined race this year. Mr. Barney has for some time condemned the overgrown offsprings of the snug and neat Pecowsic rig. The racing men who have been beaten at times by the standing sail are one and all, with Mr. Butler at their head, against any summary legislation, and only anxious to have a chance to drive it out by producing something better that will reef and lower. The petition which now lies on the table will never be taken up at any subsequent meeting; but, though its requests were not directly granted by the executive committee, the various measures unanimously adopted without reference to this long dispute, are in themselves a complete condemnation of the methods by which it has been sought to prohibit the standing sail.

FOREMAN WANTED.—Wanted a good practical man to take charge of manufacturing department. Must be capable of laying out from drawings, and building all styles of small pleasure craft. Write, stating previous experience to St. Lawrence River Skiff, Canoe and Steam Launch Co., Clayton, Jefferson county, N. Y.—*Adv.*

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

C. T. P., Marlboro, Mass.—Your inquiry will receive due attention.

T. T., Fall River.—The America has never been rigged as a sloop, and never won a "Queen's Cup." See our issue of Nov. 13.

S., Philadelphia, Pa.—Can you advise me through your valuable paper of the pedigree of the Irish setter bitch Chipeta? She was registered in the *American Kennel Register*, we are informed. Ans. She is not registered.

F'LIN.—Can you tell me, through your correspondence column, if there is such a thing published as a score book for sportsmen, in which can be kept the record or result of each day with rod and gun? Ans. There was such a book published by a St. Louis publisher, we believe, but we cannot refer you to it.

W. W., Ithaca, N. Y.—The address of *Le Yacht* is 55 Rue Chateaudun, Paris, France. Wesson's address is Worcester, Mass. A steam launch must have a licensed engineer and pilot. Charts can be had of D. Eggert, 74 Wall street, New York. The limit of draft in the Delaware & Raritan Canal is 7ft. 4in.

F. L., Michigan City, Ind.—I. I have an English beagle bitch, 1yr. and 2mos. old, of pedigree stock, bought through advertisement seen in FOREST AND STREAM. She is untrained, seems to know nothing about running rabbits or obeying orders. Would like to know if she is too old to be trained for the winter hunting, and please advise me of a book on beagle training. 2. Where can I find the English beagle standard? Ans. 1. There is no book, that we know of, which treats on this subject. Take your dog into the woods and if she is worth anything she will soon find out what is required of her. 2. In the book "Points for Judging," published by FOREST AND STREAM. Price 50cts.

New Publications.

THE NAMES OF TREES.

THE TREES OF NORTHEASTERN AMERICA. Illustrations from original sketches. By Charles S. Newhall. G. P. Putnam's Sons, New York.

This is one of those books which prompt surprise—surprise that they have not been written before. How this one came to be prepared is told in the author's preface which runs thus: "C—, if you and I were to meet a man on the street and ask him his name, he could tell us. I wish a tree could do as much. Here are splendid specimens all around us, and I don't know one of them."

"Get a book that will help you."

"I cannot find such a book. I can find no book which, in simple fashion, will so describe the tree, from its foliage and bark and style, that I can recognize it."

"Then I will make one for you."

The result of that promise is a handsome volume containing descriptions of all the native trees of Canada and the northern United States, east of the Mississippi River, with mentions of the more important introduced and naturalized species. The leaf, bark and fruit of each tree are described, with a natural size outline of the leaf, and in many cases of the fruit as well. It was indeed a "happy thought" to plan such a guide as this, and the work has been done well. "The Trees of Northeastern America" ought to be at hand for consultation until one learns to know the trees. It is a book which will add immensely to the satisfaction of an outing in the woods; and it should have a place in the camp outfit.

ATLAS OF THE METROPOLITAN DISTRICT.

Messrs. Julius Bien & Co., of this city, sent us their new Atlas of the Metropolitan District and Adjacent Country, comprising the counties of New York, Kings, Richmond, Weschester and a part of Queens, in New York, and the county of Hudson and parts of the counties of Bergen, Passaic, Essex and Union, in New Jersey. The scale employed is two inches to the mile, which admits of detailed illustration of the many economic features of interest within this area; all roads are indicated, the streets of the towns being named; the forestry, hydrography and drainage are included, and a careful distinction of the fresh and salt water marshes is made. The elevations throughout are clearly shown by a system of ten and twenty feet contours numbered, and the general appearance of the country is brought out in plastic effect by the use of carefully-graded shading. The size of each map is 23×35in., the atlas being 17½×23 in. The price of the atlas is $20.

HORSE STORIES AND STORIES OF OTHER ANIMALS. Experiences of two boys in managing horses, with many anecdotes of quadruped intelligence. By Thomas W. Knox. New York: Cassell Publishing Co. Price $2.50.

This is a book written to the illustrations, which are numerous and represent a large number of beasts, domestic and wild. The author evidently has a well-stocked scrap-book from which to draw anecdotes of animal intelligence; and he has succeeded in making a capital volume, interesting and instructive. It is designed for the young and may well be put into the hands of a boy of ten.

SCOUTING FOR STANLEY IN EAST AFRICA. By Thomas Stevens, New York. Cassell Pub. Co. Price $2.

This is an interesting account of Mr. Stevens's expedition, when sent out by the New York *World*, to meet Stanley in Africa. The time occupied was eighteen months, during which period the author had various exciting adventures with native tribes and wild beasts, and at the end displayed pluck and cunning in his exploit of getting a "beat" on the *Herald's* man, who was half an hour behind him in greeting the explorer. The volume is illustrated with some capital half-tone plates from photographs.

DUST AND ITS DANGERS. By T. Mitchell Prudden, M.D. New York: G. P. Putnam's Sons. Price 75 cents.

What are the dangers of dust? First it is to be known that "dust" consists largely of micro-organisms, living germs, disease germs, of consumption for instance. Inhalation of dust produces coughs, catarrh. Dust causes diseases of the eye. Dust spreads bacterial diseases, consumption, erysipelas, typhiod fever, diphtheria, blood poisoning. Dusty streets, dusty churches, schools, halls; dusty houses, dusty offices; all these help on disease by disseminating the germs in the form of dust. Dr. Prudden preaches cleanliness as a preventive of disease.

TRAINING FOR HEALTH, STRENGTH, SPEED AND AGILITY. For the instruction of amateurs and others. By John P. Thornton. New York: Excelsior Publishing House.

Mr. Thornton has written a book as full of good sense as a nut of meat. Besides the practical instructions for the work of athletes there are capital hints and suggestions concerning exercise and the development of a normal physical condition, which may well have universal study and heed. The book has none of the smack of the athletic "professor;" it is honest on every page

A typical West Virginian, tall, straight as an arrow and muscular, with slouch hat and good-humored face, was being piloted about the attractive parts of the city yesterday by Al Herron, of the Herron Hill Gun Club. The gentleman was George A. Johnson and he was chuck full of hunting stories. He told one that he vouched for as being absolute truth and Herron backed him up in it. He started with the astonishing statement that an old hunter in his locality had one time shot a deer while holding another. "This man," said Mr. Johnson, "was watching a runway early one morning when a fawn ran between his legs. He pressed his knees tightly together and held it imprisoned there. He was about to kill it when a yearling buck made his appearance about 75yds away. Holding the fawn between his legs he shot and killed the yearling, and then allowing the fawn to escape shot it. The man who did this feat, however, has told it so often that it has grown considerably. He now says he held a buck by the horns with his left hand while he shot another with his right. Everybody don't believe that."—*Pittsburg Commercial Gazette*

WILD INDIAN LIFE.

PAWNEE

HERO STORIES AND FOLK-TALES.

With Notes on the Origin, Customs and Character of the Pawnee People.

By GEORGE BIRD GRINNELL ("YO.")

Cloth, 417 pages. Illustrated. Price $2.00.

Pawnee customs and beliefs are richly illustrated by the folk-tales and in the copious notes Mr. Grinnell gives an uncommonly spirited account of Pawnee life in peace and in war. There is an account of the defense of a Pawnee village by 200 sick men, cripples, old men and squaws, against 600 Sioux warriors, which for sheer gallantry and indomitable pluck will match almost anything in military history. The Pawnee warriors were all away at the time, and the Sioux counted upon an easy victory. But the Pawnee cripples and women actually beat them off after a hard day's fighting, and at last so terrorized them that the bold assailants fled in panic and sustained a heavy loss. Mr. Grinnell also has written a picturesque and vivacious sketch of one of the last Pawnee buffalo hunts, in which the Indians commonly reverted to primitive weapons and usages, often hunting quite naked with no other arms than their bows and arrows. A particularly interesting part of the book is that which treats of the Pawnee doctors or medicine men. The statements of Mr. Grinnell show the possession by some of these men of a kind of skill in sleight-of-hand far beyond that usually attributed to Indians; some of the facts here described are as puzzling and unaccountable as those performed by the famous jugglers and fakirs of Hindostan, while one of their tricks is a close parellel to the East Indian mango feat. . . . Those who desire to learn of the many other wonders done by the Indian doctors must refer to its pages for themselves. As it is certainly one of the best works on Indian life, legend and character that has been written for a long time, it should obtain a wide circulation.—*N. Y. Tribune.*

Old Colony Trout Ponds

ESTABLISHED 1869.

Three million brook trout eggs for sale. Can be transported with safety to any part of the world. Ready for delivery December and January. Also young trout in the spring.

Unsurpassed fly-fishing in its season.

DENVER, Col., Oct. 21, 1890.

W. L. Gilbert, Esq., Plymouth, Mass.:

MY DEAR SIR—In regard to the trout eggs received from the "Old Colony Trout Ponds" I can say that the best possible results have been had from them at all of the points to which they have been shipped in Colorado. I know of no better packing than that employed by you. After a journey of nearly two thousand miles by rail and stage I have had a loss of less than 1 per cent. in a lot of 250,000. I do not want any better. Very truly, GORDON LAND, Col. State Fish Commissioner.

W. L. GILBERT, Proprietor,
Plymouth, Mass.

FOR SALE.

Valuable ducking property in North Carolina. Price seventy-five hundred ($7,500) dollars.

Above consists of Harbor Island and over one hundred acres of marsh land situated at the entrance of Core Sound, North Carolina. Sixty miles from Newberne and forty from Morehead City. Harbor Island contains about eight acres and has on it a house forty-four (44) by forty-two (42), two stories and attic. (Lower story abode); nine bed rooms on second floor, a two-story extension forty-six (46) by eighteen (18), (all plainly but sufficiently furnished), together with a few necessary out-buildings. Large wine cellar under main house All the buildings less than three years old. Pier extends to main channel.

Shooting consists of redheads, broadbills and other ducks; also brant and geese. In spring and fall curlew and snipe are numerous. Duck shooting commences December first and lasts till March. Photographic views will be shown and full particulars given by FREDERICK ROBERT, Nos. 97-99 Water street, N. Y. 2t

Names and Portraits of Birds

Which Interest Gunners; with descriptions in language understanded of the people.

BY G. TRUMBULL.

Contains the local names in popular use, and eighty-nine illustrations, which, with the clear descriptions in the text, will enable any man who can read to identify the contents of his game bag.

OPINIONS OF THE PRESS:

It is the first, so far as we know, of a class of books of which the need is felt in every department of natural history.—*Troy Press.*

To all dwellers by the water and in the country and especially all who shoot, the book will supply a great need, and every one who is interested in birds will be interested in it.—*Boston Evening Traveller.*

The book should find its way to a choice place in every sportsman's library.—*Chicago Inter-Ocean.*

There is a delightful dearth of dead languages in this book. The sportsman who looks between the covers for a description of some game bird—a description which will enable him to identify the creature should he meet it in the woods or on the water—is not compelled to shut the book, drop a bad word or two upon it and go in search of some Greek and Latin dictionaries to find out what the description means.—*New York Herald.*

ANSWERS TO CORRESPONDENTS.

Readers of FOREST AND STREAM *who are contemplating the purchase of books for Christmas presents will do well to send at once for a copy of our free illustrated catalogue of publications.*

THANKSGIVING.

DOUBTLESS many a sportsman has bethought him that his Thanksgiving turkey will have a finer flavor if the feast is prefaced by a few hours in the woods, with dog and gun. Meaner fare than this day of bounty furnishes forth is made delicious by such an appetizer, and the Thanksgiving feast will be none the worse for it.

What can be more delicious than the wholesome fragrance of the fallen leaves? What more invigorating than the breath of the two seasons that we catch, here in the northward shade of a wooded hill the nipping air of winter, there where the southern slope meets the sun the genial warmth of an October day. Here one's footsteps crunch sharply the frozen herbage and the ice-sharded border of a spring's overflow; there splash in thawed pools and rustle softly among the dead leaves.

The flowers are gone, but they were not brighter than the winter berries and bittersweet that glow around one. The deciduous leaves are fallen and withered, but they were not more beautiful than the delicate tracery of their forsaken branches, and the steadfast foliage of the evergreens was never brighter. The song birds are singing in southern woods, but chickadee, nuthatch and woodpecker are chatty and companionable and keep the woods in heart with a stir of life.

Then from overhead or underfoot a ruffed grouse booms away into the gray haze of branches, and one hears the whirr and crash of his headlong flight long after he is lost to sight, perchance long after the echo of a futile shot has died away. Far off one hears the intermittent discharge of rifles where the shooters are burning powder for their Thanksgiving turkey, and faintly from far away comes the melancholy music of a hound. Then nearer and clearer, then a rustle of velvet-clad feet, and lo, reynard himself, the wildest spirit of the woods, materializes out of the russet indistinctness and flashes past, with every sense alert. Then the hound goes by, and footstep, voice and echo sink into silence. For silence it is, though the silver tinkle of the brook is in it, and the stir of the last leaf shivering forsaken on its bough.

In such quietude one may hold heartfelt thanksgiving, feasting full upon a crust and a draught from the icy rivulet, and leave rich viands and costly wines for the thankless surfeiting of poorer men.

SALMON FOR THE HUDSON.

A LITTLE after midnight of Nov. 20 the U. S. Fish Commission car No. 3 arrived at Troy, N. Y., with about 10,000 six months old salmon, measuring from 2½ to 3in. in length. These were the remainder of an allotment of 20,000 salmon given to the State of New York, from the Bucksport station in Maine, in place of the eggs of the Atlantic salmon which were promised to the New York Commission last season, but which could not be furnished because of the scarcity in the supply. The car started from Bucksport with 20,000 fish, but for some unexplained reason great mortality took place as soon as the journey began. Commissioner McDonald, who went to New York personally to oversee the planting of the fish, explains the dying off in this way: The salmon were practically wild fish, and had been accustomed to their liberty. The fright and confinement of the transportation tanks were the probable cause of the great mortality. The fish were deposited at Troy on the shore of Green Island. Mr. Fred Mather accompanied the car from Bucksport to the place of planting, and Commissioner Burden, of Troy, was present when the fish were liberated.

Col. McDonald, accompanied by Mr. Burden and Mr. Mather, went to Glens Falls, and while there Mr. A. N. Cheney showed them the falls and dams in the vicinity. The Commissioner believes that fish can easily surmount the two falls with the help of two fishways, which can be constructed at a cost of not more than $5,000 each.

The 10,000 salmon planted were healthy and vigorous, and each one of them is more than the equivalent of a hundred fry.

Car No. 3, after delivering the salmon at Troy, proceeded to Washington with a number of beautiful salmon and trout for the aquaria. There were eight Atlantic salmon, varying from eight to twenty-seven months old; eighteen landlocked salmon, six of which were thirty-two months old; five brook trout, twenty months old; eight Loch Leven trout, eight months old, and five rainbow trout, twenty months old. All of these arrived in perfect condition.

ON A RUNWAY OR IN THE WATER?

THE most important subject discussed at Albany last week when the fish and game law revision committee gave a hearing, was the hounding of deer in the Adirondacks. The sentiment of those present was largely in favor of restricting the hounding season, which is now fifty days, to a shorter period of thirty days, and others spoke in favor of abolishing the practice entirely. Perhaps it is too much to expect that hounding deer in the North Woods will be stopped by law. Those who are most influental in shaping legislation for this region are the hotel proprietors and those who resort to their houses. The hotel proprietors want hounding continued because there are so many pleasure seekers who visit the Adirondacks with the hope of killing a deer by hounding it into the water, but who would never dream of trying to kill a deer on land. If these people cannot hound deer, the hotel men reason, they will not pay board bills in the North Woods. It was stated at the Albany hearing that the hotel custom lost during the year the Curtis non-hounding law was in operation amounted to $100,000. If this estimate is not exaggerated, it may fairly be assumed that the hotel men will see to it that a non-hounding law shall not be enacted; they cannot afford to have the practice prohibited.

One proposition was to permit hounding but to forbid killing deer in the water. Such laws are in force elsewhere, or to speak more accurately are dead letters.

For the enlightenment of those who are familiar with deer hounding as practiced in the South and in other sections, where the game is shot at by hunters as it passes on runways, it should be explained that deer hounding in the northern wilderness of New York means for the most part driving the game into the water where it is killed by hunters on the shore or in boats. Scores of men, who lack the skill required to hold the rifle true on a bounding buck, can readily enough kill the game in the water provided their magazines hold out or the boatman rows them near enough. Nine-tenths of the deer killed by hounding in the Adirondacks are killed in this way.

Now the proposal is to let the hounds run the game but to prohibit shooting it when it has taken to water. If such a law were strictly enforced the objections to hounding would be in a large measure removed. But it may quite safely be predicted that with such a law, one of two results would follow: The statute would be a dead letter, or if enforced the hotel men would quickly cry out for its repeal. A large proportion of their patrons, for whom the landlords wish to preserve the privilege of hounding, are, as we have said, wholly incapable of killing a deer anywhere else than in the water. If the privilege of water-killing is taken away from them, that will in effect be taking away the privilege of hounding; this class will no longer frequent the Adirondacks, and Mr. Paul Smith and his allies will again appear at Albany asking permission for their guests to kill game in the water.

THE AMERICAN FOLK-LORE SOCIETY.—The second annual meeting of this society will be held in New York city on Friday and Saturday of this week in Room 15, Hamilton Hall, Columbia College, Madison avenue and Forty-ninth street. On Friday there will be three sessions for business and reading of papers; at 10 A. M. the Council will meet; at 11 o'clock the President, Dr. Daniel G. Brinton, will take the chair, and an address of welcome will be delivered by Professor John S. Newberry, M.D., LL. D., President of the New York Academy of Sciences. The Council will then present its report to the society; reports of officers and committees will be received and general business will be transacted. At 1 o'clock the session will adjourn and the members are invited to a lunch provided by the local committee. At 2.30 P. M. the society will reassemble for the reading of papers. At 8 P. M., by invitation of the New York Academy of Sciences a joint meeting of the Folk-lore Society and the Academy will be held in the same hall, at which papers will be read. On Saturday there will be a single session beginning at 10 A. M. The meetings of the society will be open to the public but only members will take part in the business and discussions.

SNAP SHOTS.

MR. TOWNSEND COX, Forest Commissioner of New York, reports that the Catskill Game Park, which has been stocked with deer and other game, is proving so successful that it would be a wise measure for the State to acquire the entire township of Denning, in which the park is situated. The territory could probably be bought at a low price, and it is admirably adapted to a fish and game preserve. Mr. Cox proposes to have the penalty for killing deer in the Catskills raised to a fine of $100 or imprisonment one year; and he says that the public sentiment of the residents in that region favor such a stringent provision.

Mr. A. N. Cheney calls our attention to the fact that the New Hampshire law has no provision for protecting the *aureolus*, the trout of Lake Sunapee, about which there has been so much discussion. The law simply specifies "lake trout, brook or speckled trout;" and probably it was the intention of the Legislature to include all trout in this category. We presume that the reason the *aureolus* was not specifically mentioned was that it was not then known to be a distinct variety. No time should be lost in remedying this defect of the law.

An Ohio correspondent, in describing a famous hunting resort, suggests that it would make an ideal game preserve. But why not an ideal region to preserve by the public for pudlic use? Why should every favored locality, where fish or game is to be found, be picked up for a private club? The wiser plan would be to protect the game or fish for the public. By and by we shall have no desirable country outside of game preserves.

Hotel men at Barnegat and Great Egg Harbor are displaying unusual greed even for seaside resort proprietors, if the report which comes to us is true that they are killing sheepshead and other food fishes by dynamite. Unfortunately the New Jersey law has no provision to prevent this business, but it should have immediate attention at Trenton this winter.

THANKSGIVING TURKEY.

THE TURKEY HUNTER'S EDUCATION.

AT turkey hunting we are only amateurs, Lawrence and I. The truth of this is generally strongly impressed on us after having taken one of our annual trips after this wary bird. A ten years' study of his peculiar and adroit ways has not made us at all proficient in bringing him to bag.

A young man can enter college for four years, and at twenty-one or thereabouts if he be studious and of average ability can walk out full-fledged with a smattering of the dead languages and some knowledge of French and German. And the chances are he thinks he knows something. Now, if it is desirable that the conceit be taken out of him, and Timothy Titcomb says "the first thing a young man in starting out should learn is that he knows nothing, and the more thoroughly this is learned the better it will be for him," let him take to the woods and maneuver with the wild turkey on his native heath. It may take him a week to find out where the old gobbler has scratched, and it may take another week to find out whether that scratch is a day old or six months. When he has got so far he has reached A and B of the turkey alphabet. In a year, if he works hard and takes to timber kindly, he may master the alphabet and begin to spell a-b ab. By that time he will begin to understand what Timothy Titcomb meant, and when he reaches out into the future with his anticipations of a diploma in wild turkey lore, including its higher mathematics, dead languages, etc., he will surely feel that he knows nothing as yet, and has a long road to travel before he does. If he goes further he must love his work and have time to pursue it. The chances are ninety-nine to one hundred that he will go on, until stopped by some cause beyond control, for the course of most temperaments is one of extreme fascination.

There is a plenty of turkey hunters who are up in the business—to hear them tell it—persons who can go out almost any day, bag their game and be back by 9 o'clock A. M. We have heard them talk. Why, it is easy enough. First, find where the turkey is rising, locate at a favorable point within hearing, and make a certain note. You have only to keep cool and shoot straight when he comes up, and you have him. Easy enough—can get one at any time.

This same L. and the writer have in mind a person who uses language of that kind freely. He is a good talker and hailed us one day as we were returning home down the bayou from a rather unsuccessful hunt. Had we had much luck? "Only moderate." Where did we go? "Twenty-five miles above." "Went too high. Should have hunted lower down the river. Around my place they are thick. Can hear them gobble at daybreak every morning in three or four directions from my gallery. I want one only occasionally. We get wild turkey here until the family tire of it. Three mornings ago I went in the timber west of the house and located at a favorable spot and gave a yelp, and up came three fine old gobblers on a full run, one just behind the other. I shot the largest one first with my rifle, and as one was wanted for a friend who was visiting me, I touched the trigger on another. This was done in short order. The third turkey was still monkeying around in the locality, and, not wanting him, I took my hat in hand and chased him down through the woods."

If L. and I had indulged in any conceit over the small bag made in a protracted hunt of several days' duration, it was now thoroughly dispelled. We asked to be made unfast, when we proceeded at once on down stream, contemplating how easy it was for some persons to bag turkey and how difficult for others. But in the years that followed we improved in our skill somewhat, and began to make inroads into the haunts of these same birds that gobbled so lustily in hearing of this gentleman's residence.

One day, through a mutual friend, we heard that this expert had expressed a fear that we would kill an exceptionally fine gobbler in his hunting grounds, which he was reserving for breeding purposes. We sent him word to tie a red ribbon on his turkey to mark him for identification, as the lawyers would say, and the noble bird should go unmolested. But the chances are that if he be such a specimen as represented with his years of experience in eluding his enemies, he would go scot free from us without such identification marks.

An old gobbler as a rule knows his business. The fact of his existence is the proof, as his known enemies are numerous; and from the time he first breaks through his shell his path is beset with dangers, which keep him constantly on the alert for self-preservation. Having been hatched and reared in the forests he is thoroughly familiar with all its parts, including the forms of its innumerable thickets and open spots, the meandering of all its streams, the varying lights and shades that constantly play through the woods—and the thousands of voices that are to be heard every day, he has booked in his vocabulary to a nicety. If a sound not quite to his understanding is put forth it will be interesting to observe him for a brief time, for it will be but a very short time that he can be observed, unless the sound be made out to come from a friendly object. If the least suspicion is attached to it a pair of legs or a pair of wings is called into use, and Mr. Turkey is soon habitating in a more congenial locality. If the amateur hunter thinks the bird's hearing is not accurate let him get within gunshot range and turn a leaf over; but unless it is desirable to eliminate that turkey from that part of the woods instantly another must not be turned while he is paying attention. And what about his eyesight? If there is anything in the woods sharper we have not found it. Both eyes stand on the outside of its head, and he appears to see in all directions at once. It is quite easy for him in fleeing from the sportsman, whose gun he fears, to get a tree to intervene, while he streaks it through timber to a place of safety, keeping the tree accurately in line all the time. He is also when in a tree a fair ventriloquist, and if he desires to do a little clucking or gobbling on the ground without being there in person he can just do it, that's all.

As to his coming to call down through a certain part of the woods that a hunter may pick out for him, that is all bosh. He can come down through that part of the woods if he wants to, but the chances are about nineteen to twenty he won't want to. Some other route will suit his peculiar motives better.

The way of a certain gobbler in substantiation of this is still fresh in mind. He was not located until 8 A. M., rather late for a successful call. Report had it that a party previously had taken a shot at this fellow, and warning was given that it would take some skill to get shot among his feathers. His answer to the call was annoyingly suppressed, so much so that his position could not be located at first sound. In about ten minutes he answered again, still in a subdued tone, but his direction was had this time, and paddling the canoe to that side of the stream, the bow was cautiously pushed to the bank and made fast, and the woods entered as stealthily as possible. A favorable location was sought behind an old log, where the hunter's head could be pulled down frequently to fight off the myriads of mosquitoes that continually swarmed about, and which constituted a very unfavorable factor in the chance for a successful shot. It was fully fifteen minutes before the third answer was made, when his lordship seemed to be exactly in the same spot where first located. The call of the hen was but little more frequent, and with as much indifference as could be injected into it. It seemed an age before another note was had from the male, and during the interim the hunter's head went down behind the log many times to polish off the mosquitoes, and when the note was made it was still in the same half hearted way, though it seemed nearer and in a slightly different direction, showing that the bird was not as supremely indifferent as he would make believe. Then he quit entirely, and for nearly half an hour the woods seemed to be as silent as death. But the sportsman was not nearly so dead as he was silent, for he had a belief that some investigation on the very sly would be made by this very cautious turkey. It was then that the bloodthirsty insects got in their villainous work, while the woods were being motionlessly scanned by a pair of watchful eyes, covering the semi-circle on the opposite side of the log, and investigating carefully every visible spot. Not a motion could be seen nor a sound heard. The mosquitoes unmolested were still feasting with voracious appetites, and the hunter had lain so long in one position without a movement that one leg had "gone to sleep," and a new position was being as quietly obtained as possible under the circumstances, when a slight rustle in the leaves was distinctly heard in the rear. Turning his head in that direction the hunter sees his game in full view, and a noble specimen he was, walking in a stately manner, at 60yds. distance. Too far for a shotgun, or a quick shot at his head and neck would bring him to bag. Unconcernedly and without betrayal of the least alarm in his aristocratic gait and in his handsome plumage, leisurely he walks on; but ere a rifle can be trained on him, a tree, as if by mere incident, intervenes. It is enough. Mr. Turkey knows, amid one hundred and one other smart things, the stupendous advantage of an intervening tree, and swifter than the wind he runs through the woods, rattling the dry leaves, but keeping the tree so nicely in line that on either side not a feather can be seen. In an annoyingly brief space of time he gobbles 200yds. away, and loud enough now to be heard throughout the entire county of Sharkey, and having slowed up to a walk he goes on through the timber distributing his music with lavish freedom at intervals of 50yds. or less, but containing in its tone more of exultation and defiance than of enjoyable music to the discomfited, out-generaled, oft-vanquished, mosquito-gnawed, cramp-limbed, eye-wearied sportsman behind (?) the old red log.

And it never was clearly ascertained whether that old gobbler went in the air over the earth or in a subterranean cavern through the earth, to his advantageous position on the other side of things—it is not believed, however, that he took the usual method of walking on the surface, as that route had been subjected to an intensely eager search without his being revealed.

And now, Mr. FOREST AND STREAM, just here, before it is forgotten, let me speak of some experience with guns for turkey shooting. The gun that was used at this time was a double-barreled heavy 10-bore shotgun, with an auxiliary rifle barrel in one chamber. The rifle barrel required a special sight, which was set up just back of the hammers and was made to fold down when the shotgun side was used. I carried this auxiliary barrel two seasons and discarded it for the reason that I found it not sufficiently accurate for long range shooting, and greatly in the way for close work when both barrels were needed. I then clung to the shotgun for years, and when a turkey could be gotten close—inside of 40yds.—he stood rather a slim chance, if he would show part of his head and neck. If a second shot was needed at a flustrated spot, for be assumed something is going to be flustrated if the turkey is not killed the first shot, the shotgun is just the thing.

After years of trial I adopted No. 6 shot as the proper size, as containing enough shot to hit a vital spot at 40yds, and with sufficient force to kill. This is the first barrel. For second barrel I used 000 for the body, having abandoned all hope of doing anything with the head and neck after the above flustration had been created.

After awhile I weakened on my favorite shotgun. I lost a couple of fine old fellows at 45 or 50yds. that had cost me hours of patient and hard work for the chance of a shot. The first was only wounded, the second went away apparently unhurt. All the ways of loading that could be thought of or suggested by others were tried at the target to get a charge that would kill with certainty at say 60yds. None were satisfactory. Ely's wire cartridge was a complete failure and the thread-wound but little better. I was advised to get a rifle and try that, but I had tried that with the ordinary sights and failed. I wanted a gun that was almost certain death when the trigger was pulled at as long a range as possible. For a shotgun nothing is certain in turkey shooting outside of 40yds. This gives the sportsman command of a circle equal to an area of but little more than one acre. That is not a very formidable territory, and it is rather a contracted circle for the hunter and wild gobbler to occupy both at same time. Suppose the radius of this circle could be doubled and the sportsman could possess a gun that was sure death at 80yds.; he thus would command a circle of more than four acres in area, quadrupling the shotgun area. Ordinarily a wild turkey will step inside that area without rigid scrutiny, whereas the narrower limit he would naturally subject to the most rigid examination before entering it. I must confess to having scratched out some hair in trying to solve this problem of a better weapon.

At last a little light broke through on the subject. Some one suggested a rifle with telescope sight with a cross-hair (thus +) for a center. I knew something about telescopes and cross-hairs and was not slow in catching the idea. An investigation led to the ownership of a gun that money could not buy, if it could not be replaced. It is as certain death to a turkey at 80yds. as the shotgun is at 40. It is more than that; it will give light to show where no other kind of rifle sight could be used. It magnifies the game and shows it so clearly that the spot to aim at is easily selected. The eye end having an aperture of ¼in. in diameter, only the front sight or cross-hairs require attention in sighting. I have killed turkeys in trees with this sight in a dim light, almost dark; can shoot them in the morning early when the first streaks of day appear, and can kill with reasonable certainty from trees any moonlight night. This sight was made for me by Wm. Malcolm, of Syracuse, N. Y. It is a fine piece of workmanship, and is the delight of every sportsman who examines it. The glasses are in a tube nearly 4in. in diameter, which extends from within 4in. of the muzzle to the eye, when the gun is held naturally to the shoulder. It is more cumbersome than the ordinary sight, and requires more careful handling, but its other advantages over all other sights are too great to compare. To the sportsman, especially one whose eyes are at all failing from age or other cause, this sight as made by Malcolm, is just the thing. With it accurate aiming is not a question of eyesight; it is one of steadiness only. In fair light a nail head can be distinctly seen in old fences or buildings at a distance of 200yds. For me it has solved turkey shooting, and now I grieve only for those grand old fellows that have heretofore been bungled often with the ordinary gun. Gads, but many a one has gotten away! Hereafter they want to gobble and strut a long way off, and keep beyond view of the searching glass of this telescope.

Now, mind you, I am not boasting this sight in the interest of Wm. Malcolm, who is an utter stranger to me. My sight has been bought and paid for at the regular price, and I can get another one for the same money if I want it. What I am interested in is the sportsmen who want a good sight and don't know what to get or where to get it, especially the older class of sportsmen like myself whose eyes feel the need of some artificial aid. This rifle sight will surely bring game to view that often cannot be seen with the naked eye at all.

It must be confessed that in using it at first on game some of the most abominable shots were made. That will probably be alluded to further on, when we get up among the turkeys. The truth is I thought so well of the new arm that its powers were overestimated. It was found that I had a part to take as well as the gun. It took two or three days to work this fact into my noggin thoroughly. It was proved the rifle was a mighty particular thing to handle, even if it did have a telescope sight—that it shot with reasonable accuracy where it looked—and did not splatter over an unlimited area of woods. I had to get cool, hold the cross-hairs hard on the vital spot and keep them there until the game was seen to go down. Afterward some game went to camp, and the sight that had taken a slight tumble rose up again.

W. L. POLK.

CALLING GOBBLERS IN TEXAS.

YEARS ago when I left the country I gave away my dogs, sold my gun and horse, and made a resolution that hunting was a luxury I was not able to indulge in and that my hunting days were over. But, alas and alack, after all of these years the old instinct, ineradicable, returns to torment me.

While in Richmond recently on business, a friend suggested the idea of a turkey hunt to Beeville, Tex., that paradise of the sportsman. The temptation came to me in a moment of weakness, and I yielded. Beeville is a pretty town, situated in a rolling prairie country.

After a hearty dinner we started for the home of a friend of former years living in Live Oak county, sixteen miles west from Beeville. This friend is an old one, true and tried, with whom the writer has had many an exciting chase over prairie and through bottom, and with whom many a happy hour has been idly wasted around the camp fire. As we drove along, on either side of us were constantly rising bunches of quail, but we only shot a few, because it was so late that we had no time to lose.

We arrived at my friend's house at 9:30, and I attempted a ruse on him. We had not met for more than seven years, and it was thought by my two traveling companions in the hack that time had altered each of us so much that recognition would be doubtful. We sat in the hack at the gate and hallooed, and when my friend came to the gate asked the privilege of camping in his pasture for the night, saying that I had letters to him from friends at his old home, which I would deliver the next day. But the scheme did not work; my voice betrayed me; he recognized me even in the dark and gave us a hearty welcome. In five minutes we were at ease, chatting of old times and planning a hunt for the morrow. Our host said we would take a hunt near the house in the morning as a start off to get our hands in, and that there would be no trouble in getting among the turkeys if the weather was favorable.

Just as we were in the middle of our best nap and imagined we were hardly yet asleep good, a light flashed into our room and our friend and host announced that "coffee was ready." He had set his alarm clock for 4 o'clock, but did not call us until coffee was ready. The morning was not favorable, as the wind was blowing from the east in strong and fitful gusts, and we feared the turkeys would not gobble. The only light to guide us was the stars. We were rather vexed that the weather should have taken so unfavorable a turn when we had come so far for a little sport. Though the weather was not good for turkeys it was by no means a bad morning otherwise, and we enjoyed the walk of a mile out through our friend's pasture in the clear, bracing atmosphere of the beautiful morning.

We went perhaps one and a quarter miles before halting, and then began to see the first streaks of approaching daylight come peeping through the scattering live oaks, and were charmed to find the wind lulling a little. We felt more hopeful then and prepared for business.

Our host placed my Richmond friend in a good position between two roads among some clumps of trees, and then he and I moved away from him so as not to interfere with each other's roosts.

The best way to hunt in the early morning is to sit still in the vicinity of the birds and listen for the gobblers to

"open up," that is, commence their strutting and gobbling. In going to roost in the evening the gobblers usually select a long limb, which will permit them to strut along upon and air their pomposity. Their gobbling can be heard on a clear morning a fourth of a mile, and if they begin before daylight it gives the hunter an opportunity to approach them in the darkness and under the cover of other trees near enough to shoot. It is easy for a practical hunter to get to them then. Still he must be wary, for the wild turkey is proverbial for being the keenest sighted of all birds. And the hens—which as a rule are very quiet on the roost—act as sentinels to give notice of approaching danger, and when you are about satisfied that you have your gobbler, sure, they interfere with a *put put put*, and are away before you can realize the situation. If you are unfortunate in not locating them on the roost, if they do not gobble before daylight—as they did not that morning—the hunter's next plan is to sit around or walk cautiously about until he hears them and then yelp them up.

My friend and I went on about 400yds. from where we left our other hunter stationed and sat down to listen. Daylight was now full upon us; we waited for five or ten minutes, but heard nothing. The wind would sometimes lull for a while, which enabled us to hear if one should gobble. We moved on a little further and sat down again to listen. This time we were rewarded for our perseverance, for there came down the glade a sound that electrified us. To me it was like wine; it was the "gobble, gobble, gobble" that I remembered so well in early days. In a moment all my early instincts return, and the exclamation escapes me, "You are my bird."

The gobble sounded much further away than it was, owing to the wind blowing in the contrary direction. We moved a little nearer and selected a place of concealment, I taking my position behind a prickly-pear bush, whose large fan-like leaves were so arranged as to make first-rate windows to see through. My friend acted as caller, and I had only to wait and watch. Immediately in front of our position was a lovely open glade, which ran in the direction of the gobbler, and which we felt confident his lordship would take in coming to his lady love. Being comfortably fixed with gun in position and ready to fire at a moment's notice, I gave the word to my friend to proceed with his part of the programme. He commenced an imitation of the call of the turkey hen, a sort of yelp or *ke-ouk-keouk ke-ouk*. Quick as a flash came the deep sonorous gobble in answer; and after a few puffs and struts behind his screen he came out into the opening in full view about 150yds. distant. A challenge yelp from my friend heads him our way. Slowly and majestically strutting—so proudly that he seems almost to disdain to tread the earth—he bears down on us totally unconscious of the fate in store for him. Another yelp starts him in a trot, which brings him within 35 or 40yds. of where I sit, and as this is quite near enough I raise my gun to my shoulder. The motion, although very slight, catches his vigilant eye and he halts, raising himself to his full height, all alertness. Alas! too late for him. A sharp report, a puff of smoke from the cactus bush, and what a minute before was a vain, boastful, arrogant gobbler, now lies before us a bunch of feathers and the basis of a good dinner. We shouldered him and started for the rendezvous quite satisfied.

On the way we amused ourselves pitying our Richmond friend and lamenting that he, too, could not have secured a gobbler. We had not heard any gobbling in his direction nor any shooting; but judge of our surprise when we got back to where we left him, for there he was with not one but three turkeys, though all of them hens, hanging on a tree. Our pity was premature. He said when we left him he heard a gobble, but could not get to them on the roost as day was fast breaking, but waited for them to fly down. When they came down a whole bunch answered to his call, and came to him with three hens well in the lead. He took things quietly and waited for them to cross each other, and when two of the hens had their necks crossed he fired, killing both. The third rose to fly but he cut her down also, and thus in the short space of five minutes he had bagged three fine turkeys.

We walked home in triumph with our game, reaching there just as the family were sitting down to a delicious breakfast of plain country fare, including buttermilk and fresh butter, home-cured ham, honey from the hives in the yard, and cold wild turkey.

We sent the turkeys back to Beeville by the hack which had brought us out the night before, to be expressed home and distributed among friends.

Then we planned a hunt on the Nueces River, ten miles away, for the evening, as our host declared it would not be a real hunt unless we camped out a night or two, so we sat about making preparations for a regular camp and jolly time generally down the river.

S. D. CALDER.

THE NEW YORK FLOWER SHOW.—The flower show which opened on Monday at the Madison Square Garden in this city offers to lovers of flowers a wonderfully varied exhibition of plants of all descriptions. Perhaps the most striking and beautiful classes shown there are the chrysanthemums, which of late years have become so popular, and the orchids. The United States Nurseries, of Short Hills, New Jersey, who are holding this flower show, have devoted especial attention to these groups of plants, and have been remarkably successful with both. While the first chrysanthemums which we knew were rather small and bore very modest yellow flowers, they are now grown of all colors except blue and vary in size from ½in. to 13in. in diameter. Among the orchids the U. S. Nurseries have devoted special attention to the cypripediums, of which the common wild moccasin flower (*C. acaule*) is an example familiar to all dwellers in the country. A noticeable feature of these orchids is their lasting quality, a flower on the plant remaining perfectly fresh for ten or twelve weeks, while even if cut it will continue fresh and beautiful for three or four weeks if kept in fresh water. But besides these showy and handsome flowers there may be seen at this show many others not less interesting. Such are the curious pitcher plants, which contain on their leaves hollows in which water collects, which serves to attract insects, which are often drowned in it. Palms, ferns, fancy foliage plants and many commoner flowers abound, and the whole is so attractive as to be well worth more than one visit.

The Sportsman Tourist.

MOOSE RIVER AND THE WEST BRANCH.

XI.

ON our walk up the old tote road we saw no moose and had only a single glance at a caribou, which was a long distance off across the pond, but we saw many tracks, and if we had been there in the season and had hunted them, I have no doubt that we should have had some fresh meat.

When we recrossed the carry to Spencer Bay we saw where a moose had traveled since we had been over the road. Spencer Bay was calm and there was no wind on the morning when we returned to it, and we proceeded as far as Lucky Brook, where we intended to stop for dinner. We went ashore, but signs of storm, which we had been watching, became more prominent and the wind was breezing up, so we heeded the warning and kept on to the narrows.

The flight of an eagle across the bay was the only diverting incident, and we arrived at the narrows none too soon, for the wind continued to freshen; when we landed the white caps were running and the surf beat heavily on the shore. There is a camp on the point south of the narrows where Bill and I had camped before, and here we dined. We spent a lazy afternoon under the trees and bathed in the lake. Toward night we fished about the narrows—this locality being one of the best fishing grounds on Moosehead Lake—but with no success, which was a disappointment, as we now wanted a few trout to carry home.

It was getting late, however, for fly-fishing in the lake; the fish had gone to the cool retreats in the deep water, where they could only be reached by fishing deep with bait. That night was our last one in camp, and as we watched the sunset and saw the evanescent tints of the clouds come and go and fade away, our thoughts went back over the days of vigorous outdoor life which we had lived, and the nights of calm, healthful sleep under stars.

In the morning we breakfasted on ham, bread and coffee, the last of the provisions. We exposed the last of our dry plates, and packed our dunnage for the last time. We tried the trout again, but our ill success of the evening was repeated, and our friends were obliged to take our "fish stories" on faith, we carried home no trophies except our negatives. The game one hunts with the camera is not so fickle as that for which we use the rod and gun.

Early in the forenoon the steamer came for us, and as soon as the canoes were hoisted aboard we headed for West Cove and the railroad. We had a fine breezy sail of twenty miles down the lake, and saw Kineo, to the north, grow smaller, and Old Squaw, to the south, loom up nearer and nearer as we sped on. The steamer stopped once before reaching West Cove; Cy and Bill lowered their canoes gently to the water, and waving us a farewell, paddled toward Greenville at the East Cove.

It is only four years since Moosehead was connected with the outside world by rail, and for twenty miles the country, as seen from the cars, is, with the exception of the track, a wilderness. We rolled homeward high up on the sides of the mountains, and from our station on the rear platform looked at a shifting panorama of mountains and valleys, all covered with the waving forest. We saw Moxie and other mountains to the west, which had been landmarks in the east on our journey to Moose River. We rumbled over trestles at dizzy heights, and saw far below us the sparkling waters of mountain streams; and rounded spurs of the mountains where we looked down into the tops of giant trees. The road follows the valley of the Piscataquis River, a branch of the Penobscot. At Oldtown we shook hands with Francis.

"Good-bye boys, I had good time. We go again sometime," and he went to superintend the unloading of his canoe. Dennis accompanied us to Bangor.

XII.

The State of Maine is a State of noble water courses, of which the Penobscot and Kennebec are the largest and most important. It is a State on whose southern boundary beat the mighty waves of the Atlantic, while its northern frontier is in the primeval forest. Naturally, among its inhabitants are those who earn their bread upon the great deep, and others who make that other sea, of foliage, the scene of their labors. These two rivers connect the forest with the ocean.

As their mighty currents sweep grandly on toward the places of their marriage with the sea, bearing tribute from innumerable lakes and streams, the scenes upon their banks and upon their waters change. On their headwaters are the canoe and the batteau, the log cabin and the virgin forest; their lower waters are plowed by great steamers and ocean vessels, and turn the wheels of great mills in the busy cities upon their banks. Up river, the pine and spruce; down stream, the sawmill and the lumber yard. The moose and the deer feed upon the banks and swim the waters of Moosehead and the West Branch; at the mouth of the Kennebec is Bath, the greatest wooden ship building city in the Union, and at the head of navigation on the Penobscot is Bangor, the great center of the lumber trade.

On Sept. 15, 1773, one Hugh Finlay set out from the last settlement on the Chaudière River in Canada, with three birch canoes and ten Indians, with the intention of selecting a post route to the settlements on the Atlantic coast, of which Falmouth, now the city of Portland, was the last of any importance. In his journal he tells of his journey through the strange, unknown country through which his Indian guides conducted him, and says that they promised to take him by the shortest and most direct route from Canada to the seaboard. He describes numerous lakes, streams and portages, naming only one, the Rivière du Loup, till they put their canoes into the Penobscot (South Branch). They journeyed down the Penobscot till they came to some large falls (Canada Falls), around which they carried. A few miles further, he says, another large stream (North Branch) joins the Penobscot.

Then he goes on, "This river is full of salmon and trout and its banks are marked all over with the marks of the hoofs of moose, deer and the feet of other animals. We proceeded down the river to an island (Seeboomook Island), which parts the river in two, one part running N.E., the other E.S.E. We followed the last branch, keeping the island on our left hand; and a little way down we put on shore on the right hand and walked through the woods about 100yds. to a dead creek (Seeboomook Brook). We followed its winding courses in our canoes about half a mile; it led us into a round dead pond (Carry Pond) covered with broad leaves of a water plant. We camped in the woods near it. We marched through the woods a mile to another dead creek (Carry Brook) leading us also S., winding to a large lake called by our Indians Mooseparun (Moosehead Lake). This lake takes its name from a remarkable mountain (Kineo) on the S. side. The Indians say it resembles a moose deer stooping."

I have quoted Hugh Finlay's own words and abbreviations, supplying in parentheses the names which he does not give. The Penobscot Indians call Moosehead Lake Xsebeni, while the Aberakis name it Sebamook, both words meaning a large, open body of water. There has been much speculation as to the origin of the name Moosehead, and Hugh Finlay's journal seems to throw some light on the subject. Kineo Mountain does bear a resemblance, as his Indians said, to a huge moose in a stooping posture. Sullivan, a historian of the Province of Maine, in the last century refers to "Moose Lake or Moose Pond." Until within a few years deer were scarce in the Moosehead forests, but the moose roamed in large numbers and many traditions and legends refer to them, and the name has been given to many places and things. There are Moosehead Lake, Moose River, Moose Pond, Moose Island, Moosehorn Stream and so on, while the lordly moose himself feeds on moosewood, is bitten by moose flies and is attended by moose birds.

Hugh Finlay went to the East Outlet and proceeded down the Kennebec. He refers to the forks and the great carrying place, which he says was well known to his Indians, and continues his description till they came to a fall, which he says was "romantically situated." They camped at this fall, which is Carratunk, though he does not name it. He says: "The river is confined between two rocks and rushes over in a surprising manner, foaming with incredible fury. It falls into a fine rock-bound basin perfectly circular and full of fish."

At Norridgewock he saw a "smoak," and on rounding a bend saw two white men on the bank, who, he says, had planted some grain and intended to build a log house the next year. He kept on down the river to the mouth and then went to Falmouth and on to Boston. On his map he gives the location of Fort Halifax, before referred to as still standing at the mouth of the Sebasticook. Hugh Finlay made this journey through the wilderness 116 years ago. Since then thriving towns and populous cities have been founded where he saw the Indian's wigwam or "smoak" of the pioneers' camp. But a great part of the journey must be made to-day as he made it, with a guide in a canoe, and through a country still a wilderness. The tracks of the "moose deer" may still be seen where he saw them and the trout still swims in the same pools where he cast his line.

XIII.

Bangor is the metropolis of the wilderness. There are no large towns beyond it, and twelve miles of the Penobscot is the Indian Island. It is a thriving city, which boasts of an electric street railway and all modern improvements. Railroads center there, and vessels from different parts of the world come up the river to its wharves. Great sawmills and icehouses stand on the banks of the Penobscot, and ships are built there. The lumber drives from the West Branch and the East Branch, from the headwaters of the St. John River, from Chesuncook and Pamedomcook, come floating down it, borne by the irresistible spring freshets. Yet, during the past winter a bear and two deer were killed within the city limits, and also within the city limits is the finest salmon pool in the States, while less than 100 miles away the virgin forest waves its green foliage in suummer, and bends its branches under weight of snow during the long northern winters. At Bangor we embarked again on Penobscot waters, but this time we stood on the deck of the Boston steamer. We had "gone in" by the way of the Kennebec; we would "come out" by the Penobscot.

Looking up the river we could see the white foam of the rapids below the water-works dam, where the famous salmon pool is located. A short distance away was the mouth of Kenduskeag Stream, which flows through the city, and across the city was the ancient town of Brewer. The river and both its banks presented a scene of bustling activity. Above the bridge which marks the head of navigation were lumber rafts and piles of floating boards and planks. We could hear the shrill buzz of saws as they ate their way through the logs, and in the stream scows of manufactured timber lay alongside of loading vessels.

On every side was being enacted the tragedy of the forest, that drama which is opened with the axeman's stroke, and carried on through stirring scenes by many actors, till it ends in the sawmill.

The steamer's wheels began to revolve and we were on our journey home. Bangor was left behind and we sailed on between high banks and ledges, crowned with patches of young timber—pine and spruce, birch and maple—as if even at this late day the forest was still struggling to gain its lost supremacy. Here and there a tall pine, a relic of the old race, held its head proudly above the young trees. And so we sailed on for seven hours, stopping at various landings, and as the sun went down we steamed out into the ocean. When we awoke in the morning the steamer was going by the islands in Boston harbor, and our trip, like Hugh Finlay's, was a journey of the past.

WILLIAM AUSTIN BROOKS.

LARGE GAME SEASON IN MINNESOTA.—Hallock, Minn., Nov. 13.—Deer, moose and elk can be lawfully killed in Minnesota only during the month of November. In the northern part of the State these animals are found in large numbers. Last November M. Van Pelt, of Holyoke, on the Eastern Minnesota Line between St. Paul and Duluth, with a small party killed 43 deer and one bear. An instance of the abundance of deer in the Lake Superior region and westward is noted by the fact that on Sept 30, near Mansfield, a train on the Eastern Minnesota Division of the Great Northern dashed into a herd of not less than 50 deer, running along in a cut, and several were knocked off the track and one, disabled, lodged on the engine pilot, and was taken into the baggage car at the next station. A party from Hallock killed 23 moose and elk, besides other game, last November in the Rosseau Lake country, in the northern part of the State.—J. C. G.

Natural History.

MEETING OF THE A. O. U.

THE eighth congress of the American Ornithologists Union was held last week at Washington, Nov. 18 to 20, in the Lecture Hall of the United States National Museum.

The meeting was largely attended, and as will be seen from list of papers given below, was full of interest. It was one of the most successful meetings held since the founding of the Union.

The session of Tuesday was devoted to business and was not open to the general public. At this meeting were read the reports of the secretary, the treasurer and the council. Officers were elected for the ensuing year, and then followed election of new members and reports of committees.

The officers chosen for 1891 were: D. G. Elliot, President; Robert Ridgway and Wm. Brewster, Vice-Presidents; John H. Sage, Secretary; Wm. Dutcher, Treasurer. Chas. B. Cory, H. W. Henshaw, Dr. C. Hart Merriam, Dr. L. Stejneger, Dr. J. A. Allen, Dr. Elliott Coues, Col. N. S. Goss, Members of the Council. At this election there were thirty-eight members present and voting.

The sessions held on Wednesday and Thursday, Nov. 19 and 20, were open to the public, and were devoted to the reading of scientific papers. The first of these, The American Ornithologists' Union—a seven years' retrospect—was an address by the retiring president, Mr. J. A. Allen, who has occupied this chair ever since the founding of the Union. This was followed by these papers:

Seed Planting by Birds, by Walter B. Barrows. Phalaropes at Swampscott, Mass., by Wm. A. Jeffries. The Birds of Andros Island, Bahamas, by John I. Northrop. Remarks on a few Species of Andros Island Birds, collected by Dr. Northrop, by J. A. Allen. An Experimental Trial of a New Method for the Study of Bird Migration, by Harry Gordon White. A Study of Bird Waves in the Delaware Valley during the Spring Migration of 1890, by Witmer Stone. Our Present Knowledge of the Neotropical Avifauna, by Frank M. Chapman. The Case of *Colaptes auratus* and *C. cafer*, by J. A. Allen. Observations upon the Classification of the United States *Accipitres*—based upon a study of their Osteology, by R. W. Shufeldt. Some Observations on the Breeding of *Dendroica vigorsii* at Raleigh, N. C., by C. S. Brimley. The Trans-Appalachian Movement of Birds from the Interior to the South Atlantic States, Viewed Chiefly from the Standpoint of Chester County, S. C., by Leverett M. Loomis. A Further Review of the Avian Fauna of Chester County, S. C., by Leverett M. Loomis. Some Bird Skeletons from Guadalupe Island, by Frederic A. Lucas. The Present Status of the Ivory-Billed Woodpecker, by E. M. Hasbrouck. Some Notes Concerning the Evening Grosbeak, by Amos W. Butler. The Spring Migration of the Red Phalarope (*Crymophilus fulicarius*), by Harry Gordon White. On the Tongue of Humming Birds, by Frederic A. Lucas. Insect, Intuition and Intelligence, by C. F. Amery. The Habits of the American Golden Plover in Massachusetts, by Geo. H. Mackay. Correction to Revised Catalogue of the Birds of Kansas, by N. S. Goss. Second Occurrence of the White-Faced Glossy Ibis (*Plegadis guarauna*) in Kansas, by N. S. Goss. Remarks on the Primary Faunal Divisions of North America, by C. Hart Merriam.

At the last meeting of the A. O. U. it was suggested that especial effort be made to secure, for exhibition at the meeting of 1890, a quantity of photographic material bearing on birds. The committee appointed to take charge of the matter went into it with a good deal of energy and were quite successful.

One of the interesting and popular features of the meeting was an exhibition of photographic slides from living birds and nests taken by Henry M. Spellman, of Cambridge, Mass. These slides were thrown on canvas and explained by Mr. Wm. Brewster, of Cambridge.

THE WAYS OF THE WOODCOCK.

I HAVE had in captivity for several days a fine specimen of the woodcock (*Philohela minor*). My effort to prolong its life was of shorter duration than was my desire, but sufficient time, however, elapsed to enable me to observe some of its ways and habits, which were to me full of interest. The aviary which I arranged with material suitable to their natural wants, served its purpose and allowed me to see just how they acted in their native cover.

At first it was quite wild, and when given its freedom in a room it would take to wing, always running a few steps, wings partly open; it would then spring upward and take to flight. After a short flight it would alight and run to seek cover, holding its body horizontal, the end of the bill inclined downward, the wings slightly lowered, sometimes partly spread, making a fluttering motion in order to assist its speed.

While running the tail was invariably erected and spread after the manner of a strutting peacock. When it found cover that seemed suitable for its protection it would crouch down and remain motionless and permit me to caress it by light strokes of the hand, or to take hold of its bill and move it from side to side. To this the bird showed no signs of resistance. If the bill was pulled it would resist and would shake its head to free itself. Its eyes were invariably partially or fully open, and it seemed to close the lids only when the eye was in danger of injury from some moving object. A house fly would run up and down the bill over the head and body, and when the eye was approached the bird would simply close it and quietly permit an examination of the lid. I never saw the woodcock make the slightest effort to drive the flies away, nor to catch them.

The woodcock when at rest stands upon both feet, the body lowered, but not against the ground, so as to spread the feet firm. The bill is either held on a line with the body and inclined downward, or placed under either wing. When under the wing it is entirely hid, the body is rounded out as with perching birds. The wings are a trifle lowered, with the secondaries well spread meeting on the back, extending below the primaries, and reaching back almost to the end of the tail feathers. The tail invariable points upward and beyond the secondaries when in this position. It would thus remain motionless for several hours, seeming to disregard my presence, and even the touch of my hand, and only when the finger came too near the eye would it show signs of life by closing the lid. When danger to that organ had passed, it would open the lid and remain motionless as before.

My chief object in securing the bird alive was to observe how it procured its food from the ground. The woodcock would suddenly arouse from its rest and run hurriedly from one end of the aviary to the other, then it would come to a halt and stand motionless for a few seconds. Next it would rock its body, after the manner of a spotted sandpiper, seemingly a preparatory effort to gain strength to drive its bill into the ground. At times it pushed the bill against the ground several times as if tapping, holding the bill on a forward slant and bringing back part of skull (when the ground is hard to probe) apparently against the shoulders, and with one foot placed in front of the other or standing square it would push the bill into the soil. When the soil was soft the bill would be sent in almost straight down, and never placed between the feet and driven in (as some insist they do). When the bill would come in contact with a worm, the bird would hold still in a thoughtful, as if listening, manner, and then withdraw the bill part way and pause, apparently to allow the worm to work its way into and between the bills. When the bird would give a vigorous upward pull bringing the worm out, the tongue would be quickly forced under the worms, which would be drawn upward and swallowed. Occasionally when an active worm would wriggle and twist into many shapes, refusing to be swallowed, the woodcock would take one foot and straighten out the worm and quickly swallow it. When mud would ahere to the bill, the bird would take first one foot, then the other, and clean the bill, or holding the bill in water and soaking the mud loose, with a shake of the head it would free the bill and again go to feeding. I have not only seen the woodcock pull the worms out of the ground, but I have seen them pick up those that were crawling on the surface.

I received a woodcock recently to be mounted, and in its crop were a number of pieces of angleworms and several whole ones; but in no instance have I found bugs or seeds in their crops. CHAS. H. ELDON, Taxidermist.

WILLIAMSPORT, Pa.

LAND BIRDS AT SEA.

R. M. S. MAJESTIC.—Bound East, Oct. 2.—*Editor Forest and Stream:* Once more crossing old ocean, a delightful experience, summer or winter, autumn or spring. These great ships bid defiance to wind and wave; the comforts and luxuries of an elegant home or a grand hotel are provided; more solid enjoyment and healthful rest can thus be secured than elsewhere on sea or land. A peculiar privilege is gained by the unique opportunity to enjoy the intimate society and companionship of old friends, and to make the acquaintance—often life long—of new ones from many lands. We compare notes, swap stories, observe and discuss the wonders of the sea, gaining new knowledge. I am favored with the company of a keen student of nature, Bela P. Clapp, E. q., the well known chemist of Pawtucket, R. I.

A snow bunting, blown off the land by the recent severe gale, has followed the ship for many miles. Occasionally it alights, but the moving ship and many passengers alarm it; and the weary bird again flies out over the waters, but "finds no rest for the sole of its foot." It occasionally mistakes the crest of some great dark wave for the solid rock and folds its wings to take refuge. Quickly it flies away. We are deeply interested to note its flight on the leeward side of the ship. The wind blows freshly from the southwest, and when it happens to pass the bow it is carried far away to the north. I am very anxious to rescue the little creature, bravely battling for life. My offer of fifty cents to a lad in the steerage may secure it, should the bird come aboard below. If taken I will carry it to Queenstown and send it back by the earliest steamer to be liberated in New York.

This incident led to the following fact elicited from Mr. Clapp: On one occasion he took passage for New York on the steamer sailing from Providence. When engaging his stateroom in the morning he noticed a pair of swallows flying out and in a small covered inclosure high up on one of the masts. He asked an officer to explain it; and was informed that they nested there, and that shortly after the steamer reached port in the morning they left and were not seen until within twenty minutes of the hour of sailing in the evening, then staying on or about the steamer until arrival at New York.

I am a firm believer in the possession by birds and animals of something more than instinct. This one fact indicates thought and judgment. These birds raised their brood on the steamer.

Since writing the above another interesting fact has been recorded. When about 200 miles out from Cape Race a great blue heron flew slowly toward the steamer. It hovered around for a short time and then went out of sight, bound west. The veteran Captain Parsell told me he had never seen a heron so far at sea before.

GEORGE SHEPARD PAGE.

THE CHICKADEE FOR PUBLIC PARKS.

Editor Forest and Stream:

I wonder if it is generally known that we have a native bird far superior to the English sparrow for stocking our parks and public gardens. Such is the fact, and the black-capped chickadee is the bird.

As an objection it might be claimed that the chickadee is always a migratory bird, and therefore unsuitable for colonization. I believe this difficulty can be easily overcome. Five years ago a flock of chickadees fed about my cabin door-yard, to break up in the spring, part to go north and part to remain and breed in this locality, but at the present time the flock remains the year round. This change was brought about by the birds becoming somewhat domesticated. A change has also taken place in relation to food; for they have become bread eaters in the last two years. A notable change has occurred in their nesting habit. The nest usually has a moss foundation with a lining of rabbit or squirrel fur and grouse feathers. These materials I keep on hand in the spring, together with cotton, hair and other articles used in nest building. The chickadees take kindly to cotton. Often I find a nest with a moss foundation and a cotton lining. Again, with a cotton foundation and a feather lining. Some nests are made wholly of cotton.

I believe it to be an easy matter to induce these birds to nest in boxes, or better still, in sections of wooden pipe. On the score of fecundity the chickadee ranks A No. 1, for there are two broods in a season with from five to nine in each. As an insect destroyer the bird is unsurpassed. All winter long he gleans the trees for insects and their eggs, while the sparrow hops about the street searching for undigested grain. The chickadee is confiding and fearless, and his familiar *chickadee-dee* is worth going miles to hear on a cold winter's morning.

In the spring of the year he has a mating song, which is a loud, clear whistle, and it seems to say, "Tea's ready," with the accent dwelling on the first word. Some writers call this the "phœbe note of the chickadee," and express it by the word "phœbe," but in this they err, for the note consists of three syllables instead of two. Moreover, there is no similarity of sound in the notes. The one is a plaintive wail, the other a song of joy, loud, clear, and as cheery and breezy as the merry whistle of the "barefooted boy."

With such a desirable native bird what a pity it is that we should have gone out of our way to import the grain-eating, quarrelsome English sparrow. HERMIT.

IS THE PORCUPINE A CANNIBAL?—*Editor Forest and Stream:* I read in a newspaper column: "Hedgehogs are occasionally cannibalistic, the larger ones, when hard up for a dinner, chasing the smaller ones at a wonderful rate and devouring them without sauce or mercy when caught and conquered." Is this true? From my observations I should say it is not. Please ascertain if any one has ever known it to occur.—N. C. L. [We are not inclined to accept this statement as applied to the so-called "hedgehog" of the New England States, which is a porcupine and so a vegetarian. Of course many of the Rodentia occasionally devour animal food, but this statement is a little too strong to be accepted without supporting evidence. It might more possibly be true of the European hedgehog, which is an insectivora.]

SECOND OCCURRENCE OF THE RED PHALAROPE AT MONROE, MICHIGAN.—On Oct. 25, 1890, I was fortunate enough to shoot a second specimen of this maritime species (*Crymophilus fulicarius*) at Monroe, Michigan. The bird was a female in fair condition, and being shot with No. 8 shot made a good skin. It was alone. The first specimen was shot by Mr. Ralph Brandreth on Oct. 24, 1888, at the mouth of the Raisin River.—ROBT. B. LAWRENCE.

Game Bag and Gun.

THE FULL TEXTS of the game laws of all the States, Territories and British Provinces are given in the *Book of the Game Laws.*

CARIBOU AND THEIR WAYS.

NO matter where we went, perhaps it was where we should not have gone, and in fact it would have been just as well if we hadn't gone at all, except for the rare health we got, and the sort of forgive-one's-enemies quality. At present I can even forgive the man who told me to hunt caribou, but I warn him, as I gradually assume my city appearance, to "stand from under."

If a few weeks ago a man had asked me, What is a caribou? I should have told him, with a superior air, that "the caribou, I suppose, is like the rest of the deer family; it is wild, smells from afar, can hear well, and runs away when frightened, and of course, you know, should be hunted with care and judgment." If I were now to be asked the same question, I should say, "It isn't a deer at all, it's an 'it.'" To be sure it leaves tracks, and lots of them, all around everywhere, it snorts when it smells you or your last week's tracks, and then runs into the next county a couple of hundred miles or so, passes a decayed camp and goes on for a week. Its color is a cross between that of a ruffed grouse on the wing and a dose of Jersey lightning, and it only rests once—when it is dead. It lives on moss, which is absorbed by the feet, makes them noiseless, and it can see through a loaf of camp bread. But enough of natural history; I will tell you how I learned so much.

Hank said he had never hunted caribou except on snow. I told him any one could do that, but for my part I wanted an animal to have a chance, and unless I could display some woodcraft there wasn't any fun. He asked me if I had any patience and if I had a pleasant disposition, for he didn't care to hunt caribou with a man who didn't have. Answered that I was up to the average in these qualities, but thought his questions very stupid.

Our first day's hunt was devoted to looking up sign. During the afternoon we crossed any amount of it; tracks were everywhere in the deep moss; the woods were full of them. The spruce trees were very thick, and I told Hank that it was nice cover to hunt in. That night I was worried at the thought of shooting a lot of caribou and not baing able to use the meat and skins, and vowed to Hank that I would choose my heads and not shoot cows and calves if I could help it.

The next day we went out again and had to use a compass every few minutes to keep our course. We couldn't see the sun more than 50yds. in any direction. We started two bunches of caribou, but I didn't mind much, though we must have been careless, and began to think that now was the time for my woodcraft. I asked Hank to let me take the lead. We walked for the rest of the day in a circle. Hank said he thought it was a small one, but the trees were so thick he couldn't tell. We got back to camp by accident, but I didn't talk much about it. While climbing over a rock on the following day we saw a brown glimmer a little way off up wind; we crawled to it (I mean to where it was) and saw tracks. Hank thought it must have seen us. We then made a beeline by compass, hunting in the best manner till tired out, then took our back track to camp. We found that the band had come up to our cracks, wheeled and bolted. A moose or deer would have camped there and thought nothing of it. Hank said he had seen a deer browse off one end of a tree while he was chopping the other.

We hunted for several days until I would have given a dollar a pound for fresh meat. Finally we found a narrow strip of woods between two swamps which was "all torn up" with tracks. Hank said there would be no doubt of our getting all we wanted if we sat there. We hadn't watched an hour before we heard a snort from the direction we had come, but we saw nothing.

Next day we made a circle and came to our watch through the swamp, and never moved a step after we got to our stands. We heard some coming from the opposite side through the water, but they winded us up wind. I suppose our scent permeated the country somehow, or else they smelt our tracks of the day before. Hank said

he had no doubt but I would succeed if I stuck to it, but that he would rather fish. I did stick to it and got thinner and thinner; my whole character seemed to undergo a change. I saw one, but it came up from behind and then disappeared like the proverbial boarding house strawberry. Hank asked me why I didn't shoot, but when I explained why, he was satisfied and said there wasn't much use hunting without snow. It's a wonder I speak to him.

But why go on. I didn't get one, although Job couldn't hold a candle to my example of patience. I stuck to it for a month, hunting and watching. I even took lessons from an Indian in calling; his call was the identical snort that had come so often to my dispairing ears. I asked him for some fresh meat, but he said, "Me no hunt um deer now, me eat fish and muskrat." Oh, wise Indian! when will your sagacious intellect be appreciated?

OTTER.

VIRGINIA INDIAN SUMMER DAYS.

WHEN I was a youngster, and that was not so very long ago, there was a season in our autumn called Indian summer. We continue to have the same beautiful weather, and some still faintly term it "Indian summer," but it is not the one of olden times; that was a distinctive season. That weird and semi-sombre period came any time between the middle of October and middle of November, lasting about two weeks.

Maybe it was prettier among the mountains and valleys of southwest Virginia than anywhere else, or maybe it is more now the summer in the sunshine of pleasant recollections than it was in the reality of boyish days, for "time but the impression stronger makes," as the picture enlarged by mature imagination improves the hasty sketch of youth. The frosts had always been here and killed the foliage, but how beautiful some hand did paint the leaves before they fell and gave back the mystic touch to an unknown artist.

The boys used to think that the elements of nature were resting before the winter siege. It was a season awe-inspiring in its absolute quiet. No roaring mountain and swaying trees. The sky cleared. It grew warm and dry. The smoke came and kept coming until it grew dark, and until the sun would rise like a ball of molten gold and calmly march on its way, when we could gaze straight at it from morning until night. Did you ever see a forest, with the silky yellow leaf of the beech, the burning red of the black gum foliage, entwined and softened by the arborvitæ and hemlock, all tempered and tinged by an Indian summer sun? All this landscape as still as gloom itself, when thump! thump! thump! thur! thur-ur-r! the drum of the wizard grouse would break the stillness? or the covey of partridges would burst from under your footstep, and in a few whirrs of their wings look no larger than a swarm of bees? The old folks would tell us that this was the time the Indians traveled and hunted winter quarters; that they were then hunting and camping in the prairies far off west of us, and had fired them, and that the smoke had drifted this way and settled among the mountains; they were reminded and related how the "savages," just at this season, had committed their depredations, right near where we then sat. Maybe all these ideas about the smoke were correct, since this smoky, weird season is as much of the past as the savage Indian, the buffalo and the prairie grass.

There has been here, in the mountains and valleys, this autumn a beautiful modern Indian summer. In the midst of its loveliest days I conspired with a merchant friend that we would ride two horses, take behind us the blackest little negro, and follow into the fields two of the best dogs, in search of the Virginia partridge; which, here in these highlands, is a large bird, a wily bird, that possesses the wings of the wind. But what sport it is to hunt them! You have gathered from the laurel hedge the lordly grouse, with a well-merited delight to him who brings it down, but how much will it surpass its cunning little cousin, with the lintwhite throat, the bronze back and speckled breast?

It is pretty well known that the man who possesses an Irish setter, that is in his second year, and every inch life, and a pointer in her prime, neither of which is hunted more than two days out of a month, has to do some professional breaking before they will go "up the leeward side of the ravine with a slow and cautious trot," as Van Dyke's Jack did on the birchy bluffs of the upper Mississippi. Sanco of Campbell and Nellie of Loudoun (some reader will remember their names) did reluctantly submit and go to work; and when they agreed to do this we took them to a plateau, containing a forty acre broad field. Over yon side are corn shocks, the stacks out of which they were made had struggled with the grass and weeds, and left a typical feeding cover. Over this side was the uncut corn patch of a tenant; between there were sinks, with briers and elders; also ledges of limestone rock, all covered with tall blue grass fallen and matted; here and there patches of sedge grass, high and rank, white and soft with its autumn down. Sanco ranged with a high head and looked like a Hambletonian; going swift the awkward fellow tripped on a corn stalk and heels over head he went. He had seen little Nellie making game—so she was. Serpentine and silent as a garter snake she threaded her way among the weeds, lifting her cat feet over sticks and stubbles; lower she bows and stops rigid. Back yonder is tall, awkward Sanc, like a horse jerked back on his haunches, admiring his mate, that he thinks is always right and never false.

About the time we got done shooting on the first flush out came the overseer, Uncle Fayette. "Good mornin', boss, I's pow'ful glad it's you, kase I's stopped this shootin', 'cordin' to your posters, and told 'em you wanted these birds."

"All right, good old man; take these birds to Aunt Susan and tell her to prepare us a good lunch, which we will send for about two this evening."

"Lor'! Look, look yonder at Sanc! Jes' look!" said our little darky.

Nellie made her way around, and with a low bow honored the dog she invariably has a row with for running over her in play. Sanc evidently had a variety of effect produced on his smelling faculties, for his nose would turn a little, twitch a little—draw up some and stretch out some.

There sat a melancholy old hare, so sober do they look in their nest when menaced. It was under a low scrub thorn in a bunch of grass, and while contemplating him from his side, next my companion burst out a white-throated cock partridge, his wings rattling as if they were made of tin. My friend brought him down and Sanco retrieved it and made for me, when he was accosted by my companion with "Sanc, poor fellow, give him here, won't you?" He hugged Sanc, but in vain, for he brought the bird to his master and again interviewed the hare, which put out, and from its bosom came another whizzing partridge. Darky Bob yelled, "Shoot! Shoot him, boss! Shoot him!" But my gun was on the bird, which skimmed low to the ground, down the hill and suddenly arose and started across the ravine high, at which time my friend exclaimed, "Too far," but the trial was ventured and one of those hits made that apparently "flattens" the bird, and it fell circling.

The sun came well up, though low in the south when seen over the mountains. We sat down upon the soft matted grass between the limestone ledges to rest a moment, for it was warm. After some few minutes, in our front in a small thicket of thorn bushes the strange but sweet note of a bird was heard. How modest and shy! bolder directly, but still that of a ventriloquist. Where is it? It is a mocking bird, sure. Directly it hopped from branch to branch until it reached the highest in the highest bush; still suppressed, but how sweet its song. In our altitude this bird is very uncommon, and for this so much more highly prized. It seemed glad that the booming guns were silent, for it grew in confidence; and in this day when all our sweet singers are hunting the further south, how welcome this uncaged little bird! Its song was the song of freedom and of a free bird. Finally it concluded to act a little and flew to the ground, and while there nipped a moth and imitated the cry of a young chicken, fluttering and turning, very much the same sound and action as of a bound chicken in a village market.

"Good bye, little bird, we must go to our dinner down yonder by the spring;" and so we did, for Aunt Susan had sent by our little "nigger" not only our partridges cooked, but a young "smothered" chicken and more of other things than we should have had.

We hunted two days, sometimes following birds among the corn and stubbles away up in the mountains. Birds get educated, and many a shot we had to make around the cliffs of the River Clinch.

My comrade shot one which fell more than two hundred yards below in the edge of the water, and Sanc and the little darky were sent to retrieve it, and Sanc's nose beat the darkey's eyes. We saw the faithful little fellow hug the good-natured dog; "Sanco, poor Sanco, give me the bird, please. Sanc, you hateful brute." Sanc sat down and held the bird, and finally escaped and wended his way through the shelves and ledges of the long high bluff to his master, and, with that good nature that should belong to men as well as dogs, handed the bird to his trusted friend.

S. C. GRAHAM.

VIRGINIA.

GROUSE IN PASSAIC COUNTY.

WE had just returned from a trip to Canadensis and the Pocono Mountains, Pa., after this the smartest and gamiest fowl in the whole wide world, where we had three days' experience with Sergeant Van Buren of the First Police Station, Dr. Levering, clerk of the First District Court, and Richard Dyne, the latter probably one of the best brush shots in the State of New Jersey. And we came home disgusted, demoralized. There is no fool like the old fool, said we, and every time we have essayed a trip of late years after these wary birds, we have said it was our last. We are too old, have had our day, and must leave it to younger heads, at least younger legs, to climb the mountains, crawl through the laurels and thread the oozy swamps. But each season when the time comes the old fever creeps on and we are as foolish as ever, and think we are equal to the occasion. We found the birds on the Pocono in fair numbers, but very wild and not inclined to lie to a dog. We found we could not throw up our 9lb. Scott with the quickness or accuracy of a few years ago. We thought we had got through and proposed to lie back for a few days with the quail in Maryland, or a few hours behind a blind for the webfeet. But a cordial invitation from Capt. Harry Crawford, the efficient constable of the First District Court, to visit his farm at Macopin, found all our resolutions wafted to the winds, and the 4 o'clock P. M. train saw us with clerk P. W. Levering and counsellor E. K. Seguine in the Susquehanna & Western R. R. rolling out of Jersey City. We were met at Charlottesville by Mr. Siefert, who kindly drove over for us from Crawford's farm. A drive a little over an hour through a varied scenery brought us to "Harry's Farm," some forty-five acres in the heart of Passaic county, on top of the Macopin mountains, three miles from Greenwood Lake. The farm is in a high state of cultivation, lying well to the east. It is a question as to which Harry thinks the most of, his farm or his wife. The former is certainly the apple of his eye, and much of the hard earned results in the multiplicity of the law's course in the city goes toward the improvement and stocking of said farm until it is now one of the finest in that section.

We were met at the door upon dismounting by Mrs. C., a prime sample of the housewife of the successful husbandman; nimble of carriage, showing a generous living, a beaming eye and a voice of no uncertain sound in its cordial welcome.

In the morning, having engaged a native with his dog (we unfortunately lost our own) to show us the way and the birds, we were off; the dog, supposed to be a thoroughly-broken "patridge" dog, taking the lead. We first essayed to find a covey (flock they call them) of quail that lived around a certain stubble field; but they failed to materialize. We then struck off for the hill side and swamp at the bottom thereof; and here the Counsellor got in his first shot at a grouse, springing almost from under his nose and darting down the mountain side. A quick shot, but the bird kept on across the swale and over the swamp to about the center thereof, where it seemed to alight. We pointed out the spot near a balsam to our native, and told him to go in with his "trained" dog and rout it out, perhaps it would come our way and give one of us a shot. He was a long time in the swamp thrashing around, but no bird arose. Upon returning to us he said he had started no bird, but that his dog had found one lying on its breast by a stump. The bird was still warm, and the Counsellor scored the first point.

On the lower ground we came to a clump of hemlocks, surrounded by hazel and oak brush. There is a place for a cock grouse. Let us get around on the other side. But before we could get our place this elegant "trained" dog had jumped in, and whirr! on the other side went the game.

The Counsellor grunted and went on ahead. Soon we heard the whirr, whirr and a double shot. We hurried up to find the Counsellor in a high state of excitement. "I have made a double shot; got two with my first barrel and dropped another out there on the marsh. Help me find it." He showed us two quail; the other was soon found. This was four birds at three shots. The Counsellor was exuberant. We proceeded. We found the birds lying along the foot of the mountain and on the edge of the swales generally; but what a delight to travel with a native with a dog so thoroughly broken that he will range ahead just about two gun shots and won't mind the whistle or call of his master under any circumstances whatever, and to hear the whirr, whirr of the birds just beyond, and then upon following them up to see them fluttering out of trees almost over your head. We soon got tired of this sort of thing and concluded to let our native and his high-toned, educated, trained pointer take their part of the woods; and then we got many more shots.

Never in our past hunting of the grouse have we seen so much treeing by this wary bird. Almost every bird, or every other bird, after flying a short distance took to a tree; and all old sportsmen know how difficult it is to kill one as he leaves his perch. "There, Doctor, one has dropped in the limb of that spruce. If he pitches off, get his direction and then your gun four feet below, and take your chances. You cannot follow him quick enough." "I can't see him. Are you sure there is one in that tree?" There he goes—a snap shot, with the muzzle of the gun pointed half way down the mountain. "By George, you got him. Dead as a mackerel. How did you do it, Doc?" "Don't know. You told me to hold under him four feet, and as he pitched down I saw he was going fast, and I guess I fired my gun six or eight feet under." Well, it was a shot that many an old grouse shooter might be proud off.

Hold on! That confounded dog is making game. There have been birds here. Whirr! A clean miss by the Counsellor. Whirr! Ditto by the undersigned. The bird was knocked over by the Doctor at a long shot. "Hold on, Counsellor, there is another one there! Good for you—a good kill in that thicket."

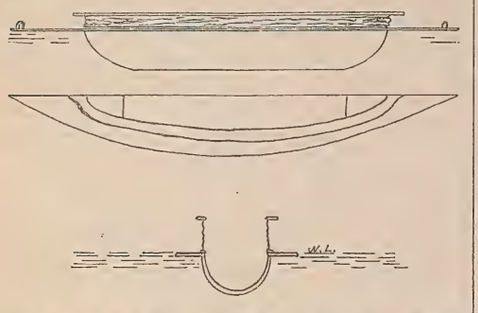
Now we try the island, a celebrated resort for grouse, but, oh, what a place to shoot! What few birds lay along the hazel brush and oak on the outside would pitch into the interior, where the laurel and other brush was ten feet in height or more, and a dog, to say nothing about a man, could not penetrate. The birds could be plainly heard treading and rustling the dry leaves. The Doctor, on his hands and knees, tried to progress. Up jumped the birds. The Doctor, on his belly, let drive at a chance through the thick laurels in the supposed direction of the birds. One barrel, two barrels. More birds springing through the thick cover. Then new shells, a third barrel, a rattling among the bushes, a thud; and the thumping on the ground proclaimed one chance shot had won. If you don't shoot, you surely won't kill.

Jehoshaphat, see that rabbit (hare), most as big as the native's pointer. Good shot, Counsellor. How they do keel heels over head when hit. Why that fellow turned a complete sommerset. What a bouncer he is, nearly the size of our northern hare. The little gray fellows that we all call rabbit, you know, is not a rabbit at all. We have no rabbit proper. What we shoot is the *Lepus sylvaticus*, or Mollie cottontail, a sweet morsel when properly prepared in a pie; and were they more rare would be considered a valuable addition to the sportsman's table. It is thus we ignore or hold lightly the best things on account of their commonness.

A clean miss again, Doctor. How do you shoot? Do you follow your birds with your gun? Do you shoot directly at them or do you try to throw your gun just ahead of the bird when flying crosswise? Now, Dick Dyne, you know, throws his gun ahead of where he supposes the bird will go—that is in the thick brush and pulls as it crosses an opening. Don't you recall the shot he made at Canadensis? The bird sprang from a thicket and darted obliquely to the left of us, but so dense was the brush that none of us could see it. Instinctively as it were Dick got the direction of the bird and trained his gun on an opening between two trees that stood about 3ft. only apart, and as the bird crossed the opening the gun cracked and the grouse was killed stone dead. A magnificent shot, but how few could do it. Again, that shot of Dick's in the laurel, when he could not get his right hand around to the barrels on account of the thicket (he is a left-handed shooter), and the bird getting up he shot him with only his one hand. Such shots are rare, but are made by old shooters occasionally.

There goes the Counsellor's gun. "What did you put up? We heard no whirr. A despicable bluejay. What under heaven did you waste a shot on him for?" "Why a jay I will kill every opportunity I can on principle. They are the meanest bird that flies. A thief always, and ever a spy and tell-tale, and no good any way."

And that is a fact. Many a time we recall, when a boy, creeping up on a gray squirrel, have we had these termagants give warning by their shrill voice and a whisk of the tail, and our prey would be in a hole, while the blue coat would sail away with his scream of exultation. Many a deer has been lost to the still-hunter by these pests, and they are hated accordingly.



We pursued our way with varying results—some good shots but many more outrageous shameful misses—until afternoon, when, being only a mile and a half from the house, we started for lunch. Upon reaching the house we found Mr. J. Reisenaus, proprietor of the celebrated road house at Greenville, whom we had met the evening before. He had also returned with his boy of some 12 years or more. He brought in a couple of grouse, a pair of hares and reported having put up a number of grouse, but having no dog and the birds rising wild, he got but few shots. We found Mr. R. a genial-hearted German and a fair shot, and as he is a reader of the FOREST AND STREAM he must be a good sportsman.

After lunch we started north. It was about a repetition of the morning programme, only the undersigned got discouraged after missing a couple of middling fair shots; he concluded his feet hurt him; and he went to the house to lie off. The rest came in in due time. After a bounteous supper we were driven to the station and took the 7:03 train for Jersey City with not a large but a satisfactory bag, and highly pleased with our trip and reception at Crawford's Farm.

JACOBSTAFF.

CHICAGO AND THE WEST.

CHICAGO, Ill., Nov. 20.—Under date of Nov. 10, Mr. U. G. Huff writes from St. Clair Flats: "Last week the Flats were full of what are locally called hoop-nets, which were placed in all of the cuts back (north of the south channel), so as to completely cut off all still-fishing. The punters are shifting their ranches to the Soy Burs and the mouth of the north channel in Anchor Bay, to be on the best shooting ground for market shooting. There are now more than 50 market-shooters on the Flats. Joe Bedore is king of the tribe, as well as 'king on de Flat, ba gare.' I inclose a sketch of the boat used by him. I call it a battery, but he calls it a punt. He being

king, I give in. This 'punt' is lead-colored. It is used anchored in the middle of 200 to 300 decoys.

"Joe has declared against those bronze-headed decoys. I am going to the Flats in a few days and will remind him of the one he promised you.

"Bill Hodgson would make a first-class warden according to my way of thinking.

"The punters tell me they have not seen so many ducks on the Flats for years as are there at the present time."

Mr. H. H. Taylor, also of Detroit, writes that another year will probably see the Flats an incorporated village, under the name Little Venice. This is a fine tribute to Grace Denio Litchfield's story by that name, published last season in the *Century Magazine*. There is a haze of natural romance about the region.

Anent the recent mention of the demi-god Brusewitz, who upholds the dignity of the game laws in this city as warden duly appointed, Mr. John Preston True writes from Boston, Oct. 24:

In a certain town in New Jersey (so goes the story) there was a prohibitory liquor law. There was also a choice assortment of grog shops in which the existing city government had a lively interest, as they were run by friends and served as rendezvous for heelers. Finally, the better citizens went quietly to the supreme court and secured a mandamus against that mayor and council, requiring them to do their duty in regard to the liquor law. There was woe among the politicians, likewise wrath and consternation. If the law was enforced their own friends would suffer. If it wasn't their own bodies would speedily be committed for contempt of court. Self-preservation being the stronger they passed the word around, and the Arabs of the rum holes folded their tents and silently stole away. Supposing you try that on your game warden!

It would seem that we need a new warden here worse than one galvanized by a mandamus. Besides, if Brusewitz doesn't know a prairie chicken when he sees it how could we expect him to recognize a mandamus?

And now comes the State of Wisconsin, the same with blood in its eye, and once more we are going to have "radical changes in the game laws." The following, from the dispatches, will shed light on the radical change business:

MILWAUKEE, Wis., Nov. 20.—The Wisconsin State Fish and Game Law Commission at its annual meeting held this afternoon discussed the report and recommendations to be made to the next Legislature. These will recommend important and radical changes in the present laws. The Commission will urge that the fish and game laws be so amended to bring the operation and effects of both under one distinct head, in order to avoid conflict and consequent failure. The present system, it will be urged, is most defective and unfortunate. A conflict of interests continually occurs that can only be avoided by the unification of the fish and game interests and the appointment of one official head, warden, manager, or chief, who will have complete and undisputed authority, and to whom alone all subordinates should report. During the last year 50,000,000 spawn of all kinds of fish propagated in Wisconsin hatcheries have been placed in various waters of the State. This immense hatch, however, has not more than half met the demands. At the meeting this afternoon an invitation was read from the Secretary of the Committee on Fisheries and Fish Culture Exhibit at the Columbian World's Fair in Chicago to the Wisconsin Commission to attend an important meeting of that committee at Chicago, Saturday next. The invitation was accepted, and a delegation will leave for there to-morrow for a general conference relative to a fish exhibit at the World's Fair.

It seems to me that the Wisconsin law needs less tinkering and more execution.

A little above I have mentioned the writing of Grace Denio Litchfield, on the St. Clair Flats. That was fiction, and not altogether piscatorially accurate fiction. I can not refrain from offering below a bit of writing, not fiction, but better than fiction, done for an Indiana paper by Evaleen Stein. It is simply a description of the Kankakee River, of which mention is so often made in these columns:

For half a hundred miles above and below San Pierre it flows through an almost unbroken wilderness. On either hand, wherever the swampy ground is sufficiently firm, it is fringed by a lordly forest, in whose shadowy depths tall elms and lindens tower in all their solemn primeval beauty, while down by the water's edge, among the delicately indented foliage of the river oaks and maples, the silvery sheen of birches and tender green of water willows, the wild marsh mallow flushes to blossom in masses of rosiest pink, and thrusting their way far out into the current, thickets of button-bushes dangle their soft balls of ivory bloom. The river itself is of the most marvelous transparency; and so perfectly does it mock all things above and about it, so akin to realty is its tremulous underworld, that to one floating upon its surface there comes the strangest fancies; keen thrills of delicious airy freedom, of winged buoyancy, such, perhaps, as the birds may feel as they pose in the heights of mid-heaven. And yet, notwithstanding this limpid clearness, there everywhere plays through the water a faint elusive tinge of amber, so betraying the slight tincture of iron that lurks within it, and that gives it a truly Midas touch. Indeed it has so bronzed and gilded and overlaid every tiniest shell, every pebble and grain of sand, that the current seems literally to flow through more priceless treasure than did ever any fabled stream of Grecian story. And when the yellow sunlight filters down into its depths, to look into the river is like peering through a gigantic crystal window, stained in hues of indescribable richness and beauty, and wrought with fantastic devices of fronded river mosses, of long, silvery grasses, with here and there a little turtle or a shoal of shining fishes, and far, far down, between the intricate tracery of this strange living decoration, there twinkle up bright glimpses of a delicately reflected sky.

Right you are, Evaleen, though the rest of us couldn't say it so well as that. But that's the kind of rivers we have out here.

At Kansas City last week I saw "Buffalo Jones." He had with him a couple of blankets made from the wool of the buffalo. The fabric was woven by an Eastern mill, and it was soft, silken and indescribably fine and warm to the touch. A finer material for a lap robe or heavy overcoat could not be found. Early in this century an English and Scotch company was formed to manufacture cloth in just this same way, but the project failed, and was loudly written down as a wildcat, visionary scheme. Yet here Mr. Jones, who has a way of doing the impossible, is on hand quietly showing his little blankets, soft, warm and entirely to be coveted. Mr. Jones says he just peels the wool off from the buffalo at shedding time, it coming off easily, in large flakes. He thinks one buffalo will annually yield wool or "fur" enough to make a yard of cloth. This is the first of the cloth he ever had made. It can be made in quantity. It is very soft in texture, softer than any woollen cloth, feeling more like fine fur. The Jones herd of buffalo will be at Chicago during the World's Fair.

At Kansas City Mr. F. J. Smith informed me of an odd freak game bag and gun that had come into his possession, an albino jacksnipe, nearly white, which was lately killed by Mr. Hagedon, of Butler. Mr. Smith also has a white quail, mounted for company for the jacksnipe. These birds probably suffered from extreme fright of some kind, so that their hair turned gray in a single night.

The great Chicago-Kansas City pigeon matches last week attracted much attention. I wonder if anybody knows how many tame pigeons are shot in a year at Jim Elliott's park in Kansas City? Well, it is just about 60,000. John Watson, the veteran manager of the only park patronized by Chicago shooters, says that Chicago shoots only about 30,000 pigeons in a year.

All the way from San Francisco comes a young gentleman and lays a card on my desk just when I am out of town. Mr. Phil B. Bekeart, when I last saw him, was one of the main hustlers of the E. T. Allen sporting goods house of San Francisco, and I am sorry not to meet so bright and well posted a young man. He knows a lot about sport on the Coast.

Not many goose shooters this fall. I may have commented earlier on the Dakota trip of Messrs. Farmer, Dicks, Hansen and Bluthart. They got ninety-six geese, some grouse, some mallards and some jack rabbits, the last what for I dunno. They were out ten days in the Devil's Lake country, making Lacotah their entry point. Mr. Farmer added to his decoy flock of geese while in Dakota by purchasing two finely trained Canada geese.

A little shooting at ducks lately, but nothing paralyzingly large. Ed Howard wires down that the ducks are in again at Fox Lake.

On Tolleston Marsh the shooting has been good till within a few days. They have raised the wind and they have raised the water down there on Tolleston. They dammed the Little Calumet and so got a wet marsh. Don't know what the folks below there are going to say about that.

Dick Turtle has been down at Senachwine Lake and had fair shooting at ducks.

Quail are unusually abundant not far out from Chicago. Messrs. Butler, Smith, Donald, Willard and the writer will make a trip before long, south of the city, after quail.

There are dozens of localities within 100 miles of Chicago where cotton-tails fairly swarm. I confess to a vulgar fondness for the sport of shooting cotton-tails, and if a light snow comes before long a little party of us may go out and have a regular country time of it.

E. HOUGH.

KANSAS GAME AND HUNTERS.

BURLINGTON sportsmen have been enjoying the fickle weather of the past few days in close pursuit of the numerous flocks of wildfowl that in their southward flight make this their resting place. The redheads have passed us, but the mallards, teal and canvasbacks are here yet, and the ringnecks and scaups have begun to arrive. The last two named are the most abundant of all our ducks in number and their period of migration is longer.

Just two miles east of town is one of the largest ponds in this section of the State; an ideal ducking ground that would make a perfect preserve. Here in season I have taken almost every species of waterfowl found in our State, either in migration or as residents. In summer the king rail hides in the sedges that lie along its marshy shores, the teal nests upon its grass crowned banks and the grebe builds its floating home amid the lotus leaves that deck its placid bosom. In the evening the boom of the bittern and the *qua qua* of the night-heron, with the loon's weird cry, echo and re-echo through the gathering shadows.

The ducks gather here in immense numbers both in spring and fall, and many are taken by local sportsmen. In the FOREST AND STREAM of the 6th inst., "F. B.," of Ottawa, this State, says that "the sandhill cranes seldom stop there." That may be true of his vicinity, but from personal observation extending over several seasons and the testimony of reliable sportsmen, I am convinced that these long-legged, long-necked denizens of other climes not only stop here, but frequently linger for several days at a time. I have the skin of one specimen taken this fall from a flock known to have remained in the neighborhood for over a week.

It is possible that the conditions and topography of this vicinity are more favorable for them than the section "F. B." writes from, though our counties adjoin.

The market-hunter lives here in force, killing game legally when he can, but taking it at any time. Our game law is a dead letter. One of these hunters recently brought in ten dozen quail, another six dozen as the result of a single day's hunt. A golden eagle was killed Oct. 27 a few miles from town which measured 6ft. 10in. from tip to tip, and weighed 7¼lbs. It was a male and in perfect plumage. I have the specimen mounted before me as I write. Would like to hear from others in different parts of the State. P. M. F.

BURLINGTON, Kansas, Nov. 14.

The fall rains have just commenced here, and as a result the ducks are coming in fast. During the first part of the week the meat markets were full of mallard ducks and quail which were shot in this vicinity. Most of them, I think, are disposed of in the city instead of being shipped to St. Louis and Kansas City, as is usually the case. The weather is so warm the game will not keep long.

Last Wednesday I met a man who lives about seventy-five miles west of this place, who had been looking for a gun to hunt with this season. He said: "I am a market-shooter, and in the winter I do nothing but hunt. I am now on my way home from Kansas City, where I have been looking for a gun and trying to arrange to sell my game. Prices are so low in Kansas City this year that I shall send my game to St. Louis in wholesale lots." These are the men who get the game in Kansas; they are good shots and know just where to go, and thus they clean out the game in a very short time.

It has been raining here for thirty-six hours and the ground is very muddy. This will bring sorrow to the hearts of some of our men, because it spoils their hunting with greyhounds. They would rather chase jack rabbits and cottontails one afternoon than to hunt with a shotgun for two weeks. Greyhounds are numerous around Ottawa, and some of them are astonishingly good rabbit dogs, though few can show a pedigree.

A farmer near town made an unusual catch one day this week. He was out hunting and shot a large golden eagle with a shotgun; the charge of shot only stunned the bird and he was captured alive. He was brought to town and formed quite an attraction for a little while; he was finally sold for $10. XX.

OTTAWA, Kansas, Nov. 15.

COMBINED RIFLE AND SHOTGUN.

Editor Forest and Stream:

Your correspondent "Shongo" describes in your paper of Nov. 6 an "all-round sporting gun," devised to meet his own wants and built in accordance therewith by his friend Prof. W. B. Hall.

I appreciate very fully the reasons he assigns for dissatisfaction with the arms he had previously used, and I seize the opportunity his letter affords to call attention to the existence of another gun contrived to meet the same wants, and of which a single specimen was constructed many years since and is in the possession of its inventor, Dr. Edward Maynard, the inventor of the well-known Maynard rifle.

It is a double gun, the barrels side by side, and may be a double rifle or a double shotgun, or one rifle and one shot barrel, interchangeable with the same facility as the single barrels of the Maynard rifle. Its general principle of construction is the same as the single gun, but with some very important improvements. The trigger guard, for instance, which acts as the lever to move the barrels, is attached to the stock instead of the barrel, as in the old pattern, the hammers are reduced in size, and brought in exact line with the surface of the barrels instead of projecting above it, and the general symmetry of the gun is such as to commend it alike for beauty and service.

The barrels are united at the breech and muzzle by a perfectly simple and effective contrivance which holds them as firmly as if soldered, and yet admits of expansion and contraction of either barrel without affecting the other, and allows them to be instantly separated when removed from the stock.

The rifle barrels in this model are 20in. in length and the shot barrels 26, but lengths and calibers can, of course, be varied to suit tastes. The inclosed target was made with this gun by L. J. Peck, of Albion, N. Y., to whom it was submitted for testing, and is in itself sufficient evidence that the reputation of the Maynard is fully sustained in its new form. It has always seemed to me the nearest approach to perfection that I have ever seen, and Quartermaster-General Meigs said of it after a careful test, "If introduced it would drive all the other sporting guns from the market."

The question then naturally arises, "Why is it not manufactured for sale?" And the answer is the same that prevents the introduction of many other articles of far better quality than are now to be had—the willingness of the great mass of our people to take an inferior substitute because it can be had at a less price. If a national contract for military arms can be secured it will pay to provide the machinery for their construction, and that same machinery can be used for a sporting weapon of similar pattern, which may be built of cheap materials and put upon the market at a low price. But the men whose artistic tastes revolt at the sight of a cheap substitute and who are willing to pay the necessary cost in order to secure the best that can be produced are not sufficiently numerous to warrant manufacturers in erecting machinery for the sole construction of a sporting weapon.

Since the construction of the gun I have described, which, as I have said, is the only one ever yet made, Dr. Maynard has contrived several very valuable improvements of which I have seen the drawings.

I have hoped that I might witness the introduction of a weapon which I am sure would gladden the heart of every genuine sportsman, and that the inventor might reap the reward he so richly deserves, but he and I are alike too near the close of life to afford further indulgence of such anticipations.

Whatever may be the nature of future discoveries and inventions, however, the existing model of which I have spoken of a combined and mutually interchangeable double rifle and shotgun will remain as evidence that the inventive skill of the present age was far in advance of just representation in actual construction.

MINNEAPOLIS, Nov. 12. H. W. S. CLEVELAND.

CHINESE PHEASANTS FOR VANCOUVER

VANCOUVER, B. C., Nov. 13.—The first lot of Chinese pheasants imported by the Vancouver Game Protective Association came to hand by the Parthia a few days ago. We have sent them to Magee's farm, about five miles distance from the city. They will be kept in a pen for a few days to recover from the voyage, and then turned loose. They arrived in splendid condition, and while November may not seem the best month to turn them down, we had to take them when we could get them.

The weather is fine, and we have had no frost yet, so they will have a good chance of looking around their new home before winter sets in. There will be a large lot on the Batavia in a fortnight's time, and these will be turned out on different parts of the mainland. Will advise you later on about cost of birds, how they thrive, and any other particulars which will interest your readers.

CHAS. E. TISDALL.

DEER AT TIM POND.

Editor Forest and Stream:

A few days ago I returned from a trip to northwestern Maine, where I had gone in the certainty of getting fresh air and exercise, and in the possibility of getting venison by other means than hounding. Myself and a friend with two guides reached Julian Viles's camp at Tim Pond, 10 or 15 miles from Stratton, on Oct. 29. The first two or three days we bagged nothing but partridges and rabbits, and then to change the luck we loafed a day in camp while the guides started out to try their single fortunes. One of them returned within three hours, having stumbled upon two large buck caribou less than a mile from the pond, both of which he got. A couple of days later the same guide brought in a medium sized deer, and toward the end of our stay my companion shot a magnificent five-prong buck that would weigh 200lbs. or over. Besides the four large animals secured I missed a fair shot at a deer and had another one come within a few rods of me in the thick spruce growth. My guide also saw a deer which he did not get, and the other guide, when without a rifle, had a deer stalk by within easy range, while the fourth one of the party had my experience with a heard but unseen deer. The quantity of fresh tracks, deer and some caribou, proved we had not exterminated the game, and any one who could be in that country when the snow first comes to stay, as it probably has done by this time, would have an excellent chance for good hunting.

We were in camp but two weeks; the first few days a crunchy and then a crusty snow made noisy traveling, and the rest of the time the ground was covered with frozen leaves, yet in spite of these very unfavorable conditions the party had the above recorded luck, and furthermore the game was gotten in a respectable and honest fashion. Any one not an actual invalid will, I think, get a more lively pleasure out of this sort of hunting than out of a lifetime of hounding.

The camp at Tim Pond consists of a dozen log huts which are well filled in the fishing season, but at this time of the year the solitarily inclined vacationist will meet there only such company as he takes along with him. The proprietor, as our comfortable and inexpensive experience testifies, will see to it that his guests are well fed and plentifully supplied with firewood at a reasonable figure per day. Within a few rods of the camp the original forest begins where the only roads are spotted lines and the traveling in summer so difficult that few of the guests ever go away from the Pond or buckboard road. I say this last lest any one may think that the camp of log huts implies a pathed and picknicked forest with all the charm of wildness rubbed out. The country will be found rough enough to suit the taste of the most robust hunter, while the comforts of the camp will not prove disagreeable at the end of a long day's tramp. We were very fortunate in the guides who cared for us, Grant Fuller and Will Myers, energetic and obliging men, and both thoroughly familiar with the woods and all that is in them. D. C. L.

New York, Nov. 50.

BOSTON'S SPORTSMEN.

THE Harry Moore party, recently mentioned in the FOREST AND STREAM, has returned from its hunting trip to Durham's Creek, North Carolina. They are back again to business with faces somewhat embrowned by the southern November sun. They report wonderfully fine weather, almost too hot for hunting. Dr. French was unfortunately delayed in Washington, so that he was with the party for only two days of hunting. The hunters went on the trip after deer, wild turkey, quail, opossum and coon. The hunters obtained each class of the game intended. The pigeon and lark shooting was also excellent—game that they did not expect. They got six deer in all; one deer for each man except the Doctor. But curiously enough the deer were all killed by one man of the party, Geo. C. Moore, except one killed by one of the guides. Still they all hunted from the stands, with the chances supposed to be about equal. The deer were driven by dogs, and shot by the hunters from the stands. As luck would have it, the deer were all killed as noted above. It is also singular that the only wild turkeys killed by the party were two, shot by Harry Moore. He says that of all the game he ever undertook to hunt, the wild turkey of North Carolina is about the most difficult. They will go into the top of the tallest pines and there it is impossible for the hunter to see them. The best one Mr. Moore shot was with No. 3 buckshot, a very long distance. It seemed to be impossible to approach nearer, and he took the chances.

Mr. Moore describes the possum hunting in the night as something about as full of fun as it is possible to imagine. They brought home several alive, as well as taking a good many for the table. They also mastered Mr. Coon in several instances, though he is a much more difficult game than the possum.

Bears continue to be a remarkably popular game with the Boston sportsmen who go down to Maine this fall. An unusual number have been killed and brought here. Bear steak is on the regular bill of fare at some of the popular hotels in Boston. Some of the dudes have tried it and declare that it is great for one's courage. It has been dangerous to propose it to members of the Brokers' Board of late, however. Johnnie Smith, brother of the proprietor of the New England House, has just returned from a bear hunt in Carthage, Maine. He had the good fortune to secure three fat cubs. The first day they surprised the old bear and her three young. Two of the cubs were shot. The other, with the mother, escaped. The next day the old bear was again surprised. The other cub was shot, and the old bear wounded, but not sufficiently to prevent her escape.

C. E. Davies and G. B. Eames, two noted Boston hunters, have gone into the western part of Massachusetts for a grand hunt after birds. Mr. Eames is president of the Reading Gun Club and also prominent in the Reading Kennel Club. Mr. Davies is president of the latter club. They take four trained pointers with them. They left on Saturday for Fitchburg, from which place they will start on their trip. They have estimated their kill at twenty-eight partridges and twice as many quail a day.

We are probably to hear the wolf cry from Maine again this winter "because the deer are plenty." One of the Maine papers locate them at Kinkfield and another at Madrid. In one case three were seen and in the other two. The papers say they have been shot at but not killed. One of the Kibby Valley hunters is reported killing a very heavy deer the other day. The head and antlers weighed 35lbs. It is safe to say that deer hunting in Maine is not quite up to expectations this fall, for reasons that will be given in the FOREST AND STREAM later.

SPECIAL.

SWAN LAKE.

WE were surveying a line for a levee in a very unsettled part of Coahoma county, Miss. The settler who lived nearest the scene of our work was Mr. McGhee, a gentleman of the wilderness, whom the water had run across the river from Arkansas. McGhee had cleared up a fifteen-acre field, built a two-story log cabin (ground plan about 14×18) with a spacious portico around it, and was engaged in raising cotton and robbing bee trees. It was beside this palatial castle that we pitched our tent, having some trouble in finding room enough among the corn stubbles to spread our downy pallets (each of which consisted of an armful of hay and a blanket). We boarded at Mrs. McGhee's rural restaurant.

The route to our work led us across the bed of Swan Lake, on the north bank of which lies the renowned Garland Field, noted for its abundant supply of game. The lake was dry at that time, and its bottom was partly covered with grass, which afforded very good pasturage.

We frequently saw deer at a distance up the lake, so we concluded to kill one. We took a gun out with us one day, and were gratified that evening on our campward march at seeing a couple of deer about half a mile off, near the elbow bushes on our side of the lake bed. I proceeded toward them, walking a few yards within the bushes. When about opposite them, I crawled to the edge under cover of a large willow tree, from which I had an excellent view of a large doe about 60yds. off and a half-grown fawn at her heels. The doe was broadside to me. They had apparently heard me, for they both had their noses high. It was a magnificent spectacle to one who had never before seen a deer in its native haunts. I plugged a load of buckshot at the doe and off she galloped, closely followed by the fawn, at which I sent the other load. They both escaped. It afforded me some satisfaction, however, to say that I had shot at a deer, notwithstanding the fact that she didn't fall. It had become dark by the time I rejoined my companions, which made our tramp back to camp a little rough, as we had to follow a blazed trail through a mile or two of woods and cane. There were spots of moonlight on the trees, which we sometimes mistook for blaze, thus losing our bearings about four times. On such occasions one of the crowd would stand still while the others circumnavigated around him at a distance of about a hundred yards, feeling the white spots until they located the smooth ones. We finally made camp about 9 P. M.

Next day we left the gun behind. While crossing Swan Lake, both morning and evening, we saw three bears some distance off, apparently nosing the ground quite unsuspiciously. Upon the strength of that two of the party started out before daylight the following morning to get a bear. When the remainder of the crowd reached the lake, about two hours later, we were astonished at seeing the bears in the same spot again. We wondered why the hunters hadn't scared them away. (We didn't expect them to kill any.) This was explained thus: Having a telescope along we drew a focus on Messrs. Bear. There they were, plain as a white fence—not the bears, but three enormous black hogs, rooting with as much composure as that with which the bears of yesterday had been nosing the ground. After that we didn't hunt bears any more in "them diggin's." TRIPOD.

Mississippi.

OHIO GAME FIELDS.

DAYTON, Ohio, Nov. 24.—William Wolstencroft, Wade Wilson, Rolla Heikes and Edward Rike have returned from their hunt in the sand thickets of Lucas county, this State, and Wolstencroft and Wilson proceeded at once to their homes in Philadelphia, well pleased with their success in the field. During the week that they were out the four gentlemen bagged over 600 quail and 100 pheasants, and knocked over an occasional rabbit for the farmers. They were not bothered with fences, and were in a territory of hazel and huckleberry bushes, a buckwheat region, and thickets around the swales where pheasants abound. The hunters were astonished to learn that a deer had been killed there last fall, and another one seen while they were there, only twenty miles from Toledo.

William Bradford, George Volker and Clayton Miller, of this city, in three days' hunt in Wellston, Jackson county, killed 25 dozen quail and 51 rabbits, and brought back with them a brace of blue ticked, well-trained two-year-old beagles that are well trained rabbit dogs. These gentlemen had expected to hunt at Gallia Furnace, Gallia county, but the superintendent of the thousand-acre tract had reserved the shooting privileges for his friend, Mr. Al Wickersham, of Jamestown, who is there this week. It is a rough, heavy-timbered mining country, and the forests and dense undergrowth are filled with wildcats, foxes, coons, possum, squirrel, pheasant and quail, and occasionally a keen hunter can bring in a wild turkey.

Clark Denious, of Washington, C. H. and S. S. Troup, in three days in Fayette county got 178 quail and 25 rabbits. Michael Stockert, who had the privilege of shooting over a section of 640 acres of grazing land in Clark county, found an abundance of birds for several days' sport within a quarter of a mile of the house, therefore did not need to disturb coveys over the rest of the farm, but left them for a hunt after Thanksgiving Day.

A prodigy among hunters is discovered in the farming section southeast of this city, half way to Bellbrook, in the person of Miss Ollie Owens, a modest girl of 13 years of age, daughter of a farmer. She is a fine wing shot and works a brace of her own dogs to perfection in the field. She dresses in *vivandière* costume of navy blue flannel, uses a 12-gauge Remington, loads her own shells, carries game bag and ammunition by a broad shoulder strap, is self-reliant and does not get rattled, keeps her dogs within short range, covers field or copse closely and is always accompanied by one of the family, usually an uncle, who is himself fond of hunting. When seen in the field by a Dayton party Friday she had bagged 9 quail and her tenth was a bird that the Daytonians had missed, and as it came her way she knocked it over, her dog retrieved it, and as she put it in her game bag she gracefully saluted the astonished gentlemen. BROWN.

WORCESTER FOX HUNTING.

WORCESTER, Mass., Nov. 22.—The annual hunt of the Worcester Fur Company occurred on Thursday of this week. The game they were after was foxes and they succeeded in capturing six, and all reporting a fine day's sport. The club had with them about thirty of the members residents of this city, also Ledyard Bill, of Paxton; Leander F. Herrick, of Millbury; Estes Knight, of Oxford; H. C. Newell, of Ashburnham; Frank Sweet, of Auburn; Edward and Leonard Taft, of Meriden; A. D. Norcross, of Monson; Judge Huber Clarke, of Willimantic, Conn.; and Dr. S. P. Holbrook, of East Douglas.

The events of the day closed with the annual dinner at the Bay State House, at which a large number of notable persons were present. At the head table with A. B. F. Kenney, president of the society, and E. S. Knowles, secretary of the company, were His Honor, F. A. Harrington, mayor of this city; Hon. Joseph H. Walker, of this city and a member of the Fifty-first Congress; also Hon. John R. Thayer, of this city, recently elected to the Massachusetts Senate. At the other tables were about fifty guests, among them were Col. James M. Drennan, Webster Thayer, a member of the Board of Aldermen, Capt. David M. Earl, all of this city, also Richard Luther, of Leicester; Chas. Prine and Paul Wheeler, of Rutland; W. P. Brigham, of West Boylston; John M. White, of Millburn; S. E. Bliss, of North Brookfield, besides the others mentioned above as present at the hunt. The men of the party were full of stories of the hunt and many interesting experience of the haps and mishaps of the day were told. A fuller report will be given next week.

NOTIONS ABOUT LOADING.

Editor Forest and Stream:

Your correspondent "W. A. W." recommends for a 12-bore shotgun 3½drs. powder and 1¼oz. shot for ducks. I agree with him that heavy charges of powder will give a larger bag of game than light charges. I have experimented much with light and heavy charges. For many years I have used in a No. 12 gun 4 to 4½drs. powder and 1¼oz. shot, and in a No. 10 gun 5drs. powder and 1¼oz. of shot. Of course the recoil with such charges is heavy, but I overcome the recoil by padding the sleeve of my hunting coat about three-fourths of an inch in thickness. When hunting prairie chickens in my shirt sleeves, I had a vest prepared with a sleeve for the right arm, also padded. Thus prepared the heavy recoil would not be noticed. Some of my sporting friends following my example had the padding made of sponge such as is used in cushions. H. L.

ILLINOIS GAME.—Lexington, Ill.—While James Turpin, of Lexington, Ill., was hunting on the 17th of this month he saw a very large bird, which proved to be a gray eagle. He shot and broke one wing, and finally captured it and brought it to town. It weighed 10lbs. and measured 8ft. from tip to tip of wings. Doctor Hanson bought the bird and will have it mounted. It is the only eagle seen in our vicinity for years. The law and our farmers are doing much toward replenishing the prairie chicken and quail. There are few farmers who will let hunters go upon their lands to shoot. We have had scarcely any water fowl here this fall. The ponds are all dried by tile and the streams are so low they would hardly swim a duck.—S.

THE UNITED HUNTING, FISHING AND CAMPING CLUBS OF WESTERN PENNSYLVANIA.—Pittsburg, Pa., Nov. 22.—The regular quarterly meeting will be held at the rooms of the Pittsburg Rod and Gun Club, No. 512 Smithfield street, on Saturday evening, Nov. 29, at 7:30 o'clock. Delegates from all clubs are requested to be present. Visitors from all fishing and hunting clubs not members of this association, are requested to attend. The officers of all clubs, and all sportsmen, and all who are interested in the protection of fish and game, are invited to attend and bring their friends. Prominent sportsmen will be present. Important changes in the fish and game laws will be proposed.—J. W. HAGUE, Sec'y, 136 Fifth avenue.

NEW YORK GAME AND FISH LAWS.

THE Codification Committee gave a hearing at Albany last week, at which a number of sportsmen and others were present. Hon. H. A. Reeves, representing the net-fishermen of Long Island, protested against the proposed amendment requiring nets in Peconic and Gardiner bays to be taken up three nights in the week. Hon. Geo. E. Towne made similar claims for the net fishermen of Lake Erie. State Fish Commissioner Henry Burden, of Troy, asked for proper protection of fish in the Delaware River by preventing the netting of shad and bass. He urged a law making the capture of salmon in the Hudson under 3lbs. unlawful. Also one compelling fishermen in the Hudson to take up their nets for at least one day a week to allow the fish to get to the spawning grounds. The use of seines at the mouth of the Croton River, now so prevalent, should be stopped.

W. H. Thompson, of the St. Lawrence Anglers' Club, read a letter from the president of the St. Lawrence Game Club deploring the illegal use of night set lines, and spoke of the lax enforcement of the fish laws. Mr. Kellogg, attorney for the club, said the restriction against violating the law seemed to be slight, as an offender, if caught, could pay his fine and yet come out ahead financially. Hence the laws are not observed. The fine against netting should be at least $100, and for using dynamite the penalty should be three times as great as for any other illegal fishing.

The destruction wrought by the use of nets in the Hudson River was described by Howard N. Fuller, representing people along the Hudson who have had ample opportunities to witness the extinction of fish in waters which should supply the thousands of poor people along the banks with a plentiful supply of fish of the most desirable species. The State has built fishways, put in salmon fry and employed salaried protectors at a large expense; yet the law has permitted the use of nets, resulting in the utter deprivation of the beneficial results that should have accrued from such improvements. The Hudson has been depleted of fish by netting, especially where fykes are used; in other words, from Troy dam to Poughkeepsie. Mr. Fuller advocated a law prohibiting the taking of fish in the Hudson River with nets, except shad, herring, minnow for bait, or fish to be used in the propagation of fisheulture.

The most interesting part of the hearing was with respect to deer hounding. Mr. Seymour Van Santvoord, of Troy, advocated a law prohibiting hunting with dogs—and he thought the Commission might go a little further by prohibiting the killing of deer in water. Nine out of every ten deer, he claimed, were killed in the water, after they had been hemmed in with no chance of escape. He stated that a failure to adopt a law prohibiting hounding would eventually end in the extermination of deer in this State. Such a law is upon the statute books of seventeen States and Territories, and in States were such a law is not enforced, deer hunting is a thing of the past for want of game.

Dr. Samuel Ward said he was a firm advocate of deer hounding and the killing of deer on the runway, but he would have no objection to a provision in the law prohibiting the killing of deer in the water, although he knew some sportsmen would object to it. The inhabitants and summer visitors of Franklin county were unanimously in favor of hounding deer, holding that it was most sportsmanlike to kill deer on the runway after due warning. It

took a practical sportsman and a man of nerve, he said, to kill deer on a runway, and there were very few hunters who could do it. He believed that ten times more deer were killed by still-hunters than by hounding. He favored the law prohibiting the killing of deer at any time, holding that such a provision would tend more than any other to increase the number of deer. Referring to the Curtis law of 1885, which prohibited hounding of deer for one year, he said that Paul Smith and other hotel keepers in the woods could testify to the fact that their business receipts were decreased more than $100,000, because people would not go up into the woods if they could not enjoy hounding, "the most manly and sportsmanlike manner of killing deer."

William L. Fowler and Frank C. Wolcott, representing the Black River Game and Fish Protective Association, were both opposed to deer hounding and asked the Commission to recommend that the season for the killing of deer be shortened.

Scudder Todd and Charles Smith, from Lewis county, opposed hounding or the killing of deer in the water. Mr. Smith stated that nearly all the deer were killed in the water, being cornered after a hard run in front of the hounds.

Mr. Kellogg said it was an utter impossibility to detect or convict persons who hound deer contrary to law, and there should be a change of boundaries to make them as simple as possible. He favored a law prescribing a heavy penalty for any person who has a hound in his possession in the prescribed territory during the close of the deer season.

R. J. Richardson, Lowville, advocated shortening the present law that allows hounding for fifty days (Sept. 1 to Oct. 20) to thirty days, expressing the opinion of woodsmen and sportsmen. All killing of does should be prohibited, which need necessitates the prohibition of jacking, for a man shooting at night must run his chances on killing a doe.

Jas. F. Tracey, of Albany, said he thought after fifteen years' experience in the woods that hounding and jacking were destructive of deer. He favored an act making the hounding season as short as possible, but not the time for other methods of hunting deer. Jacking he was not adverse to, but he advocated prohibition of killing does.

Chris Goodsell, a guide for fifteen years on the Fulton chain, thought no does or fawns should be killed; jacking was a destructive practice. The hounding season should be shortened to at least thirty days instead of fifty. This summer he found one fawn and six deer floating or on the shores dead on the various lakes.

Charles J. Smith said he found two bucks and three does in the latter part of October on the shores of Smith Lake, where they had been driven by hounds at a time when the water was so chilly as to cause their death. None of them had been shot.

It was argued by some of those present that a new commission should be created, to have special charge of game and fish protection, relieving the Commissioners of Fisheries of their present responsibilities in this field.

OF INESTIMABLE SERVICE.

PUBLIC sentiment in reference to the protection of birds and other wild animals, mostly known as game, has become healthier in tone and spirit in the past few years. The necessity of throwing some guards around them to prevent extinction is apparent to the most stupid, also to the most selfish. It is a matter of the greatest importance, and cause of gratitude, that the States and Territories have passed laws that are more or less beneficial in this regard. A compilation of these acts has been made by Mr. Charles B. Reynolds, the well-known editor of FOREST AND STREAM, and published by the Forest and Stream Publishing Company, 318 Broadway, New York. Now, every earnest observer of the law, who loves to fish and hunt, and every man or woman who has an interest in the preservation of birds and all other animals that are entitled to life, liberty and the pursuit of happiness, has the means of knowing what the laws are. The compilation is in good shape, is prepared for quarterly issue and will be of inestimable service.—*Public Opinion.*

R., Chicago, Ill.—*Adv.*

Sea and River Fishing.

THE FULL TEXTS of the game fish laws of all the States, Territories and British Provinces are given in the *Book of the Game Laws.*

TROUT FISHING IN NORTH CAROLINA.

VERY few Northern trout fishermen know much about the streams in western North Carolina, I think, and perhaps if I should tell all of my experience in that region people would say that some of my "yarns" were decidedly "fishy," I will, in consequence of that, confine this article strictly to facts.

I went to the city of Asheville last May, to find some place where speckled trout could be caught in sufficient numbers to make the sport interesting. I went to the headwaters of the Big Pigeon River, 40 miles west of Asheville, and found trout in unlimited numbers. Took a train on the Murphy branch of the Western N. C. R. R., and stopped at Pigeon Valley station, 25 miles from Asheville, thence by wagon up into the mountains over 15 miles of the roughest road I ever rode over, found a farmer who agreed to keep me, and the next day the former and your servant gave the "speckled beauties" our attention.

There are three or four good creeks in that region, besides the river. We fished Crawford's Creek the first day. Crawford's Creek is quite a large stream. It rises up under Cold Mountain and nearly its whole course is through dense woods, over big ledges, and hundreds of deep, dark pools are found which fairly swarm with trout, many of which are of very good size. The best fishing on this stream is the first two or three miles from its mouth. About three miles from the mouth of the creek it divides into two forks and some good strings are caught in both of them, but as I could get all the fish I wanted without going up the fork, I did not fish them.

Our first day on the creek was a very satisfactory one, and when we reached home, about sunset, we had 17lbs. of as handsome mountain trout as I ever saw. Old man Crawford, who owns the creek, charges all who fish it 15 cents per pound for all they catch. I fished it eight times while I was up there, for fish for my own use, and paid him something more than eleven dollars, and did not keep any fish that would measure less than 6in. in length. I fished that creek in company with men who came up from Asheville, and other places, and I think they paid him at least ten dollars more. You can understand by this, I think, how abundant trout were in that region last summer.

When I started for the mountains I provided myself with such flies and tackle as I had been in the habit of using on the trout streams in New England and northern Michigan, but when I came to use those flies I found that those N. C. trout didn't fancy them; the result was I used a cinnamon-hackle, and baited the hook with a red worm; with that contrivance I could catch those trout until I was tired.

About two weeks after my arrival at the fishing grounds, the stick worm became plentiful and then we gave up the red worm; we also began using a lemon-colored hackle.

The stick worm is either white or a light lemon color; it is about three-fourths of an inch in length, and when put on to the hook it makes a very attractive-looking fly (?), and the average trout will rise to it when he will not to anything else.

The trout catcher cannot fish from the banks of those mountain streams to any considerable extent; they flow between steep mountains, through dense growths of laurels and rhododendrons, and the fisherman must take to the water. It is because of this state of things that scientific fly-fishing is impossible.

My second trip up Crawford Creek was made a few days after my arrival, I went alone; the day promised to be a good one, sun was bright and warm, and everything seemed favorable for a successful day's sport. I started into the stream at eight o'clock A. M. The water was as cold as ice, and the trout "bit" ravenously for about three hours; then they stopped. I was then on the best part of the creek and the rain had commenced falling; it looked as if my day's sport was at an end, but I had a very large string and did not feel badly discouraged. I sat under a large rock and ate my lunch of corn bread, fried pork and ginger bread, and waited for the rain to stop. At the end of about an hour the sun came out, and I left the creek and went up to a little clearing, about half a mile, where Crawford had a little cornfield; it was one of the rockiest cornfields that I had ever seen, and I thought I would rather own one of the sand barrens in Florida than such a field as that, but the creek could be fished from the bank through the clearing and I expected to get a dozen or two big fellows in going through it. There are no very deep "holes" through the clearing; it is a gentle ripple all the way, with many rocks with dark nooks under them, overhanging low banks and bushes, and very good ground for fly-casting.

After reaching the clearing I tied on a fresh cinnamon-hackle with a red body, cast over to the opposite side, the fly struck the water by the side of a large rock; there was a splash and a rush down stream to the first of the ripples, and at the end of about two minutes I landed my prize: it was a prize, indeed, and would weigh at least three-quarters of a pound.

Another cast at the extreme lower end of the ripple, and another rise, and another good half-pounder was landed. Things began to look brighter, except some heavy, black clouds could be seen coming down through the gap about half a mile away, and that promised to give me a wetting unless I sought shelter in Crawford's old shanty up in the cornfield.

I kept on fishing until I reached the clearing and then made the best time I knew how to for that old shanty, but I was pretty well soaked when I reached it. Crawford and his boys were there; they had a big fire in the old fire place, and after a "nip" of old North Carolina "mountain dew," I sat down by the fire and dried my clothing. At three o'clock the rain stopped, the sun came out bright and hot and I started for home, three miles from where I was, over a cattle trail, and after having accomplished about half the distance the rain began to pour; there was no shelter to get under, and I commenced whistling to keep up my courage. In five minutes after the storm began I was as wet as I could be, and a temporary shelter would have been of but little use if I could have found one.

When I reached Crawford's house I was wet, tired and about famished with hunger, and while Madam C. was weighing the fish I devoted my best efforts to a big apple pie which the old lady set before me. The pie was made of dried apples, and it might not have been considered one of the daintiest ones that ever was made by a Yankee housewife, but it seemed just at that time to be the best one I ever ate.

About the time I had filled up with pie and paid for my trout, my landlord, farmer Osborn, came up on mule back; he was going up the creek to look for me. It was my first trip alone, and he and his good wife had become alarmed at my long absence.

Osborn said he was afraid I had fallen down some one of those big ledges and broken a leg or two. I told him I was all right, had had no bad falls, but had seen lots of good ones, and could not get a rise from any of them in the deep, dark, wooded portion of the creek. Osborn said those "holes" were full of them, and that we would catch them after the water became a little warmer. There had been no warm rains up to the time of my arrival, the streams were low and but few trout had commenced running.

I had mounted the "mule brute" while we were talking over the events of the day, we were three-fourths of a mile from Osborn's and if it hadn't been for that "mule brute" I do not believe I could have reached home that night; every bone in my body ached.

Supper was nearly ready when we reached the house. I washed, changed my clothing, took a good stiff "horn" of "old rye" and proceeded to the supper table, where I found a surprise awaiting my coming. Osborn had been fishing a few of the deep holes in the river during the afternoon and had caught eleven beauties that would average at least half a pound each. Six of them laid on a platter before me, fried to the most beautiful golden brown you ever saw. I was just hungry enough to lay away two of them, and I did it, without making many remarks about it either.

The rain fell heavily all that night, and the next morning the creeks and river were torrents; no fishing could be done that day, and I did not care much about fishing for one day at least; I was pretty stiff and sore; my old cowhide boots had made my corns tender and I was glad to rest. I had some fine Scotch hooks, tied to a hair snell, but without any fly on them; and after a breakfast of fried trout, fried pork, cornbread and milk I got one of the boys about the place to catch an old white rooster that was strutting around the barnyard. I plucked some of the long fine feathers from his neck, found some lemon-colored dye about the house and dyed them. After they had been dried I took several of those little hooks and tied them with my yellow feathers, using white silk and gold tinsel for bodies and made some very fair looking flies. And they beat all the "store" flies I ever used or saw used during the three months of my visit in that region.

My yellow flies did not come into general use until after the middle of June, when the stick worm had hatched out.

I forgot to mention that I paid Madame Crawford for 23lbs. of trout the day I fished the creek alone. I had at least a dozen, which would have tipped the beam when caught at ¼lb. each.

There were a dozen good hearty appetites to appease in Osborn's family, and even that big string of fish would not be wasted.

About the only fly that can be used in North Carolina is a species of the *Phryganidæ*, familiarly termed cad or caddis fly and in those wilds "stick bait." The females lay their eggs upon the leaves of the overhanging bushes, to which they adhere until they are hatched, a process, which, in warm weather, soon takes place. The eggs produce little six-legged larvæ, which fall in the water and immediately set about constructing for themselves tubelike cases in which to reside secure from their numerous enemies, especially the brook trout. When seen at the bottom of the water these cases appear like short bits of stick, but they will be found on examination to be regularly and beautifully constructed of various materials, some of pieces of reed, grass and the like, and many of fine gravel and sand, which are strongly cemented together with a kind of glue, which the larvæ produce, and which completely resist the action of water.

After having passed sufficient time in the larva state to arrive at a proper degree of maturity, the insect fastens its case to the stem of some water plant or to the under side of a rock, and closing it at each side with a kind of grating, through which the water necessary for breathing flows, it turns to an inactive pupa.

In a few days it issues from its outer case, rises to the surface of the water, and bursting its pupa skin appears in its last and perfect form of a beautiful fly.

I did not observe more than two kinds of these flies when I was in the North Carolina mountains; those were the white and yellow ones. After those flies came trout would not readily take the few worms we were able to find; but about the time the stick worms were hatched we could find plenty of "yellow jacket's" nests, and where we could not cast our flies we used the "yellow jacket's" grubs; no feather upon the hook, and the trout could not possibly resist that bait, and we took many big fellows with that grub.

Several parties of city fellows came up there during my visit. They generally brought dozens of gorgeous flies, laughed at our rude tackle, and when they went home carried big strings of trout which Osborn and I caught for them with our home-made flies, stick worms and hornet grubs.

I used much smaller hooks in those mountain streams than I had ever used before. About the smallest kind of Limerick is the proper kind to use. Most of my flies would not measure more than ⅜ of an inch in length. With such hooks I caught a good many trout of a pound weight each; if my snell and leader held I had but little fear of losing them. I believe I did not break six hooks during the entire time I was there.

The second day after my last tramp was Saturday; the river was at about the right fishing stage, and Osborn said we would go down and fish the big pool, at the mouth of "Hungry" Creek. That pool is about 150yds. in length, about 30yds. in width, and from 2 to 6ft. deep when the river is at the proper fishing stage. The current is slow, and on the east side there is a ledge from 150 to 200ft. high. The side of the ledge is covered with a dense growth of water maples, rhododendrons, vines and blueberry bushes, and it is impossible to fish it on that side; the west side is lined with small willows, which offer little or no protection from the sight of those keen-eyed old settlers who live under the ledge, and in order to fish there successfully one must go there just before dark.

So after sunset we mounted our mules and rode down there, fished a few holes above the big pool while waiting for the last rays of daylight to disappear, and then went to the foot of the pool, waded in until we had reached about the middle, and began casting. I used a white-coachman, one that I had made that day; Osborn used a yellow-hackle with gold body, and his first cast brought a big fellow to the surface. In a moment I got a rise and landed one of a pound weight. This was a pretty fair beginning, I thought. After I had killed my first one the trout commenced rising all around us. I think I could count a dozen at a time. I had not seen anything like it before, and at the end of twenty minutes we had bagged nine big ones; they weighed 11lbs. We could catch no more that night, owing to darkness; we could not see where to cast, and those "old settlers" had stopped rising. We caught about fifty large trout from that pool during my stay there. I do not think anybody but Osborn and myself caught a fish out of that place during the entire summer.

The next day was Sunday, and no fishing was to be done. Those mountain farmers all attend church on Sunday, and if a stranger would stand well with them he must abstain from labor on that day.

After the family had all gone to church, I called the dog, a splendid collie, took my pipe and went after flowers down the road by the side of the river. That road ends at Osborn's house; it is a lovely road to travel on on foot for a short distance on a bright, warm evening. It is well shaded with large chestnuts, oaks and hemlocks, and on that delightful morning the laurels, white azaleas, Indian pinks and many other lovely flowers lent their beauty to the scenery and filled the air with their fragrance. I gathered great clusters of them, all that I could carry, to take to the house.

Upon reaching home Mrs. Osborn brought out two large jars, arranged the flowers and stood them upon the mantel in my room; they made a lovely appearance and filled the room with the sweetest perfume. Every nook and corner was filled with lovely flowers after the first of June, and about the middle of June, when the rhododendrons came into full bloom, the sides of these steep banks along the stream presented such a sight as a lover of flowers would never forget. It was a sight that cannot be described on paper; one may go there and see it as I did.

Is it any wonder that the *Salmo fontinalis* is an aristocrat, as well as the best food fish that is found in fresh water? His home is in the clearest and purest water; he feeds upon the daintiest of food, and is surrounded by the most beautiful scenery, and I think that all true lovers of the gentle sport of angling will agree with me that he is, indeed, the king of fresh-water fishes.

Perhaps some of the readers of FOREST AND STREAM will say I am a little "soft" on the mountain scenery of western North Carolina. I cannot help it if they do. I believe that all true worshippers of that good old man, Izaak Walton, are affected by beautiful scenery as badly as I am. Old father Izaak never saw such a lavish display of beautiful nature as we have in our country, and I believe the western end of the Alleghanies and the Blue Ridge beat any other mountains east of the Rockies in North America; the heavy growth of timber, the dense thickets of bushes and vines, many of which are made beautiful in spring and summer by being covered with brilliant flowers, cover the rough sides of the mountains to their summits, thereby hiding their roughness from view; so that very few of the peaks present the rough, bold and desolate appearance of the Rocky or the White Mountains. RUSH.

THE "GOLDEN TROUT."

Editor Forest and Stream:

In 1885 a large female trout was sent to the Museum of Comparative Zoology at Cambridge, Mass., from Dan Hole Pond by Fish Commissioner Luther Hayes. Through some inadvertence its arrival was attended with uncertainty concerning its history, and it was some time before letters of inquiry led to a correct understanding. The specimen was the original of the figure 16 of which our friend Dr. Bean speaks on page 313 of the current volume of FOREST AND STREAM, Nov. 6, and which he identifies with the species described by himself as *Salvelinus aureolus*. Not wishing at the time to commit myself to a positive identification without seeing more than a single one, and after being repeatedly assured that no European species had been introduced in the pond whence it came, while waiting for other and smaller ones for comparison, the trout was provisionally placed as a variety in a species known to occur in the region. That it was not permanently located will be made evident by turning to page 19 of my article on the "Salmon and Trout" in the Nineteenth Annual Report of the Commissioners on Inland Fisheries of Massachusetts, 1885, where the only reference is the following: "Figure 14 represents a ten-inch male [*Salmo fontinalis*], figure 15 a female of about eleven inches, and figure 16 a female of twenty-one. The latter [a figure of the Dan Hole specimen] differs in various respects from the others, as in the nearly uniform brownish of the back, shape of caudal, etc. A knowledge of the younger stages from the same locality may lead to the separation of this form. Its shape resembles that of the salmon."

It was only after the acquisition of additional specimens, through the friendly interest of Mr. Walter M. Brackett, and Fish Commissioners E. A. Brackett and E. B. Hodge, that I felt warranted in positively asserting the fish to be the "Alpine trout" of Europe (*Salmo alpinus* Linn.). Subsequent acquaintance with this trout has given me no reason for change of opinion, or for doubting that, with my specimens before him, the Doctor would agree with me. Figures of *S. alpinus* in Dr. F. A. Smitt's Swedish monograph on the Salmones represent the Sunapee trout quite as well as if they had been drawn from them. In another article the subject will be dealt with at greater length. S. GARMAN.

CAMBRIDGE, Mass., Nov. 17.

[Doctor Bean was unable to identify the golden trout with the introduced saibling for several reasons, although he observed and wrote about the striking resemblance between the two species before publishing the description of *Salvelinus aureolus*. He had compared a moderate number of the Sunapee trout with saiblings from Germany and Norway and Prof. Smith's beautiful figures had been consulted. Some of the differences recorded by him at the time were as follows: The saibling has 10 gill-rakers below the angle of the first gill-arch, a slender stomach and a very narrow band of hyoid teeth; the golden trout has 14 gill-rakers below the angle, a stout stomach, and the hyoid teeth in a broad band. It is a matter of record also that the first saibling eggs sent to New Hampshire by the U. S. Fish Commission were received and hatched at Plymouth in 1883. Two years later Col. E. B. Hodge sent a golden trout weighing 5½lbs. to the National Museum, and wrote that much larger ones were to be had. It is not probable that the saibling will grow to such size in two years from the egg in any waters. Dr. Bean is desirous of having this subject fully investigated, and will readily acknowledge his mistake if he has redescribed an old trout. He has several statements of trustworthy persons to the effect that the golden trout was caught in Sunapee Lake long before the saibling became a subject of artificial culture, and that it inhabited Dan Hole Pond seventy years ago.]

THE CONGER EEL.

MESSRS. Theodore and Thomas Smith, of South Norwalk, Conn., have been catching a great many conger eels this fall. This eel was formerly unknown at South Norwalk, and there has been considerable speculation as to where it came from and what it could be. It has been used to some extent for the table, and while the flesh is very much lighter in color than that of the common eel its flavor is stronger. The congers taken by the Messrs. Smith average less than 1lb. in weight. They were caught in fyke nets, out among the Norwalk Islands, near shore, in comparatively shoal water.

The conger eel is described in most books under the name of *Conger vulgaris;* other names for it are *Conger oceanica* and *Conger conger*. Dr. Day says it is known at Aberdeen, Scotland, as the evil eel. In Great Egg Harbor Bay, where it is not uncommon, the fishermen call it the sea eel. The species rarely ascends into fresh water. It is voracious and extremely pugnacious, frequently jumping at its captor like a snake, and biting viciously. It grows to a length of six feet, and is said to attain to the weight of 100lbs. In the Southport Aquarium, England, a conger in 5½ years increased in weight from 3lbs. to 90lbs. Some individuals of extremely large size are caught by cod fishermen off Noman's Land. On our coast the fish is not generally eaten, but the Portuguese and Spaniards use it in great quantities, and at one time it found a ready sale in Edinburgh, Scotland, although in British waters it was generally considered unfit for food. As an aquarium fish the conger is very attractive, because of its sleek appearance and pleasing colors. Two examples were brought recently from Chesapeake Bay and are now living in the National Aquarium at Washington.

A SUPPOSED HYBRID TROUT.

Editor Forest and Stream:

The inclosed sketch is an exact outline drawing of a brook trout (*S. fontinalis*) found in the market here in bulk with a number of lake trout (*Salvelinus namaycush*), taken with gill-net on the north shore of Lake Superior on the 1st inst. In general form, color and markings, save the red spots, it had all the appearance of the latter fish; but the square tail, branchiostegals, fin rays and teeth formula were those of the former. It was a male spent fish, 16in. in length by 8¾in. in girth at the front of the dorsal fin, and weighed just 2lbs.

I am no believer in natural hybridism, but this fish comes the nearest to it of all I have ever met with.

I might add that the markings from back to belly were entirely those of the lake trout, lacking, both on the back and fins, the beautiful tortoise tracery of the brook trout. The red spots were double the usual size and on a background of round white, or bluish white, spots. The fish had passed as lake trout and been overlooked as such until I made the discovery. DR. E. STERLING.

CLEVELAND Ohio.

[The sketch shows seven red spots above and fourteen below the lateral line. The tip of the lower jaw is hooked upward so that it reaches almost to the level of the eye. The form is much more elongate than is usual in the brook trout, and the upper parts are shown to be covered with irregular long blotches, which are always noticed upon the hybrid between the brook and lake trout. In our opinion the fish was a cross between these two species, artificially produced, and the probability is that it was obtained by fertilizing eggs of the brook trout with milt of the lake trout. Several of the State Commissions, and some private fishculturists, have been engaged in hybridizing the two species mentioned, and, as the cross is a fertile one, the subdivision has been continued at will; so that individuals deriving only one-quarter or even one-eighth of their parentage from one or the other species are recorded. We agree with Dr. Sterling as to the improbability of natural hybrids among the *Salmonidæ*. It is a pity that the specimen was not preserved in the Doctor's cabinet, so that its probable origin might have been satisfactorily determined. A good figure of the hybrid between the lake and brook trout was published in FOREST AND STREAM of May 9, 1889, and another description of this cross appears in our issue of Jan. 17, 1889. The sketch by Dr. Sterling represents the fish as having a very short head and with the upper jaw reaching to below the middle of the eye. In many respects the fish differs from our notion of the hybrid between lake and brook trout, and we can only hope that additional specimens may yet come into the hands of Dr. Sterling or some other naturalist, who will state their characters in detail.]

DEATH OF SALMON AFTER SPAWNING.

THE following interesting and important letter of Mr. Thomas Mowat, dated at New Westminster, B. C., Sept. 6, 1890, was addressed to Judge James G. Swan in reply to an inquiry concerning the return of Pacific salmon to sea after spawning. Judge Swan forwarded the letter to Col. Marshall McDonald, U. S. Commissioner of Fish and Fisheries, to whom we are indebted for the opportunity of reproducing it:

I have much pleasure in informing you that I have proof without doubt that the *Oncorhynchus*, or Pacific salmon, do in many cases return to fresh water annually, for the purpose of reproducing their species. I have proof of this in the case of the quinnat (*Oncorhynchus chouicha*) and suckeye (*O. nerka*), and I am confident, from observations that I have made, that the cohoes (*Oncorhynchus kisutch*) do return in larger numbers than those first mentioned. During the seasons of 1884, '85, '86, I made use of the leather or harnessmaker's punch to mark the quinnat salmon after they had been partially stripped of their eggs, and were obliged to be returned to the pens. The marking was done by punching one or more holes through the adipose dorsal fin and then passing a piece of colored cloth or twine through the hole, so as to distinguish them from the fish that had not been handled. Sometimes we cut a portion or the whole of this fin off, and these fish were returned to the water after we had finished stripping them. Two successive years later a few of the fish so marked passed through our hands and were recognized, and I learned that some had been taken by the netters. It must be understood that the strings were not left on the fish. The fin was found to be withered somewhat, with the hole partially grown up. Since the season of 1887 we have been operating on the suckeye, and, as I have already described, some of these were marked in a similar way; but owing to having so many in the pens we had to keep different marks on them, so that the tails of some were bent or doubled up and a V-shaped piece taken out. Two of the fish marked in this manner were taken by netters this season and sent to me. One so marked was shown to the editor of the *Columbian* at my office, hence the report.

My contention has always been that at least four species of our salmon return to the rivers to reproduce, the fourth, including those alluded to, is the steelhead, of which none die except by accident. My opinion is that 75 per cent. of the quinnat salmon survive that ascend from 75 to 100 miles inland; those that ascend from 100 to 1,000 miles, or reach the summit of the Rocky Mountains are reduced from various causes down to from 5 to 25 per cent. The percentage of the suckeyes that survive is slightly under that of the quinnat, while that of the cohoes is very large, as they do not ascend so far inland and have a better chance to return. The qualla and humpbacks die in large numbers, as they are more pugnacious, spawn in shallow water and are more liable to disease.

I quite agree with you as to the views held in reference to the salmon returning; they no doubt descend very rapidly and either in the deep water of the center of the streams or along the shores, where they are less apt to come in contact with nets. I have on several occasions noticed the spent suckeye salmon swimming down this river [Frazer] toward the gulf, and I have been informed by the netters that they have taken them; but of course there is not the same chance of capturing them on their return to the ocean.

THOMAS MOWAT.

[The qualla referred to in the above communication we suppose must be the dog salmon (*Oncorhynchus keta*), and the humpback is the *O. gorbuscha*. The steelhead salmon, of course, is really not a species of *Oncorhynchus*, but belongs to the genus *Salmo*, and has very different habits from the species of *Oncorhynchus*. It spawns in the spring and is found in the rivers spent before the *Oncorhynchi* are ready to spawn. The question of the return of the Pacific salmon to the sea after spawning is a very important one and worthy of much more extensive investigation than it has yet received. We have never quite believed that the quinnat and red salmon (*Oncorhynchus chouicha* and *O. nerka*) all die after spawning, as stated by some very good authorities, and yet this is merely a matter of belief and may not be warranted by the facts in the case. We have seen the mending dog salmon (*O. keta*) in fresh water near the sea; we have, also, observed the apparently complete annihilation of the humpbacks after spawning, although not more than a few yards from salt water. What is needed in the case of the quinnat, red salmon and silver salmon is observation of the streams which they ascend for the purpose of spawning continued until the fish descend to the sea. In this way only can the problem be solved.]

ANGLING NOTES.

ANOTHER fishing season has come and gone, leaving us a wealth of pleasant memories to recall during the long winter evenings. Rods and reels are put away, and the breechloaders now engage the sportsman's attention. Unfortunately death has sadly thinned the ranks of the anglers the past few months and we have to mourn the loss of several prominent sportsmen and good companions. John Lowery will be greatly missed at the South Side Sportsmen's Club, when they gather down at the club house next opening day; and Florida will see Dr. Ferber no more. And poor Endicott, who used to be the life of our party down at Bill Chadwick's, at Squan Beach, every season, has also gone to the "happy hunting grounds" where all good sportsmen hope to go. Young Fred Poor's death was also a great shock to his friends and fellow members of the Laurentian Club. Always bright and cheerful, his presence was like a ray of sunshine in camp, and he will be sadly missed next season.

Mr. Theodore Gordon is one of the most thorough fly-fishermen we have ever had the pleasure to meet. He believes what is worth doing at all is worth doing well, so he pays attention to all the little details that go to making a good angler; and above all, will not use bait under any circumstances. He would as soon shoot a quail on the ground. He thinks that we are all wrong on the subject of artificial flies, and believes we ought to discard various foreign fancy patterns, and copy our own natural insects and flies as closely as possible. He carries out his theory in practice. On the Neversink last season no one brought in better baskets of trout than Mr. Gordon, whether they used fly or bait.

We presume it is a waste of time again to caution our readers about putting away their rods at the end of the season without having them put in order; but if they would only pay attention to this caution they would save both themselves and the rod makers much trouble. Besides they would be in better condition next spring. Many neglect this until a day or two before they start on their fishing trip; the result is the workmen do not have time to do the rods justice, the varnish does not get half dry and the whole thing is hurried and unsatisfactory. Also beware of putting rods in closets near furnace flues or up high near the ceiling, where it is always hot and dry, but lay them on the floor of a cool spare room, if possible.

The striped bass fishing still remains fair at Hell Gate, and quite a number have been taken near Robbin's Reef. The method described in these columns last month, that is the gang and spoon with a sandworm for bait, seems to take the largest fish. A good many have been lost owing to the cheap tackle used by many of the fishermen, who are not up to handling the big fellows, and think anything will do, but after a striped bass grows to be a five-pound fish he is not to be trifled with in the swift waters of the "Gate," and it requires good tackle to hold him.

THAT MAMMOTH CARP.

THE capture of the mammoth carp here last Friday morning has been the subject of conversation among the brothers of the rod and reel. The following facts, with reference to the capture of the carp, I have secured from one of the lads who assisted in taking it. The fish was caught about 10 o'clock in the morning in the shallow waters of the Sandy Hill Brook, quite a distance up the stream from the Reservoir Pond, where the fish has probably been for some years, as it is eight years since some eight or ten German carp were placed in "Higgins Pond," which was made by placing a dam in a suitable location upon this Sandy Hill Brook. This dam was carried away by a flood some four or five years ago, when the carp therein found their way down the brook to the reservoir pond of the paper mill, some three or four miles below, which is quite a deep body of water, but not of very large dimensions. Shortly after the freshet that carried the dam out of the Higgins Pond two or three of the German carp were captured in the paper mill pond—one of 1¾lbs. and a third of some 2¾lbs. was captured by the mill hands, but they being ignorant of the name, nature and character of the fish were unable to tell what they were. The capture of this recent fish, however, brought to mind the fact of the taking of the other fish and the fact that the Higgins Pond was stocked with German carp, so that the matter of identification is now an established fact. I am inclined to think from my conversation with the lad who assisted his brother in the capture of the 11lbs. carp, that there is still in the reservoir pond one or more of the fish of considerable size, and it is simply a matter of time to demonstrate this fact, as the inhabitants of the neighborhood where the fish were captured seem determined to find out if such is the case, as all the small boys, factory hands and fishermen in general are trying their skill to secure another of the monsters if there are more of them to be secured. WORONOC.

WESTFIELD, Mass.

RAINBOW TROUT IN COLORADO.—The success of the rainbow trout in Colorado, where it was recently introduced, is wonderful. The species thrives even better than in its native waters and is spreading rapidly. As for its size in its new home, General John Pierce, ex-Fish Commissioner of the State, has caught specimens in the Platte, near Denver, weighing 5 or 6lbs.—J. G.

A NEW NAME FOR BLUEFISH.—Dr. Hugh M. Smith, of Washington, D. C., has informed us that the bluefish is known in Rhode Island waters as Spanish mackerel. The latter fish is evidently unknown in that region, or the two could not have been confounded.

AMERICAN CATFISH'S CARE OF YOUNG.

PROBABLY most persons who have visited rivers and streams which catfish inhabit have observed in the summer an old fish with a black cloud which proved to be of young swimming about. The old fish was the male, and the care of the young was assumed by him till they were old enough to take care of themselves. Several old observers have recorded their impressions of such concourses, and among them were the celebrated Agassiz and Girard.

Prof. Agassiz, in his notice of the *Glanis* of Aristotle, likewise noticed the habits of the common catfish of Massachusetts, the *Amiurus nebulosus*, then generally known as *Pimelodus catus*. Says Prof. Agassiz: "I have had fewer opportunities to watch [this than the sunfish.] However, I have seen them in the spring, which, in the latitude they inhabit, does not fairly set in before the end of May, approach the shores of our ponds, like *Pomotis* [the common sunfish], in pairs, and clear also a space among the low water-grasses, *Scirpus* and the like, in very shallow water, not more than a foot or so in depth, and deposit its eggs in the same manner as *Pomotis*, and watch as carefully and vigilantly over its progeny. Yet I have not been able to ascertain how long the period of incubation lasts. But at different times I have seen the young already hatched, still hanging about within the area of the nest, protected by their watchful parent, sometimes the male and female remaining together with them; at other times, either one or the other of the old fish keeping watch alone. I have seen larger broods of young, already three-fourths of an inch, and even an inch long, remaining together like a flock, around one or the other of the parents; and sometimes both swimming slowly in the center or by the side of what, at some distance, would appear like a black cloud rolling slowly through the water in one or another direction, but which seen more closely, proves to be a flock of young fish. I have observed such flocking broods through the whole month of June, and noticed that in each the young were of larger and larger size in the latter part of the month, until they swim more loosely, and finally disperse half together; the parents standing near the flock, or even in its center, in proportion as the fish are smaller. When watching over the eggs which are not yet hatched, or when following the young brood, the old fish seem very solicitous for the safety of their progeny, and drive away with great fierceness any approaching enemy. I have even seen one dart at a little hand-net which I was dipping in the water, to secure the young which were still hovering over their nest." These observations were recorded in the Proceedings of the American Academy of Arts and Sciences of Boston.

Dr. Girard described a swarming (to borrow the language of apiarists) which he observed near Philadelphia in the following terms:

"In visiting a small pond, situated above Schuylkill Falls village, an innumerable quantity of small fish were seen along shore, near the surface of the water. On approaching them they all suddenly disappeared, and the water being muddy we could not tell where they went. A scoop-net brought to light a subspherical mass, composed exclusively of green confervæ, and which after examination proved to be a regular nest, constructed, as we suppose, by the parent fish, whose progeny it contained; for in it the small fishes seen a moment before near the surface had gone to seek shelter. In all probability the eggs were deposited in it, and when hatched, the young, instead of dispersing themselves, remain for some time congregated under the care of the parent who provides food for them.

"The number of young fish gathered around the nest was at least from 300 to 400 and of different sizes. The largest were about 1¼in. long and the smallest about ¾in. This difference in size seems to us as indicating that eggs had been deposited and fecundated at different periods in the nest.

"They all had the abdomen distended like full grown individuals before spawning. But this was owing to the stomach gorged with food. The skin of the belly was so tender that soon after death it was entirely decomposed, the intestine and stomach then appearing outside of the abdominal cavity.

"The structure of the nest was very simple, confervæ in strings were disposed circularly all around. The size of the entire structure was about 8in. in its longest and 6in. in its shortest diameter. There was at least one opening to get in and out, but this portion of the nest we could not examine thoroughly from want of clear water; and after having been kept for some time out of the water it was entirely deformed.

"The nest laid at the bottom of the pond, 1½ft. deep in that place, and protected by aquatic plants growing along shore. The water here is never subjected to any violent motion, and thus the soft materials of which it was constructed were resistant enough for that particular locality.

"We should think that under other circumstances, as, for instance, a current of water, catfish would construct their nests of a substance more capable of resisting a chance of destruction.

"Further observations will tell us more about this interesting subject, and it is with the hope that some one more favorably situated than we are will devote some attention to it, that we have brought before the Academy the very little it was our good fortune to observe on this occasion."

There is cause for doubt as to the correctness of Dr. Girard's views as to the nest, and in view of our present knowledge doubt is also provoked as to the care of the female for the young, but these observations of two eminent men are reproduced, not only for their intrinsic interest but to incite to observation of the facts in a state of nature.

In 1883 the present writer was fortunate enough to witness the incubation and care of the eggs and young exercised by a common catfish of Eastern America, occurring in the neighborhood of Washington and known as *Amiurus albidus*. In the spring of 1883 a number of adults of this species were obtained from the Potomac River and put into aquaria in the building of the U. S. Fish Commission. Three of these were placed under Col. McDonald's supervision, in a tank, and of these one deposited eggs, which were taken charge of by another. The account of the doings of the fishes has been given by Prof. John A. Ryder in a "Preliminary Notice of the Development and Breeding Habits of the Potomac Catfish," published in the Bulletin of the U. S. Fish Commission (Vol. 3, pp. 225-230).

"On the morning of July 13," 1883, according to Prof. Ryder, "a little after 10 o'clock A. M., we noticed a mass of whitish eggs in one of our aquaria, inhabited by three adult specimens of *Amiurus albidus*, two of which were unmistakably the parents of the brood, for the reason that they did not permit the third one to approach near the mass of eggs which one of them was watching vigilantly. One of the individuals remained constantly over the eggs, agitating the water over them with its anal, ventral and pectoral fins.

"The mass of ova deposited by the female in a corner and at one end of the slate bottom of the aquarium measured about eight inches in length and nearly four inches in width, and was nowhere much over one-half to three-fourths of an inch in thickness. The ova were covered with an adhesive, but not gelatinous, outer envelope; so that they were adherent to the bottom of the aquarium and to each other when their spherical surfaces came in contact, and consequently had intervening spaces for the free passage of water such as would be found in a submerged pile of shot or other spherical bodies. There were probably 2,000 ova in the whole mass, as nearly as could be estimated. The eggs themselves measured about one-sixth of an inch in diameter a short time after oviposition and after the large water space had been formed about the vitellus, between the surface of the latter and the egg membrane. The vitellus measured one-eighth of an inch in diameter. Over the eggs thus deposited one of the fishes was to be constantly seen hovering. It was found that it was forcing fresh water through the mass by rapid vibrations of the anal, ventral and pectoral fins. Over these the parent fish kept zealous guard, constantly agitating the eggs day after day, and on the sixth the young commenced to be hatched, and came out in increasing numbers until the eighth day; they exhibited a tendency to bunch up or school together like young salmon. They also, like the young salmon, tended to face or swim against the currents in the aquarium, a habit common, in fact, to most of the young fishes recently hatched.

"The development of the fins of the new-born were somewhat similar in general character to that usually observed. On the second day the medial natatory fold began to grow out on the dorsal and ventral side and the end of the tail, but up to the fifth day no clearly marked differentiation of any of the unpaired fins had occurred. The first of the paired fins to appear were the pectorals, which began to show themselves on either side of the body on the third day a little way behind the ear, as a pair of low longitudinal folds. The first of the unpaired fins to be developed was the anterior dorsal, which was first marked off from the rest of the natatory fold on the fifth day by a slight emargination near the anterior end of the latter. Coincidently with the development of the first dorsal the first rays of the caudal began to develop on the fifth day, just below the upturned caudal end of the notochord which terminated near the dorsal border of the tail, but no distinct embryonic caudal lobe was ever developed.

"On the fifteenth day after oviposition it was found that they would feed. While debating what should be provided for them, Mr. J. E. Brown threw some pieces of fresh liver into the aquarium, which they devoured with avidity. It was now evident that they were provided with teeth, as they would pull and tug at the fragments of liver with the most dogged perseverance and apparent ferocity. This experiment showed that the right kind of food had been supplied, and on this they flourished, none dying, until the 1st of August. It is worthy of note that when pieces of liver were thrown into the aquarium the parent fishes would apparently often swallow them, with numbers of young ones eating at and hanging to the fragments. I was soon agreeably surprised to find that the parent fishes seemed to swallow only the meat, and that they invariaby ejected the young fish from the mouth uninjured, the parent fish seeming to be able to discriminate instinctively, before deglutition occurred, between what was its proper food and what were its own young. As soon as the young began to feed they commenced to disperse through the water and to all parts of the aquarium, and to manifest less desire to congregate in schools near the male, who also abated his habits of fanning the young with his fins, as was his wont during the early phases of development.

"The most interesting feature of the development and evolution of the young catfishes is the early appearance of the barbels. The first pair which is visible is the maxillary at the angles of the mouth of the embryo. This pair of barbels grows out at either angle of the mouth, on the third day, as a pair of flat lobes, continuous anteriorly with the upper and anterior border of the mouth. By the fifth day the maxillary barbel becomes much prolonged and cylindrical, while the two pairs of chin barbels appear at the same time a little behind the outer margin of the lower jaw as two pairs of low fleshy papillæ. By the seventh day these have grown considerably in length and become cylindrical. On the same day the nasal pair of barbels have been formed as papilliform outgrowths at the anterior margin of the posterior nostrils, the anterior and posterior nostrils being already separated by a pretty wide bridge of tissue. The early separation of the anterior and posterior nostrils by a bridge of tissue in the embryo catfish is a striking instance of the acceleration of precocious development of this structure, which is not usually formed so early. Thus the young continued to flourish until the 30th day of June, or about seventeen days after they had been hatched, when it was determined to solve the question of which sex it was that took charge of the young. The custodian of the aquarium had naturally called it the female, but the present writer recalled the fact that it was the male of most fishes that was the care-taker of eggs and young, and that it would be probably found that the male was the care-taker in this instance. The parent was dissected in the writer's presence by Prof. Ryder and it was found to be a male. "Upon cutting it open and removing a portion of the milt or testes, they were found as a lobulated paired organ on either side of the mesentery, depending from the dorsal wall of the abdomen. The lobes of the testes were digitate. Upon compressing fragments of the testes under the microscope active spermatozoa were pressed out."

The female was also examined. "The spent roe or ovary of the female was a paired organ, the right and left sacs of which were joined together posteriorly. The ovarian lobes or leaflets were disposed transversely in the sac."

Only selections have been made from Prof. Ryder's account, and for further details respecting the development of the young resort must be had to Prof. Ryder's memoir.

The catfish has now been followed from the egg to its development in the image of its parents. Exactly how long the father remains in charge is unknown, but doubtless before he leaves them the young have learned well how to forage for themselves. At this stage they have been examined by Prof. Forbes, who tells us that they live upon insect larvæ (chiefly represented by *Chironomus*) and the small crustaceans *Cyclops* and *Daphnia*.

THEO. GILL.

MASCALONGE TEETH AS TROPHIES.—Under date of Oct. 18 Mr. Gardiner M. Skinner, of Clayton, N. Y., well-known as the maker of the popular Skinner spoons, writes as follows: "Have you ever extracted any of the large teeth from the lower jaw of a mascalonge? It may be done with a small pair of pliers, and they may be attached to a card bearing the record of weight, size, etc., of the fish. I have several of them, and to some they prove a curiosity. An important and large one would be quite a novelty mounted and used as a scarf pin. Don't you think so?"—E. HOUGH.

Fishculture.

HOLDING LARGE SPAWNING FISH.

THE handling of large fish without injury to them is a matter of great difficulty. Nets of any kind allow them to flounder about and rub off their scales and mucous coating and tear their fins. The use of the hands also is liable to injure them, as the grip must be a very secure one.

The writer in transferring large fish to aquaria has found nothing so useful and so little hurtful for the purpose as a square of wet cheese cloth or muslin. By passing it under the fish and grasping the upper corners or edges the fish is held firmly and securely by the soft and clinging

muslin. The idea occurred that it might also be made useful in spawning large fish by making of it a sort of bag with a strap for slinging it over the shoulders of the spawntaker, thus relieving his hands. This, while holding the fish securely, would allow a free use of both hands.

With several holes in the bottom of the bag, through which to squeeze the spawn or milt, one bag could be made to answer for fish of varying degrees of size. The soft, clinging nature of the muslin would allow the needed pressure to be made from the outside, or the hands could be inserted into the bag to clasp the fish. It is possible also that the pressure of the muslin alone would force out the spawn freely. A light oval iron frame at the top of the bag would probably be an advantage.

In some respects light canvas might be found preferable to muslin, especially if oiled or greased, to prevent harshness. It would not, however, allow such free access of air to the gills of the fish. The muslin should be wetted before using, and greasing might be still better, as it would prevent the adhesion of mucus. The accompanying illustration will give a general idea of the apparatus suggested.

W. P. SEAL.

THE TENCH IN MISSOURI.

WE are advised by the U. S. Commissioner of Fish and Fisheries, Col. M. McDonald, that the tench, which were transferred from Washington to the new station at Neosho, Mo., in the fall of 1889, promises to be a very prolific and valuable species in the waters of Missouri. Only twenty-three yearling fish were sent to Neosho, but the superintendent of the station now has from these a stock of 10,000 young fish. The tench has been given a fair trial in Washington City and vicinity, but has apparently made no impression in the streams in which it was planted. An occasional specimen has been caught in the Potomac or one of its tributaries, and found its way to the National Museum or the Fish Commission, as a species unknown to the fishermen; but so far as we are aware the tench has never been taken in sufficient numbers to make itself known in the markets. The same remark applies apparently to all eastern waters. It is gratifying, therefore, to find that this fish, which has a high reputation as a food fish in Europe, promises to thrive in some of our Western streams.

The Neosho waters appear to be peculiarly adapted to introduced fish of the carp family. Mr. Page, the superintendent of the station, has reason to believe that goldfish, which were hatched in April, 1890, have already matured and produced young.

THE AMERICAN FISHERIES SOCIETY.

THE "Transactions of the American Fisheries Society" at their 19th annual meeting, held at Put-in-Bay, Ohio, May 14, 1890, is one of the most attractive and valuable of its series. It contains the address of its president, Mr. E. G. Blackford, the record of the routine business of the meeting and the papers read before the Society. Mr. Fred Mather has papers on the "Eggs of the Pike-perch," "Danger to Fish Eggs in Transit" and an Index Review of the Proceedings of the Society, from the time of its origin to the end of its 18th annual meeting in 1889. The index of authors and subjects is exhaustive and can

not fail to be appreciated by all who have occasion to refer to the publications. Mr. J. H. Bissell has contributed articles on "Detroit Whitefish Station" and "Grayling in Michigan." Mr. Wm. P. Seal discusses the "Desirability of Great Public Aquaria in the United States," and, in connection with Mr. John Gay, reviews "The Past and Present of Fishculture," with an inquiry as to what may be done to further promote and develop the science. Mr. Herschel Whitaker details "Some Experiments in the Impregnation of Pike-perch Eggs," and Mr. Hoyt Post treats of the "Sturgeon, Some Experiments in Hatching." Judge Emory D. Potter wrote upon the "Origin of Fishculture in the United States." Mr. P. P. B. Hyerson describes an "Experiment in Trout Hatching and Rearing in Arkansas." Dr. T. H. Bean has a paper on "The Alaskan Fishes and their Allies," which is illustrated by twenty-one figures of the species. Dr. J. A. Henshall has an article on "Fish Protection." Dr. R. O. Sweeney describes the "Spawning and Development of the Siskiwit."

We miss a table of contents and alphabetical index, as well as the customary discussions of papers, which usually form parts of the published proceedings; but we congratulate the recording secretary of the Society, Mr. E. P. Doyle, upon the neat and attractive appearance of the nineteenth volume of the Transactions.

WHITEFISH WORK OF THE U. S. F. C.—The season about closing has been notable for success in collecting eggs, especially in Lake Michigan. The Alpena station, with a capacity of 45,000,000 eggs, is full and eggs will be sent by messenger from there to the new station at Duluth, Minnesota. At the Put-in-Bay station, in Lake Erie, about 500 jars, holding 150,000 eggs each, have been filled. The station of the Ohio Commission at Sandusky is being filled by the U. S. Commission with eggs from the vicinity of Toledo and Port Clinton. After the eggs are carried far enough forward to bear shipment, many of them will be divided among State Commissioners who have already applied for them; the distribution will include New York, Wisconsin and some other States having suitable waters. It is evident that whitefish are abundant and that artificial propagation of this species is bringing the desired results.

The Kennel.

All communications must reach us by Tuesday of the week they are to be published; and should be sent as much earlier as may be convenient.

FIXTURES.

DOG SHOWS.

Dec. 30 to Jan. 3, 1891.—First Dog Show of the Buckeye Poultry and Pet Stock Association, at Canton, O. James Sterling, Sec'y, 39 North Market street.

1891.

Jan. 6 to 9.—Delaware and Susquehanna Poultry and Pet Stock Association, at Binghamton, N. Y.

Jan. 13 to 17.—Third Annual Dog Show of the South Carolina Poultry and Pet Stock Association, at Charleston, S. C. Benj. McInness, Jr., Secretary.

Jan. 20 to 25.—First Annual Dog Show of the Louisiana Poultry and Pet Stock Association, at New Orleans, La. A. E. Shaw, Secretary, Box 1058.

Jan. 20 to 25.—Dog Show of the Georgia Poultry and Pet Stock Association, at Augusta, Ga. A. H. Vonderleith, Secretary.

Jan. 21 to 26.—Dog Show of the Elmira Poultry and Pet Stock Association, at Elmira, N. Y. Carl Hart, Secretary.

Jan. 27 to 30.—Inaugural Dog Show of the South Carolina Kennel Association, at Greenville, S. C. F. F. Capers, Secretary.

Feb. 24 to 27.—Fifteenth Annual Dog Show of the Westminster Kennel Club, at New York. James Mortimer, Superintendent.

March 3 to 6.—Second Annual Dog Show of the Maryland Kennel Club, at Baltimore, Md. W. Stewart Diffenderffer, Secretary.

March 10 to 13.—First Annual Dog Show of the Duquesne Kennel Club, at Pittsburg, Pa. W. E. Littell, Secretary.

March 16 to 19.—Inaugural Dog Show of the Washington City Kennel Club, at Washington, D. C.

March 24 to 27.—Second Annual Dog Show of the Massachusetts Kennel Club, Lynn, Mass. D. A. Williams, Secretary.

March 31 to April 3.—Seventh Annual Dog Show of the New England Kennel Club, at Boston, Mass. E. H. Moore, Secretary.

April 8 to 11.—Third Annual Dog Show of the Mascoutan Kennel Club, at Chicago, Ill. John L. Lincoln, Jr., Secretary.

April 14 to 17.—Fourth Dog Show of the Cleveland Kennel Club, at Cleveland, O. C. M. Munhall, Secretary.

Sept. 1 to 4.—Dog Show of the Youngstown Kennel Club, at Youngstown, O.

FIELD TRIALS.

Dec. 1.—Second Annual Field Trials of the Central Field Trials Club, at Lexington, N. C. C. H. Odell, Mills Building, New York, Secretary.

1891.

Jan. 19.—Eighth Annual Field Trials of the Pacific Kennel Club, at Bakersfield, Cal. H. H. Briggs, Secretary.

Feb. 2.—Third Annual Field Trials of the Southern Field Trials Club. T. M. Brunby, Secretary, Marietta, Ga.

EASTERN FIELD TRIALS.

THESE trials opened on Thursday, Nov. 13, with the Members' Stake at Otterburn Springs, Amelia Court House, Va. The day was cloudy and continued so throughout the running. Birds were very scarce in the open, the damp weather sending them all to cover. The judges were Messrs. Simon C. Bradley, Greenfield, Conn.; Thos. Johnson, Winnipeg, Manitoba, and W. W. Titus, Mount Pelis, Miss. The drawing was as follows:

MEMBERS' STAKE.

MISS MONARCH (Capt. Chas. Gray), Roy Monarch—Flossy,
with
GUY (Col. Geo. T. Leach), Gladstone's Boy—Lady.

GATH'S MARK (H. Hulman, Jr.), Gath—Gem,
with
ANNIE F. (F. R. Hitchcock), Roderigo—Juno A.

FANNIE M. (H. Hulman, Jr.). Gladstone's Boy—Flame,
with
WHITIE (Herbert Merriam, Gus Bondhu—Royal Myrtle.

BETTY S. (Highland Kennels), Roderigo—Bo Peep,
with
JACK MODOC (W. A. Coster).

First Series.

GUY AND MISS MONARCH.

The start was made at 9:20 A. M. in stubble. Guy soon showed himself the best ranger, going off down the edge of fields for a quarter of a mile, working his ground thoroughly. Half a mile further on Guy hunted through an orchard. Miss Monarch then made game, but nothing found. Birds had left the stubble and gone to hills. Sent on, Miss M. in woods at edge of meadow flushed. Guy followed the covey and pointed, and birds flushed all around him. He was steady to wing. In heavy weeds and brush Guy got another point on running birds. Guy then roaded to a point, but birds were not flushed, being very wild. Dogs went into a swamp and were ordered up. Sent on inside of woods in sedge grass, but no birds being found dogs were ordered up at 10:15. Guy did all the work, was the better ranger and under good control. Miss Monarch pottered and looked to her handler too much.

GATH'S MARK AND ANNIE F.

These two were cast off in open fields at 10:20. Annie started off the faster and ranged in the open, Gath in the branches, through some weeds, but nothing found. Mark here began to extend himself and hunted through weeds without result. Another half mile was covered when Mark worked in woods through sedge grass, but no birds were found. Annie depended too much on her handler. Further on Mark pointed and three birds were flushed, both steady to wing. Annie then worked back some distance. Here Mark got another point which was not allowed. Hulman, in getting up his dog, flushed another bird, Annie pointed, but flushed. Mark then got a point in good style and Annie backed. Birds ran, Mark pointed and birds flushed and flew into tall grass. After working through brush Mark pointed again, birds flushed and dropped three rods away in weeds. Mark then flushed the birds in weeds four feet high. Dogs were then sent to branch where birds were marked, but found nothing. Dogs ordered up at 11:12. Both were fast, but Mark did the best work.

FANNIE M. AND WHITIE.

Sent off at 11:25. Fannie M. showed best speed and made a wide cast in weeds and stubble. Whitie was slow and pottered along a branch. Sent on through cornfield, Whitie pointed. Mr. Merriam flushed, Fannie getting up in time to see them go, both dogs steady to wing. Birds scattered in woods and grass. Fannie then scored a flush. Whitie then pointed a single which flushed wild. The work here was too fast and several birds were missed, the judge putting up the birds the dogs should have pointed. Dogs were ordered up at 12:10. Fannie did some genuine work, but Whitie happened on the birds in brush around the cornfield. Fannie was the faster, but did not seem at home on the scattered birds. She was not used to her owner, Mr. Hulman, and looked more to her handler who was in a buggy near by. Lunch was called at 12:15, after which

JACK MODOC AND BETTY S.

were put down at 1 o'clock in wet, soggy ground. A covey soon flushed near the spectators and scattered. Billy flushed a single, birds had scattered in high broom straw and dogs could not locate them. A move was then made for fresh ground where both dogs soon pointed a lot of birds, both steady to wing. Betty made game and Duryea flushed covey. Jack pointed where they got up. Betty then pointed but no bird was found. One bird was then flushed and Betty getting up dropped to wing. Jack then made a fine point, bird flushed and shot by Mr. Coster. Betty made another point, moved up and came to a point again, bird put up by Mr. Duryea but not shot at. Sent off on new ground Jack soon pointed but moved on and continued roading, getting behind judges and handlers in timber where he was found by reporters, who flushed a bird. Dogs were then taken up, down 45 minutes. Both dogs were fast, but Betty had a little the better of it in this respect. This ended the first series and all dogs remained in as the judges were not satisfied with the work done.

Second Series.

GATH'S MARK AND MISS MONARCH.

Put down at 2:20 in a corn field—drawn blank. Sent on to clover field Mark went on half a mile or so to some grass and weeds, where he came to a point. Hulman flushed, shot and killed. Mark steady to wing and shot, and sent on to retrieve, did his duty well. Dogs were then ordered up at 2:40. Mark showed himself the better dog. The next two,

GUY AND WHITIE,

were cast off at 2:45 in stubble. Guy flushed some birds but stopped to wing. Guy then pointed in pines and grass; he moved up, but Leach put up the pointed bird. Guy soon made another point, Leach putting up the bird. Guy scored another, Leach flushed, fired and missed. Guy pointed again on Whitie's track. Whitie then got a point and Guy backed. Merriman flushed but did not shoot. Dogs up at 3:15. Up to this time seven bevies had been found. The next two,

JACK MODOC AND FANNIE M.

were sent off in weeds at 3:27. Neither could range very fast. Tried in wood bottom but no birds found. No points were made, both ranged wide. Ordered up at 8:55, Fannie was lost for five minutes, not being used to her owner, Mr. Hulman.

ANNIE F. AND BETTY S.

These two were sent off at 4:05 in high weeds and wet ground. Annie was a little the faster. Annie came to a point which proved to be on a lark. Annie moved on ranging finely over a large stubblefield and then into brown straw and sedge, but found nothing. Returning to stubble she came to a point but nothing was flushed. Dogs were ordered up after a long heat, no birds having been located. Both dogs were fast and worked ahead without let up, Betty being a bit faster at finish, both deserve credit for ranging and endurance. This ended the running for the day, and a move was made for the hotel.

Friday.

GATH'S MARK AND BETTY S.

were put down to-day on the Jefferson farm, at 9:03 A. M., in long stubble. Mark roaded in corn, Betty S. down a branch, the latter getting on to a point, Mark backing finely. Birds were put up and both steady to shot. Betty S. then got a point in a fence, moved a little but dropped to order, Mark, ranging off, came up to back. Mark soon made a point and Duryea flushed the bird. Mark then pointed again in leaves and was backed by Betty S. Birds were running then in the leaves, birds then flushed and Betty dropped to wing. Moved on to woods when judges consulted and decided to stop in woods. No birds being found, dogs were ordered up. Mark was the faster, Betty getting to birds first by chance as she was not so well handled.

ANNIE F. AND JACK MODOC.

Put down at 9:35 in corn stubble. Jack started out with a bad flush and ran into the covey, which scattered in every direction. Mr. Coster whipped him. Then the brush was tried, but dogs did not go where birds were. The stubble was hunted over again, but drawn blank. On edge of stubble Jack came to a point, left it, swung round and kept on casting. Annie was brought up here and Jack called off, when they went down side of stubble. Annie seemed to like the open and covered most ground, Jack taking to the edges. Jack came to a staunch point and a rabbit was started. Jack kept pointing, then roaded up and a covey flushed; Jack steady to wing. Annie did not show game. Following covey into briers, Annie pointed, Coster flushed, both dogs steady. Jack then pointed where they got up; both were called off and judges then sent them to woods, but nothing came of it. Sent on, they worked into the cornfield again, Jack made a staunch point, went on, turned back and pointed again. Annie crossed him and did not make game. Dogs were then called up at 11 o'clock. After some consultation the judges decided the awards as follows: Gath's Mark first, Betty S. second, Jack Modoc third.

The running of the regular stakes commenced Nov. 18, at High Point, N. C., as stated in my account of the Members' Stake at Otterburn Springs, the scarcity of birds there, and the impossibility of much open work being done, led the management to pick up stakes and go on the old grounds at this place. It was a wise move and one the club deserves great praise for making. Extra expense and trouble were incurred, but this does not daunt the men who are at the head of the club. Those in attendance at the trials include Messrs. Pierre Lorillard, Jr., E. C. Kent, F. R. Hitchcock, H. B. Duryea, Herbert Merriam, H. B. Anderson, E. H. Hyde, Thos. Johnson, J. M. Taylor, W. L. Washington, A. Merriman, A. Morten, R. A. Gray, C. A. Joyce, C. E. Sherwood, C. Tucker, W. Andrews, W. C. Lindsay, W. B. Mears, L. W. White, John White, W. Tallman, W. Brailsford, A. Cameron, W. W. Titus, Wm. Bradley, Frank Richards, J. B. Stoddard, C. E. Buckle, Capt. McMurdo, E. Dexter, B. Waters, J. M. Avent, and Mr. Carroll, of New York, who, it will be remembered, spent some time recently in Africa with the lordly lion and other big game.

On the grounds, within a short distance of town, birds were found to be fairly plentiful, and it was therefore possible to get through the two first stakes in good time. On Tuesday the 18th an early start was made to the Glass House. The weather being bright and clear, a little frosty in the early morning hours, but during the day it became quite warm, uncomfortably so for those who had to range far afoot. This may be said of the weather during the whole week, so that the club may consider themselves to have been highly favored by the weather clerk, though the heat in the middle of the day made it rather hard for the dogs to pick up scent, especially after running some time.

The Derby stake was concluded Wednesday night, and the decisions made were eminently satisfactory, the best dogs being undoubtedly in their right places. The winner, F. R. Hitchcock's Tory Lieutenant, is a black and white setter dog, by Jean Val Jean out of Princess Helen. J. O. Donner is the breeder. Tory's fine range and snappy action elicited great admiration from the *cognoscenti*, and his good training reflected great credit on his handler, John White, a veteran in the business.

Tapster, the second winner, is a liver and white pointer. He is by King of Kent out of Hops. His sire had already made a reputation for himself as the sire of the phenomenal young dog Rip Rap, who did such startling work last year. Tory Lieutenant has shown himself one of the best Derby winners that ever ran, being little inferior, if any, to the winner Rip Rap of last year, and Mr. Hitchcock may be proud of the mark he has made with his new love—the English setter.

The judges, Messrs. Duryea, Merriman and Johnson did their work well, showing at once that they were men of experience and quick decision. The field of spectators was in the main composed of men who are entirely devoted to field sports, thoroughly understanding the requirements necessary to carry out the trials in an orderly and proper manner, so that there was little need of a marshal or risk of the judges, handlers or dogs being interfered with in their work.

A word of praise for our host, Geo. T. Leach, and I will take the heats in their proper order. It was no small undertaking to provide, at a moment's notice, accommodation and food for forty or fifty hearty men, in such a place as this, but by Tuesday everything was in running order and one cannot speak too highly of the generous table and excellent accommodations provided, the lunches in the field being particularly good and welcome, soup piping hot and always on time.

Tuesday.

DERBY STAKE.

READY II. AND COYOTE.

These two were put down at 8:35 near the Glass House. Ready II., an Irish setter, was handled by H. B. Anderson, and Coyote, an English setter, by Chas. Barker. Weather bright and cool. In sedge grass a bird flushed, Coyote steady to wing; this worked through, nothing more was found. After working a lot of ground, woods and sedge grass, Ready flushed a covey, then made a point and Coyote backed. Anderson put up birds and both dogs were steady to shot and wing. Ranging back into sedge, Coyote roaded to a bird but did not point, bird flushed. Ready then pointed, no bird; Coyote then flushed three birds. Sent on through several fields, Coyote ranging the best, in edge of wheat field Barker walked into birds, near where Coyote was roading. Both dogs then pointed and birds were put up, both steady. Another point by Coyote and the dogs worked through woods and were then ordered up at 9:19. Coyote was the faster and better ranger, and had a little the best in style.

PAUL BO AND ZIG ZAG.

Down at 9:25. Titus handled Paul Bo and Capt. McMurdo Zig Zag. In sedge grass Zig Zag false pointed. Paul then ranged off into weeds and through corn on hillside and over a lot of ground. Both dogs made game, but nothing came of it. Paul then roaded on edge of woods, passed the birds, which flushed into woods; both dogs steady to wing. Zig Zag then made a point and Paul backed, birds flushed and was a little unsteady. Working on down to the edge of woods and through high sedge grass dogs were ordered up at 10:08. Zig Zag was the faster and better ranger and showed more sense, both equal in style.

NELLIE BLY AND TAPSTER.

Nellie Bly, handled by John A. Hunter, and Tapster by C. E. Buckle, were cast off at 10:15 in bottom. Returning to woods Tapster false pointed. On, Nell pointed in edge of wood, Tapster backed. Sent on to find a covey was flushed; both steady. Tapster then made a point, Buckle fired; dog steady to shot and wing. A single then flushed; both dogs steady. Working on Tapster pointed where birds had been. Sent on Tapster flushed a single in high grass, then on through sedge grass, when dogs were ordered up at 11 o'clock. Nellie Bly showed some fair work, but is not so fast as Tapster, not so wide a ranger. A great deal of ground was covered in this heat with little result.

DILL AND REVELER.

Dill handled by Tucker, Reveler by Frank Richards, were cast off at 11:05. The dogs worked through several fields to some woods where Dill pointed, nothing found; on in woods, a covey was flushed by a judge, on the same birds Reveler scored a point, then Dill pointed, Tucker shot, and dog steady to shot and wing. Dogs then worked on through woods where Reveler pointed a single which Richards put up, fired and both dogs steady, then both dogs got a point, moved on and Dill scored another, and Reveler pointed the same birds in pines. Here a reporter put up a bird which dogs had passed. Judges then ordered the handlers to leave the scattered birds and go into the open at 11:40. Dogs worked over the hill through high sedge grass, but nothing being found, the judges ordered dogs up at 11:48. Both dogs were about equal in style and range, but no good work was done. We then made for the old school house for lunch.

RUPERT AND PHŒNESS.

After lunch Rupert, handled by Avent, and Phœness, by Cameron, were cast off at 1:10 in sedge grass. On into woods Phœness did some roading, then out of woods into high sedge, both dogs ranging well, Rupert the better. Soon after Rupert did some pretty work, coming to a point on a bevy, which was put up by Avent, Rupert steady to shot and wing. Rupert then pointed fur. On in sedge grass a bird flushed behind Avent. Phœness over a fence made a point on a covey, which Cameron flushed, Phœness ranged on but Rupert pottered behind. Then Phœness got a point, and moved on to another point by the roadside, and a single got up to the left, Phœness steady to wing. Dogs ordered up at 1:57. Phœness under better control and Cameron's good way of handling was much admired. Rupert ranged wider but was heedless to whistle at times.

WILLIAM H. AND TORY LIEUTENANT.

These two, William H., an Irish setter, handled by Ander-

son, and Tory Lieutenant, handled by John White, were put down in sedge grass near cornfield. Tory at once began to show his speed and range. Working to woods Tory pointed in hedge, birds being on the other side. Tory roaded on down; both dogs made game in sedge grass and then Tory pointed, when birds flushed all round; dogs steady to wing. Dogs then went on in bottom, where a reporter found Tory on a point in long sedge grass. White flushed the bird, both dogs steady. On, Tory pointed in pines, no bird. William H. roaded the bird and put it up. The judges then consulted and dogs were ordered back. Working over a lot of ground, both in woods and open, and nothing being found, dogs were ordered up at 2:50. Tory showed his superiority in style, speed and range.

WHYTE BEDFORD AND SAM R.

These two English setters were cast off at 2:55 in high sedge grass. The former was handled by Tucker and the latter by Titus. Both dogs started off at a good gait through some pines into open fields, then back into pines. Whyte B., by a ditch, pointed birds, which Tucker flushed, dog steady to shot and wing. Sent on in sedge Whyte B. roaded to top of hill and then Titus flushed a single in pine woods, which dogs had passed. Brought back to where birds had been Whyte B. got another point. Dogs sent on, several fields were worked through hedge of woods, when in brush Whyte B. pointed again; Tucker shot, both steady. Whyte B. got another point in sedge, Tucker flushed. Sam R. coming to a point to the right Titus put up, shot and several more flushed, both steady to shot and wing. A few minutes after dogs were ordered up at 3:45. Both showed good range and speed.

VANITY FAIR AND IAN.

Vanity Fair, handled by Hyde, and Ian by Cameron, were put down at 3:55 in corn. Both started off well. Soon Ian roaded to a point on a covey in hedge row, Vanity Fair backed nicely; Cameron flushed birds, both steady to wing. On in corn both dogs got a point, and several birds flushed wild. Sent after scattering birds in weeds Vanity Fair roaded to a flush on a single, steady to wing. Ian pointed in woods, birds gone on, then he roaded to a point in pines, when Cameron flushed; dog steady to shot and wing. Further on, Vanity was found on a staunch point, Ian backed, Hyde shot and killed, both dogs steady. Out of woods, both dogs were ordered through a cornfield, where, on edge of brush, Ian came to a point; sent in to flush, he put up a covey; steady to wing. Vanity coming up roaded where birds had got up. Dogs, further on in weeds, were ordered up at 4:35. Ian showed more range and speed, equal in style.

QUEEN VIC AND PEARLINE.

At 4:37, in open field, Queen Vic, handled by Chas. Barker, and Pearline by W. B. Anderson, were cast off. Vic soon pointed a covey and Pearline backed, birds flushed. On, Queen Vic flushed a single in high grass. Queen Vic here ranged out of sight; brought back, both were sent on over some fields, when dogs were taken up and put down at 4:45 in stubble. Pearline then ranged way off in cornfield and was brought back. After some more ranging through sedge grass dogs were ordered up at 5:20 and a start made for town. Neither did very good work, Pearline having a slight advantage.

Wednesday.

RAZZLE AND TYKE.

The meet to-day was near the town, weather being bright and frosty. The above dogs were put down at 8:17 in sedge grass. Razzle was handled by S. C. Bradley and Tyke, the English dog, by Cameron. Both dogs worked through the woods but nothing was found, then a lot of ranging was done in the open, mostly in sedge grass, for about 45m. Then at edge of field Razzle pointed a bevy, steady to shot and wing. Then Tyke roaded into woods when he flushed a single, and then pointed another close to it, which flushed, dog steady to wing both times. Out into corn, some more ranging was indulged in but no game being found the dogs were ordered up at 9:23. Razzle had a little the best of it throughout in speed and range, Tyke did a good deal of pottering work, pointing repeatedly and then moving on.

TRAP, JR., AND MAID OF KENT.

Trap, handled by Geo. Grey, Maid of Kent by C. E. Buckle, were put down in stubble field at 9:50. Maid soon got a point on a covey in ditch, Trap backing nicely, Buckle shot, both steady to shot and wing. Ranging off into high grass, Maid pointed a single and roading on two more flushed directly afterward, another of the same bevy got up a few yards further on; Trap then pointed the same birds, Grey shot, both steady. In edge of woods, Trap pointed again, the birds flushing. In woods Maid then worked on to the birds and pointed several singles in quick succession, showing good nose and clean work; Trap pointed again, when dogs were ordered up at 10:10. Both dogs ranged wide but Maid of Kent showed the better work and will, of course, stay in. This finished the first series and the judges then consulted, having now reached the Model farm. After one hour and twenty minutes lounging a decision was arrived at, and Tapster, Tory Lieutenant, Maid of Kent, remained in for second series, but it was decided to give Whyte Bedford, Ian, Phœness, Nellie Bly, Sam R., Trap, Jr., Rupert, Dill, Tyke and Razzle another chance to show what they could do. After lunch a start was make with

RAZZLE AND IAN

in stubble at 11:45. The following heats were most of them of short duration. In a few minutes Ian made game, and a single flushed ahead of him by the side of the woods. Then Razzle roaded to a point in a ditch in sedge field: then a point was made by Ian, another by Razzle and another by Ian, all on scattered birds. Dogs were then ordered up at 12 M. After lunch the next two,

PHŒNESS AND NELLIE BLY,

were put down at 12:46 in weeds. Phœness false pointed in woods. After working through the dogs were taken up till 1:12, when they were put down in the open in sedge grass. Nell roaded to a point in corn, but nothing came of it; dogs were then ordered up at 1:20 P. M., having found no game.

SAM R. AND TRAP, JR.

These two were put down at 1:22 in a cornfield. Working over into weeds and sedge both dogs ranged well ahead, Sam R. coming to a point on a covey at edge of woods was backed by Trap. Titus shot, both dogs steady. This was a very pretty piece of work, putting every one into good spirits again, as it gets monotonous riding along field after field without finding. Sam R. then made another point, and sent in to find made a wide cast, but nothing came of it. Sam hunted alone through woods, and coming back roaded to a point; then he pointed another bird in a fallen tree and was ordered up at 1:45, having done some good work, showing better speed and range than the other dog.

RUPERT AND DILL.

Down at 1:47 in sedge grass and ranging out well ahead, Rupert made a point on covey; birds put up and dog steady to shot and wing. Then he scored two points on the scattered birds. Dill flushed and then roaded on, when judges ordered dogs up at 2:16. Both ranged wide and were equal in style and speed.

RAZZLE AND TYKE.

Tyke, the pointer, and Razzle, English setter, were put down at 2:22 at the edge of some pines. Tyke false pointed; he is uncertain in his work and looks too much to his handler, as most of the English dogs do. On, Razzle pointed a covey by the roadside; birds flushed, dogs steady to shot and wing. Here the *World* reporter, Mr. Morton, got a nasty kick in the back, but a drop of medicine soon put him in the saddle again. Razzle in woods made a fine point, and Tyke also got a point on the same bird, both steady to wing. Dogs up at 2:42. Razzle did more clever and dashing work.

The judges now consulted as to which should remain in with the others in second series, and decided that Tory Lieutenant, Tapster, Sam R. and Maid of Kent should run off for the stakes in the order named.

Second Series.

TORY LIEUTENANT AND TAPSTER.

These two were put down in open fields at 3:22. Tapster started off at a clipping gait and soon made a good point on a covey in edge of pines, Tory backing nicely, dogs steady to shot and wing. Roading on, Tory secured point on some birds, and then Tapster, called up to back, went in ahead and flushed two birds, but Tory did not budge. Further on each scored a single. Tory in a sedge field then pointed a covey and Tap backed, both steady to shot and wing. The dogs were then ordered up at 3:45. Both showed good work, but Tory was more finished in his style of going up to his game and was a little the speedier and wider in range. Judges now consulted for some minutes and then ordered the next brace,

SAM R. AND MAID OF KENT,

down at 3:55, where the other two had been taken up. After ranging over all kinds of country for more than an hour, dogs being taken up and held for more likely ground two or three times, making a very tedious hunt, Maid came to a point in sedge grass and Sam backed nicely, both steady to shot and wing. Following birds over into woods Sam pointed again by the side of a fence, but birds had run on. Dogs were then ordered up at 5:10 and no one was at all sorry. This was the poorest game day during the week. After supper, the judges decided that F. R. Hitchcock's Tory Lieutenant should take first prize, Tapster second, and Maid of Kent and Sam R. divided third money. The decision was received with approbation, and the healths of owner, breeder, handler and dog were toasted right royally in the club room.

SUMMARY.

First Series.

READY II. (Max Wenzel), Irish setter bitch (Red Dash—Ready),

with

COYOTE (J. I. Case, Jr.), black, white and tan English setter dog (King Noble—Cricket).

PAUL BO. (T. M. Brumby), black, white and tan English setter dog (Paul Gladstone—Bohemian Girl),

with

ZIG ZAG (Charlottesville Field Trial Kennels), liver and white pointer dog (King Kent—Hops).

NELLIE BLY (J. H. & J. A. Hunter), orange and white English setter bitch (Ben Hill—Daisy Hunter),

with

TAPSTER (Charlottesville Field Trial Kennels), liver and white pointer dog (King of Kent—Hops).

LILL (P. Lorillard, Jr.), black, white and tan English setter dog (Toledo Blade—Dashing Lady),

with

REVELER (W. B. Hill), black and white ticked English setter dog (Gath's Mark—Esther).

RUPERT (Memphis & Avent Kennels), black, white and tan English setter dog (Roderigo—Bo Peep),

with

PHŒNESS (A. P. Haywood-Lonsdale) black and white English setter bitch (Woodhill Bruce—Lucy).

WILLIAM H. (Max Wenzel) Irish setter dog (Red Dash—Ready).

with

TORY LIEUTENANT (F. R. Hitchcock), black and white English setter dog (Jean Val Jean—Princess Helene).

WHYTE B. (P. H. Bryson), black, white and tan English setter dog (Roderigo—Florence Gladstone),

with

SAM R. (W. W. Titus), black and white English setter dog (Dash R.—Daisy Hope).

VANITY FAIR (W. Wilson), black, white and tan English setter dog (Roderigo—Pet Gladstone),

with

IAN (A. P. Haywood-Lonsdale), black and white English setter dog (Woodhill Bruce—Lucy).

QUEEN VIC (J. I. Case, Jr.), black, white and tan English setter bitch (King Noble—Vashti),

with

PEARLINA (Elmwood Kennels), black, white and tan English setter bitch (King Dan—M'liss).

RAZZLE (N. S. Simpkins), liver and white pointer dog (Dexter—Seldom),

with

TYKE (A. P. Haywood-Lonsdale), liver and white ticked pointer dog (Ightfield Dick—Perditta).

TRAP, JR. (G. C. Gray), lemon and white English setter bitch (Ruby's Druid—Trap),

with

MAID OF KENT (Charlottesville Field Trial Kennels), liver and white ticked pointer bitch (King of Kent—Hops).

Second Series.

Tapster with Tory Lieutenant.
Maid of Kent with Sam R
Tory Lieutenant first, Tapster second, Maid of Kent and Sam R. divided third.

ALL-AGED STAKE.

The drawing for this stake took place immediately after the decision was given in the Derby, and resulted as follows:

IGHTFIELD GUELPH (R. P. Heywood Lonsdale), liver and white bitch (Bang's Boy—Linda),

with

TORY LIEUTENANT (F. R. Hitchcock), black and white setter dog (Jean Val Jean—Princess Helen).

DAISY HUNTER (J. A. & Jos. H. Hunter), orange and white setter bitch (Gath's Hope—Daisy F.),

with

INCHIQUIN (John J. Scanlan), Irish setter dog (Shandon II.—Iona).

DARRAGH PAT (Hudson River Kennels), Irish setter dog (Chief—Lassie),

with

DUKE OF HESSEN (Hempstead Kennels), liver and white pointer dog (Luck of Hessen—Blarney).

BARKER'S GROUSE (S. F. Barker), liver and white dog (Mainspring—Swan's Fly),

with

BANDANA (Will Wilson), black, white and tan dog (May Dawn—Doc).

SHOT (Meares & Brown), lemon and white dog (Heno—Vic),

with

KING'S DAN (Elmwood Kennels), blue ticked dog (King Noble—Elsie Belton).

HARRY C. (Elmwood Kennels), black, white and tan dog (Roderigo—Countess Hona),

with

SARSFIELD (W. L. Washington), Irish setter dog (Garryowen—Curragh Bell II.).

TILLIE BORU (George E. Gray), Irish setter bitch (Brian Boru, Jr.—Biddy),

with

ANTOINE (J. M. Avent), black, white and tan dog (Roderigo—Bo Peep).

DAISY HOPE (W. W. Titus), orange and white setter bitch (Gath's Hope—Daisy F.),

with

CLAUDE (C. P. Fox), black, white and tan dog (Roderigo—Lillian).

EL RIO REY (R. M. Hutchings), black, white and tan dog (Gath's Mark—Blue Chiqua),

with

ORANGE DON (Meares & Strudwick), black, white and tan dog (Decatur—Juliet).

EDGEMARK (Francis S. Brown), black, white and tan dog (Skidmore—Flo Maclin),

with

PRINCE L. (J. I. Case), black, white and tan dog (King Noble—Elsie Belton).

FANNIE M. (H. Hulman, Jr.), black, white and tan bitch (Gladstone's Boy—Flame),

with

ROI D'OR (O. W. Donner), black, white and tan dog (Roderigo—Bo-Peep).

IGHTFIELD DEUCE (R. P. Lonsdale), liver and white pointer bitch (Wynstay—Dainty),

with

LILLEY BURGESS (Frank T. Richards), orange and white setter bitch (Gath's Mark—Esther).

IGHTFIELD RANGER (R. P. Lonsdale), black, white and tan dog (Dick Wind 'Em—Peep-Bo),

with

CASSIO (J. M. Avent), black, white and tan dog (Count Noble—Lizzie Hopkins).

Thursday—First Series.

IGHTFIELD GUELPH AND TORY LIEUTENANT.

This brace was put down at 8:45 in grass field. W. Brailsford handled Guelph and John White had charge of Tory. The weather was as usual bright and cool, wind south. Tory at once started off at his usual fast gait, ranging wide. After some twenty minutes' work Tory pointed a covey by a ditch and was steady to shot and wing. On in pines Tory scored again, and moving on got another, which Guelph backed. Tory then was taken up and Guelph worked on alone, and while ranging came to a sudden point. Birds put up, dog steady to shot and wing, and retrieved bird. Both dogs were then sent on in the open stubble, and at 9:27 were ordered up. Tory showed most speed and range.

DAISY HUNTER AND INCHIQUIN.

Cast off at 9:36 at edge of pines, Daisy was handled by owner and the Irish setter by Irwin. At edge of pines Daisy pointed a covey, Inchiquin coming up, backed to order. Inchiquin steady to shot and wing, but Daisy broke shot. Daisy, jumping over fence, stiffened on a point in ditch, showing a very smart piece of work, steady to shot and wing. Daisy made another point on scattered birds, and Inchiquin roaded to a point without result. Inchiquin roaded on but found nothing. In pines Daisy made a point on single bird, steady to shot and wing. Inchiquin was then sent on alone, roading to point on the birds, and then pointed the rest of the covey a little further on, which then flushed. Irwin shot, dog steady to shot and wing. Ordered up at 10:22. Daisy was the faster and wider ranger, and showed more style.

DARRAGH PAT AND DUKE OF HESSEN.

These two were put down at 10:30 in open field. Pat was handled by W. Tallman and Duke of Hessen by John White. Duke at once started off at a good clip; in fact, both dogs ranged well, but Duke was the faster. In about twenty minutes Pat pointed a covey in a ditch, which flushed wild; dog steady to wing. Duke soon got on to the same birds and pointed in edge of sedge grass; birds put up, White shot and killed; dog steady to shot and wing, retrieving bird nicely. Pat then pointed in corn patch, then roaded on and shortly pointed again, when a single flushed, Tallman shot and killed, dog steady to shot and wing; Pat retrived bird. Dogs up at 11:58 and then Pat put down alone. He soon pointed birds at edge of pines, which Tallman flushed; dog steady to wing. Then Duke was put down till 12:04, when they were ordered up. Duke showed more style and freer range.

BARKER'S GROUSE AND BANDANA.

These two were put down at 12:08, Tallman handling Grouse and Hyde Bandana. Bandana soon pointed in high grass; but nothing was found. Tallman in pines then walked up a single, which Bandana had passed and the single flushed near by. Bandana roaded on, pointed, then moved on following the foot scent; further on Bandana got on to the main covey, and Grouse coming up backed nicely. Hyde fired, both steady to shot and wing. Sent on over rough ground into pines Grouse got a point on the marked covey. Tallman flushed, dogs steady. Grouse then pointed again and roaded on out of sight. Bandana taken up, but in two minutes dogs were sent on again. Ordered up at 12:06, when a move was made for lunch.

SHOT AND KING'S DON.

Cast off at 12:45 P. M. in open field. Meares handling Shot and Bradley King's Don. Shot soon pointed a covey in broom straw, Meares put up and shot, dog unsteady to wing. On, both pointed the same bird that was shot at. In a ditch King's Don pointed a covey and Shot called to back did not do so, Bradley fired and missed, flushed birds, both steady to shot and wing. After some more work the dogs were ordered up at 1:41 P. M. Both ranged well, Don had the speed and range and was under better control than Shot.

HARRY C. AND SARSFIELD.

Harry C., handled by Bradley, and Sarsfield, by Irwin, were put down at 1:58 in wheat field. In sedge grass Harry made game and then pointed some birds that flushed wild, Bradley shot and missed, dogs steady. Sarsfield in woods roaded to a single which flushed to one side of him; further on in woods, Harry pointed but birds had gone on; then out of woods alongside a stream, a single flushed while Harry was in the water. Dogs up at 2:40. Harry had better range and style, Sarsfield, for a dog of his age, did good work and ranged well. He completely upset the rumors as to his gunshyness and unfitness for the field.

TILLIE BORU AND ANTOINE.

These two were put down at 2:45 in sedge grass. Both dogs were handled by their respective owners. They started off at a good gait, and Antoine soon got on to a covey, pointed and was backed nicely by Tillie; birds were flushed, but not shot at. Antoine then pointed two of the covey in pines. Tillie coming on backed, both steady to wing. On

Antoine pointed, moved on out into the open, then into pines, where he pointed and flushed a covey. Avent shot, dogs steady. Across a swamp Antoine got another point and was again backed by Tillie and a single flushed. Both dogs did some roading in woods, Antoine pointing, but no bird put up. Out into the open in weeds Tillie roaded and came to a point, and a few yards further on Antoine pointed a large covey; Avent shot; both dogs steady. Tillie was then taken into woods, where bird had been marked down, where she pointed a covey in the fence. Gray shot and missed, dog steady to shot and wing. Dogs were then taken up at 3:38.

DAISY HOPE AND CLAUDE.

Titus handling his own bitch and Bradley, Claude. These two were put down in sedge field at 3:54. Both off at speed, when Claude soon pointed a covey in pines, Bradley shot and missed, dog steady. Daisy had meanwhile ranged off some distance in woods; brought back, further on she pointed and Claude backed; Titus shot and killed and Daisy retrieved bird. Then Claude pointed and his handler flushed a single some distance away, and yet another flushed near by; Claude then roaded to edge of woods. Daisy soon pointed a single. Dogs up at 4:15. Down again in corn at 4:22, and on in high sedge a bevy flushed. Daisy then got a point on two of these birds and Claude backed nicely. Birds flushed and both dogs were steady. Daisy then roaded on and pointed, Claude backing, but nothing found. Daisy further on pointed one of the scattered birds. Bradley shot for a retrieve, but missed. Dogs were then ordered up at 4:40. Both good rangers and showed plenty of style.

EL RIO REY AND ORANGE DON.

Cast off at 4:42. El Rio Rey was handled by Titus and Orange Don by Meares. El Rio showed most speed and range at the start. After working for about 20 minutes, Orange Don roaded to a point on a single of scattered birds, which Meares killed, dog steady to shot and wing. On the same covey El Rio got a point in sedge, birds put up, Titus shot, dogs steady. Another single flushed in front of the dogs. Then both dogs got a point, Don on a single, which Meares flushed and killed; sent to retrieve, Don did not acquit himself very creditably. El Rio then roaded to a point on covey at side of woods, Titus put up birds, misfired, dogs steady to wing. Working on Don came to a point near some pines, sent on to find, with no result. Dogs were then taken up and a start made for town and dinner.

Friday.

EDGEMARK AND PRINCE LUCIFER.

Another bright morning saw us all early at the Blair field, and the dogs were cast off at 8:25 in sedge grass. Bradley had charge of Edgemark and Barker handled Prince Lucifer. Both started off fast and in two minutes Prince had a covey marked, birds flushed and dog steady to wing; Edgemark backed. Further on, in pines, Prince pointed false. Both dogs then pointed some birds in weeds, birds put up, both were steady to shot and wing, both handlers firing. Prince Lucifer then, in galloping across a sedge field, stopped short on a point, the other dog backing, but birds had run on. In woods Prince pointed again without result, though two birds flushed some distance lower down. On, Edgemark made a point, bird killed and dog steady to shot and wing. In oak woods Prince pointed a single, Barker shot and missed, both dogs steady. Dogs ordered up at 9:10. Prince Lucifer showed more style and slightly the faster and wider ranger.

FANNIE M. AND ROI D'OR.

Off in sedge grass at 9:15. Fannie M. was handled by Stoddard and Roi by Buckle. Both started off at a good gait, Roi beginning at edge of oak woods with a false point. In sedge about ten minutes after Roi pointed a covey very nicely, Buckle put up and killed. Roi sent on to retrieve did so after some casting about. Roi then roaded to woods when he pointed, sent on to find, two birds flushed ahead of him. Fannie further on pointed a single which Stoddard killed; sent to retrieve she acquitted herself well. After ranging over several more fields without finding, dogs were ordered up at 10:03. Both showed good range and speed, Fannie M. being somewhat the best in this respect, style about equal.

IGHTFIELD DEUCE AND LILLY BURGESS.

These two were cast off at 10:11 in sedge and stubble. W. Brailsford handled Deuce and Richards Lilly Burgess. A covey was soon flushed by Brailsford in a field that Lilly had been over. Birds marked down in woods. Sent on both dogs pointed and birds flushed wild. Lilly then cast wide over a field and made a nice point on a brace. Deuce, brought up to back, did so. Lilly working on, a single flushed in dry leaves. Then the woods, a cornfield and some stubble were worked out without result. Some more likely places were hunted through, some of which was hard on the English dog, a pointer, but she went at it gamely, and at the end of 45 minutes was going better than the setter. Dogs up, down 50 minutes. At first the setter had the speed and range, but as above stated gave place to the pointer in this respect, style about equal.

IGHTFIELD RANGER AND CASSIO.

The last brace in this series was put down at 11:10 in stubble, Brailsford handling the English dog and Avent his own. Cassio coming down the side of a hill pointed a covey very smartly, birds at the same flushed wild some distance ahead. On the singles Cassio made two quick points. Ranger, acting very puppyish, failed to point several birds that were near him and while Cassio was pointing ahead of him. Ranger then pointed a cripple and tried to catch it, and soon made another point on bird, which Brailsford put up and shot at. Ranger then flushed, but stopped to wing. After some time Cassio found a covey and pointed in pines. These were not followed, and a course was laid for the Model Farm. Cassio went his usual snappy gait, and with the exception of occasionally stopping to look, ran well. Ranger lacks the speed, range and style for this country. Down 45m. The judges consulted after lunch and decided that the dogs worthy to remain in to run in second series were Duke of Hesson, Daisy Hunter, Prince Lucifer and Shot. There was a good deal of dissatisfaction at this, as there were six or eight dogs left out that had shown equally as good work, if not better, than two or three of those left in and which eventually proved the case.

Second Series.

DUKE OF HESSEN AND DAISY HOPE.

Cast off in sedge at 2:42, the dogs ranged through some fields and oak patches, both ranging out of sight for several minutes. Duke came back to whistle, but Daisy was not found for some time, being in corn at top of a hill. Both dogs then started again at 3:30 in sedge grass, through an orchard, into some woods, then in woods Daisy pointed a large covey, which were marked down in woods. Titus flushed, dog steady. The pointer working off meanwhile in the woods with Judge Merriman. In pines Daisy got a single, and at the same time a few yards further on Duke pointed to the rest of the covey, which were flushed by White. Further on, in pines, Daisy pointed and Duke backed, no bird put up. Then Duke pointed a single, White shot, Duke steady. Ordered up at 3:33. Both are speedy and wide rangers, a little too much so at times; equal in style.

SHOT AND PRINCE LUCIFER.

Shot, handled by Barker, and Prince, by Meares, were put down at 3:47. Two minutes later at the bottom of a hill Prince scored a pretty point, then roaded on a couple of yards and pointed again, when Barker put up a large covey which was marked down in woods on hillside. Meares shot and missed, dog steady. After the marked birds, in ditch at edge of woods, Prince roaded a few yards, when Shot pointed a single, which Barker shot, and retrieved the bird very nicely. Dogs were then taken up and put down where the covey was first found. In open field Prince did a good piece of work, though his handler was whistling him off all the time, roading to a covey in the very spot when Mr. O'Bannon had to move his horse out of the dog's way, and was much astonished when the dog pointed a covey, which Meares put up and killed, dog steady to shot and wing, and retrieved the bird. Dogs were then ordered up at 4:15.

DUKE OF HESSEN AND DAISY HOPE.

These two were then put down again about a quarter of a mile further on, at 4:33, in clover and sedge grass. The dogs soon parted company and in oak woods to the left Daisy pointed a covey. Titus put up the birds and fired. Daisy sent in to retrieve, failed to find wounded bird. In edge of woods Daisy pointed and Duke was brought up to back. Titus flushed the covey into woods, shot and killed and Daisy retrieved the bird. Dogs were then ordered up and a start made for town. Both ranged well and worked their ground thoroughly. In the evening the judges very properly changed their minds and decided to give some of the other dogs a chance to show their mettle again. Those given another life to-morrow are Duke of Hessen, Shot, Fannie M., Ightfield Deuce, Lilly Burgess, Cassio, Harry C., Ightfield Guelph, Daisy Hope, Daisy Hunter, Prince Lucifer and Antoine.

Saturday.

Every one was pleased to think the judges had seen fit to alter their decision of Friday afternoon and give several more dogs a chance that had shown equal merit to those, with one exception perhaps, at first selected. The start was from the Glass House, and at 8:36 the first brace,

DUKE OF HESSEN AND SHOT,

were put down in a sedge field. The weather was mild and somewhat cloudy, quite a change from previous days. It was not long before Duke flushed a covey which flew into pines, and this bad work affected his chances in the stake, no doubt, to some extent. Lower down the field, Shot had stiffened to a point, birds flushed and dog was steady to wing. Both pointed in pines but birds had got up. They were then ordered up at 8:50.

IGHTFIELD DEUCE AND FANNIE M.

These two were put down in corn stubble at 9:02. Both started off in good style, Fannie M. being the wider ranger. Deuce hunted after a while very houndy, nosing the scent too much, Fannie's style being accordingly very noticeable in comparison. In oaks Fannie pointed nicely, steady to wing. On in pines Deuce pointed at the very edge a single, which Brailsford put up, and dog jumped at bird as it flushed toward her. Deuce then pointed again, Brailsford shot and missed, Deuce steady. Further on Fannie pointed and was backed by Deuce, but no bird was found. Fannie catching up to the birds made a very fine point on a single, which Stoddard put up, but could not shoot on account of reporters, who dropped to gun with more celerity than grace. On, Fannie pointed again, birds had run on. Fannie then roaded to the covey and was steady to flush, she then pointed fur. On in broom straw Fannie pointed and held it till Deuce was brought up to back. Another rabbit was put up. Dogs up at 9:38. Neither showed any great work, though Fannie had the best of it.

LILLY BURGESS AND CASSIO.

In sedge grass these two were cast off at 9:40. Lilly was quite lame in the early morning and was stiff in her action. Cassio soon pointed a covey, Lilly came and took the point with him. Birds were marked in rag weeds. On, both pointed; Avent shot and missed, then Richards killed and Lilly retrieved. Cassio then pointed a rabbit in edge of woods. Lilly then cast up edge of woods and pointed a single. The dogs were then taken up twenty minutes. Only fair work was done and not up to winning form.

HARRY C. AND IGHTFIELD GUELPH.

Down at 10:05 in stubble. Bradley walked into a covey, Guelph coming up slowly pointed, when they got up. Going on, Harry ranged out over stubble, hunting fast and wide, the English dog, as usual, keeping more at home. In pines Guelph did better; roaded up and pointed a covey, which Brailsford killed and bitch retrieved poorly. In weeds Harry made a point, moved on and flushed; steady to wing. Guelph then pointed nicely and Harry backed. Dogs up at 10:35.

DAISY HOPE AND DAISY HUNTER.

These two sisters were put down at 10:42 in ploughed field at edge of woods. They were almost identical in color, the only difference being a couple of orange spots on Daisy Hunter's loin. Both started roading in different parts of the field; Hunter finally pointed a covey in a brush heap. Handler shot and killed, bird retrieved nicely. Hope then pointed by the side of fallen timber, Hunter backing; birds flushed, Titus killed and Hope retrieved after a wide cast. On in pines Hope pointed a single, Titus flushed, steady to wing. In another part of pines Hope pointed another single; Titus put up the bird, dog steady. Sent on through sedge grass to marked birds, Hope pointed the covey which Titus flushed. Hope was then taken up to wind for Hunter, who was lost, but eventually found pointing a bevy. Dogs up. Hope did some very good work without a fault on the scattered birds.

PRINCE LUCIFER AND ANTOINE.

Down at 11:19 in corn. In oak woods, Antoine pointed, nothing found. At edge of wheat, out of woods, Prince pointed a single, Barker shot and missed. Antoine then got a point in sedge and Avent flushed two birds, Prince backed, both steady. In open, dogs were ordered up at 11:35. Both were about equal in range and speed. A move was made for lunch and judges consulted for some time. About 12:30 they decided on the four to finally run in the third series as follows: Ightfield Guelph, Shot, Harry C. and Daisy Hope.

IGHTFIELD GUELPH AND SHOT.

After lunch at the old school house, this brace was put down at 1:20 in sedge grass. Shot made game in some briers while Guelph was roading in the bottom and working up to birds, pointed a covey, part of which flushed. This was a bit of pottering work. Dog was steady to wing. At the same time Shot went up ahead and located birds in a likely place, and held his point till Guelph came up. Meares shot and missed, dogs steady. In edge of oak woods Shot pointed a single nicely; sent on he pointed and flushed another to the right. Guelph then pointed and Brailsford killed, bird retrieved. Then Shot pointed again. Guelph backed but birds had gone on. Shot pointed again on foot scent. Following on into sedge grass Shot pointed again and birds flushed. In edge of sedge Shot pointed, Guelph coming up went in and took his point instead of backing; a single flushed, both steady. Back into sedge, Guelph roaded to a point on a scattered covey which flew into woods. After some more ranging dogs were taken up at 1:57. Shot showed better range, Guelph not going up to his points in a confident manner.

HARRY C. AND DAISY HOPE.

These two good ones were put down at 2:05 in sedge grass. Daisy started off the fastest, and after crossing a creek was lost some minutes and finally found by Mr. Lorillard. Meanwhile Harry C. pointed a covey. Soon after this Daisy was lost again, but the character of ground was such that she should have been held and not allowed to hunt out and range so far. It was shown conclusively in the last heat with her sister, that she could be made to hunt to the gun when required. In this case, two wide-ranging dogs were put down and their handlers were afraid to restrict their range. Dogs were then taken up and a move made to more open ground, where Daisy was put down alone at 2:59. After working out a lot of country she was missed again, but was found within 200yds. pointing a covey, birds were flushed and dogs taken up at 3:20.

DUKE OF HESSEN AND HARRY C.

Duke of Hessen was tried with Harry C. again at 3:24 in stubble. Harry flushed a covey in rag weed field and birds marked down; were not found. Afterward Harry pointed again on side of hill and Duke backed a long way off; no birds. Duke soon after pointed a covey in pines. Harry ran close to birds without seeing Duke and flushed them. Harry pointed again, Duke pointing at the same time. Duke then pointed the covey, but was too close and some of them flushed, others laid and were flushed by White. Harry then made a point on a single in the woods and repeated. Duke then got a point on another, when dogs were ordered up at 4:16.

DAISY HUNTER AND CASSIO.

These two were put down together at 4:25 in sedge grass in bottom. Cassio started off with a point on fur and ran it out straight. Daisy on the other side of ditch at same place pointed a covey in pines. Cassio then ran into these birds, and going on dropped to point, to which no birds were flushed. Over in weed field he pointed again, and bird was killed by Avent which Cassio retrieved fairly well; then he flushed one in pines. Cassio acts best on these birds; Daisy is inclined to get off. After some time Cassio made a good point on a covey. Daisy ranging on hillside also found a covey and pointed well. Dogs were ordered up at 5 P. M., and this concluded the running for the All-Aged Stake of 1890.

After dinner the judges gave out their decision as follows: Daisy Hope first, Duke of Hessen second, Daisy Hunter and Shot divided third. Thus two of the four first selected were thrown out and more capable dogs put in their place.

The winner of the All-Aged Stake, Daisy Hope, is a big, rather coarse looking English setter bitch, rather straight behind, and almost white in color, her orange ears being her only markings. But she can go, and no mistake about it.

Duke of Hessen, the pointer, and winner of second prize, is a well-made liver and white dog, and is known to every show-goer as a noted winner on the bench. Daisy Hunter, sister to the winner, is, as I have said before, a well-formed bitch barring throatiness and shortness of muzzle, her body being quite up to show form. Harry C. is a handsome looking black, white and tan English setter, is nicely built and a good worker.

SUMMARY.

First series given above.

Second Series.

Duke of Hessen with Shot.
Fannie M. with Ightfield Deuce.
Lilly Burgess with Cassio.
Harry C. with Ightfield Guelph.
Daisy Hope with Daisy Hunter.
Prince Lucifer with Antoine.

Third Series.

Ightfield Guelph with Shot.
Harry C. with Daisy Hope.

Fourth Series.

Harry C. with Duke of Hessen.
Daisy Hunter with Cassio.

Daisy Hope first prize, Duke of Hessen second, Daisy Hunter and Shot divide third.

The Irish setter specials for best and second best Irish setters in the trials were won by Geo. Gray's Tillie Boru and Max Wenzel's Ready II., though many thought that Darragh Pat's work entitled him to second place. Major Taylor and Mr. Tallman judged the English setter bitches for the medal presented by Pierre Lorillard last night for the bitch showing the best bench show form. Of those brought forward Messrs. Hunter's Daisy Hunter was far the best as regards bench show form, though a little throaty; she has a fair head and well-made body, is well-ribbed and has excellent legs and feet.

CHAMPION STAKE.

The drawing for this stake took place on Sunday night and resulted as follows:

Gath's Mark with Rowdy Rod.
Rip Rap with Daisy Hope.
Chance with King's Mark.

The start will be at the Holton school house at 8 A. M. sharp, when it is expected the best work of the trials will be seen, as this stake contains the *crême de la crême* of field trial form.

The annual meeting of the Eastern Field Trials Club was held this afternoon, when officers for the ensuing year were elected, particulars of which I hope to be able to give you in time for this mail. H. W. L.

[*Special to Forest and Stream.*]

HIGH POINT, Nov. 25.—The running of the Champion Stake was commenced Monday morning at 9 in the order named. Pierre Lorillard, Jr., took Mr. Johnson's place as judge. Gath's Mark in his heat with Rowdy Rod showed himself much superior, doing some good work on scattered birds. Daisy Hope had the best of Rip Rap in next heat, but Rip made a sensational point. While retrieving a bird he came to a point on another, with the dead bird in his mouth. Next heat Chance had slightly the better of King's Mark, but at finish both were lost for some time.

In second series Gath's Mark's work was better than Rip Rap's, though both hunted wide and fast. Several points were made by both and good work done. In the next, King's Mark and Daisy Hope, the latter did the best work, not ranging away so far. Then Chance and Gath's Mark were run at 4:50. Several coveys were pointed and fair work was done on scattered birds. In the evening the judges announced Gath's Mark as the winner. He is nearly seven years old and shows wonderful vigor.

The English setters were judged at 9 P. M. for the Lorillard medals. In dogs O. W. Donner's Roi D'Or won. In bitches, F. R. Hitchcock's Annie F.

HUNTING DOGS AS PETS.—*Editor Forest and Stream:* My former communication appears to have been misunderstood. My contention is that hunting dogs are not properly pets. The two qualities do not go together. Let a high-spirited game dog be introduced into the house and petted and fondled as a favorite, and continued in that keeping, and it will be found that with one or two interbreedings with other house dogs of the same species, the offspring will lose all their vigor and endurance, and so much of their vim as to make them utterly useless as hunters. Any dog, however spirited and intelligent he may have been, becomes enervated and impaired by petting and indulgence. Hence we repeat with full confidence, that hunting dogs are not adapted to use as a house dog. Perhaps to be more clearly understood, we should have added, as a house dog and hunter combined. We are not disputing that dogs of any species may be favorites in the house or in the field; but contend that hunting dogs attain their greatest excellence in the field and in the chase, rather than about the house. That, at least, has been our experience.—G. S. T.

SPRING.

DEATH OF A NOTED FIELDER.

SPRING, the winner of the last of the Western Field Trials, died on Oct. 30, at West Point, Miss. He had a brave heart, one that never faltered. No day was ever too long for him. No test of his courage to go and to endure too great. He defeated the great Bohemian Girl—winner of the Southern Trials at Carthage—King's Mark—who won first at the Central Trials—and also beat Chance, the victor in many a hot-contested field, and the acknowledged crack of the Memphis & Avent Kennels. Thus Spring, a pointer, has beaten some of the best setters in America and stood the equal of any performer of his day. He is the only one from Texas that has ever won at a recognized trial or defeated dogs that have since become famous. He was the widest ranger and had more speed than any other dog I ever saw. His range was simply phenomenal. The fact is, he never stopped until he found birds. The writer remembers an incident of a day's chicken shooting last August, at Big Island, near Alvin, Texas, which is worth relating.

The weather was extremely warm, and we had drawn the country from the railroad to the timber blank. In a bend of the forest where the prairie gradually rose from the plain to an elevation of considerable extent, we could see Spring about a mile away, and as he was then going at a tremendous pace and showed no signs of turning, I laughingly remarked to W. F. Stewart: "The old fellow must be heading up the creek for a crossing." By this time our wagon was well into the drop, and we lost sight of him. On reaching the summit of the hill we could see him nowhere. After hunting twenty or thirty minutes I suggested getting in a dugout that lay under the bank, and crossing, believing that we might possibly find him on the other side. We landed and climbed up the bluff bank and found him, as I had supposed, not 60yds. away, stretched out as straight as a string with one foot slightly drawn up, on a dead point, as transfixed and staunch as the parent earth on which he stood, rigid and immovable. It was a grand and a beautiful sight to a sportsman! I flushed the chickens, which were wild, but we had a fine country to work them in, and killed a great many out of the covey, which was unusually large. I had with me my hitherto undefeated brace of pointer dogs and a field trial winner. Stewart had his old dog Jim and Nigger—"ringers to find chickens." The score at sundown stood as follows: Spring twenty-seven singles and two coveys, Joy, Pride, Rogue, Jim and Nigger nothing. Should Stewart see this (and he is a subscriber of the FOREST AND STREAM) he will doubtless remember the occasion for more than one reason. At the time of Spring's death he was being worked by W. W. Titus, who intended to handle him in the Champion Stake of the E. F. T. C., but the poor old fellow has gone to join the great and silent majority. He was bred by Capt. E. C. McMurdo, out of Curlew by Mainspring, and was owned by Mr. R. M. Hutchings, of Galveston, Texas. J. H. H., JR.

COCKER TYPE.

Editor Forest and Stream:

Did any one hear a squeak out of your correspondent "Gothamite" when I alone and single-handed was for years fighting an uphill fight for the working cocker? I rather think about time he was as silent as an oyster. For six long years I fought against the long and low abortion, and now "Gothamite" says the cocker of the future will not be my type. Well then, what will the type be? Maybe he has a patent way of improving cockers like Hornell Velda, but I think not, for all were forced to admit that she was the best ever seen in America. Come now "Gothamite," just admit you are wrong and that the printer's devil made the mistake. The main part of "Gothamite's" letter is O. K., except about Rabbi and Brock. Rabbi stands too square; and Brock, I think, has to be starved to keep him under 28lbs. His remarks about Mr. Watson are away off, as Mr. Watson does know what a working cocker is and has probably shot more over spaniels than "Gothamite" has; it was Mr. Watson who bought Doc for Mr. West. I should like to ask "Gothamite" who was a novice six or eight years ago, was it Uncle Dick or "Gothamite," and did he ever see a cocker of my breeding that could not jump across a street gutter, or that was not a natural hunter and retriever? "Gothamite" can just bet his gizzard that the cocker of the future will be of the Fellows type, that is, a working cocker. J. OTIS FELLOWS.

HORNELLSVILLE, N. Y., Nov. 22.

Editor Forest and Stream:

In the last issue of your newsy journal I find the following unreliable statement from an anonymous writer who signs himself "Gothamite": "Our spaniel men have learnt by now what a cocker spaniel should be, and will no longer allow themselves to be led by the nose by Masons and Watsons, who really started the 'long and low' craze." I now summon "Gothamite" to prove to the readers of FOREST AND STREAM that I either started or assisted in starting the "long and low" craze in cocker spaniels. In the mean time I may perhaps be permitted to assure "Gothamite" that he is not quite through with "Cocker Spaniels of 1890."

Dogs: Their Management and Treatment in Disease. By Ashmont. Price $2. Kennel Record and Account Book. Price $3. Training vs. Breaking. By S. T. Hammond. Price $1. First Lessons in Dog Training, with Points of all Breeds, Price 50 cents,

DOG CHAT.

WE hear that the first of the series of members' meetings of the Hamilton Kennel Club, for instructions in breeding and keeping dogs, takes place on Thurday evening, Nov. 20. Dr. Mole will read a paper on "Dogs and their Treatment." A members' exhibition of spaniels will then take place. A competent judge has been secured who will give an address on the breed under consideration and afterward judge them, club diplomas being given to the successful owners. This is quite a good move and might be followed to advantage by other clubs as it serves to draw the members together more, and is bound to foster a feeling of emulation with results that would soon be apparent on the bench.

Among the dog men whom we saw at the Radnor meet at Chestnut Hill, was Mr. Chas. T. Thompson, accompanied by his wife in a handsome turnout. Friend Jarret had to be content to jog along on a carriage horse, his mount having the previous day come a cropper over a stone wall, to the detriment of several inches of horse skin. Another familiar face was John Masters, for some time manager of the Chestnut Hill Kennels after Mr. Lindsay left, and a man who did a good deal toward putting the kennel in the right way.

"I don't think that dog is very polite," said the tramp.

"Why?" asked the dog's owner.

"Because he made me get up off the grass and then took my seat," answered the tramp, adjusting his coat tails to make them cover as much space as possible.—*Puck.*

Mr. Eberhart has purchased the pug bitch Sara Bernhardt, by Lord Roseberry out of Mrs. D'Orsay's Cora. This is the bitch that was presented to the actress Minnie Palmer, when she was playing in England. Sara will make her début at New York next February.

We are informed that the entries for the South Carolina bench show at Charleston, S. C., Jan., 13 to 17, 1891, will close Jan. 1. Premium lists will be ready by Dec. 1. Dr. H. Clay Glover takes the sporting classes and H. W. Lacy the remainder. We hear that several prominent kennels will take in this show in the course of a trip to either Atlanta or New Orleans, which come the week after. All indications point to this Charleston show being the best yet held in the South. The poultry fraternity will also meet in strong numbers, as the sixteenth annual meeting of the American Poultry Association takes place during the show.

DOG TALK.

I DESIRE to call the attention of the stud book committee to the recent registering of Mr. E. H. Moore's phenomenal rough-coated St. Bernard puppy Lady Melrose. In Vol. V., Part I., I find "No. 9032—Lady Melrose, by Ch. Merchant Prince ex Bernie V." Again in the 1889 edition I find another Lady Melrose, 15,614, by Ben Lomond ex Recluse. The oldest Lady Melrose is at present owned by Mr. J. R. Teague, at the Elmwood Kennels. This certainly savors of carelessness somewhere.

The National Beagle Club are talking of leasing or purchasing a large tract of land in New Hamshire, stocking it with game, building a club house, etc. The club will have a social run with the merry little hounds on Thanksgiving Day.

It is reported that the St. Bernard world will soon be electrified with the news of the importation of several more bitches. New England will soon rival old England at this rate.

At a special meeting of the Maryland K. C., on Nov. 20, this resolution was passed: "Resolved, That the vote of censure recently passed on the A. K. C. be recalled and that the M. K. C. hereby tender their apologies for their previous action in the matter." The Board of Governors also held a meeting and passed the following: "Believing that the Board of Governors have the right to recall the vote of censure and having the interest of the club at heart, it is moved and seconded that the vote of censure recently passed on the A. K. C. is hereby recalled and we duly apologize for said vote of censure, the said vote of censure having been passed on misapprehension." I understand that there is a big fight going on in the M. K. C., and if the strain is not taken off pretty quick the rope will break.

SETTER LOST.—Mr. J. Von Lengerke had the misfortune to lose a large, coarse, rawboned-looking orange and white setter dog, answering to the name of Mage, on Friday morning, Nov. 21, from his home in West Hoboken, N. J., and being strange in the place strayed off. Mr. Von Lengerke offers a reward for his return, and should be much obliged if any of our readers could give him some information about the dog.

FOX HUNTING.—Ithaca, N. Y., Nov. 20.—A fox chase was held about seven miles east of here Saturday, Nov. 15. It was a chase for all ages and sizes, and was won in a rather slow style by a large hound who no doubt had considerable greyhound blood in his veins. The chase was attended by several men well known in dogdom; among others was Mr. E. R. S. Lozier.—LOTOR.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

☞ **Prepared Blanks sent free on application.**

Douis. By H. H. Kent, Wollaston Heights, Mass., for black Schipperke bitch, whelped Oct. —, by G. R. Krehl's Duiske out of Cople Sophie.

BRED.

☞ **Prepared Blanks sent free on application.**

Lady Nan—Bo'swain. Woodward & Herrick's (Chicago, Ill.) bull bitch Lady Nan (champion Harper—Charmion) to their Bo'swain (champion Grabber—Susan), Sept. 30.

Chequasset Marigold—Hesper. Merry Mount Kennels' (Wollaston Heights, Mass.) St. Bernard bitch Chequasset Marigold (Alp—Sombre) to E. B. Sears's Hesper (Sailor—Bellona), Nov. 7.

Bula—Hesper. Merry Mount Kennels' (Wollaston Heights, Mass.) St. Bernard bitch Bula (Hector—Bernie V.) to E. B. Sears's Hesper (Sailor—Bellona), Oct. 22.

Ruby—Dad Wilson, Jr. E. H. Howard's (Bullittsville, Ky.) English setter bitch Ruby to J. S. Hudson's Dad Wilson, Jr. (Dad Wilson—Lit), Aug. 13.

Daisy Cambridge II.—Dad Wilson. A. D. McPhearson's (Covington, Ky.) English setter bitch Daisy Cambridge II. (Racket—Daisy Cambridge) to J. S. Hudson's Dad Wilson Cambridge—Dido II.), June 5.

Blonde—Ben Hill. J. S. Hudson's (Covington, Ky.) English setter bitch Blonde (Dad Wilson—Sadie H.) to his Ben Hill (Druid—Ruby), Aug. 17.

Fatima—Dad Wilson. Capt. John Romes's (Cincinnati, O.) English setter bitch Fatima (Rex—Bessie Lee, Jr.) to J. S. Hudson's Dad Wilson (Cambridge—Dido II.), Aug. 22.

Kate Q.—Ben Hill. R. B. Caruthers's (Newport, Ky.) English setter bitch Kate Q. to J. S. Hudson's Ben Hill (Druid—Ruby), Oct. 22.

Lucy Bell Noble—Ben Hill. W. S. Eaton's (Covington, Ky.) English setter bitch Lucy Bell Noble (McD.—Belle II.) to J. S. Hudson's Ben Hill (Druid—Ruby), Nov. 12.

Daisy Hunter—Dad Wilson. John A. Hunter's (Sandborne, Ind.) English setter bitch Daisy Hunter (Gath's Hope—Daisy F.) to J. S. Hudson's Dad Wilson (Cambridge—Dido II.), Oct. 29.

Fayette Nelly Bly—Ben Hill. C. T. Hyde's (Connersville, Ind.) English setter bitch Fayette Nelly Bly (Lark P.—Kilbuck Vic) to J. S. Hudson's Ben Hill (Druid—Ruby), Nov. 2).

Bessie Marshall—Dad Wilson. J. S. Hudson's (Covington, Ky.) English setter bitch Bessie Marshall (Ben Hill—Tempest) to his Dad Wilson (Cambridge—Dido II.), Nov. 8.

Pearl of Tempest—Dad Wilson. J. T. Toohey's (Strawn, Ill.) English setter bitch Pearl of Tempest (Ben Hill—Tempest) to J. S. Hudson's Dad Wilson (Cambridge—Dido II.), Sept. 10.

Gathlit—Dad Wilson. J. S. Hudson's (Covington, Ky.) English setter bitch Gathlit (Gath—Lit) to his Dad Wilson (Cambridge—Dido II.), Nov. 1.

Biddy Clare—Dan O'Connell. L. N. Hilsendegen's (Detroit, Mich.) Irish setter bitch Biddy Clare (champion Elcho, Jr.—champion Meg) to his Dan O'Counell (Sarsfield—Coe F.), Nov. 13.

Laila Rookh—Dan O'Connell. L. N. Hilsendegen's (Detroit, Mich.) Irish setter bitch Lalla Rookh (champion Elcho, Jr.—Bessie Giencha to his Dan O'Connell (Sarsfield—Coe F.), Nov. 19.

Bud—Fishpool Gem. G. A. Muenchinger's (Newport, R. I.) Yorkshire terrier bitch Bud (Snyder—Mollie) to North Fields Yorkshire Kennels' Fishpool Gem (Harrison's Ben—Bent's Rose), Nov. 15.

WHELPS.

☞ **Prepared Blanks sent free on application.**

Hallowe'en. H. W. Huntington's (Brooklyn, N. Y.) greyhound bitch Hallowe'en (Zoedone—Cataract), Nov. 10, three bitches, by his champion Balkis (Clyto—Primrose).

Polly S. J. N. Swazey's (Bucksport, Me.) pointer bitch Polly S. (Bang—Polly), Oct. 29, thirteen (nine dogs), by C. W. Winship's Pousel (Bang Bang—Boski).

Daisy Cambridge II. A. D. McPhearson's (Covington, Ky.) English setter bitch Daisy Cambridge II. (Racket—Daisy Cambridge), Aug. 6, nine (five dogs), by J. S. Hudson's Dad Wilson (Cambridge—Dido Lit.).

Blonde. J. S. Hudson's (Covington, Ky.) English setter bitch Blonde (Dad Wilson—Sadie H.), Oct. 21, nine (three dogs), by his Ben Hill (Druid—Ruby).

Fatima. Capt. John Romes's (Cincinnati, O.) English setter bitch Fatima (Rex—Bessie Lee, Jr.), Oct. 24, ten (five dogs), by J. S. Hudson's Dad Wilson (Cambridge—Dido II.).

SALES.

☞ **Prepared Blanks sent free on application.**

Chickasaw II. Black, white and tan English setter dog, whelped Nov. 15, 1884, by Gladstone—Sue), by J. S. Hudson, Covington, Ky., to C. G. Smedberg, same place.

Dad Wilson—Bohemian Girl whelps. English setters, whelped April 16, 1890, by J. S. Hudson, Covington, Ky., a black, white and tan dog to Harry Northwood, Martin's Ferry, O., and a lemon and white dog each to John Taylor, Huntington, W. Va., and Geo. C. Hore, Hamilton, Ont.

Rifle and Trap Shooting.

RANGE AND GALLERY.

EPHRATA, Pa., Nov. 20.—Although the members of the North End Rifle Club held their last meeting for this season on their range near Ephrata several days ago, the boys determined to have another shoot before putting up their rifles for good. They therefore arranged a meeting for to-day, to shoot for medals, on the old range near Schoeneck, about five miles north of Ephrata. This range is as fine a range as any that can be found in this part of the State. Lying in a narrow ravine between two ridges of considerable height trending east and west, it is protected from winds and storms. This range was abandoned for the one now used near Ephrata for the simple fact that many of the members come from Ephrata and wished for a range nearer home. The day was exceedingly stormy and cold, and but six members participated in this match, which was for two medals, a gold and a silver, to be given to the two members who made the highdst points in three scores of ten shots each to each shooter. Darkness came on before the three scores could be finished, and so but two scores were shot; 209yds., rest shooting:

C S Wenger—
10 10 10 10 10 9 10 10 10 10—99 8 9 10 7 8 8 9 10 10 9—88—187

J A Stober—
10 10 9 9 9 10 8 7 8 10—90 9 10 10 8 7 9 8 8 8 10—88—178

L M Wiest—
10 9 10 9 7 7 10 10 6 10—88 9 9 9 10 7 10 9 6 10 8—87—175

W D Winters—
10 6 8 8 10 7 10 10 8 8—85 10 6 6 10 10 10 6 9 7 10—84—169

L M Carpenter—
7 6 9 9 8 9 5 8 9 10—77 8 7 9 7 7 8 8 8 8 7—77—154

D B Lefever—
7 10 9 10 7 5 6 4 6 7—71 10 9 7 6 6 8 8 4 4 4—66—137

C. S. Wenger succeeded in making the highest score and received the gold badge, while J. A. Stober received the silver badge, he being second man. C. S. Wenger's score of 96 out of a possible 100 is one of the best ever made around here.—D. B. L., Sec'y.

EMPIRE RIFLE CLUB.—New York, Nov. 18.—The following score was made by the Empire Rifle Club at their headquarters, 12 St. Marks Place, on the Massachusetts 12-ring target, distance 100ft., off hand, possible 120 points:

W Overbaugh	115	W Miller	107
W Mesenholder	94	W Rosenbaum	113
C Zettler, Jr.	105	J Zettler	94
J Grimm	107	E Smith	94

STRAIGHT RUNS.—Rochester, N. Y., Nov. 20.—*Editor Forest and Stream:* I see that "Badger" states through FOREST AND STREAM, Oct. 30, that Mr. Levengston, of Saratoga, N. Y., made one of the largest straight runs in regular sweepstakes on record, making 123 straight. The Northern Wayne Gun Club held a two-days shoot about a year ago, when Mr. Henry Whitney, of Phelps, N. Y., made a run of 136 straight, not missing a bird in the two days' shooting.—DE WILL.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

FIXTURES.

If you want your shoot to be announced here send in notice like the following:

Nov. 25-28.—Tournament of the Newark Gun Club, at Erb's Park, Newark, N. J. Two days at inanimate targets and two days at live birds. Jacob Pentz, Secretary.

HIGHLAND GUN CLUB OF DES MOINES.

DES MOINES, Iowa, Nov. 7.—Des Moines is the capital city of the State of Iowa. For a long time it was a rather slow, though slowly progressive city, and sporting matters had small prominence, but of late it has made great strides in business activity, and the shooting interests there may temperately be described as in a highly flourishing condition indeed. Of old, the Des Moines trap clubs were loosely organized, lightly numbered and inert. To-day the cream of all the old clubs, including the East Side Club and the old organization of the West Side, is combined with the best fruit of the more recent growth of sportsmanship. There is but one trap club in Des Moines now. It has 60 odd members, will soon have 100, will hold the best and indeed all of the better class of trap-shooters of the place, and is already not only the best organized and best conducted club of the sort in a large section of country thereabout, but one of the model clubs of the whole country where shooting at the trap is practiced. This is the Highland Gun Club, whose organization has been completed for only a single season.

The president of the Highland Gun Club is C. W. Budd, and readers will in that fact see the cause of a great part of the unity and energy of the Des Moines trap-shooting fraternity, for Charlie is as popular at home as he is abroad. Under Mr. Budd's cordial invitation, the writer has spent some pleasant hours at the former's home, and to day attended the regular club shoot at Highland Gun Club grounds.

There are not many clubs in towns of over 50,000 so fortunate as this one. Indeed I do not know of one. It is only about eight minutes' ride by the little dummy motor line from the center of the city to the gate of the grounds, and the distance is only a trifle over a mile. Yet the ample and comfortable grounds, situated as they are in a beautiful spot among the trees at the foot of the river bluffs, are quite secluded and free from any interruption. The motor line runs up the river bank, crosses the river, and passes this little park, which lies on a dry bench in the river bottom, with houses beyond it, back of and above it on the bluffs of each side of the river, but with none close enough for annoyance on either part. The natural trees grow round about, and the location is one of great natural beauty. At present there does not come to mind one more beautiful devoted to such a purpose.

Highland Gun Club is a body duly incorporated, stock $10,000, each share being held at $10, and each member being a shareholder. The club bought its land, six acres, at $500 an acre, spent $300 in grading, $200 in fencing and sowing to grass, and over $1,000 in the club house, two stories, 20×40, a cut of which latter is shown herewith, displaying it a very tasty and suitable building. This building is admirably adapted to its purposes. There is a large room up stairs, used as a dining room in tournament times. From this a wide verandah looks out over the grounds and over a pleasant landscape besides. This verandah is especially devoted to the ladies, of whom in the families of the different members there are many who take an interest in shooting. Within the following year there will be organized an auxiliary shooting society composed solely of ladies.

Back of the club house the river runs close in. The fence will soon be extended clear back to the river and a boat house erected. Several members live on the bluffs just across the river, and sometimes come across in boats, and the grounds themselves are just a pleasant pull over a very pretty water course from the heart of the city. The grounds themselves, it need not be said, are provided with all modern appliances in the way of live bird and artificial target shooting. The score lies directly in front of the door, and beyond the traps the ground lies perfectly level. It is a good shooting place. Ten years ago no such places were thought of among shooters at the trap in this part of the country. The man with the gun, need we say again, is coming up. Some of the best young business men of Des Moines belong to this club, and they even come to shoot. It is President Budd's boast that a man can get any kind of a match he is looking for among the boys of Highland Club.

To-day has been a raw and chilly one, but the appended scores, furnished by the obliging secretary, Mr. Will Burnett, will show a fair attendance. Last week Mr. Rolla Heiss, of Dayton, Ohio, toyed with the festive live bird and got a little 16-gauge experience at targets out here, and to-day Mr. Harvey McMurchy, the same being White Horse Harvey, of Gila, was on hand with several new guns, with "Smith" on their handles. Charlie and Mac had broken all their targets and gotten all their live birds straight up to the time the writer was obliged to leave the cheerful company about the club house stove, in order to catch one of those unpleasant affairs known as an early train.

The officers of Highland Gun Club are C. W. Budd, Pres.; Will Burnett, Sec.; A. C. Miller, Treas. The club is a good one in every respect, and worthy of more than this hurried mention. It will be heard from regularly in these columns. Below are scores of to-day's shoot:

The following scores were made by a few members of the Highland Gun Club, Nov. 7: 25 live birds each, $10 entrance, following conditions: 10 birds, gun below the elbow until the bird starts; 10 birds, gun held in any position the shooter may choose; 5 birds, gun on the shoulder until the bird starts:

Chase	1010010201111111212012020—18

E. HOUGH.

WATSON'S PARK.

BURNSIDE, Ill., Nov. 18.—Following is the score made here today by Chicago sportsmen for the Sporting Review Pub. Co.'s cup, use of one barrel only, American Association rules, 20 live pigeons, $10 entrance:

B Rock	11011011101100111111—15	Wadswo'h	11111101010111111111—17
C Willard	10111111111111001011—16	J Orvis	11100111011110011010—13
Robbins	11011110100000110011—11	I Watson	11111101111111011111—18
Tork'gton	11101013111160111111—16	L Willard	01110111010101111100—14
J Klein'n	11111160111011110110—15	A Kleinm'n	10111111111011111111—18
Loveday	11110011011111011000—13	H Ehlers	11130010111101000101—12
V Hoffm'n	10111110111111101110—16	W Foss	11111110111101100110—15
W Babeuf	01111011111101111111—17		

J. E. Price, M. J. Eich, W. L. Wells, C. F. Smith, G. Hoffman, B. Barto, A. W. Reeves, W. D. Price, C. B. Dicks, H. Smith, F. E. Willard, A. Hoffman, W. L. Shepard, J. Tony, C. Burton, F. C. Donald, Geo. T. Farmer, C. D. Gammon and John Waton withdrew.

Ike Watson and Abe Kleinman are tie for cup. Abe did not shoot for money, but for cup only, so Ike Watson won first money alone. R. B. Wadsworth won second, as Babeuf did not shoot for money. C. E. Willard and A. T. Torkington divided third. On shoot off W. W. Foss won fourth.

Nov. 19.—Sweeps, American Association rules:

R B Wadsworth	01212—4	J E Price	11011—4
B Rock	12122—5	A W Reeves	21121—5
W Babeuf	02102—3	C E Willard	11221—5
W W Foss	11221—5	John Orvis	11102—4
J J Kleinman	11212—5	Ike Watson	10212—4
L Willard	10111—4		

John Watson withdrew. In shoot off A. W. Reeves and C. E. Willard div. first, R. B. Wadsworth won second, W. Babeuf third.

Same day, same conditions:

R B Wadsworth	11112—5	J E Price	11012—4
B Rock	02111—4	A W Reeves	11112—5
W Babeuf	21110—4	C E Willard	12222—5
W W Foss	21021—4	John Orvis	11000—2
J J Kleinman	21021—4	Ike Watson	22012—3
L Willard	11012—4	J W Wolf	12101—4

R. B. Wadsworth, A. W. Reeves and C. E. Willard div. first; W. Babeuf won second, Ike Watson third.

Nov. 20.—*Herald* medal and Jenney & Graham Gun Co. trophy, at 20 live pigeons, $20 entrance, Illinois State rules:

J E Price	01112110211220212121—17	M J Eich	11121011211111221111—19
W'dsw'th	12212121111211222112—20	I Watson	21112221122122220122—19
Kleinman	11211212112221211221—20	B Rock	00110001022211111011—13

R. B. Wadsworth and George Kleinman div. first money and will shoot-off for trophy in the next shoot; M. J. Eich and Ike Watson div. second; J. E. Price won third; B. Rock won fourth.

Fort Dearborn Gun Club, at 15 live pigeons, Illinois State rules:

C D Gammon	122111112222211—15	F O Griffin	11202102010010— 9
H Ehlers	22122212111011—14	W L Shepard	21021101121222—13
A Kleinman	11112021112212—14	J E Price	01112110211220 –12
Geo Airey	10222121212221—14	G Kleinman	11211212122212—15
C E Willard	22210112121211—14		

George Kleinman and C. D. Gammon will shoot in next club shoot.

Same day, at 20 Peoria blackbirds:

G Airey	11100010111111111111—16	G Klein'n	11111110111011111111—18
A Klein'n	11101101111111111111—18		

Abe and George Kleinman will shoot-off in next shoot. Abe and George Kleinman were tied for live bird medal last shoot; in this shoot George won. RAVELRIGG.

CHICAGO–KANSAS CITY.

WE print to-day cuts made from instantaneous photographs showing the positions at the score of Col. C. E. Felton, the "Chevalier Bayard of Chicago sportsmen," and the nationally popular expert, Mr. J. E. Riley, of Kansas City. The illustrations

POSITION OF MR. J. E. RILEY.

show the gentlemen as they appeared in their famous tie race in the great Chicago–Kansas City match. This contest was watched with greater interest than any other of the series, and it was really the deciding event, and it was generally supposed Mr. Riley

POSITION OF COL. CHAS. E. FELTON.

would defeat his opponent by two or three birds. Col. Felton remarked after the match that he was much gladder to tie Mr. Riley than he would have been to beat him. The memory of this graceful and gentlemanly contest deserves perpetuation.

NEW YORK SUBURBAN.

NEW YORK, Nov. 22.—A good lot of birds, a bracing atmosphere, and plenty of wind made to-day's shooting at Claremont more interesting than at any previous time. We had a rattling good shoot both at live birds and inanimate targets. In fact every Saturday there are as many shooters on the grounds as will be found at the average tournament, so called, and the wonder is that there are not more, when consideration is taken of the facilities the location affords—only 18min. from foot of Liberty street, plenty of trains each way, thoroughly equipped grounds, run in a systematic and generous style, plenty of traps and trappers, a competent superintendent, and, last but not least of all, cheap shooting at live birds (25 cents each and no extras) and targets (3 cents each), no obligation to go into the sweeps, and separate traps for those who desire them. A number of first-class shots have been developed by practice on these grounds, who otherwise would never have been heard of. The annual meeting of the association takes place Dec. 6, at Claremont, when election of directors and officers for ensuing year will take place—another president will probably be elected, as Mr. Hathaway declares his intention of retiring when his term expires. The association owns the buildings, fences, etc., and is out of debt, with large stock of ammunition on hand and ten thousand bluerocks.

If we have not accumulated profits in cash, we have kept the grounds open every day the past year, had shoots every Saturday and holidays, paid the superintendent his salary in full, and provided abundant sport and healthful recreation for ourselves and the public. We think we have done well. This is the only grounds of the kind run on that plan in the country. We have visiting shooters from almost every State, and they are invariably pleased. The scores of to-day's work follow:

Five sweeps, at 10 bluerocks, 50 cents entrance:

Johnson	7 7 9 9 6	Du Bray	7 8 9 6 9
Collins	8 9 7 10 9	Osterhout	7 4 .. 5 7
Lindsley	8 7 7 6 7	A Rose	5 7 .. .. ..
Englewood	6 6 4	N Rose	7 9 .. .. ..
Hunt	3 7 7 5 7	Sherman	.. .. .. 9 9 10
Hathaway	7 6 5 9 9	Clark	.. .. 7 7 5
Morris	9 4 9		

Two live bird sweeps, at 4 birds each, $2 entrance:

Johnson	0221—3	2012—3	Hathaway 1112—4	0022—2
Collins	2200—2	1101—3	Morris 2210—3	2012—3
Lindsley	0221—3	0121—3	Du Bray 1100—2	1021—3
Englewood	2111—4	1121—4	Sherman	0111—3
Hunt	2212—4	0221—3	Clark	0021—3

AD VANCE.

THE ALBANY TOUNAMENT.

THE first league tournament for the month of November was held under the auspices of the Albany Gun Club at Elm Grove Shooting Park last Tuesday. A more inauspicious day in the way of weather never dawned upon a tournament occasion, the frowning skies sending down their chilling complaints in innumerable falling flakes of snow. Manager Vine and the writer went up to the grounds on the nine o'clock morning local, and the cheerless walk from the shooting lodge was, in good truth, most dispiriting. At the latter place we found no one present, and the little building, though the door stood open, was cold, silent and tenantless. In the field a solitary figure was seen moving about in the sodden grass. This was the faithful trapper, Jack Whitney, who had placed the entire main battery of the traps in position and was busily engaged in putting down an outfield battery, consisting of a pair of Cruttenden's hurlers, to indulge the expected sportsmen in the latest fad of the devotees of the trap, shooting at incomers.

The manager turned his attention to laying out the intricate system of pulling cords for the seven traps, and the writer turned his attention to several new arrivals. The first of these was our own well-tried and experienced sportsman, Mr. T. H. Greer. Following the Albanian came a strongly-built fellow, who is rapidly making his way to the front among the crack shots of the league, and whose performance with the gun at many of the events of the present season has caused him to be rated among the reliables as a slashing shot who can do his share in making the pace a hot one, particularly in a long race. This is Frank Pidgeon, of Saugerties, who in addition to his claims to the respect of his brother sportsmen as a good shot, is also president of the Hudson River Game and Fish Protective Association. There were more down-the river sportsmen to come, and these proved to be Will Mattice, George F. Tolley and T. B. Lever, of Catskill. Then the star of Saratoga shed its light upon us in the person of Harry M. Levengston, Jr., of the renowned Big Four. After the greetings were over there was a lively tussle with the big stove in the lodge to get that refractory monster to dispel the dampness and elevate the temperature to the degree known as the solid-comfort state. It was no small job to clear the demon of iron of its overflowing load of dead ashes and cinders before starting the cheerful blaze, and certainly there was no help in the guying we got from Uncle Sammy Goggin and Captain Gustave Buesser, of the Trojan Gun Club, who remembered a "roast" their club got for not having a fire on a certain cold tournament day, and they eagerly seized the occasion to get even with that newspaper fellow. The sacrifice of an empty kingbird box provided the material combustible for the ignition of a hod of coal, and from that out to the end of the day the ruddy gleam that came through the dilapidated mica windows was as pleasant as the smile of a cherub. All preparations having been completed, and as the party present was reinforced by the arrival of two members of the West End Gun Club—Geisel and Leon—it was thought best to do a little shooting; so at the suggestion of the managers the men took up their guns to engage in a sweep at 5 kingbirds: Geisel, Goggin, Pigeon and Mattice div. first money, Levengston, Leon and Lever div. second, Tolley third, Buesser fourth. After the sweep the regular events of the programme were started in with

No. 1, 10 kingbirds, entrance $1:

Levengston	1111111111—10	Buesser	1011110111— 8
Pidgeon	1111111111—10	Tolley	1011111010— 7
Goggin	1111110111— 9	Leon	1011011110— 7
Mattice	1101111111— 9	Lever	1100111010— 6
Geisel	1111111001— 8		

All ties divided where not stated.

No. 2, 10 kingbirds, 6 outgoers and 4 incomers, entrance $1:

Levengston	1111111101— 9	Tolley	0011001011— 5
Buesser	1111011111— 9	Roberts	1111111110—10
Lever	1111011111— 9	Re-entry	1111101011— 8
Pidgeon	0011111111— 8	Rockwood	1013110111— 8
Mattice	1101111111— 8	Re-entry	1111110111— 9
Leon	1111111010— 8	Paul	1011101111— 8
Goggin	1101111100— 8	Re-entry	1101111111— 9
Geisel	1100100111— 5		

Roberts (Rupert, Vt.), Rockwood (Albany), and Paul (Cohoes) did not come on the ground until contest No. 2 was closed. These three marksmen, in order to make a claim on the prizes for best aggregate scores in eight of the ten contests, shot at 10 birds each, and then at 10 more in a re-entry. They were not required to pay the entrance fee, and therefore had no claim on the purse, which was awarded as follows: Levengston, Buesser and Lever divided first money; Pidgeon, Mattice and Leon divided second; Goggin won third; Geisel won fourth.

No. 3, at 15 kingbirds, entrance $1.50:

Levengston	111111111111111—15	Roberts	011010111111111—12
Paul	111111101111111—14	Lever	011101111110010—10
Mattice	111111110111101—13	Goggin	010101101111101—10
Rock	111111110111011—13	Buesser	111010011111001—10
Geissel	011110111101111—12	Pidgeon	101000110111111—10
Leon	101101111111110—12	Tolley	011010010110111— 9

Two members of the Greenbush Gun Club arrived on the ground as No. 3 was being shot to a close. J. H. Patten, president of the Trojan Gun Club, came immediately after, and the next event filled splendidly.

No. 4, at 10 kingbirds, entrance $1:

Pidgeon	1111111111—10	Patten	0111111110—8
Rockworth	1111111110—9	Kapp	1101011011—7
Roberts	0111111111—9	Geisel	1101010011—6
Mattice	1110111111—9	Goggin	1110111000—6
Leon	1111111110—9	Greer	1101010011—6
Paul	1111011111—9	Tolley	1110011000—5
Levengston	1110111011—8	Mack	1001001111—5
Buesser	1011111011—8	Lever	0000001111—4

Those in the tie for second shot it out as follows: Rockworth 5, Roberts 5, Mattice 4, Leon and Paul withdrew.

Dinner followed at Russell's Hotel, where Brother John serves things up plainly, but neatly, and the service is always prompt and satisfactory.

Back to the shooting lodge we found several new arrivals from the West End Gun Club. These were Major W. J. Reineck, D. W. George, J. B. Sanders and H. K. Adams.

By this time there were lots of sportsmen present as spectators, among whom I noticed Messrs. Herrick, Countryman and Lansing, of the Forester Gun Club; Taylor, of Clarksville; Becker, of New Scotland; and Edward Ruth, of the Pawling Gun Club, Brunswick. A little later Henry Gove came on the ground with Milton F. Lindsley.

The next contest on the programme was made specially interesting by its being shot not only for a purse, but for an elegant trophy, presented by Mr. Archie Paul, of Cohoes. This special prize consisted of a solid silver cup, gold-lined, and beautifully chased. The contest filled with an even twenty entries, but only eleven of the men entered shot for the cup. No. 5, 15 kingbirds, entrance $1.50. A dollar extra was charged those who entered for the cup:

Pidgeon*	111111111111111—15	Goggin*	001111101111101—11
Mattice	111111111111111—15	Tolley	101101101110111—11
Levengston*	111111011111111—14	Taylor*	001111011011111—11
Paul	111111011111111—14	Mack	100111010111011—11
Leon*	111011111111111—14	Geisel*	111101101001111—11
Rockworth*	111111111001111—13	Roberts*	111011001011110—10
Buesser*	111111111001111—13	Lindsley	101011011100111—10
Becker*	011101111011111—12	George	011111010001010— 9
Adams	011100111111111—12	Lever	101101001001110— 8
Patten*	111111010011101—11	Kapp	001101100111041— 8

* Entered for the cup. † Forfeited shot.

Pidgeon and Mattice tied with clean scores, but as the last named did not enter for the cup, that superb and desirable prize became the property of the Saugerties shooter, who also received a divide of first money. Mr. Pidgeon was warmly congratulated by his friends, not only for capturing the cup, but for the coolness and address he displayed in shooting his way to the top when pitted against ten men who have, one and all, made excellent records in this part of the trap-shooting world.

No. 6, two-man team race, open to teams from any club, 25 kingbirds per man, 50 per team, entrance per team $2.50:

Saugerties Gun Club.

Mattice	1110111100111111—12		

Only the league medal contest remained to be shot out. There was very little daylight left, and it was proposed to postpone the shoot for the medal until the next league tournament at Catskill, Nov. 25. A few hot heads insisted upon shooting for the medal, although the holder of it, Mr. Levengston, had departed for Saratoga. A squad of six men faced the traps to shoot at the stipulated 25 birds each. At the end of the tenth round it was so dark that the men shoot in a kneeling position to get, if possible, a clear view of the flying kingbirds, and a light was brought from the hotel to enable the scorer to do his work. The marksmen kneeling in a row, the flash of the guns momentarily lighting up their faces, and the scorer in the lodge plying his pen by the light of a lamp, presented the most singular spectacle ever witnessed at a trap-shooting tournament. The forfeited shots became numerous and the misses still more so. Even the keen-eyed Edward Ruth, who was stationed in the trapper's pit acting as caller, finally failed to see the bird distinctly, and the game was called at the close of the eighteenth round. The score follows in detail:

Mattice	0011110101111100110—11	Rockworth	1010101011100*100—10
Goggin	1110111011101001000—11	Adams	0111101101000001—10
Lever	1101010011101101*—11	Buesser	1011101110010*00—10

*Forfeited shot.

The contestants came out of this race worse off than they went in, for they had to pay for their birds without getting anything in return except the fun they had, and of the latter there was a perfect cyclone.

A purse of $10, divided 50, 30 and 20 per cent., was offered for best aggregate scores made in all the contests, except the team race and the league medal contest. In the eight contests to count for aggregates a contestant had to shoot at 100 kingbirds. Of this number Harry M. Levengston, of Saratoga, scored 92 and won first money; Archie Paul, of Cohoes, scored 91 and won second; C. A. Rockworth, of Albany, scored 88 and won third.

The gratifying success of the tournament of the Albany Gun Club, under such discouraging conditions of weather, is another one of many proofs that Elm Grove is a favorite shooting ground for sportsmen throughout eastern New York and for our brethren in Vermont as well. The easy accessibility of this shooting park, combined with Albany's advantages as a railroad center, will make this a most desirable and well patronized tournament ground as long as the management is kept up to the high standard of excellence established by the crack clubs of the league.

The next league tournament will be held at Catskill, Nov. 25. The grounds near the West Shore railroad depot are a favorite resort for trap-shooters, and there is no more popular tournament manager than Geo. E. Tolley. The managers of the Albany Gun Club have in view another tournament, to take place Dec. 2. This will probably close the league season, as pigeon shooting events at the various country resorts are more popular than kingbird tournaments during the winter months.—*Albany Argus.*

MACALESTER VS. ELLIOTT.—Two of the best wing-shots in the world, Charles Macalester, of Philadelphia, and Capt. Elliott, of Kansas City, will soon shoot at live pigeons for the largest stake ever wagered on a bird race—$20,000 a side—if the efforts to bring about the match, which are now well under way, are successful. Since the Westerner defeated Edgar Murphy at Long Branch early in the fall, Mr. Macalester's friends have been trying to bring about a meeting between the nervy Quaker City man and Capt. Elliott. Both are willing to shoot for $20,000 a side, and if Capt. Elliott will agree to shoot at 30yds. rise and 50yds. boundary, which conditions he is said to favor, the match may be completed within a week. Several shooting grounds have been suggested at which to shoot the race, but from present indications the Westminster Kennel Club at Babylon, L. I., will be selected. It was on these grounds that the great race for $16,000 between Mr. Macalester and Dr. Lee Knapp, of the Union Club, was shot last year, and the men who backed the New Yorker to the extent of nearly $150,000 on that occasion will probably select the Philadelphian as a winner if the proposed match is completed. Some of Edgar Murphy's friends believe he was not at his best when Capt. Elliott defeated him, and are willing to back him heavily if another match can be made with the crack Western shooter.

Yachting.

Yachtsmen who do not see what they want under this heading will please look under the hatches of the *Canoe*, peep into the *Kennel*, squint down the barrel of the *Rifle*, open the *Fish Car* and *Game Bag*, inquire of the *Sportsman Tourist*, and if their yearnings are still unsatisfied, push their explorations into the *Editorial* and *Advertising Departments*.

A WEEK'S CRUISE.

AUGUST had come again and the crew began to cast about for a companion to accompany him on a cruise to Sandy Hook, to enjoy a week's fishing and sailing in the neighborhood. Year after year he had experienced disappointment in getting just the right kind of a fellow to accompany him, and latterly he had enjoyed his outings on many trips alone; not that there were not plenty of congenial acquaintances who would be glad to go, but unfortunately business seemed to particularly confine them when it was most convenient for the crew. As to the other kind of fellows, who think they would like to go, but on finding that they have to take their share of the work, and experience a little discomfort on occasion, want to be set ashore at the most inconvenient times and places; the crew classes them with those inflictions which we who are Episcopalians pray on Sundays, if not oftener, to be delivered from.

Friend K. was asked and gladly accepted our invitation, but at the last moment found he could not go on the day appointed, but promised to come down on the steamer and meet us at the Hook on the following day. Having provisioned our little craft, of which a description was given in the FOREST AND STREAM of Mar. 14, 1889, an early start was made one Monday morning from our mooring in Newark Bay.

With the wind light from the N.W. and a flood tide, we tried to lay our course through Staten Island Sound, a slow task; but as the sun grew higher the wind strengthened so that at eight o'clock we were off Elizabethport, making good headway under mainsail, jib and topsail. This latter sail may make a little boat 15½ft. W.L. and 18ft. on deck, appear to some as too much like a toy, well, that is just what she is, as is every boat, no matter how large, kept for pleasure sailing only. If the sail locker were overhauled a jibtopsail, spinaker and trysail would be found. On many an occasion the crew remembers well he would have had to sleep out, when almost becalmed along some marshy shore, had it not been for high sails; which, being aloft principally, caught the fanning air and wafted him homeward.

The trip had now fairly commenced. Chelsea, Rossville and Sewaren were quickly passed. At this latter place two friends were met, weakfishing, who asked us to stay and try our luck by them, but as the fish ran only about ¾lb. we did not, more especially as we—that is we must here explain, the boat and the writer—had quite a sail before us. Tottenville and Perth Amboy being passed, the crew was tempted to try for striped bass on a spot behind Wood's Point, which he had discovered, the tide being just right, but the increasing breeze and exhilarating sail, coupled with a desire to get as far as possible away from localities that had any appearance of business about them, proved the greater inducement, so, after taking in topsail, about a S.E. course was laid for the Horse Shoe, or the Sandy Hook peninsula.

The wind continuing from N.W. and freshening, the jib was taken in, as progress was made into open water the peak was settled a little, a pull taken on the topping lift, as there was quite lumpy water met, and the canvas covered with spray over the cockpit.

The wind being dead aft, it was necessary to watch closely to prevent a jibe, as the following sea tended to make steering a matter requiring somewhat more than ordinary care. Rushing along, the little boat was driven until the curling foam from her bows was almost on a level with her forward deck, yet we took no water on board. As we ran from Raritan Bay into the Lower Bay, with a freshening wind and sea, alone, the broad Atlantic in view before us, and some miles from shore, no description can convey to those who have not been similarly situated, the exhilaration and excitement experienced. The crew was in his element, having the satisfaction of sailing a well balanced and easily steered boat, that, although oftentimes half out of water, never refused to promptly answer her helm.

But the tension on the nerves begins to tell, and the crew changes the course to get under Point Comfort, where smoother water could be expected. Under the influence of the strong westerly wind the tide had fallen rapidly, and the water was seen breaking in shoal spots around and behind the point; another moment and the board, which was down to steady us, dragged on the bottom, the following sea almost boarding us; so putting the tiller hard-a-starboard, a pull was taken on the main sheet, quicker than it takes to tell it, and we are heading off shore. The wind being now abeam its full force was felt, and reduced sail became necessary, so lashing the helm to the board a reef was tied in the mainsail and the jib bobbed, and under way again just in time to avoid fouling some rows of oyster stakes. Soon the changed tint of the water was noticeable, being of that blueish-green color indicative of pure, deep salt water, so grateful to the eye. Many sloops were met heading to the southward out of the Shrewsbury, all carrying reduced canvas. The crew thanked his stars that the wind was dead fair for him, a abeat to windward under the present circumstances would have been making a toil of a pleasure.

At 12:52 P. M. anchor was down in the Horse Shoe, having made the run of 27 miles in less than five hours, but having had to sail against considerable tide favoring about one-half the way, and being contrary the other half. Hungry and thirsty, no time was lost in visiting the ice box. After lunching the crew went ashore to the telegraph office and wired home his safe arrival and quick passage, and to friend K. to meet us by an early boat in the morning.

After getting the New York paper the crew proceeded to look up Capt. Sandy and his house boat, but found that, owing to some recent regulation of the officer in charge of the Government property, he had been compelled to move further down to Spermaceti Cove. Returning to the boat, we hail a bayman raking clams near the shore and purchase some. The clams found in the shoal water of this little bay are renowned, and have rarely to seek a market in the hotels further down the beach, although occasionally a small consignment finds its way to the oyster market in New York. These clams must not be compared with the larger ones dredged in great quantities by the numerous sloops out in the bay. In fact, so assiduously has this inshore clam been sought after that they have of late become scarce, as obtaining a couple of bushels in a day is considered a good catch; although the crew remembers, and that not so very long ago, when the shore was literally paved with them, and when it was considered no trick to rake up a bushel in half an hour.

Sail was now made for the Cove, which was a couple of miles down the beach. On running in Capt. Sandy's homely craft was found moored close to shore, and on coming alongside the crew was soon shaking the honest fellow's hand. Choosing an anchorage where we would be afloat at all times of the tide, sails were stowed and canvas cabin and mosquito canopy put up. As sheltered as this spot was from the fresh breeze, the sun proved very hot. As far as mosquitoes were concerned, however, strange to say, this year they were not at all troublesome. Reclining on the cushions, the crew is soon absorbed in the newspapers he had obtained. The welcome cry of supper attracts our attention, and looking up we see that Capt. Sandy has prepared the crew's evening meal; so, jumping into a boat we had obtained from the Captain as a tender, we are soon with him.

Sancho Panza has said, "God bless the man who invented sleep." If he had not, he should also ask to have blessed the man who invented appetite. What mattered it if the eel stew was slightly burned and the fried clams and soft crabs were somewhat greasy. Had we not, under the influence of the fresh air, sunshine and the glorious sail down, acquired the appetite and digestive powers of the ostrich? If there is one thing more than another which the crew dislikes to do, it is cooking, and almost any privation is considered preferable; so even Capt. Sandy, although not a Delmonico by any means, is tolerated. Going on board again, cushions and rugs are arranged, the flaps of the canvas cabin turned down, as the nights here are quite cool, and soon sleep has closed our tired and sunburned eyelids.

Next morning after a plunge and a hearty breakfast we get underway for the steamboat landing to meet K., and on getting him on board we give him an old suit and stow his shore togs in the waterproof clothes bag. Below the government dock we try for weakfish with but little success, giving it up for the day we decide to take a cruise ashore and visit the lights on the Highlands of Navesink, so up killick, and in something less than two hours we are off the Jackson Club landing.

Ascending the steep hill we presently arrive at the foot of the towers, and notice the neat and well-kept grounds about them. Obtaining permission from the head keeper to inspect the lights we are conducted by a sub-keeper up the stairway of the southerly tower and into what we may call the tention of the light. In the center is the light, consisting of several concentric and superimposed burners of polished brass of great size; on the outside is the apparatus of heavy crown glass, many inches thick, clear as crystal and beautifully polished, some 12ft. high and 6ft. wide.

Raising the screen above the several cylinders on the side furthest from the sun, the panorama there pictured is beautiful in the extreme. Set in this transparent media we see condensed and photographed the surrounding view. The heaving bosom of Old Ocean glittering in the glory of the noonday sun, its surface ruffled with the summer breeze, which, filling the rounded and bellying sails of the merchant fleet, seemingly at our feet, courtesying to the swell as they pursue their diverging pathways; the nodding foliage of the forest on the adjoining hills, stirred too by its influence, seem returning the salute of the waves, who, running along, dash impetuously on the yellow sand in the seeming endeavor to reach and caress the lovely landscape.

Every object has its natural tint and action, the details of the scene are ever changing. All the surroundings, as far as the eye can reach, appear as though congealed in the thick glass of the lens, in the space of a few hands breadths.

It is too hot to remain here longer, so we unwillingly descend and remark the several tanks used for stowing supplies of oil and means for conveying and supplying it. Many years ago lard oil and we think whale oil were used. It was supposed that petroleum oils could not be burned, but as improvement in distilling, treating and burning these latter oils were introduced their superiority and cheapness became apparent to the intelligent and progressive Lighthouse Board. Until late years we listened to a lecturer of some note, who roundly abused the board for persisting in the use of whale oil when the electric light was obtainable; but the electric light has been tried, and for the ordinary method of lighting had to be abandoned, although for vertical signaling in foggy or heavy weather it may yet serve a good purpose in our lighthouses, which must teach us that in matters of this kind in the language of the scientist, we "must make haste slowly." For the following short description of these magnificent lights I am indebted to the Lighthouse Board through their courteous Engineer secretary, Major Jas. F. Gregory, U.S.A.:

The Highlands of Navesink Lights are situated on a small bare plateau, on the easternmost spur of the Highlands of Navesink, N. J. The two lights are shown from towers each 55ft. high and they are connected by the dwellings of the keepers. Each light is of the first order, is 248ft. above the level of the sea and is visible 22¼ nautical miles at sea. The first order lenticular apparatus consists of a central glass belt forming a hollow cylinder 6ft. in diameter and 30in. high. Below it are 6 triangular rings of glass arranged in cylindrical form, and above, a crown of 18 rings of glass, forming by their union a hollow cage composed of polished glass 12ft. high and 6ft. in diameter. The great Scotch lighthouse engineer, Mr. Alan Stevenson, says of this apparatus:

"Nothing can be more beautiful. I know of no work of art more beautiful or more creditable to the boldness, ardor, intelligence and zeal of the artist."

Such an apparatus costs about $8,000. The lenticular apparatus was invented and constructed in France. The Board orders such as it needs from Henri Lepante, Bartier and Fenestre or Sautier et Cie., French firms. A better and fully illustrated description of this apparatus may be found in the article on Light House Illumination in Johnson's Universal Encyclopedia, Vol. 5, pages 25-32.

These lights were erected in 1762, and were rebuilt in 1862. They were first lighted by reflectors, but in 1838 one was fitted with a first order catadiopteric fixed apparatus, and the other with a second order revolving catadiopteric apparatus, both of which were constructed by Henri Lepante in Paris, by order and under the superintendence of Com. Perry, U. S. Navy, who was directed by our Government to purchase apparatus, constructed on the principle of Fresnel, in obedience to a special act of Congress approved July 7, 1838, appropriating the necessary funds for the object.

The towers were elevated and improved to receive this apparatus, with a view to testing the superiority of this mode of illumination over that of reflectors employed generally in the light houses of the U. S. A first order fixed lens light was thus placed by the side of a second order revolving lens light, with a view to differentiating the relative powers of the two sets of apparatus. It is understood that these were the first sets of apparatus of lenticular order employed in this country. They operated so well, so inexpensively, and without getting out of order, that this apparatus gradually succeeded the diopteric apparatus, and now the lenticular arrangement has come into general use, except on light ships. The burners used in these lenses consume 10 gills of mineral oil per hour each and they burn from sunset to sunrise, the records of the lighthouse establishment do not give the cost of the original towers at Navesink as they were built during colonial times, but their refitment and repair since 1861 cost $74,125.80.

Next day is spent in sailing about Pleasure Bay and visiting acquaintances among the hotels at Bellevue and Seabright. Meeting an old friend, the Commodore, he insisted on our driving with him at the Bellevue, and it was far in the "wee sma' hours" before we got to bed at the hotel. In the morning a plunge overboard refreshed us, and after breakfast we start back for the Hook to again try the fishing. With a light breeze from the westward we sail out in company with a catboat, the tide being fair; some of the people on the cat we had met on the previous evening, and entering into conversation found that they had made up a beach party, and were going down the shore to enjoy a clam bake; they gradually drew away and left us. Reaching our old fishing grounds we experienced the same ill success as before. A passing sloop hailed us to say that there was a school of bluefish breaking at the point of the Hook, so getting our anchor we make sail and get out our trolls. After tacking back and forth, we notice the fish as they jump after menhaden or other bait, close to shore, and working down the beach on the outside, we are soon among them and are kept busy hauling in fish of about 2½lbs. After losing the school once or twice they finally disappear. On counting our catch we have 14 nice blues, and have only to regret that we were not able to take them with rod and reel in a sportsmanlike manner, instead of as K. said, using a clothes-line.

The early afternoon finds us at anchor in the cove again. We wished our friends at home had our fish, but as it was impracticable to keep them fresh until our return, we made a virtue of necessity and gave them away.

Our stock of water running low, Captain Sandy tells us of a wonderful spring on the opposite shore, at the foot of the Highlands. We soon sail across and anchoring in shoal water, we take our jug and waterbreaker and go ashore. Running out of and down the hill side, the spring is seen, and our vessels we filled with the sweetest of water; cold and sparkling, it is renowned for its purity. We were told that pilot boats and fishing vessels frequently visit this spring to obtain water; certain it is that after keeping some two months on the boat it was found as palatable as ever.

It being low water we stroll along shore, gathering a number of oysters which, although small, are of good flavor. Getting back to the Cove we rig up for the night, and enjoy for supper some of the bluefish we had that day caught, cooked by Captain Sandy in his best style, and served on a table we had improvised on the beach. We are soon under our canvas cabin glancing over the papers obtained from the steamboat by Captain Sandy's boy. Cushions and rugs are again adjusted, and we are making up for the sleep lost the night before in enjoying the Commodore's hospitality.

Next morning we again try for weakfish with but small success, three or four of say ¾lbs. being all we caught. We cannot imagine why fishing is so poor this year, as in former seasons we had trydifficulty in catching all we wanted. Although truth to tell weakfishing is but mild sport, yet it is about all that is left to us now in the waters adjacent to New York. Their scarcity cannot be laid to the menhaden fishermen this year certainly, as they have not pursued their calling in inshore waters, and it is to our mind a very open question if this industry appreciatively affects the supply of food fishes, if it is confined only to the capture of the mossbunker. Great South and Barnegat Bays were well supplied with weak, blue and other palatable fish at this time, but Raritan Bay and surrounding waters afforded little or no fishing, and this although the waters showed less pollution than heretofore.

Giving up fishing we go ashore and stroll along the ocean side of the peninsula, and watch the surf as it breaks in a long line of foam on the hard sloping beach, we notice that at irregular intervals the undulations are longer and consequently the surf is higher as the larger wave breaks. We speculate on this, and decide that it must be due to some tidal influence. We had often heard that this larger wave was at regular intervals as every third, sixth or seventh undulation, but this is evidently an error.

Many steamers and sailing vessels are watched leaving and entering the port of the metropolis of the Western Continent, in fact, the broad Atlantic is dotted with them as far as the eye can reach; new square-rigged craft are observed; three and even four-masted schooners seem to have taken the place of the bark, brig and brigantine, so often seen in years gone by, with what advantage gained insurance people seem in doubt.

Getting hungry we wander back to the boat, and soon our appetites are satisfied. Captain Sandy's boy is seen approaching in his catboat, and with the usual papers he hands K. a telegram which tells him he must be at business in the morning, and therefore must start back to-night. The crew feels sadly disappointed at this, as he will have no companion during the long sail back on the morrow, but it cannot be helped, so entering the catboat we are at the steamer wharf in a short time, where bidding K. good by we are presently back at the Cove and aboard our own craft.

The night having turned somewhat chilly the canvas curtains are drawn down closely, the lamp is lit, and after perusing the papers, a few chapters of "Pickwick Papers" are read before we go to sleep. About 2 o'clock A. M. we are awakened by the wind, which is blowing a strong and cold breeze from the eastward, which threatens to blow away our canvas cabin, forcing us to rig some preventers on it. While doing this we find we are dragging anchor rapidly, more cable does not remedy matters any, so we are forced to crawl under the forward deck and get out the heavy Chester folding anchor, overhaul the cable in the dark, and let it go. This brings her up, but where we have drifted to we have no idea, but we notice quite a little swell on, owing to the heavy wind. As nothing else can be done, we turn in and are soon asleep again.

In the light of the crew's experience it is a wonder more boats or yachts using the ordinary galvanized anchor, sold by naval supply people, do not go ashore, as it is shaped to do almost anything else than hold on hard on sandy bottom; they may answer very well in the mud around New York, but how they hold elsewhere is a mystery, unless indeed they do it by sheer weight. The crew has provided against this trouble in the future by having an anchor made of an approved and well-tried pattern by Horace Ericson, of Barnegat, N. J., who by the way, although only the village blacksmith, is a nephew of the deceased inventor of Monitor fame. This anchor has been galvanized and will hold in any bottom, although not as heavy as the store ones by 75lbs.

The crew wakes to find the wind still from the eastward, but more moderate, the weather thick and threatening rain, but traps are stowed and deck cleared for our return home. After breakfast good-byes are said and we start off under mainsail and jib. We were probably some two miles on our course, when an impenetrably thick fog settled down on the water, so thick that the bowsprit end could barely be seen from the stem. Fog whistles were heard to the eastward, and as there was no pleasure in sailing in the fog we hauled on the wind and stood back. The wind had now almost died out, so that it was very slow work indeed. Finally a fog whistle was heard ahead on the port bow, and immediately after what was taken to be the point of the Hook showed up, but instead proved to be an ocean steamer, trying to feel her way on to an anchorage. We had evidently in trying to make the Hook been carried past it by the ebb tide and were heading for Europe. We hailed the steamer, which proved to be a cattle boat, and asked her if she knew where she was; an officer or pilot from the bridge hailed back that they was somewhere off the point of the Hook and in the channel, but just where they would like to know. Before he had done talking she disappeared, even while he was asking, "What ship is that?" evidently he did not see us.

Well, here was a pretty pass. We knew, however, if we stood to the westward, like C. Columbus, again we would fetch up against some land; so we headed about, and with the wind once more astern and quite an ocean swell under our keel, we go land hunting. We had been holding a W.N.W. course about half an hour, the wind having freshened slightly, when the flapping of sails was heard ahead. The next moment a sloop was seen in the wind

almost over us. Jamming the tiller hard a-starboard, we just clear her as she fills away on the starboard tack, so close that we go over a light skiff she has in tow, swamping it and losing its oars. A hail from the sloop to pick up the oars, and she is lost in the fog. A horn blown in our vicinity makes the crew think he had better fetch and hug the nearest shore; but just where that shore is rather bothers him. As now he must be well inside the Hook, he heads a S.W. course, hoping to strike somewhere in the neighborhood of Port Monmouth. That he is a little anxious cannot be denied, and he heartily wishes that he had not started until clearer weather.

The wind was now breezing up from the N.E. and the fog looked thinner, at which our courage rose proportionately. In less than an hour we fetch land not far from Bayside Beacon. Skirting the shore we run into Keyport, and go in there to make a visit to an old friend and get dinner. Having paid our visit and dined, we go aboard to find that the fog had entirely cleared and the breeze is fresh from the N.E. With port rail under, we head across Raritan Bay for Staten Island Sound; up this we beat. There is power in the wind, and we are forced to take in a reef before reaching Sewaren. Here we take tack for tack with a catboat some three or four feet longer than we are; but as the wind increases, power tells, and she leaves us. After an exciting sail home, we pick up our moorings and are so glad to get back after nearly a week's absence. RICHMOND.

THE NEW DEED OF GIFT.

THE following letter was published in the *World* of Nov. 19, the writer being Mr. James Ashbury, the first challenger for the America's Cup:

To the Editor of the World:

Although not a yacht owner, I have followed with interest the various phases in relation to the Cup won in 1851 by the America. To my mind the recent decision to alter the deed of trust under which the Cup is held is most amusing, as all negotiations and acts to alter the conditions of the trust are as unsportsmanlike as they are illegal.

The terms of the trust are clear beyond question. In or about 1870 Commodore Stebbins officially informed the New York Y. C.:

First—That Mr. Schuyler had reported that the intention of the donors was that a race or match for the Cup meant a single vessel and not a fleet.

Second—The commodore took the opinions of three eminent American judges, who ruled that a match or race meant a single vessel.

By a vote of 20 to 1 the yacht owners ruled in 1870 that a fleet should sail, but in 1871 practically admitted their illegal act by deciding to send one vessel, but their nominating four to pick and choose from on the morning of the race was again a violation of the deed and of the intentions of the donors, and in subsequent years the contention was withdrawn.

As no opposition has been made to the club using a centerboard, no question arises thereon on races in American waters.

It is not competent for the N. Y. Y. C. to dictate to English yacht clubs as to the terms under which the Cup could or should be raced for in English waters. The race would be under the terms of the deed of trust, and the late Mr. Schuyler and the N.Y. Y. C. had no particle of right and power to alter the terms and conditions in any form or shape. In these circumstances I propose to apply to the American courts for an injunction to restrain the N. Y. Y. C. from setting aside the original deed as given by the four donors.

In treating for any future races the club must be careful to advise the challenger that the legality of the second deed will be contested in the Superior Court of America, and that no race can take place pending such decision. Yours truly,

Nov. 12. A GLOBE TROTTER.

How much there is behind Mr. Ashbury's threat we cannot say, but he has little reason to love the New York Y. C., and at the same time he would be doing a real service to his fellow yachtsmen if he could secure a return to the original deed of gift. A resort to legal measures is always to be deprecated in matters of sport, where fair play and good fellowship should be the guiding principles, but the complications following the last change of the conditions governing the America's Cup are taking such a shape that an attempt at a legal solution is by no means improbable before another race is sailed. Even though no steps be taken by Mr. Ashbury or other British yachtsmen, the time may come when, in order to get a challenge, the New York Y. C. will have to resort to a friendly suit in order to free itself from the new deed of gift. The usual fall crop of challengers and defenders is now in full bloom, 90-footers for syndicates and single owners on both sides of the water, for Gen. Paine, Mr. Forbes, Mr. Morgan, Col. North and other yachtsmen, but thus far not a particle of corroboration has appeared, and it is probable that big yachts and international racing will take no more tangible shape next season than this.

PODGERS AND THE AMERICAN EAGLE.

Editor Forest and Stream:

The yachting season being over, and everything from the catboats to the big steam yachts having gone into winter quarters, interest in the sport necessarily flags. The owners are too busy in Wall street to think of sail or steam, although many of them are probably carrying more sail and heavier pressure just now than at any time last summer. Stocks and securities that are insecure are occupying their close attention to the exclusion of all thoughts of pastimes. They are riding out gales, some of them, with single anchors and dragging into a lee shore, longing for a snug harbor under their lee.

That some of the Wall street tars will come to grief—go on the rocks—seems probable from the "present condition of the market." So we cannot expect much yachting talk from that class of yacht owners. They have other fish to fry, some big ones—whales mayhap, with a scarcity of frying pan capacity. But there are a few yachtsmen who are not slaves to Wall street and cannot we hear from them as to what is to be the next "fad" in yachts?

Yachts and yacht building have become as much a matter of fashion as to model, form and style as the latest in dress and dog carts. We have had a severe infliction of things English. Not a yacht built the last two years that has not had the pigeon fantail, blasted English stern, you know, narrow, unsightly and hideous to an American eye not tainted with the anglomaniac fever. Cutters have had their brief day and those owning them are tired of them. We have gone through that stage of English worship, tried a mixed model of depth and breadth, a combination consceion of English rig, English sterns and American beam, but stuck to lead keels, and after all what good has come of the new departure? Every other attempt of the kind has been a failure and to-day we do not turn out a faster or as handsome a craft as our daddies did. Is there a schooner afloat to-day that could beat the Sappho, think you? or even a sloop that could beat the old Maria, I doubt it.

It strikes me we are groping in the dark, we are in a semi-benighted condition. We have lost our grip on the old models and made no improvement in the way of the new, and as it stands to-day we are all at sea. There is no longer any fixed type of the American boat. We have tried to copy the English and failed, tried a semi-combination, half cat and half dog, and what shall we do next is the question. I really believe if Burgess was asked to-day what model or kind of a boat he considered as the best to build, if he answered conscientiously, he would say "damfino."

It has been a year of experimental groping in the dark, much as the doctors grope when they try one medicine on the chances, then another, until the patient succumbs to experiment. The fellows who pay for yachts are the patients in this case. The modelers and builders are the fellows administering their vital doses, often making the patient very sick.

This concession to and fad for things English handicaps every builder. He knows he must humor his customer by giving him something very English, you know, and hence is in a quandary what kind of a hairpin to turn out. "Quandary" would be an appropriate name for the craft he does turn out.

Is there not yet remaining some man with sufficient nautical skill and independence to strike for his sires and his country and turn out an American boat? A boat with beam. A boat with moderate depth. A stern with space and bearing in a knock-down, and not a tooth-pick. Some day, I think, Burgess will come to the rescue, throw overboard all these English notions now literally forced upon him, and say, "Away with this foolishness, I will build an American boat." That day will come. He will emancipate himself from his present "anything to oblige Benson' and wrap himself in the American flag, and Kirby-like declare himself a true American. I shall live to see it, and when he does I will put a classical dictionary under one arm, a pair of blue specs on my nose, and invade Boston to do him honor.

Yachting to-day is losing its grip, so many failures have driven, and are driving, the community to steam. Of course those are not the real genuine article. Not dyed in the wool yachtsmen, but they are in the majority. Steam yachts are gaining in favor with that class who must get back to keep an appointment at the club. Of course it is at the club, always is. You will see more of the tea-kettle fleet another year if they cannot get a sailing craft to beat t'other fellow. And some day they get becalmed down the bay, they say —— sail, I'll have steam, and forthwith offer the craft for sale. Look at the list of sailing craft advertised by yacht agents. It tells the story. You can buy schooners and sloops at the cost of their cabin outfit, while steam yachts go off lively.

I doubt if you will see a regatta of the New York Yacht Club next summer. The interest in regattas is a thing of the past, and it don't pay. It is a great expense to yacht owners and the clubs. The annual cruise is a great improvement on the regatta—more fun, gives a long holiday, and helps the cause.

I want some smarter fellow than I am to come out and tell us what we are going to do about all this degeneracy. If there is any remedy, what is it? PODGERS.

DELAWARE RIVER.—The sixteen foot cats, new this year and twins—Clarke and King, had an interesting race on Nov. 16. Course from Cooper's Point to Chester Buoy and return, 30 miles. No limit of time. The Clarke had been a winner all the season, although the boats are as near alike in form, sail plan, etc., as the greatest care could make them. Some one suggested that a slight difference in men would make either boat win. Hence the race. Capt. John McCulley won the Reedy Island pitcher, a handsome gold badge which he wears with becoming pride, and several club prizes, in the Clarke; and has never been defeated in this boat. Capt. R. G. Wilkins sailed the King for the first time. The boats made a splendid start at 10:30. Wind north and light veering to E. and W. At Kaign's Point the King hauled her wind across the bow of her competitor and after a luffing match bore away for stronger tide. Shortly after, the Clarke being further to the eastward took the wind off shore; leaving the King to "fish out a breeze" from some other quarter. Flood tide caught the boats off League Island and the wind freshened, with westing in it. The King seemed to like it and was soon pinching the Clarke for windward position, eventually passing her and slowly but surely opening the gap. Above the lower end of Tinicum and three miles from the turning buoy on the upper spit of Chester Island, the King was half a mile in the lead. McCully then signalled he would like to declare the race off and sail it over again. This Wilkins consented to reluctantly. The boats had been "bucking" the tide for several miles and it would have been an all night's job to finish the race. It is evident to local sailors, however, that had the race been continued to the lower buoy, the boat leading by say only half a mile, would with the flooding tide have been four or more miles ahead on the home stretch, as the wind was very light. The King beats the Clarke in a run of 12 miles, one half-mile.

QUAKER CITY Y. C.—At the November meeting of the Quaker City Y. C. the board of trustees reported the election of Messrs. John S. Lloyd, George D. Gideon and Dr. Joseph T. Rothrock to membership. Com. Middleton submitted his report of the annual cruise. The secretary reported the enrolment of the following yachts: Sloop Lizzie, Mr. F. S. Brown, length 32ft., beam 11ft. 8in., draft 3ft.; Schooner Norna, Mr. E. R. Coleman, length 105ft. 9in., beam 21ft. 8in., draft 12ft.; Yawl White Cap, Dr. J. T. Rothrock, length 75ft., beam 20ft. 9in., draft 9ft. The committee on river club house reported that they had inspected several properties and would report fully at a future meeting. A special meeting of the club was held on Nov. 20 to consider the advisability of forming a class in navigation, and to meet Commander Francis M. Green, of the Pennsylvania Nautical Schoolship Saratoga, who had been invited to address the club on the necessity of yachtsmen having a knowledge of the science of navigation. At the close of Commander Green's address the committee on lectures and entertainments were authorized and directed to make such arrangements as may be necessary to inaugurate a course of studies and lectures in navigation. The committee announced that 12 members of the club had promised to join the class. The yawl White Cap, Dr. J. T. Rothrock owner, with Davis Bullock and Percy Moore, of the University of Pennsylvania and Mr. A. S. Hitchcock, of the Missouri Botanical Gardens, sailed from Philadelphia in October, on a scientific expedition to the Bahamas and West Indies, and arrived at Nassau, N. P., on Nov. 8, after very heavy weather on the passage. The White Cap sailed for the Windward Islands on Nov. 12. The schooner Norma, Mr. E. R. Coleman, is fitting out for a cruise to the West Indies, and will sail about Dec. 1.

THE WRECK OF THE URANIA.—The first particulars of the wreck of the Urania were incorrect, the details being as told in the following extract from the *Field*. The yacht was a 64 ton cruising yawl, about 65ft. l.w.l., 14ft. 10in. beam and 11ft. draft, built in 1882: "A fatal disaster occurred at Bangor, co. Down, during Thursday night's storm to the 64 ton yawl Urania, from the Clyde to Southampton, with Viscount Cantelupe, eldest son of Earl De la Warr, and seven men on board. The yacht put into Bangor Bay on Thursday evening, through stress of weather, and anchored a few hundred yards from the battery. At 2 o'clock on Friday morning, however, the wind shifted, and the Urania was driven on the rocks. Finding their vessel going down, the men helped Lord Cantelupe up the rigging, following afterwards themselves; but just when his Lordship had reached the highest footrope he struck the yacht and unfortunately was thrown into the boiling sea and drowned before the eyes of his men and a large crowd of people standing on the rocks close by. Capt. Hannay, the coastguard and his men, Mr. Arthur Hill Coates, and others were in the meantime getting the rocket apparatus ready; and, connection having been made, the captain of the yacht and his six seamen were saved after 3 hours' hard work, and comfortably housed by Mr. Coates. The greatest sympathy is felt for Lord Cantelupe's young wife and relatives, as he was only married 5 months ago. The top of the Urania's mast was visible above water on Friday morning."

THE NORTON STEAMER.—The Norton yawl which was built at Staten Island a couple of years ago, and which at one time issued a challenge to any yacht for a race around Bermuda, has lately been converted into a steamer by the Pusey & Jones Co., her compound engines being 5½ and 10½×10in. The vessel is 58ft. long, 12ft. 6in. beam, and 6ft. 4in. draft, her displacement being 41 tons. She is fitted with the Norton air and water ballast, the tanks holding 8 tons of water. As the engines and the Norton system occupy nearly all the interior of the hull, a high deck house is necessary to accommodate the crew. The screw is 34in. diameter and 34in. pitch; the vessel is yawl or ketch rigged, and her bunkers carry 15 tons of coal, which is considered a thirty days' supply. In this craft Capt. Norton last week sailed from Staten Island for Toulon, France, proposing to call first at the Azores. His party include himself and wife, with their niece, an engineer and assistant, sailing master, two seamen, steward and cook. The Norton system has been fully described in the FOREST AND STREAM on several occasions; it is simply a form of water ballast and sealed airtanks, possessing some peculiar features for which much is claimed, but in no way superior to other methods of water ballasting.

LAWLEY'S YARD.—The beach and basin at Lawley's are well filled, nearly all the Eastern flyers being hauled out or moored in the basin. Among the former are Volunteer, Alga, Pappoose, Shark, Hawk, Swordfish, Saracen, Saladin, Rosalind, Chiquita and Milicete; while in the water are Mohican, Gitana, Troubadour, Wayward, Gossoon and Say When. In the big shed Mr. Welch's new cruiser is planked up, a fine-looking craft of moderate beam and easy bilge, with iron keel. Near her are two small steamers, built in stock, but since sold. In the small shed is a steam yacht for Mr. C. S. Eaton, owner of Rosalind, now planked up. Men are at work carting away a part of the hill to make room for a new building shed 125×50ft. on the north side of the yard, while another building will be erected for the steel building plant. The Belmont 46-footer is laid down, and the spars for her and three others are roughed out. One of these is for Cornelius Vanderbilt, one for Bayard Thayer and one for A. B. Turner, owner of Milicete, last year's centerboard 46-footer. All four are keel boats. Mr. Turner has engaged Capt. Charles Barr to sail his boat.

THE ROBERTS BOILER.—A company has just been organized under the name of the Roberts Water Safety Tube Boiler Co., with a capital stock of $250,000, to build the Roberts boiler. Mr. Roberts is president and general manager. The building and plant will be enlarged and improved.

XARA.—The purchaser of Mr. Mean's 40-footer is Mr. Alfred Kayne of Newburgh, N. Y., and Xara will fly the Rat rampant of the Newburgh C. & B. A. next season.

CONSTELLATION.—The new singlestick rig for this schooner will have a boom 106ft. long, a gaff 57ft. and 80ft. hoist.

BOOKS RECEIVED.

CUDJO'S CAVE. By J. T. Trowbridge. Good Company Series, No. 4. Boston: Lee & Shepard. Paper. Price 50 cents. This was first published in war times, of which it is a story; and it had a tremendous sale in those days. Doubtless many readers will be glad to read it again, to test whether it has the same interest now as then.

NAMES AND PORTRAITS OF BIRDS, by Gurdon Trumbull. A book particularly interesting to gunners, for by its use they can identify without question all the American game birds which they may kill. Cloth, 230 pages, price $2.50. For sale by FOREST AND STREAM.

Canoeing.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

AMERICAN CANOE ASSOCIATION.

OFFICERS, 1890-91.

COMMODORE: WALTER U. LAWSON, Boston, Mass.
SECRETARY-TREASURER: RALPH F. BRAZER, 47 Central street, Lowell, Mass.
REGATTA COMMITTEE: J. A. Gage, Lowell, Mass.; W. G. MacKendrick, Toronto; L. B. Palmer, Newark, N. J.

CENTRAL DIVISION.

Officers:

VICE-COM.: C.V.Winne, Albany, N.Y.
REAR-COM.: T. P. Gaddis, Dayton, O.
PURSER: Howard Brown, Albany, NY
EX. COM.: J. K. Bakewell and H. M. Stewart.

NORTHERN DIVISION.

Officers:

VICE-COM.: W. H. Cotton, Kingston.
REAR-COM.: J. C. Edwards, Lindsay.
PURSER:
EX. COM.: Colin Fraser and F. H. Gisborne.

EASTERN DIVISION.

Officers:

VICE-COM.: J. W. Cartwright, Jr.
REAR-COM.: G. L. Parmele, Hartford.
PURSER: R. Appollonio, Winchester.
EX. COM.: Paul Butler, E. S. Towne and Sidney Bishop.

ATLANTIC DIVISION.

Officers:

VICE-COM.: I. V. Dorland, Arlington.
REAR-COM: E.D. Anderson, Trenton.
PURSER: R. Hobart, Newark, N. J.
EX. COM.: H. L. Quick and H. M. Kreamer.

Applications for membership must be made to division pursers, accompanied by the recommendation of an active member and the sum of $2.00 for entrance fee and dues for current year. Every member attending the general A. C. A. camp shall pay $1.00 for camp expenses. Application sent to the Sec'y-Treas. will be forwarded by him to the proper Division.

Persons residing in any Division and wishing to become members of the A. C. A., will be furnished with printed forms of application by addressing the Purser.

WESTERN CANOE ASSOCIATION.

Commodore—D. H. Crane, Chicago, Ill.
Vice-Commodore—N. B. Cook, Chicago, Ill.
Rear-Commodore—O. A. Woodruff, Dayton, O.
Secretary-Treasurer—J. H. Ware, 130 Rialto Building, Chicago, Ill.

Applications for membership should be made to the Sec.-Treas., on blanks which may be obtained from him, and should be accompanied by $2 as initiation fee and dues for the current year.

A. C. A. EXECUTIVE COMMITTEE MEETING.

THE following is a list of the amendments to the constitution and by-laws adopted at the meeting on Nov. 15, a summary of which was given last week:

CONSTITUTION.

Art. V., Sec. 1. Add the word "librarian" after secretary-treasurer. Sec. 2. "The librarian shall be elected by the executive committee for the term of three years." Art. VII. As a continuation of Art. VII. "In the event of absence of commodore the ranking officer of his Division will act in his stead, and should no officer from that Division be present the senior member present of that Division will preside." Art. VIII. Change the reading of Art. VIII. as follows: "In the absence of the vice-commodores the rear commodores will act in their stead and Division officers take precedence as to rank. Should no Division officer be present at a meet or meeting the senior member present of that Division shall preside." Art. IX., Sec. 2. Third line should read: "They shall also forward to the A. C. A. secretary-treasurer, by Aug. 1, the amount due from the Division to the A. C. A. treasurer, and within four weeks after the annual camp of the A. C. A. a list of members and canoes of their Divisions. Pursers shall receive, etc." Art. XII. In Art. XII. "In the official organ" shall read: "In one of the official organs."

BY-LAWS.

Chap. I., Sec. 2. Add after first sentence: "Members joining the Association after Sept. 30 shall pay no dues for the current year." Chap. IX., Paragraph 2. Add the "club race" after the words "the three record races," in the third line. Chap. IX. (8) To read: "They shall submit to the commodore in time for publication at least two weeks previous to the annual meeting, a full report, in which shall be embodied all proposals for changes in racing rules, whether originating with the committee or submitted to them by members. They shall also furnish a condensed report of the annual events and expenditures duly audited by the secretary-treasurer for the year book." Chap. X. Add: "And for the secretary-treasurer the letters A. C. A. in gold, supported by a quill in silver." Chap. XI. Add "the librarian or" after fifth word.

The following is an abstract of the statement of the committee on camp site and arrangements:

Expenditures.

Printing and postage		$ 27 55
Lumber	$479 14	
Freight two ways	83 90	563 04
Well and bricks		90 50
Labor		660 08
Tents		33 50
Signal station		2 35
		$1,377 02

Credits.

Lumber—Tent floors	$170 25	
Docks and skids	126 53	
Loose lumber	21 11	
Flag poles	10 50	
H. Stanton, on account mess	163 98	
Labor, H. Stanton, on account mess	73 13	
Entertainment	60 50	636 00
Cost to A. C. A.		$740 92

The above summary conveys a very small idea of the full and complete report made by Mr. Burchard, covering 22 type-written pages, with bills attached, and giving a detailed statement of every board used and of every hour of labor. The full contracts for lumber, which was bought in New York, are also included. Arrangements were made by which all uncut boards, or those above a certain size, were returned.

The following letter was sent to the executive committee:

J. W. Cartwright, Jr., Vice-Com. E. D., A. C. A:

DEAR SIR—I desire to say a few words on three different subjects, viz: War Canoes, Cruising Canoes, and the Pecowsic Sail, to be presented by you to the executive committee at their coming meeting.

I name the above subjects in the order of merit to the A. C. A. as I look upon the subject, war canoes being of the greatest value to the A. C. A. as giving the most enjoyment to the greatest number and thus tending to increase the membership.

War Canoes.—Two objections now against war canoes are transportation facilities and enough paddlers in any one club to man then, and both are easily overcome in the following manner. Let the A. C. A. fix the limit and number of paddlers to a canoe and have the canoe made to take apart at the midships section so it could be shipped back and forth in an ordinary freight car. Then let each division buy a canoe to be the property of said division or better still let the four divisions unite on some maker to build all four of the boats. Now let each division take their war canoes to the meet and man them with paddlers belonging to said division only. Start the four boats on a half-mile straight away race and you will have more good fun and excitement than was ever had at any previous race held by the A. C. A. Harvard and Yale would be nowhere, and besides creating a healthy rivalry between divisions it would also furnish sport for all.

Cruising Canoes.—In my opinion the A. C. A. is entirely on the wrong track in trying to encourage what is termed an "all around canoe." Who ever heard of an all around horse? A horse to be of any account whatever must be distinctive, a trotter, a draught horse or a saddle horse, one or the other, not all in one. Just the same with a canoe, she must be either a racer, a paddler or a cruiser. The A. C. A. should not lose a day in fixing the limit of a cruising canoe, and her dimensions should be something like this: length not over 15ft., beam not less than 30in., cockpit not less than 18in. wide by 5ft. long and using a bilge centerboard or a board that does not project up higher than the Radix; sail area not over 75ft. This is all that need be said about dimensions. Now let the A. C. A. take the combined sailing and paddling race for a cruising race, and have all the events done with a cruising canoe with the exception of the unlimited and trophy races. I am ready to subscribe $10 toward the purchase of a cruising trophy like the two other trophies now held by the A. C. A. Of course the

above arrangement does away with the record and in my opinion it should be done away with, for by so doing you get a perfect cruising canoe and you never will in any other way.

Pecowsic Sails.—I was much surprised at the last A. C. A. meet when I turned out one morning to be told that the executive committee at their meeting the night before had prohibited the use of my favorite sail, and I hope the honorable committee will rescind the resolution passed at the meeting. It certainly does not look right to say that the A. C. A. has prohibited the use of a certain kind of sail when so many are coming into use wherever you go. I never had a sail that I could not put up and lower while afloat. No man ever helped me to leave a wharf or make a landing because the water was rough. I never jumped into the water when approaching the lee shore to save my boat. At the reviews held at Grindstone and Bow Arrow I was in the line and raised and lowered my sails the same as the rest of the fleet. It is in fact a sail with so many good points that the A. C. A. cannot forbid its use without more or less reaction hereafter. It is also largely in use where members having but little time to enjoy a sail desire to rig up quickly. In small areas it is coming into use every day. Now because some members have increased their sail areas out of all proportion to the size of their canoes merely as an experiment, and have since discarded them, it is simply unjust for the A. C. A. to say that I must discard all use of my favorite sail in the future. Respectfully submitted by PECOWSIC.

SPRINGFIELD, Mass., Nov. 12.

CANOEING IN ENGLAND.

THIS letter, which is intended to answer a paragraph in the FOREST AND STREAM and to notice a letter by Mr. Bigelow in the *Sail and Paddle* for September, was delayed because I have just returned from a long vacation in Scotland to find a pile of copies of the *Sail and Paddle* and the FOREST AND STREAM awaiting my attention.

My reason for writing is that I fear Mr. Bigelow's letter, if not reviewed, might give to American and Canadian canoeists a somewhat misleading notion of the present state of canoeing in England, both as to our canoes and canoeing institutions.

Not only is this letter applicable to Mr. Bigelow's article, but I hope it may be read in conjunction with many paragraphs which have appeared lately in the FOREST AND STREAM, and I offer my remarks in no hostile spirit to either paper or individual, but only in that *bona fide* canoeists in England are not desirous of appearing to act as protectors of a movement under which canoeing is persuaded to "collidescope" into boating and small yachting, all the while under the colors of canoeing, and therefore under false colors.

It must be borne in mind by my American readers that in England we have two elements which detract greatly from the possibility of canoeing as a sport ever here growing to A. C. A. proportions. These are the absence of suitable waters handy to our large cities, and that volunteer service and cycling steadily absorb a large number of young men who otherwise would probably take up canoeing.

Mr. Bigelow says "The sport of canoeing is fast disappearing in England, if it is not already gone, in spite of the fact that the British Canoe Association has grown steadily in members since 1887."

It is very evident that Mr. Bigelow takes his cue from what he saw at the B. C. A. meet, at Falmouth, and if that were the true barometer of English canoeing he would, no doubt, be justified in all he says.

However, as a fact, the British Canoe Association holds but a small percentage of the British canoeists. It is not truly an association, but a club, and a boating club at that, in which canoes, boats and small yachts are admitted indiscriminately.

There are no "association" definitions to conserve the classes or types, and no racing classifications to guide British canoeing—even if the association were acknowledged as "representative of British canoeing" (which, however, it is a long way from being).

The British Canoe Association was started in 1887, at a "cruising meet" of the Royal C. C., to which other clubs and canoeists had been invited. It was created there and then without due notice, and in the absence of many of the leading canoeists, and it promoters refused to reconsider or reopen new the details of its constitution; hence a large number of the best known canoeists held aloof from the so-called B. C. A. then and since.

I have not, and never had, the slightest objection to the B. C. A. as a "club," but I do object to a mixed boating, yachting and canoeing body, assuming what to ordinary canoeing must appear as the conservancy of canoeing, because of the national title used.

Mr. Bigelow, in the September *Sail and Paddle*, describes the 1890 meet of the B. C. A., and from all I have heard his description is perfectly accurate and his criticism, so far as that meet is concerned, just; and I only ask American canoeists to read it and answer the question, "Can this be called a canoe meet?"

Now as to Mr. Bigelow's criticisms on the size of English canoes, he says: "Every canoe built is heavier and deeper than the last; of those here most do not pretend that they can be paddled at all. They (the Englishmen) understand under the term canoe almost anything that is sharp at both ends." I hope Mr. Bigelow means this only of "those here." I do not know whether he has visited Kingston, Hendon, Liverpool, Wear, Tyne, Tees, Sunderland, etc., for, at these places, he would have seen "canoes" as really canoes as any in America. Did he see the Royal C. C. races? I believe he is a member of the Royal C. C. Has he lost his club book? If not let him turn to pages 15, 16, 17 and 18, he will there see that our definition, under which alone canoes are allowed to race in the R. C. C. is really stricter than the A. C. A. rule. We limit size exactly the same as A. C. A. rules; we, above this, limit sail area to 112 sq. ft.; we prohibit sliding out deck seats, bucket wells and standing sails (the latter practically), and we paddle our races in the same canoes we sail our races in.

The majority of our canoes are 16ft. by 30in. beam, and about 5in. draft, and sailed without ballast, or with very little. The rather too minute limitations, such as to minimum depth (page 16), were incorporated to stop the building of mere bottoms decked over, *i. e.*, too small a craft instead of, as Mr. Bigelow suggests, too large a boat.

As a matter of experience—with the squally winds we get in England in the early summer—I do not view the sliding out deck seat as detrimental to canoeing, provided, as with us, a reasonable limit is put to sail area. Our limit of 112ft. is too small, and might well be put up to 120ft.

With sail area limited to 120ft., which is an area a 16ft.×30in. canoe can carry by balance of her crew, I don't think that a heavily ballasted canoe cutter (see the FOREST AND STREAM, Sept. 25) would, except in a gale, beat the ordinary no-ballast canoe. But under the A. C. A. rules unlimited sail may be piled on sufficient not only to drive the extra weight, but also to overcloud the light canoe in moderate winds, and the lead and power must enable her to outcarry the light craft in a heavy blow and lumpy sea. Added to this also is the advantage of using a long extended seat fitted to a platform of comparatively stable nature, a bucket well and low freeboard.

Here, you have the possibility of a class of craft veritable "machines," as perfect for match sailing as they would be imperfect as canoes.

I have, as you point out, myself had such a craft in 1879. Her lines were in Kemp's first edition of "Yacht and Boat Sailing." I soon gave up the schooner rig and put her back to the ordinary canoe fitout of main lug and mizen. Though she was successful in racing, she was simply abominable for hauling about or housing; needed two regular cradles to sit on in the boat house.

In those days we sat below and steered by foot, what would she not do when sailed now from the deck position and with unlimited sail? Well, the R. C. C. limits stop her, but the A. C. A. rules distinctly invite such craft.

I know full well that all "limitations" are vexatious to the inventive genius, but they are necessary for the common good. I think the Royal Canoe Club has gone too minutely to work—but that is ever the result of undigested amendments being sprung upon a meeting and accepted rather than risk losing an important reform. The divergence from canoe type in England used to be in beam, depth and ballast, but our American cousins taught us the power gainable by sitting out to windward, we saw the danger that that position would invoke huge sails and deep wedge bodies and lead or heavy plates; so we limited sail area, and thus at one stroke cut off any advantage that might have been gained by the threatened divergence from true canoes. With sail area limited and length limited, beam, centerplate and keel limits are of very minor importance, and could with advantage be simplified in the rule so as to give greater freedom of model. It has been declared on all hands in yachting that under the length and sail area rule it is impossible to build a successful monstrosity—therefore with the canoe all we have further to do is to insure that "canoe nature" is conserved to the craft. The A. C. A and the R. C. C. rule being so very nearly alike, let me suggest that a simplified medium rule might be agreed upon between the three countries, America, Canada and England—otherwise international racing is barely possible.

Americans visiting England would have to comply with the requirements not only of limited sail area, but as to position of center plate, *i. e.*, not abaft mid-lengths, size of well, etc. Englishmen going to America to sail for the A. C. A. and New York trophies are under the disadvantage that, unless they build specially for such trip a canoe simply a racer and which they would not be allowed to test in our English races, they take over a canoe built and fitted and tested under the curb of our "limitations." Neither of us are Romans, so I don't see why, when we go abroad we should "do as the Romans do." It should be legislated so as to be a case of "When Greek meets Greet, then comes the tug of war."

The canoe yawls, to which Mr. Bigelow refers as "big canoes," have come into favor in England in many places where the waters, owing to mud banks, etc., are unsuited to small canoes. But with no guiding definitions or limitations the successive boats of this type have quickly "run to seed" in the direction of small yachts, with heavy lead keels, bowsprits, jibs and gaff sails.

The Royal C. C. does not recognize them as canoes, but has, as the senior authority on canoeing in England, created a definition in order to draw the line between canoe type and yacht nature. The definition is very simple, yet effective: "Length not over 20ft., beam not less than 3ft., depth from upper side of deck to under side of keel, measured anywhere, not to exceed 3ft. No ballast outside or below the garboards, excepting center plates. No transom or counterstern. Rating $\left(\frac{\text{length}\times\text{sail area}}{6000}\right)$ not to exceed 0.5."

Thus, if the "yawl" is 20ft. long she can only have 150ft. of sail, and no expert designer would give such a craft excessive beam or depth or ballast. The far more likely danger would be a shallow saucer-shaped skimmer built to suit particular water.

As yet canoe-yawls have not shown any sailing superiority over canoes. On Hendon Lake the best canoes have beaten the yawls in all kinds of breezes and smooth water, but there has not been a trial between the best canoes and yawls in lumpy water.

Of course the yawl men say "the yawl will yet be built which," etc., etc. Of course it will, but we never intended to be always able to fight gunboats against line of battle ships.

For giving-sailing, of course, a "yawl" is the thing and suits the married member, and so no harm is done to "canoeing;" but harm is done to our sport when "yawls" stalk abroad as "canoes." Railway and steamer companies having agreed to a rate for carrying canoes, then find heavy monsters put upon them. Up go the charges never to come down again.

I cannot doubt but that the present danger to canoe sailing in America is the absence of a (reasonable) limit to sail area, and in England is the presence of (unreasonable) minor limitations. Under the A. C. A. rules, as now existing, model yacht elements must come to the fore and the *bona fide* canoe must take a back seat. Under the English minor limitations (cruising requirements as to fittings) a canoe is at a disadvantage when pitted against the less fettered A. C. A. craft. Whether one or both these evils require amendment is a question to be promptly considered before the "damage is done."

If the majority prefer to let the machine develop, well, let her rip; but don't stop at that; create a second or cruiser class under all the same conditions as the racer class—except that some limitations are added to conserve the *bona fide* canoe of general utility, viz., a reasonable limit to sail area—say 112sq.ft. A reasonable size of hatchway to enable sitting below. Reasonable hatchways in the decks for stowage purposes; and two permanent bulkheads below with space between for sitting in, *i. e.*, 4ft.

It this second class were created there would be cudos in racing a "cruiser" against the "machines" if she won, and admitted fair excuse if she were beaten, whereas at present it would be asinine folly to expect to beat with cruiser fittings a craft solely fitted and designed for racing, which some vulgar people call a "racing machine." W. BADEN-POWELL (Nautilus), R.C.C.

NOVEMBER, 1890.

ROYAL C. C. CHALLENGE CUP.

THE race for the challenge cup, postponed from June 14, took place Oct. 18 in a spanking breeze from the northwest, with occasional heavy slammers. The following canoes were entered:

Boat.	Owner.	Boat.	Owner.
Whizz.....	E. R. T. Croxall.	Atalanta.....	R. De Q. Quincey.
Nautilus	W. Baden Powell.	Birdie.....	P. Waterlow.
Stella.....	G. E. Webster.	Vanessa	B. De Quincey.
Selene.....	S. F. Staples.	Roulette.....	C. Livingstone.
Severn	T. H. Holding.	Nemo.....	P. Cox.
Diamond....	H. Church.	Mercury.....	D. Waterlow.

Of these, however, only the Whizz, Stella, Diamond, Birdie, Vanessa and Mercury put in an appearance. Much regret was felt at the absence of Nautilus and Atalanta. The race was under the management of Mr. Herbert, the senior mate, assisted by Messrs. Miles and Ingram, and was started at 12:30.

Vanessa was first over the line, and went off with a good lead, followed by Diamond and Whizz, the others being in close proximity. At the buoy in the bight Diamond was first, but Vanessa soon after passed her, and was never again headed during the race. Diamond's steering gear gave out, and she had to stop for repairs, and was passed by the Whizz. The first round was completed as under:

Vanessa.....	12 51 30	Stella.....	12 55 00
Whizz	12 52 40	Birdie	12 56 00
Diamond.....	12 54 50	Mercury.....	12 56 30

In the second round at the lower buoy Whizz was struck with a squall and capsized, and her example was immediately followed by Birdie, whose plumage got considerably soaked before she was picked up by the Nina, who this year has been much engaged in rescue work. Whizz and Birdie were now out of the race, which was continued by the others, until Diamond, nearing the home buoy, carried away her rudder, and after this second mishap retired. The three canoes now left in the race finished the remaining rounds as under:

	2d Round.	3d Round.	4th Round.	Final.
Vanessa.	1 14 00	1 33 30	2 02 00	2 25 00
Stella.....	1 19 00	1 42 40	2 08 00	2 33 00
Mercury.....	1 22 30	1 47 10	2 14 00	2 42 00

The winner sailed remarkably well throughout, and quite deserved her victory, the owner receiving the congratulations of his competitors, and of a number of old sailing canoeists who were looking on. The times of the rounds were very fast, but with the exception of a beat into the bight, it was nearly all reaching.

Vanessa and Whizz will meet to-day (Saturday), Oct. 25, to sail off the final heat, and if there is a breeze we expect to see a good fight.

Oct. 25.—The final match for the £50 challenge cup (sailing) came off on Hendon Lake on Saturday. Two wins out of three races is now the mode of competing for this trophy, and was inaugurated this year in order to prevent the cup being won on a fluke. But owing to want of wind in the early summer the racing had to be postponed to October, and consequently found the racers much more off than on, many being away touring and sporting. Even had the whole racing fleet been at the starting line it must be admitted that the early start and short day appertaining to an October race, together with biting wind and cold water, tones down the allurement of canoe racing, except perhaps to the few known "best chance" men.

On the 18th a hard breeze with squalls lasted well through the ten-mile race (triangular course), which was sailed by the winner, Vanessa, in 1h. 55m. Whiz, the final winner, being third in that race, until Diamond's gear carried away, when Whiz took second place, but soon after capsized and gave up. Nautilus, though entered, was not a competitor, her owner being away in Scotland.

On the 25th the two winners of the previous races met to sail off the deciding match. The start was made at 12:45 in a W.S.W. fresh breeze and drizzling rain, the two canoes were about 3yds. apart beam and beam, with Vanessa in the lee berth on crossing the line to beat to windward. Their sail plans were about equal, large main lug and small mizen lug, total area limited to 112sq.ft. Vanessa carried a heavy centerplate and some 50lbs. of lead; Whiz had a light plate and no ballast. The boats are of same length and beam. In beating to windward Vanessa soon showed out and took the lead, and at the lower mark was 1m. 35s. ahead of Whiz, but the latter gained on the run to the home buoy, a distance of one mile, 42s. This form of sailing was repeated throughout the match, the difference between the boats appearing more marked as the wind fell lighter; Vanessa won the first round by 35s. In the second round the wind fell off, and Whiz on the run up got the lead; but the pair came up beam and beam a long way, Vanessa only dropping astern when near the home mark by declining to gibe her boom over to a shift of wind which took her by the lee. After this Vanessa again got the lead, but working into a calm patch she was passed by Whiz, the latter carrying a strong free puff all to herself well down to the lower buoy. At the end of the third round Whiz was leading by 28s. The wind got more to west and to north of west, and Vanessa made a slight gain the fourth round, or 8 miles, giving Whiz a lead of 14s.

The wind had now got to N.W., and made it nearly all reaching. Vanessa again got level with Whiz, at west end of the lake, but mistaking the position of the buoy luffed far out of the course, letting Whiz round with a good lead. None the less, Vanessa closed a lot on the reach home and made a close finish, the difference being 42s. The whole time elapsed but 2h. 47m. Mr. Croxall, the owner of Whiz, was much congratulated on winning the cup.

The result of the cup racing is that, out of the three races two have been in light wind and smooth water and one in a strong breeze and moderately rough water; and that the light, small, no-ballast boat wins in light weather. Vanessa is the Nautilus of 1887, a comparatively heavy deep canoe, fitted with all cruising appliances; whereas Whiz is essentially, except as to comparatively small differences or lines, of the Charm type; she has no cruising arrangements, such as hatchways for storage, and is of very shallow construction. Possibly, being 10in. longer than Charm, the Whiz might make a better show in American competition than Charm did, but a very general opinion prevails among R.C.C. men, that she is not of a type which can perform well in strong squally winds or really rough water. On the whole, the Royal Canoe Club has enjoyed an excellent season of racing, and the prizes have been well distributed among the best boats. The official table of races sets out the following order of winnings:

Position.	Canoe.	Owner.	1st Prizes.	2d Prizes.	Challenge Cups	Total. 1st	Total. 2d
1	Nautilus	W. Baden Powell	3	2	1	4	2
2	Vanessa	B. de Quincey	3	1	—	3	1
3	Whiz	Croxall	1	—	1	2	—
4	Severn	Holding	2	(mixed)	—	2	—
5	Stella	Webster	1	2	—	1	2
6	Atalanta	R. de Quincey	1	—	—	1	—
SECOND CLASS		Todd	1	1	1	2	1
CLASS		Roberts	1	—	—	1	—
YAWLS..	Nina	Mills	1	—	—	1	—
		Calkin	—	1	—	—	1

Whether the speed of the canoes lately built is better than was got out of a craft ten years back, such as Pearl and Nautilus of 1880, is a question which has lately been asked by several old hands, who no longer are active canoeists; up to half that elapsed time, say 1885, the answer is clearly "Yes." But when we come beyond that date, to 1886, we have Stella (the Nautilus of 1886) and Vanessa (the Nautilus of 1887) still good enough to win in the modern company in good breezes.

Times of performing the course count for little as guides, as all depends on the exact direction, strength and steadiness of the wind.

The fact remains that, so far, no canoe has been produced which has come to Hendon—sailed all the matches—and won each race she sailed in, which was sailed out.

The canoe may exist—but probably has yet to be built—which will be entitled to hoist the "clean-sweep" broom at the mizen.—*Nautilus, R. C. C., in Field.*

A YEAR TOO LATE.—Messrs. Harlan & Hollingsworth will build a duplicate of the steamer Shelter Island this winter, and next year two boats will be run to Greenport and Sag Harbor.

THIS WILL HIT YOU!

Before and Behind the Curtain,

or the

Adventures of Billy Shakespoke.

A story of amateur and professional stage life.

BY CAPT. CHAS. A. J. FARRAR.

This book will interest all, comprising as it does many laughable scenes and incidents of actual happening. 272 pages, 6 full-page engravings, neat cloth binding, price $1. JAMAICA PUBLISHING COMPANY. Jamaica Plains, Mass.

Names and Portraits of Birds

Which Interest Gunners; with descriptions in language understanded of the people.

BY G. TRUMBULL.

Contains the local names in popular use, and eighty-nine illustrations, which, with the clear descriptions in the text, will enable any man who can read to identify the contents of his game bag.

OPINIONS OF THE PRESS:

It is the first, so far as we know, of a class of books of which the need is felt in every department of natural history.—*Troy Press.*

To all dwellers by the water and in the country and especially all who shoot, the book will supply a great need, and every one who is interested in birds will be interested in it.—*Boston Evening Traveller.*

The book should find its way to a choice place in every sportsman's library.—*Chicago Inter-Ocean.*

There is a delightful dearth of dead languages in this book. The sportsman who looks between the covers for a description of some game bird—a description which will enable him to identify the creature should he meet it in the woods or on the water—is not compelled to shut the book, drop a bad word or two upon it and go in search of some Greek and Latin dictionaries to find out what the description means.—*New York Herald.*

WILD INDIAN LIFE.

PAWNEE

HERO STORIES AND FOLK-TALES.

With Notes on the Origin, Customs and Character of the Pawnee People.

By GEORGE BIRD GRINNELL ("YO.")

Cloth, 417 pages. Illustrated. Price $2.00.

Pawnee customs and beliefs are richly illustrated by the folk-tales and in the copious notes Mr. Grinnell gives an uncommonly spirited account of Pawnee life in peace and in war. There is an account of the defense of a Pawnee village by 200 sick men, cripples, old men and squaws, against 600 Sioux warriors, which for sheer gallantry and indomitable pluck will match almost anything in military history. The Pawnee warriors were all away at the time, and the Sioux counted upon an easy victory. But the Pawnee cripples and women actually beat them off after a hard day's fighting, and at last so terrorized them that the bold assailants fled in panic and sustained a heavy loss. Mr. Grinnell also has written a picturesque and vivacious sketch of one of the last Pawnee buffalo hunts, in which the Indians commonly reverted to primitive weapons and usages, often hunting quite naked with no other arms than their bows and arrows. A particularly interesting part of the book is that which treats of the Pawnee doctors or medicine men. The statements of Mr. Grinnell show the possession by some of these men of a kind of skill in sleight-of-hand far beyond that usually attributed to Indians; some of the facts here described are as puzzling and unaccountable as those performed by the famous jugglers and fakirs of Hindostan, while one of their tricks is a close parellel to the East Indian mango feat. . . . Those who desire to learn of the many other wonders done by the Indian doctors must refer to its pages for themselves. As it is certainly one of the best works on Indian life, legend and character that has been written for a long time, it should obtain a wide circulation.—*N. Y. Tribune.*

ANSWERS TO CORRESPONDENTS.

Readers of FOREST AND STREAM *who are contemplating the purchase of books for Christmas presents will do well to send at once for a copy of our free illustrated catalogue of publications.*

Good Things to Come.

IT is perhaps not too much to say that the most popular writer who ever contributed to the FOREST AND STREAM was "Nessmuk," whose lamented death occurred last spring. We are in little danger of overestimating the gratification that will be caused by the announcement that we have in hand for immediate publication a manuscript written by "Nessmuk," some years ago, and descriptive of his experiences during a winter's camp life in Michigan. It is entitled

Still-Hunting—By Nessmuk.

The narrative is, we think, one of the best things that ever came from his pen; it is distinguished by the terseness, shrewdness, humor and suggestiveness that have made his writings famous. The first chapter will be published next week, and it will run through four numbers. Next week, too, will be given a paper on

The American Woodcock,

by Gurdon Trumbull, favorably known as the author of that valuable book, "Names and Portraits of Birds which Interest Gunners." For early publication we have

Ice Fishing in Arctic Alaska,

an illustrated article descriptive of the Eskimo methods of taking the little cod of the Polar seas. The recent paper by Alex. M. Reynolds, "A Plea for the Cowboy," was so well received that its author has sent us a supplement, entitled,

Cowboy Reminiscences,

which will prove to be of interest quite equal to the first published. Our well-known correspondent "Chasseur" has written for us a lively account of hunting adventures in

The Great Dismal Swamp,

a weird region which is ever full of fascination for the explorer and sportsman. Not the least noteworthy of the manuscripts in hand to be printed in early issues is one which comprises extracts from a daily diary of hunting experiences years ago in Ohio. It was written by one of the best known sportsmen of that State, and with its pictures of the wild scenes of a half-century ago in the Reserve cannot fail to prove of rare entertainment.

These are a few only of the many good things in store for the readers of FOREST AND STREAM.

AN EFFECTIVE COMBINATION.

THERE is one combination that works. It is that of a live and brave game protector and a public-spirited anglers' association. There is such a combination in Syracuse, N. Y. The deputy game protector, Edward Hawn, and the Onondaga Anglers' Association have been working in combination against the fish pirates of Oneida Lake, and some of the results are set forth in the report published in our angling columns to-day. It is a record of which all concerned in making it may well be proud.

The class of men engaged in illegal netting on Oneida Lake had by reason of long immunity grown confident and defiant; and they were so powerful that unaided the State authorities could not cope with them. Sustained by the money and moral support of the Onondaga Anglers' Association, Deputy Hawn has courageously waged a war of extermination upon the nets; and he has accomplished so much that unless his resources fail, it is not too much to look for the suppression of this particular form of piracy.

The Onondaga members deserve the fullest and heartiest public support. Their appeal for funds should not go unanswered. The good work undertaken should not be abandoned for lack of means.

Deputy Protector Hawn is deserving of all praise for the courage and determination he has shown. He evidently has in him the making of an excellent State protector; and we trust that when an opportunity offers he may be promoted. Such men were never more needed than at this moment.

The Syracuse *Times* is our authority for the report that the war against the fish pirates of Oneida Lake is still in active progress. There is no hint that the recent change in the office of Chief Game and Fish Protector will cause an abandonment of the campaign; and those who were apprehensive of the supremacy of the lawless elements on the retirement of Mr. Drew will now, we trust, take heart again.

CO-OPERATIVE PROTECTION.

THE discussion by Mr. Seal in the present issue, of the partial failure of protective legislation, merits careful reading by every one interested in the preservation of our fish and game. We know from frequent conversations with the writer of this article that he is heartily in sympathy with all honest efforts to provide and enforce laws for the protection of the useful inhabitants of the waters, as well as of the fields and forests. A considerable portion of his time has been devoted to the study of the conditions favorable to such life and to its multiplication. Abuses similar to those described by Mr. Seal have fallen under the observation of most of us.

The number of violations of our game laws both open and secret is appalling, and the necessity of putting additional checks upon the injury caused by these destructive agencies should be apparent to every thinking person. It is a humiliating fact that man is one of the worst enemies to the animal life around him. In the rôle of fisherman his contrivances for the capture of his prey are often so effective in their action as to accomplish the extermination of the fish or the abandonment of the fishery through its becoming unprofitable. Illustrations of this will occur to every one who has investigated the subject. The haste and greed to take fish induce men to effect their capture when immature and comparatively valueless, or when emaciated and practically valueless for food, and to intercept them when seeking their spawning beds, with utter disregard of the future supply.

We agree with Mr. Seal that concert of action is required on the part of all people who are in favor of the rational use and the wise protection of our fish and game. The masses must be brought to the knowledge of the fact that protection is for them, and not only for a few individuals or a class of the community. They have not yet arrived at this knowledge, indeed there are persons charged with the enforcement of the laws who have doubts as to the necessity for certain protective legislation. In some localities there is an abundance of law, but a great laxity in its application.

The want of uniformity in State legislation is another crying evil. We may cite the lower Susquehanna as an example in point. Pennsylvania prohibits the use of fish baskets which prove so destructive to young shad, herring and other fishes in their autumnal migration. This State has spent a good deal of money and devoted considerable time and thought to the introduction of black bass, rock bass, calico bass, crappie, wall-eyed pike and other valuable species into the Susquehanna, and with the co-operation of Maryland, injurious fishing devices might be entirely removed from the river, with the result of making it one of the finest fishing streams in the East. Maryland, however, refuses to co-operate with Pennsylvania, allows fish traps to be used wherever the avarice of the fisherman suggests their location and thus cripples the efficiency of the well directed efforts of the Pennsylvania people. Clearly then we need a better understanding of the aims and results of protective legislation. We want the hearty sympathy of every man who favors obedience to wise laws, whatever may be their object. The wilful destruction of birds and fishes should be looked upon with as much disfavor as theft and arson and should be punished with equal severity.

SNAP SHOTS.

IT would be pleasing to learn that we were misinformed regarding a Nova Scotia incident, recently alluded to here, where a magistrate, who happened also to be a hotel keeper, made illegal and unwarrantable discrimination between his patrons and others in the exaction of non-resident license fees for hunting. In a note printed in another column Chief Game Commissioner C. S. Harrington assures us that such abuse of official prerogatives if brought to light will not be tolerated. It is possible that Commissioner Harrington has been misinformed of the circumstances of the case; he says that the Americans fled the country before the officers could come up with them and that they so dodged their license fees. As we understand it the Americans returned home, feeling that they had been imposed upon by the landlord of the inn who had required payment from them. The root of the trouble appears to have been their ignorance as to what the Nova Scotia law did and did not require.

Erastus Titus, of this city, who died last week at the age of ninety years, was known to his fellows of the craft as an enthusiastic fisherman, and until he was eighty-six years of age he had made fishing trips to the rivers of Canada. It has never yet been discovered how aged a man must be before he grows too old to go fishing. The taste for fishing may not be more persistent than that for shooting, but because the gentle recreation calls for less physical exertion than to range the covers, we find that men who by reason of the advance of years are compelled to lay aside the gun are apt to take up the rod and reel, and haunt the trout pools.

In the death of Mr. J. A. Hewlett, who passed away last week, the sportsmen of New York have suffered a severe loss. Mr. Hewlett was president of the Narrows Island Club of North Carolina, and his keen sportsmanship, his gentleness and invariable courtesy made him greatly beloved by his associates. Mr. Hewlett had long been a resident of Brooklyn, but did business in New York, and and was universally respected and loved by all who knew him.

We have a letter from our well-informed correspondent "Special" setting forth a condition of things in Maine which calls for prompt attention. It is alleged that jacking out of season and hounding deer are carried on in Maine to a scandalous extent. This letter will be published next week.

Christmas is coming. Would it not be a subject of general congratulations if the warring kennel factions could patch up their differences and unite in the good will of the season?

Any subscriber may supply a friend with a copy of the current issue of the FOREST AND STREAM by sending us on a postal the name of that friend.

The Sportsman Tourist.

HALF-HOURS IN THE SIERRA NEVADA.

HAVING returned from my annual trip for 1890 to the mountains I will supplement my former articles with this summer's jottings. No one knows what a joy an outing means until they have experienced one in California, somewhere among her mountain fastnesses. Air pure and life-giving; water crystal, clear and cold as the snow that gives it birth; scenery as awesome and grand as the world affords; fishing and hunting good enough to satisfy any reasonable man; and over all the smiling unclouded sky of California. No summer rains to keep a camper or tourist confined to shelter day after day as in other less favored climes. No insect plagues to make one's life miserable, and but few noxious creatures of any description. In some localities there may be found a few rattlesnakes in the course of a summer, but they are not plentiful and not aggressive. In places a few mosquitoes may be met with, but they are troublesome only for about an hour at dark. The chill of the night soon lays them up for repairs. And when night sets in the tired camper can lie down in his blankets under the quiet stars and sighing pines and sleep undisturbed till morning, dreading no untimely rain nor tempest, and with nothing worse than a coyote's yelp to disturb his slumbers. If there is anything on earth that is calculated to make a man indulge in "cuss words" it is to be roused at 2 A. M. out of his blankets with a drenching rain beating in his face.

Many a time, in the Eastern forests, has the writer suffered this experience; and has also spent uncomfortable and unprofitable days, both to health and enjoyment, under bark or canvas, listening to the never-ending drip, drip, of the weeping skies, and fighting the pestilent mosquito.

One summer in particular rests like a nightmare on my memory. It was in the months of June and July, 1874, that with three companions I spent four weeks on and about Lake Megantic, and during the first two weeks of our stay there were just two days upon which it did not rain. It rained for "keeps," too, and no foolishness about it. The Chaudiere River was a mass of seething foam, ditto Spider and Arnold, and not a fin could be captured in any of them. Now and then one or two of us would venture out upon the lake and troll for a "laker" (or a "longe" in the local parlance) to stay our stomachs with. Sometimes we would get him and sometimes we wouldn't, but of one thing we were always sure, we would come in more ill-natured than we set out, and wet to the skin. Still we just had to do it, because it was a case of "muskrat or no meat."

Our cook got sick and quit, two of the party contracted severe colds, our blankets got damp and we could not dry them, so that we were uncomfortable night and day. We all got "broke" at "draw," our reading matter gave out, and we could get no mail without a 13-mile row in the rain, as we were camped on Spider, and if there had not come fair weather we would have had murder or suicide in that camp sure.

In thirteen summers' outings in California, sleeping in the open air the greater part of the time, I have never been wet. Sometimes a thunderstorm occurs in the high Sierra, and quite often at the locality of Echo, but it is always in the daytime. In fact, the weather here is "gentlemanly," and always gives warning as to what it is going to do before it does it.

Of course it does not matter so much to me what the weather is, now that I have settled down to Echo as a constant resort, and have a permanent camp there, but I want my friends (and all the readers of FOREST AND STREAM are such) to know the pleasures of a California mountain outing. And by the term "mountain," I mean what I say. One needs to attain an altitude of 4,000ft. and over to be truly in the mountains. There the water is absolutely pure and cold, the air cool and bracing, and the balmy breath of the pines and firs make sweetness in the forest. The waters teem with the gamiest trout, and the "antlered monarch of the hills" stalks proudly over the ranges. The blue grouse and mountain quail call from every ravine, and no matter in what direction one wanders, new scenes of beauty unfold upon the eye. A Sierra stream is a "thing of beauty and a joy forever," whether we sit by its side as it sings its way over gravelly beds, or listen to its diapason as it roars through gloomy cañons, hundreds of feet below us. But the crowning beauty of all is a Sierra lake. No swampy shores or tangled undergrowth surround its dimpled waters. Clean-cut rocks and timbered slopes, towering peaks and snow-covered ranges, are mirrored in its pure waters, while no plebeian fish disturb its depths. Trout, and trout alone, reward the angler's skill.

From Auburn to Echo Lake is about 90 miles, which I generally cover with my own team in two and a half days up, and two down. On my way up this year, about 20 miles above Placerville, I met an old French Canadian, with whom I had rather an amusing confab. In the lumber and wood camps around Tahoe are many of these Canucks, who have lived there for several years without becoming Anglicised. In fact, Antoine Bissette would be an accomplished English scholar beside some of them. Virginia City is quite a headquarters for them; and they are so clannish that they trade and do all business with their own countrymen, and consequently remain much as they were when they left their native land. It seems that this old Canuck had concluded to come over into California with his son, induced thereto by visions of greater gain. He was sitting on a pine log by the roadside, where a tiny stream came trickling down the mountain. He was just in the act of wiping the sweat off his forehead with a hooked forefinger as I drove around the bend. His hat and a bundle tied up in an old jumper lay by his side. His heated face and shortened breath showed that that he had been walking far and fast. Rising to his feet as I drove by he saluted me politely, and called out: "*Arretez-vous, s'il vous plait, monsieur.*" I reined up as the old familiar *patois* struck my ear, and entered into conversation with the man. He appeared to be about 50 years of age, middle-sized but strong and wiry, with stiff black hair and beard, and an exposed chest covered with a dense growth of hair. It had been many years since I had attempted a conversation in Canadian *patois*, so I answered in English, pretending not to understand him.

He continued, "*Pardon, monsieur*, but was dis de *chemin pour* Placerville?"

"Yes, this was the road to Placerville."

"How many far she'll be?"

"About twenty miles."

"Mabbee you'll see boy, one 'bout *vingt-cinque* year hol' down dar, *quartre, cinque arpent*, hein? (A Canuck will always ask the distance, if short, in acres, never in miles.)

"Yes, I had met a 'boy' of about that age some two miles back."

"Wal, sah, she 'll mah boy, an' Ah 'll 'fraid Ah 'll goin' lose it."

"How is that?"

"S'pose she 'll come one place where tree, two, four, road come so"—placing his index finger of one hand across that of the other—"she 'll not know which one of it for tak', an' Ah 'll 'fraid she 'll gone scattaire."

I assured him that there was no chance for his son to scatter until he reached Placerville, whereupon he become satisfied and volubly communicative, and I could easily understand, without explanation, how his son walked on ahead, impatient at his father's delay in talking to every passer-by, and so became a source of anxiety to his father, for fear he might "scattaire" at a cross road.

At a mountain hotel, some fifteen miles from where I met the garrulous Canadian, I stopped for a noonday rest, and sat down in the bar-room, office and reading-room combined, to await the preparation of the noonday meal. Presently a "half-shot" individual took a neighboring chair. He sat down in a one-sided manner that attracted my attention, and I took a good look at him. He was dressed, like nearly all mountaineers, in canvas overalls and blue cotton jumper, flannel shirt, felt hat, and strong, coarse boots. He was tall, lithe, and well built, was fairly intelligent looking, and about 35 to 40 years of age. Presently he put his hand on one of his thighs, and running it up and down two or three times in a caressing manner, muttered, "It's dog-goned sore." Then, in a louder tone, "I was struck by a line yisterday."

There being no other person in the room at the time I supposed he addressed me, although he had not looked my way, so I echoed his words in an interrogative tone.

"You were struck by a line?"

"Yep."

"How did that occur?"

"Well, stranger," in a condescending mnnner, "I have prob'ly told the story fifty times already, but I don't mind tellin' of it again."

Just then the proprietor of the house came in, and our mountaineer jumped up and invited me to "take a drink." I thanked him and said I never drank. Well, then, would I take a cigar with him? Yes, I would take a cigar. But had I only known its deadly qualities before as well as after smoking, the deadliest "tarantlar juice" would have been risked instead. He imbibed a full glass of whisky, and leaning against the bar where he would be convenient for another drink, he resumed:

"Ye see, it was this way. I located a piece of land this spring up at Grouse Flat, back of Sugar Loaf. [This is a well-known landmark on the grade.] There'd been a band of sheep 'round my place, an' they'd moved away and left three strays. I see 'em yisterday mornin' as I was goin' over to Brownells, a neighbor o' mine, an' I went back home after my rifle to shoot one uv 'em."

When a band of sheep changes its pasturage in the mountains, if any be left astray they become the legitimate game of the first man that finds them. Otherwise they will soon be destroyed by coyotes, bears or panthers.

"When I came back I had Brownell's dog and my own with me. The sheep wus in the middle of a band of horses and I couldn't get a shot. Seemed as though they knew something was after 'em, and they jist hugged tight to the horses. I circled roun' an' roun' 'em tryin' to get a shot at a fat wether, an' jist as I wus sneakin' roun' a big rock, a line jumped me."

"A what jumped you?" I exclaimed.

"A line, a mountain line."

"Oh!"

This was the first enlightenment I had received as to what a "line" meant. I had supposed all the time that he had been somehow injured by a rope or cable and did not drop on his meaning.

"Yes, sirree! He jist jumped squar' on my back, an' he tuk me a rake on the back with one foot, an' on this thigh (indicating the one he had caressed with his hand while sitting down) with the other. He jest everlastin'ly clawed me, and I expected to feel his teeth in my neck, but as soon as he jumped me the two dogs jumped him, an' I guess that saved my life. At the same time I threw the muzzle of the rifle back over my shoulder an' shot him through the body. Then he quit an' tuk down the cañon, an' the dogs after him. In a minit I heerd 'em at the bottom, havin' a high old time, an' I put after. I had wounded the critter purty bad, an' he cudn't get away from the dogs, up hill, an' I soon settled him. Then I began to sweat an' git scairt, an' the more I thought of it the scairter I got. My jumper an' shirt an' suspenders was clean clawed off. My back, my breeches was ripped to thunder, an' the blood was jest a-runnin' into my boots. I niver stopped for nothin', but jest put-er fur home, an' plastered up the scratches the best I cud, put on a coat, an' cum down here and got some clothes from Dennis. [This was the hotelkeeper's Christian name.] But take another drink with me, stranger?"

"No, I thank you."

"Wal, another cigar then?"

"Oh, no! no! Leave me out this time. Please?"

"All right, stranger, but ye see, the way it is with me, I must drink. They say 'at whisky is a sure cure far rattlesnake bite, an' so I'm a goin' to take it fur these 'ere wounds to keep the pisen outen 'em. But say, aint you a doctor?"

"Yes."

"I thought I heerd 'em call you that. Don't you think whisky is good to keep out pisen?"

I told him that the antiseptic powers of whisky, taken internally, were somewhat over-rated in my opinion.

"Betcher life, whiskey's good fur rattlesnake bite, an' if it's good fur rattlesnakes its good for lines. Say, Doc', what's good to put on these blamed scratches?"

I suggested such remedies as I thought could be procured at a distance of thirty-five miles from a drug-store.

"Now, that's no good! You jist make up a plaster of sulphur an' sody an' honey, an' put that on a sore, an' it'll draw out the pisen every time. That's what I'm a-goin' to get an' put on mine."

I thanked him for his information, and said that my advice was evidently not needed, and for him by all means to stick to his own prescriptions, plenty of whisky internally and "sulphur, 'sody' and honey" on the outside.

Just then the bell rang, and as I entered the dining-room I could see the hero of the lion fight taking another full dose of his "anti-pisen" remedy.

When I came out from dinner I found that either the whisky or the "pisen" had got in its work, and the victim was uncomfortably snoring in an arm chair with his head hanging away down his back and the flies holding high carnival in his open mouth. I asked the hotelkeeper if the man's word was worth anything and he said it was; that the man was truthful when sober and that he had come there in the manner described and had told the story in the same way before getting drunk. Also that he had shot a female panther at or near the same spot that spring and that this one was probably its mate.

If the story be true then a mountain lion will attack man. I advise the reader, however, to take it as I did, *cum grano salis*.

After the tremendous depth of last winter's snows B. and myself expected to find our summer habitation on Echo crushed to the ground. But on our arrival we found it intact and the only damage sustained was the crushing of the bow of one of our boats. The boat house had been crushed at one end and the boat had suffered severely from the immense pressure. We had sent a man ahead of us, however (old "Hatchet" was not with us this year), who had repaired it well and everything was in order. Our new man proved a treasure, as he was not only as good a boatman as old Hatchet but was a good and a clean cook, a handy man in camp, and a man of more than average intelligence and ability, and gentlemanly withal. In fact, "old Bart" proved invaluable, and both B. and myself trust that he may live to be our factotum for many a year.

The fishing at Echo this year was as good as we ever found it. B. and I in a part of one afternoon caught 76 trout that weighed over 60lbs. Every one was caught and fairly killed on the fly, too, with 7½oz. rods. That was our best record, but not a day passed during our three weeks sojourn upon the lake but that the fishing was good enough.

After a hard half-day's toil I secured three specimens of the little chief hare (*Lagomys princeps*), and I trust they have safely reached the Smithsonian Institution before I have penned these lines.

Great drifts of snow, the accumulation of last winter's storms, lay upon the shores, even down to the water's edge, and the surrounding peaks were loaded and covered with vast snowfields. It was the end of August when we left the lake and there was snow even then down to the water in places. And yet the climate was perfection, 78° was the highest and 48° the lowest that the thermometer indicated during our stay.

The writer begs the reader's pardon for the infliction and promises "not to do so no more" if forgiven this time. He pretends no skill in verse and only sings from the heart:

If from cities and towns you desire to run,
Go to Echo! Old Echo! Dear Echo!
Or in business transactions you've been badly "done,"
Go to Echo! Old Echo! Dear Echo!
You can there find employment for rod and for gun,
And your hours can pass in delightfullest fun,
There heat, bores and duns can conveniently shun,
At Echo! Old Echo! Dear Echo!

Of all places I know, 'tis the dearest to me,
At Echo! Old Echo! Dear Echo!
Its wild glens are sweeter than meadow or lea,
At Echo! Old Echo! Dear Echo!
On its boisterous bosom, so wild and so free,
Where the waves, in their fright, from the storm seems to flee,
Is the one spot on earth where my heart longs to be,
At Echo! Old Echo! Dear Echo!

Its waters are clear as a maiden's bright eye,
At Echo! Old Echo! Dear Echo!
Or the luminous depths of the o'er-arching sky,
At Echo! Old Echo! Dear Echo!
And mirror the mountains and bluffs standing by,
Bearing pines, firs and hemlocks, with tops reared on high,
Midst whose branches the night winds mournfully sigh,
At Echo! Old Echo! Dear Echo!

In the morn, on its breast, see the sportive trout flash,
At Echo! Old Echo! Dear Echo!
Where the water's untouched by the wind's stinging lash,
At Echo! Old Echo! Dear Echo!
At noon, see the waves on its shores wildly dash
To the tune of the tempest and thunderbolt's crash!
Whilst at eve, sleep is wooed by the rivulet's plash,
At Echo! Old Echo! Dear Echo!

AREFAR.

AUBURN, Cal.

MISSOURI'S GREAT GAME YEAR.—Seneca, Mo., Nov. 22.—We are blessed with an immense flight of ducks this fall; and as there is an abundance of rain they are staying with us and we are having some fine sport. A party of three went out last week and camped near the Neosho River. After looking along the river and about the sloughs they did not find many ducks. They went from there to the prairie where some stockmen are feeding 4,000 head of cattle, which waste a great deal of corn. The ducks had found this and were there as thick as blackbirds; but the boys could not go among the cattle to shoot, consequently they had to stay on outside of pasture to do most of their shooting. We are now waiting for the cattle to be taken away to make a raid on the ducks in big shape. We can go to the river and have a good day's shooting any time. I have been out a few times and I must say that I never saw as many quail as there are this season. I can go out for two hours and not go more than a half or three-fourths of a mile from town, and get as much shooting as I could two years ago by taking a team and spending a full day. We find a woodcock now and then on our hunts this fall which is a very rare thing for this section of the county they must get in with the ducks and drop out along the line of flight. A party of hunters camped in town last night on their way home; they had been down on Spavanaugh Creek, in the Territory; they report good success and had with them seven deer.—F.

NEAR TO NATURE'S HEART.

By Rev. S. N. McAdoo.

I'M alone to-night in a solemn wood
That murmurs afar like chafing seas,
For the wandering winds, in fitful mood,
Are playing a march on the towering trees,
And the balsam-firs are sighing soft
To the gentle touch of the courting breeze.

I have pitched my tent on a mossy bank,
And kindled a fire before the door,
Where the flames leap up with many a prank
From the pitchy knots that hiss and roar,
While I turn my steak on a wooden spit,
And the grateful odors upward pour.

How sweet to the taste is the simplest dish
When the wood-nymphs pour their flavors rare:
Ye housed-up kings in vain may wish
In a banquet hall so rich to share
As regales the palate of him who drinks
Of the sylvan stream and the tonic air.

But now the evening meal is past,
And the wings of flame have flown away
From their nest of coals, now fading fast,
And drowning deep in the ashes gray,
And to me, when alone, draws nature near,
And talks in a sweet, familiar way.

She whispers love from every breeze,
And laughs in the brooklet soft and low,
And, down through the netted limbs of trees,
She looks on me from the stars that glow
As a mother's eyes, when the beams of love
On her first-born babe begin to flow.

And I, as a child in the mother's arms,
O'ercome with sleep and with love caressed,
Full far removed from the world's alarms,
Lie down in the soft embrace of rest,
While nature chants her lullaby song
And soothes me to sleep on her gentle breast.

Natural History.

NOTE ON THE GRAY WHALE.

THE following extract from a letter recently received from Judge Caton, will be read with interest. This distinguished author is spending the winter on the California coast at Monterey, and takes as great an interest as ever in matters pertaining to natural history and sport. Writing under date of Nov. 22, he says:

I am informed that during the past summer the great Bay of Monterey has literally swarmed with fish of various kinds and especially mackerel, so that a fisherman from a boat could rarely throw a hook into the water without its being instantly seized, usually by a mackerel. This has invited into the bay seals and other marine animals which subsist upon fish; and numbers of the California or gray whale are now frequenting its waters, and are so tame that they sometimes endanger the boats of fishermen.

This whale, it may be remembered, is the fiercest and most dangerous of all the cetaceans, and, being an inshore whale, was formerly pursued from stations on shore, of which there were many between San Francisco and San Diego. Most of these have been abandoned within the last ten or twelve years, owing to the scarcity of the animal, since which time they have no doubt been on the increase. The wreckage of two of these stations which were near here may still be seen.

This is the only whale whose breeding grounds are well known. These are the lagoons, which penetrate the land from the ocean, and here thirty or forty years ago they were sought by the whalers, and terrible and destructive combats took place with these ferocious animals.

The gray whales are rarely seen more than ten miles from shore. They are strictly migratory, passing to the north in the spring as far as Behring Sea, and even into the Arctic Ocean, and returning in the fall. Their range is from the Gulf of California and Cape St. Lucas to the extreme north. They are rather small in size, the very largest not exceeding 70ft. in length.

The weather here is most charming, with every indication of very light rains this winter, which means fine trout fishing a couple of months hence in the streams putting into the ocean from the mountains. Last season these streams were so high that they afforded very little sport for the angler. J. D. Caton.

Food of the American Goshawk.—*Editor Forest and Stream:* In the past few years I have stuffed and mounted quite a number of American goshawks, and in many cases find the stomach to contain a quantity of the flesh, feathers, etc., of the ruffed grouse. Mr. J. S. Woodworth, of South Berwick, Kings county, N. Y., tells me: "Last fall while out partridge shooting I saw something moving a few feet beyond a brook near by. Thinking it a partridge or some bird about the same size, I fired at it, and on going to the spot found that I had killed an American goshawk. The ground being covered with a light fall of snow numerous tracks attracted my attention, and on looking around I saw in the brook a ruffed grouse, all under the water but its head. A further examination of the tracks disclosed the fact that the grouse had been pursued by the hawk, and had either fallen into the brook or had gone in for safety from his savage enemy. I took the bird from the water, wrung its neck and took it home."—W. L. Bishop (Kentville, N. S.).

Habits of the Horseshoe Crab.—"Some land crabs of the West Indies and North America," says a writer in the *Nineteenth Century*, "combine in large swarms in order to travel to the sea and to deposit their spawn, and each such migration implies concert, coöperation and mutual support. As to the big molucca crab (*Limulus*) I was struck (in 1882 at the Brighton Aquarium) with the extent of mutual assistance which these clumsy animals are capable of bestowing upon a comrade in case of need. One of them had fallen upon its back in a corner of the tank, and its heavy saucepanlike carapace prevented it from returning to its natural position, the more so as there was in the corner an iron bar, which rendered the task still more difficult. Its comrades came to the rescue and for one hour's time I watched how they endeavored to help their fellow prisoner. They came two at once, pushed their friend from beneath, and after strenuous efforts succeeded in lifting it upright; but then the iron bar would prevent them from achieving the work of rescue, and the crab would again heavily fall upon its back. After many attempts one of the helpers would go in the depth of the tank and bring two other crabs, which would begin with fresh force the same pushing and lifting of their helpless comrade. We stayed in the aquarium for more than two hours, and when on leaving we again came to cast a glance upon the tank the work of rescue still continued. Since I saw that I cannot refuse credit to the observation quoted by Dr. Erasmus Darwin, namely, that 'the common crab during molting season stations as sentinel an unmolted or hard-shelled individual to prevent marine enemies from injuring molted individuals in their unprotected state.'" The crab here referred is the well known horseshoe crab, horsefoot or king crab of our Atlantic coast (*Limulus polyphemus*), which is one of the curiosities of the animal kingdom and a subject of grave speculation as to its proper place in nature. The species has been introduced into European waters and also into San Francisco Bay, Cal., where it is supposed to have been carried with oyster spat from the Atlantic. The breeding habits of the horseshoe crab are extremely interesting and may be found described in Section I. of the Fishery Industries of the United States. This animal is one of the great attractions in the marine aquaria at Washington.

A Snowbird in a Crockery Store.—Lockport, N. Y., Nov. 25.—About the first of this month a slate-colored junco (*Junco hyemalis*) flew into the crockery store of W. E. Jenney & Son, on Main street, this city, and has remained there ever since, excepting one day when it was out for a few minutes. I happened to call at the store after it had been there about a week, and was asked what kind of a bird it was that had taken possession of their store. I failed to see any bird for some time, but finally Mr. Jenney, Jr., flushed it from the rear of the store, and as it flitted past me I saw the two white feathers in the tail and identified the above species. I have called a number of times since to ask about it, expecting every time to be told that it had taken its departure, but after a few moments' search it has always been found, generally perched on some article on the upper shelf. I called again last evening and was directed to one of the many hanging lamps on sale. At first I was unable to see the bird, but finally found it perched under the colored glass shade on the soft wick that was in the burner. A Brush electric lamp was burning within 12ft., and I wondered why it should have taken up the position to spend the night so close to the bright light. But I found that the green shade under which it was perched protected it from the light and brought out the bluish slate color of the head and upper part, and also the white of the bill and the under parts. I stood within 5ft. of it for some time in conversation with Mr. Jenney, and it did not seem to be the least disturbed. I think it is a very queer place for a snowbird to select to spend the winter. It feeds on seeds and crumbs of crackers placed in the window in the back end of the store.—J. L. Davison.

An Ill-Natured Bird.—Dayton, O., Dec. 1.—John H. Mittendorf of this city, who travels for Croft & Allen of Philadelphia, caught a young pelican on Morris Island, South Carolina, and sent it to the National Soldiers' Home near this city. The bill of the bird is about 12in. long, and the pouch beneath has capacity of a gallon. He lives among the miniature ponds and tropical plants in one of the large greenhouses at the Home, is a ravenous feeder on fish, and is an ill-natured bird, snapping his ungainly jaws at everybody that passes.—Brown.

Dayton, O., Dec. 1.—While hunting quail in Logan county, Luther Horn shot and killed a bald eagle that measursd 7ft. 7in. from tip to tip of his wings. The quail season closes in Ohio Dec. 15, therefore there are but nine days more sport for the hunters.

Game Bag and Gun.

The full texts of the game laws of all the States, Territories and British Provinces are given in the *Book of the Game Laws.*

BOSTON AND MAINE.

THE local coot shooters have not had remarkably good luck this year, though the shores have been lined with flying birds on the occasion of one or two storms. At Brant Rock the shooting has been rather poor this fall, but on one of the last gales several good bags were made. Thus far few brant have been killed, a half-dozen covering about the quantity of this year. Still the occasion of another southeast gale will send the gunners down to the Rock in good numbers, though the season is already too late. The gunners have not had as good shooting at Annisquam and the Ipswich River. Birds have seemed to be scarce, and very wild. Their flights, even in stormy weather, have oftener been out of gunshot than close in shore, as on former seasons. At Biddeford Pool the local gunners, who could be on the spot at the moment, have had some good sport, but to sportsmen from Boston and other distant towns there has been only a series of disappointments. The birds have usually flown before the gunners were on hand, though notified carefully—sometimes by telegraph—by the boatmen and hotel keepers.

A. W. Gore, H. B. Plummer, Charles Bradbury, N. C. Nash and C. W. Dimick have recently been on a gunning excursion to Cape Cod, giving special attention to quail. They report the birds small and not as plenty as they expected to find them, though they made some fair bags. Mr. C. E. Bassett beat the record shooting in southern New Hampshire this fall. Together with a companion they have a record of some 100 birds this season; most of this number were woodcock. It is evident that they know where and when to go, for others who have tried to follow in their tracks have returned empty handed. Still one or two others have had luck, Mr. R. Shumway having a record of 43 woodcock in the same State.

There have been one or two good tracking snows in Maine of late, and the reports of deer killed begin to come in. Some have also been smuggled into the market here. Mr. Willie Clark, of Rumford, in this State, recently shot a deer while swimming the river, in a location where a deer twenty years ago would have been unheard of. And so it is, the deer are actually more plenty in the sparsely settled portions of the farming country than in the deep forests, if possible, since they are hunted less in such locations. A deer recently swam the river a short distance from Livermore Falls, and then browsed in the field awhile before taking to the woods. Mr. W. Mills, of Boston, has secured a fine caribou head this fall. It is being mounted by Crosby of Bangor. It spreads 37in. across the antlers. The antlers are 4ft. in length and have twenty-eight points. The caribou was killed Oct. 10, in Jackman Plantation in Somerset county, Me. Three deer have recently been seen in Chesterville, Me., in a field with the cattle. The owner of the cattle is of the opinion that the deer have lain with the cattle at night. But the hunters are now after the deer, and they will hardly lie with the cattle any more.

Hiram G. Blacon, of West Paris, has recently had a funny adventure with a coon. Hearing the barking of his dog one night he went to the scene of the fray and found that the dog had a coon in the corner of the fence, and that the coon, not daring to turn tail to the dog, had showed fight head on. Mr. Blacon put a charge of small shot into the coon, but the charge was not enough to kill the tough little fighter, but sufficient to make him watch his opportunity to turn from the dog. Mr. B. is a tall man, and doubtless the coon thought that he was a tree, or at least that he would do for a tree. He climbed him in a moment and perched on his shoulder, out of the reach of the dog. It was now Blacon's turn to be scared, and he tried to dislodge the coon, but he only drove his claws in the tighter. All this time the dog was greatly excited. In sheer desperation the man was for running into the house, coon, dog and all, when on passing a post the coon jumped for it. Here he was dispatched with the gun. Special.

"A WORD FOR THE ENGLISHMAN."

Editor Forest and Stream:

I beg space to reply, as briefly as possible, to a few of the points in "C. P. W.'s" criticism of my book, "The Big Game of North America." I am glad to say at the outset that all Englishmen are not game butchers by any means, but so many of those who have visited this country solely for the purpose of hunting have conducted themselves as such, that I deem Mr. Cooke's remarks concerning the particular one of whom he wrote as fair and just. I have met a number of these visiting Englishmen in the Far West myself, and they have told me of killing large numbers of big game animals for which they had no use, and of which they could not save even a part. One of these gentlemen, for instance, whom I met on a certain trip in the Shoshone Mountains, said to me: "I killed eleven elk yesterday, but none of them had good heads and so I did not take any of them."

When I protested against this waste he replied: "It's a long way over here from our country, you know, and when we come we want to have a little sport."

Another Englishman, named Jamison, who has made several hunting trips to this country has left a trail of blood wherever he could find game enough to make it. On one occasion he hired three guides and kept them out for nearly three months. He ordered them to kill everything they saw in the way of game and avowed his determination to break all previous records in that line. In one instance he got a stand on a herd of buffalo and killed twenty-three of them. He corraled a band of elk in the head of a cañon and shot down seventeen of them. He did not take a head, a skin or a pound of meat from any of these animals. He wounded a deer so that it could not get up and then amused himself by sticking his knife in its quarters a number of times and watching its struggles. He became so enraged at one of his saddle horses because it could not carry him up to a certain buffalo that he cut it with his hunting knife, disabling it so that it had to be turned out.

At the end of this slaughtering tour Jamison's score (with that of his guides) footed up 412 head of big game. One of his guides, a man whom I know intimately, whom I have hunted with and whom I believe to be truthful, is Sam Fishel. He is now in the employ of the Government and is stationed at Fort Custer, Montana. I have also heard of Jamison's butchery from a number of ranchmen and business men in the Far West. Possibly he is the same man Mr. Cooke refers to. For the sake of all decent men, of whatever nationality, I hope so, for I should hate to know that there are two such brutes alive anywhere.

A great many Englishmen have left bad names in our Far West for having killed large numbers of our game animals for mere sport, leaving the carcasses to rot—others for killing large numbers and saving only the heads. The most of this work was, of course, done back in the sixties and seventies. No man could slaughter game to such an extent now, even if disposed to do so.

The man mentioned above gave the general excuse of his class when he told me the distance necessary to travel and the expense of coming from England to hunt in this country justified large killing for sport alone.

It is true that all the game butchers are not Englishmen. We have hundreds of them here who should have been banished to some desert island years ago.

Mr. Perry explained in a recent number of Forest and Stream why he and his party killed so large a number of elk in one day, and to his communication I respectfully refer "C. P. W." I am grateful to this gentleman for the candid and fair-minded manner in which he criticises these two of my contributors, and for his kind words concerning the others. G. O. Shields.

Game in North Carolina.—Mr. Benjamin Kuser of Trenton, N. J., has lately returned from a ten days' trip to Littleton, N. C., on the Roanoke River. As Mr. Kuser relates it, the story of his trip, or rather what he accomplished, and what he accomplished it with, is remarkable. His bag for the ten days was 200 quail, 30 woodcock, 6 wild geese, and numerous other birds. The historian says that Mr. Kuser claimed to have used for the geese a gun weighing 25lbs., loaded with ¼lb. of black powder and 150 buckshot.

WILD TURKEYS IN THE OVERFLOW.

"CAN you write a brief diary of our turkey hunt last March, for a letter to FOREST AND STREAM? I want to write it up, and have forgotten the routine of each day's doings myself, and want your aid to freshen my memory."

"Doubt whether I can recount it," replied Lawrence. "We went to so many places, in various ways and at different times, can't recount it in its regular order, but I'll try."

"Well, you recollect what took place on that ridge at Howlett Lake, don't you—how you bumfoozled around there among a drove of big turkeys and killed the littlest hen in the bunch? You also recollect no doubt what took place on the west bank of the river below camp on a very narrow unsubmerged strip of land, where you took a stand at the lower end, while I went above to work down on a drove of turkeys that had been seen mid way? You recollect also about that drove working down in your vicinity, and how you banged away and killed another puny hen, and how I threatened to do something desperate to you for not killing a gobbler, and how you mimiced a crying booby, which you can do admirably, saying you shot the first turkey you saw and didn't see a gobbler at all?"

"Now look here—hold on—if you write that up in your piece, I'll tell about that shot you made at the finest gobbler in the woods at 15yds., and shot a hole through a sapling and never touched the turkey. What d'ye think of a shot like that. Why, I could have killed that turkey with a club."

"All about shot shall go in, Lawrence; I tell that always on myself when recounting that trip."

"Never heard it before," puts in one Conway from behind the counter, who had been overhearing the dialogue.

"Now, Lawrence, let's try the first day in the woods; what did we do?"

"Oh! you went up the ridge above camp, flushed fifteen turkeys, and had them in trees around you for an hour in full view, while you waded and splashed around among them with that superlatively fine .38cal. telescope and didn't even get a shot, returned to camp at 10 A. M., swore you had been among a tremendous drove of turkeys all morning, but didn't kill any because, as you said, 'it was so early in the hunt.' This, in addition to your statement that you had seen 5,000 rabbits, which had been run on the ridge by the overflow, is what occurred up your way, and I think it was enough for your part the first morning."

"Lawrence, you talk well. Your memory is freshening. Now, what occurred in the afternoon? Try that."

"Let's see—let's see—I have it! We got three turkeys that afternoon. The last one killed was the hen I shot from the roost by moonlight."

"Not much, my boy, not much! You're a leetle too fast. That roosting hen was not quite so soon; it was two or three days after that when that little episode happened. Reflect, my child; reflect!"

"Am reflecting, and reflecting right, too."

"Betcher nickel."

"Bet you a nickel."

Money is put up and Conway holds the stakes.

"Lawrence, we'll settle that bet by the moon. We sat up that night waiting on the moon for light to shoot by. We went out for the turkeys about 10 o'clock, the moon then being about one hour high.

"Correct—all right—we'll leave it to the moon."

An investigation of the almanac was made, and next day the scribe was leaning across the counter of Warner & Searles, with Lawrence on the opposite side with a look in his eye indicating restlessness, evasiveness or something of the kind. Before he could evade or elude he was asked:

"Did you write that diary?"

"No, I didn't. I just can't do it. Can't arrange it—couldn't do it to save my life. Haven't got time, anyway."

"And I believe you, since your grand break on that roosting turkey. Where's Conway? I want those nickels. They're mine. That moon settles the bet. You admit the moon was an hour high when the turkey was shot, and that the shot was made about 10 o'clock."

"About half-past 9—well, go on."

"We left Vicksburg for our hunt early Thursday morning, March 6, 1890, reaching the grounds at dark that evening. Friday was our first day in the woods when you claim said turkey was killed. On Friday the moon rose at 7:04, Saturday 8:00, next day at 8:58—"

"Hold on! That'll do. You are having that turkey killed powerful close to Sunday night. You can't put that on me. I never did it. Something wrong about that count. Get a fresh almanac. Guess you killed that turkey yourself. Conway, give this miserly and contentious old quarreler those nickels. Let's have peace."

Lawrence may have faults, but shooting on Sunday is not among them. On that day he knows how to obtain a certain amount of enjoyment by quietly resting about a comfortable camp. I have often wished I could stay in camp on that day, but when camp is in the heart of the virgin forest all my moral resolutions go to pieces. The dense woods and the wild life in them are too much for my poor weak humanity.

Lawrence has one fault, I might as well tell it now. He can't correct it, or at least don't. It has annoyed me often. His attention has been frequently called to it. It is one of no small moment in the woods. It has been the occasion of the loss of more than one turkey. His face is as white as a sheet. It glares and reflects light frightfully in the woods. On a hunt he could be stained a nut brown, but he won't submit to it, preferring to go on frightening game.

And once he deceived me. Not that exactly, but he failed to tell the whole truth. We had been turkey hunting that season in a region occupied by a panther. This animal had signified his presence near our camp on more than one occasion. The teachings of the older members of the party were that this animal, like all others, was a coward, and would flee on the approach of man. Lawrence, then in his teens, apparently acquiesced in this view. At least he did not controvert it, and left that to be inferred. This panther had a habit of making some ferocious and blood-curdling screams along with the first streaks of day. We were generally getting out about that time, and would separate and go in different localities. On our return to camp about 10 or 11 o'clock we would naturally comment on these panther notes. No one, however, suggested the idea of being turned back. It took Lawrence two years to get up courage to do that. He had one morning early paddled down the bayou alone. At a favorable spot he entered the woods, leaving the boat securely tied on the bank. There was yet insufficient light through the timber, with its dense undergrowth, to see well for walking. The vines or leaves were rattled, and the panther near by, probably being disturbed by the intrusion, pierced the woods with one of those distressing screams. Lawrence had immediate use for the boat, which he got into and pushed to the middle of the bayou promptly. It was not a bad thing for a boy to do, in fact, it was natural—would have done the same thing myself under similar circumstances. That is not what is complained of. The ground for complaint is that it took this boy two years to tell it. It is not friendly to keep back experiences so long from boon hunting companions. But to our trip.

For two months hardly a day had passed without a visit to the store and a short talk had on the subject. Mr. W. generally kept one ear open for this conversation, the other being diligently lent to his numerous customers, for while he could not go along he was interested in the pleasures of his boy, and he loves the woods dearly himself. Even in January he had gone with us to our favorite locality, not so much for game as to look over the ground and see if the birds were there. Not being gobbling time then we had indifferent success, but it was a delight and revelation to be in the midst of a dense forest even though but little game could be had. The turkeys were found to be there in fair numbers. In places the woods were being literally scratched to pieces. A few large flocks were seen and four killed. This lent a rosy appearance to our March trip.

Weeks before the turkey calls were brought out and practiced on. The tone not suiting was altered, made worse, and altered again and again, until approximately satisfactory. Other kinds were made and tried, though none were ever obtained that would perfectly imitate all the notes. Some sportsmen claim to be able to make the note perfectly and to call up the sly old chap without fail. We have tried the bone from the turkey wing, the quill, horn, box and slate. At times we would think we had it down fine, but in the woods on an old gobbler it would make a break. Somewhere the glossy feathers would drop, the head and neck shoot up straight and high for an instant only, and a quick *put, put, put* with amazing suddenness ended the controversy.

This year an unexpected and undesired factor forced itself upon us in a flood stage of water in the Mississippi River. Our hunting ground on the Little Sunflower River is a low swamp, and at extreme high water every foot of it becomes overflowed. Especially is this the case when a break in the long line of levees, extending almost all the way from Memphis to Vicksburg, occurs, when the Little Sunflower swamp goes under too deep to talk about. Up to the time of our hunt this year no such break had occurred, though it was daily feared, not only by us hunters who had but an insignificant interest comparatively in the result, but by the thousands of people who were living in the vast delta, extending two hundred miles in length by fifty in width, whose plantations would be submerged, property destroyed and planting seriously delayed if not altogether prevented.

On the day of our departure, March 6, the gauge at Vicksburg marked 46.4ft. Raftsmen and others familiar with the swamp predicted for us the entire overflow of the Little Sunflower country. However, we had an idea of our own, born probably in the hope that some land would still be left to us in that cherished locality. We would go there anyway, and if we could not find hunting ground on the high ridges we would raise steam on the little launch and proceed twenty-five or thirty miles further, through the upper end of Little Sunflower, into Indian Chute, said to be the shortest river in the world, about 100yds., and then into Big Sunflower River, where steamboat men had assured us there was ample land not overflowed, and wild turkeys in abundance. This would put us into unfamiliar territory, but it was vastly better than no territory at all.

At 9 o'clock on that Thursday morning the anchor line was made fast to the buoy and thrown overboard with a splash, the gong was made to clang once by L., as pilot, as a signal to the engineer to come ahead, and soon the Greenwing was under way in the waters of Lake Centennial. Passing the north end of Desoto Island, a stiff wind is encountered, and rather rough water for the heavily loaded little launch, with her over 3,000lbs. of coal and a liberal supply of "duffle" for a stay of two weeks in the woods.

It has never been our creed to leave anything behind that might add to our comfort in camp. A list of the articles taken would astonish some sportsmen who, from necessity or other cause, have made a study of how to travel and hunt lightly equipped. Our boat enables us to carry all we may need without special inconvenience, and it is rarely that our needs while out even to the smallest article go unsupplied. It is easier to take than do without.

Among the things in store were 300lbs. of ice, which had been put up in three sacks packed in sawdust. These packs had been stowed in the canoe Amateur, that the already crowded launch might be relieved to that extent. The thick wadding of sawdust made the ice stand rather high in the canoe, and she was a shade unsteady, but she seemed to follow along very nicely, even in the choppy water of Centennial Lake, until we had traversed two-thirds the length of the lake, when the engineer discovered that the ice had been dumped and was floating 200yds. in the rear. We turned back, and, after considerable tugging, two sacks of the ice were dragged into the launch, the other sack having lost its cake through a hole, both were left rather than suffer further delay in securing them. With the additional ice aboard the Greenwing had all she could comfortable carry, and it was with some relief that the Mississippi River was reached, and we turned up that grand old stream, protected from the high wind by a heavy bar of willows which extends down the north shore from King's Point.

Five miles up we enter Old River, a former bed of the Mississippi, but now a channel for the lower end of Yazoo River. We are now in dead water from the back water of the flooded Mississippi. It is yet seventy miles to our destination, and back water will extend all the way. On either side the lands are principally overflowed, only a small portion of the highest lands on the front being out. Here and there stand cabins of the tenants with water over the floor, others are entirely surrounded by water. In most of the latter the tenants still live, with a skiff or other boat tied conveniently to the door frame or gallery post.

We pass through McKee Pocket in Old River, a famous ducking ground. The Greenwing has had some enjoyable sport here, but there are no ducks to be seen at this season, and she steams on with only the memory of exploits in that line. Two miles further and Old River is left and Yazoo River entered; and two miles above the mouth of that enters Steel's Bayou on our left. That is a glorious stream for game, especially wild turkey; and it is always with more or less misgivings it is passed, fearing that we may travel further and get less. But civilization is beginning to secure too strong a hold up there now for us. Ten years ago we could hunt there all day long without hearing the sound of any but our own guns. Now the tenant's cabin stands on some of the most favorite spots, and if the sportsman calls turkey along that stream to-day a turkey is no more apt to answer that call than a negro with his old musket or rusty shotgun, and as some of them shoot at the shake of a bush it is not strictly safe to hunt there.

The trip itself is monotonous enough. It is through sombre dead woods on the left, vegetation not yet showing perceptibly in the trees of the cold swamp lands, though on the right the prospect is more cheerful, with the Warren county hills looming up well in the distance, from its warmer soil showing a verdure grateful to the eye.

Twenty-five miles above Vicksburg we reach the suspension bridge of the L. N. O. & T. railroad. No need to swing the great span for the diminutive craft; she passes under with two feet to spare. The bridge tender only comes out and gazes after her as she puffs and frets on up the river, with her babes, the Boss and the Amateur, in tow.

Eighteen miles further and the Little Sunflower is entered, the Greenwing now being the only boat that plies on that stream. For the first five miles up the ubiquitous cabins are plentiful enough, but most of them are now standing in water, and the clusters of negroes that come out on the little galleries curiously to gaze after us look sufficiently forlorn and distressed to invite a passing sympathy. Still as a rule they are fed and sustained during these overflows by the owners of the land they till, and they pass through a disaster of this kind comparatively free from trouble. Among these laboring classes, taking the negroes all in all, they comprise the happiest race of people on earth, caring only for the mouthful they eat to-day and the few clothes they wear on their backs.

Ah! here is the mound, and we yet have twenty-five miles to go and the afternoon is well advanced. At this mound we enter a low swamp, and not a speck of land nor a splinter of a habitation will be seen before reaching the hunting grounds, and then no cabins, and it may be not a speck of land.

As to land above we could only conjecture. The general inundation below gave us ominous forebodings of disaster to the turkey ridges on the Little Sunflower. Still it was a case of hope, and a high pressure of steam was kept up in order to gain our destination before dark. One thing was assured, there was sufficient depth of water, and the Greenwing would bump no logs or snags on the way this time.

After a bit the drift is reached, the pilot clangs to the engineer to hold up and the damper to the furnace is closed to keep down the steam. It being not a thousand yards to the bow of the launch the engineer is soon alongside the pilot, and an old bald head and a thick-haired young man are together prospecting for a favorable route through this miscellaneous mass of rubbish. This drift has been in the Little Sunflower for years and every time we go up that way a new road has to be worked through it. The spike pole and cross-cut saw are brought into use, and by dint of hard pulling and pushing, this way and that, and working the engine occasionally to assist, in twenty minutes or half an hour we are through and again under way.

William fired. I came near leaving him out. I have never felt altogether able to delineate him exactly. He is twenty years old and nearly black. Usually L. and I ran the machine alone, but this time we determined to indulge in the luxury of a servant, though our boy was not fully up in the acceptation of the word. At routine work he would do fairly well, doing what he was shown as near as he could and no more. He neither had assumption nor originality. In one way he was a comfort, he never got "too fresh" and did too much. He took no interest whatever in the trip so far as we could see. He could make the fire, boil potatoes, cut wood, in a limited way, wash dishes, and hold the fort when L. and I were in the woods. But if we were out unusually late, beyond the regular meal hour, for the life of him he could not anticipate our needs sufficiently to have dinner or supper under way on our return. We had to be there to tell him.

Nevertheless he afforded us no small degree of comfort and pleasure before we reached home. If he got any out of us or the trip we never found it out, and I don't know to this day whether he would like to renew the experience. My wife, who is a better judge of human nature than I am, especially as developed in those of "colored pursuasion," says he would.

After the mound had been passed William's attention was called to the fact that no ground was visible, that water, water everywhere covered all the land for miles and miles around; that for twenty-five miles no land would be seen, and may be none then; that probably we would sleep that night in mid-stream, and couldn't get to land if we wanted to. William only grinned in answer, and we were at a loss to know whether he had been duly impressed with the solemn situation, but we suspected he had not.

The mouth of Coon Bayou looms up on the left. At this point it is wider and more prominent than the river we were navigating, but up a short distance it narrows, becomes very crooked and full of logs and drift. It leads up through a swamp even lower than that bordering the most uninhabitable part in the Little Sunflower. At certain seasons its banks abound in deer and bear and probably in turkey, but at this time all the regions contiguous to it were inhabited by the festive catfish, cadaverous gar and ungainly turtle.

At Run Out, five miles below our destination, we had

hoped for a speck of land, it being comparatively high there. If so we were O K for Gum Ridge. The hope perished. In the mean time the sun had gone down, and the forests that had been stretching away on either side for the past twenty miles through water alone began to take on a gloomy aspect. Higher yet another ridge was scanned eagerly, and the engineer pronounces "Land!" but the keener eyes of the pilot discern only floating leaves, which are drifted along the timber line.

The lantern is now lit that the water gauge may be the better watched in the fast-growing dim light, and the pilot keeps calling back in unwelcome words, "No land, no land."

"Well, ding on! Blast the luck; if you don't find land soon we will throw over the anchor and go to roost. Cracky! Lawrence, all our turkey range is gone to ruin—ruin."

"Hold! Land! land!" cries the man at the wheel.

"Hurrah!" comes from the engine. "We've got 'em, my boy. If that ridge is out, Gum Ridge, one mile above, is also out."

"So is Howlet Lake Island. So are the mounds. We'll have meat on the Little Sunflower, and don't you forget it."

"Keep her pointed for Gum Ridge, Mr. Pilot, we'll camp there."

And at dark, with light barely sufficient to see, the nose of the faithful little launch was cautiously pushed to bank, the engine backed, came ahead, backed and came ahead again, until a suitable landing having been made, the bowline was made fast, and the stern pulled to bank and tied securely, with the gunnel of the boat barely overlapping the thin bank at what proved a snug and very enjoyable camp.

With buoyant spirits we set to work to put our camp in order. The Rochester lamp was lit, and lantern hung on the outside; the ice was rolled out and snugly stacked against a sapling on a thick bed of dry leaves and covered with blankets; the refrigerator—a 16gal. stone jar, packed in a flour barrel, with dry sawdust, secured with a layer of plaster paris—was removed to land and the interior filled with sundry articles to keep dry; provision boxes were also moved out and stacked one on top of the other and securely covered to keep out rain and varmints. Finally the Greenwing began to look quite roomy, and we could move about in a limited way without stumbling over our traps. Then the two boats, the Amateur and Boss, were gotten ready with the proper oars in each, the former occupying a place at the stern on the larboard and the latter a similar position on the starboard of the launch. Thus they are always tied, and await in readiness any emergency that may call either into use. Steam having cooled considerably, the boiler is emptied of its noisy contents, and the surrounding woods were made to roar.

In the meantime the pot on the oil stove has begun to boil, when a little tea is added and preparations made for supper. The good things that L. always has in his basket in addition to our nice cup of tea with cream and boiled potatoes with fresh butter make an excellent meal, which we all enjoy with especially keen appetites, since, on the way up, but a hasty lunch at noon or thereabouts had been partaken of. William sat apart from us on a snug seat between the engine and boiler, having his plate filled third, and eating at the same time. This is as near social equality as the two races get in this country.

The alarm clock is next wound, set for 4 o'clock, and hung in view. Next is the bed, which is a comfortable one. There is just room for it in the boat. First boards are laid to be flush with the seat running around the sides and rear of the cockpit, then a heavy rubber blanket 7 by 9ft. is spread down to intercept dampness, next is a 5 by 7ft. cotton mattress 4in. thick, and on this are spread several pairs of blankets, to further soften the mattress, and then come the pillows and a light covering. Lastly a good bobonet mosquito bar is put up. Next the curtains are all pulled down and fastened, and our rest and protection for the night are assured. In the meantime William has kept up a lively rattling of the coal forward of the boiler to make room for a cot which has been brought for him. The Rochester is extinguished and the lantern turned partly down and hung to show the little clock, and we all turn in for an enjoyable rest, all being tired with the early preparations for a start and the long journey. In fifteen minutes William is first asleep, indicated by heavy breathing, and he is the first on our trips to turn L. down at that, for L. is a sleeper from away back, putting in his time early, often and late, when we will let him. In time I join the others in unconscious repose, and one day of the trip is at an end. W. L. P.

[TO BE CONTINUED.]

NOVA SCOTIA LICENSES.

HALIFAX, Nov. 27.—*Editor Forest and Stream:* In your issue of Oct. 30 you mention that moose are reported numerous in Nova Scotia. This I am happy to say is quite true, yet if the practices you afterward refer to in the same article were generally and successfully followed, we would not long be able to say so.

"There is reason to believe," you say, "that the license law is not enforced with perfect impartiality. It is said that in some localities it makes a difference what hotels are patronized by visiting sportsmen, immunity from prosecution for hunting without license counting as among the advantages enjoyed by the guests of certain inns."

The charge implied in the above remarks is too serious to be allowed unchallenged circulation in a journal possessing the influence of yours. You are doubtless aware of the great difficulties surrounding the carrying out of these laws. Often they are broken in the solitude of the forest, and no evidence of the fact can be procured. Often lawless people combine to ignore them, and too often they are beyond the reach of the law before their offense is discovered. Frequently so-called sportsmen from your country and other foreigners have not thought it beneath them to slip into our forests without license, and to escape home before discovery. But when you imply that this is done through want of impartiality in the enforcing of the game laws, you convey a most erroneous impression. The officers of the game laws received information this fall that two or three United States citizens were hunting in Nova Scotia without license. Also that a certain hotel keeper had manufactured for them what he called a license, which, though not worth the paper it was written on, might still do duty as a genuine license among those who knew no better. Instantly orders were sent to the locality to have the lawbreakers arrested; but, as too often happens, they had escaped to the shelter of the Stars and Stripes before the officers of the law could lay their hands on them. On their next visit they will have an opportunity of judging whether such immoral conduct is made possible from want of impartiality, or from the mere vulgar possibility of breaking law, which is open to all who like trying the experiment.

In this country it is regarded as a point of honor among sportsmen, to respect the provisions of the game laws. I write to enlist your powerful influence in bringing about the same sentiment among all your sportsmen, which we have found conspicuous among some of them.

The hotel keeper you refer to is now receiving the attention of the authorities. The "advantages" you mention have reached an inglorious end.

C. S. HARRINGTON, Chief Game Commissioner.

FIELD DAYS IN CONNECTICUT.

SHOOTING in Windham county this fall, from a Connecticut standpoint, was successful, but at the same time surprise and forebodings would at times seize the sportsmen. Those who walked the woods in early summer saw unmistakable signs of large broods of partridges, healthy and well along in feather and friskiness. The hayfields and brier patches were filled with the call and scurry of quail, young and old. The rich green of the alder runs was silhouetted with the waving flight of the woodcock. Rabbits and squirrels scampered about everywhere, and, alas! young foxes, thin-nosed but hungry-mouthed, were galore. On the whole, signs indicated good shooting.

October came in good time, and then the reasons for moderate bags. The brilliant scarlets and yellows, and fading greens of the New England autumns, mixed on nature's palette and spread by a bountiful but delicate brush, are unsurpassed elsewhere, yet the hunter, however keen his eye, longs for the biting frost and the northwest wind that will wither and scatter the leaves; for only through the bare brown branches can the noble flight of the grouse be followed with any certainty of aim. This fall the frost hung modestly back in the north and it was not till about the 20th of October that we had what could be called good open shooting. Then the partridges; what had become of the young partridges? Of the 39 shot during the month only a meager half dozen were this year's birds. A friend counted 3 youngsters among his 17 shot. The birds as a whole were old, large and educated in tricks many and bewildering.

Hunting over ground whose every brook and wood, every rock and stump are familiar pages before a reader's eye, we know just what game and how much to expect in each cover. So as the days rolled on the stock grew less and less, and campaigns and sieges had to be planned for the circumventing of the birds now well known but wild and wary. The partridges that led us so many times down the run in the cannonading place (so named by us from a deathless fusilade poured upon a flight of woodcock and a flock of quail once started there years ago by a certain party of enthusiastic but inexperienced sportsmen), then across into the scrub oaks, and then by a run and a dodge behind a friendly laurel away back into the woods, grew careless at last and with a whisk of indifference calmly lighted in a bunch of nondescript bushes across the road. Bang snuffed the battle with trembling lips but firmly held flag and waited the command of "on." Like Bre'r Rabbit the bird "lay low," realizing at last his danger, and Bang had to make two or three exciting dashes and turns before the partridge rose out of the tangle of briers, and then he nearly escaped, for it was not till both our guns were empty that he fluttered to the ground with a broken wing. Bang appreciated the importance of prompt and severe action, and raced after the fleeing bird with eager mouth. A tail hold resulted simply in a mouthful of feathers, but the next grab the dog had him by the breast and then bore him in triumph and oh, so proud, to our feet. All this happened in an open pasture, and every move of the bird and dog was easily seen. Gunners who go out for birds only and are never moved except by score cannot understand the thrilling interest of this incident, nor of the countless others that have chaptered the hills and woods for miles around.

The woodcock shooting was very good for us this year, and from certain cosy nooks a bird or two could be kicked up every few days. We got forty-four. The quail never in my recollection were so plenty, though about two bevies out of three were much too small to shoot when the season opened. The last few days of October, when the woodcock had pretty much gone by and the partridges had been thinned out to an alarming extent, we devoted our time to the quail and shot forty-five.

Retrospectively I think the young partridges were killed by the "tick" and by four-legged vermin to an unusual extent, and what with the large numbers of old birds shot, next fall we shall have to put up with indifferent shooting as far as these birds are concerned. Woodcock are fickle creatures, coming or not as they please. Quail, if the winter is mild and open, next season will be almost voted a pest by the farmers. Every few years, though, a bitter storm of snow and ice kills them off by hundreds, and—well, let others read the goose bone.

Just a word about our dogs. Bang is a nine-year-old Irish setter, and if he ranges a trifle too far for our thick swamps, is an average dog for partridges and woodcock, and an excellent one on quail. At home he is a grand old gentleman and is worthy of all the love that is given him.

Let's new dog, Mont, is a marvel. Gunshy and bought for $5, with care, patience and kindness he has been developed in one short month into the most satisfactory dog I ever shot over. Never deigning to lower his nose proud nose to the ground, he covers the ground slowly but surely. His hunting is almost dogged (excuse the word play), for he brooks no interference from his two-legged companions in the way of interference or directing. He had the power this fall of apparently compelling the partridges to lie awaiting our pleasure, not always of killing to be sure, but of getting a shot. His one fault was his staunchness. Time and time again I have seen him absolutely refuse to "go on" and raise a bird, and a single hunter would often have been in a quandary, but a yell from Let saying Mout was pointing would quickly bring Bang and myself from the other side of a swamp, and then it was an exciting moment as Bang, backing the other dog while I got in a good position for shooting, on the word, would rush in and raise the bird.

Here is an incident: One morning Let and I had walked up either side of a pointed alder run, and starting nothing jumped over the wall intending to walk down the road a quarter of a mile to our hunting cart and then go to another cover. Bang followed us over the wall; but Mont had disappeared, apparently into the bowels of the earth, for he had been with us a moment before. Whistling and calling were fruitless. I suggested that he had sneaked back to the cart, a former habit that had helped to reduce his price to the aforesaid $5. Let shook his head, but we walked down the road only to find Rosa hitched to a tree alone. We got in the cart and walked the pony up the road, whistling for dear life, and after a delay of about twenty minutes were at the place where we had first missed the dog. To our amazement Mont came down the road wagging his tail almost out of joint. Let said, "That dog's been pointing." We got out of the cart and walked up the road fifty feet, when Mont and Bang both pointed toward the brush. Let kicked the brush and we got three quail out of about a dozen as they rose. Mont without the slightest doubt had been standing those birds all the time, and at first with us calling him only a few feet away. Mont can not be bought for $5 now.

F'LIN.

RUFFED GROUSE IN NOVEMBER.

THE season was rapidly drawing to a close, and I felt the desire strong within me for one more day's hunt before the open season expired. In the vicinity of home, however, the birds had got so scarce and wild from constant hunting that to secure a single one was well nigh impossible.

Hearing from a friend that partridges were plenty in the town of Durham, N. H., I concluded to put in the next Saturday there, and the morning of the 22d saw me bright and early bound for the station with gun, dog, lunch and twenty-five cartridges.

On arriving at Durham at 10:15, my friend told me the best place for birds was about three miles south of the station. I loosed my pointer, shouldered my gun and started.

A walk of about a mile brought me through the village and to the top of a hill, from which I could see quite a distance on all sides. To the southward there lay a slope covered with scrubby pines, beyond that a field, then a thick growth of alders and a wooded bluff, and further on thick woods. I concluded that this, if anywhere, was the place for birds, and my instincts did not fail me. I worked through the pines, across the field and nearly through the alders without a rise, and was beginning to grow rather skeptical as to the resources of the place, when reaching the edge of the alders with a rush and roar four partridges got up at about the same moment. I threw my gun to my shoulder and waited. In a second or two a bird broke through the screen of alders to my left, heading straight up the bluff. Just before he disappeared behind the trees I caught him and saw him close his wings as he went out of sight. I heard another making off to the right, caught sight of him just before he reached the woods, some 70yds. away, and downed him, a clean double. I climbed the bluff, the dog retrieved one, I the other, and felt considerably better.

Proceeding through the woods the dog flushed two without my seeing them; they were pretty wild.

Half a mile from the bluff I struck a road, and soon after a small boy with a team, and rode some two miles further south with him through patches of woods about all the way. When I left the team it was 12:30, and I ate my lunch, sharing it with the dog; and then headed back toward the station. About noon the wind commenced to blow, and I had quite a stiff breeze in my face when I started back. Went some half-mile through several wood lots without seeing anything, when I came to a clump of bushes in the lee of a considerable stretch of timber, and where the sun shone warmly. I felt that this must hold a bird or two and sent the dog in. She soon flushed one which came out booming, straight toward me, and so near that I had to let him go over my head, and then turning quickly shot. I saw that he was hit, but he kept on bravely. Just before he got out of range the old Parker spoke again, and this time he heeded the call. It was a cock, and a big fellow.

After this walked along some distance without finding any more. At length, going through a considerable tract grown up with scrub pines and bushes, I started several, and put in two difficult snap shot, without starting any feathers that I could see. Here the dog also jumped a rabbit, which made good his escape back into the brush, closely followed by a charge of No. 8.

By this time the sun had nearly completed his limited circuit, and my ground was nearly gone over. But one spot remained, a lot of some twenty-five acres at the edge of a hard wood growth, well covered with alders. Had worked nearly through the bushes when I heard one get up. When I caught sight of him he was right in the line of the sun, whose beams shone on his plumage and scintillated from his wings as he moved them, so that as he bore down upon me he looked as big as a balloon. I drew a bead on the biggest part of him, as near as I could tell with the sun right in my eyes, and let go. Having no idea that I had dropped him I kept the gun to my shoulder and waited for him to show up, but he didn't come, and I only saw a couple of feathers drifting rapidly down wind. I went into the bushes and found him only about ten steps from where I fired. It was a cock, and by far the largest bird I have got this season, weighing just a trifle under 2lbs.

The sun was not quite down, but I had finished my beat and moved on toward the station across the bleak and wind-swept hills. Neither scenery nor temperature, however, was able to depress my spirits, for my success had been much better than I anticipated, and viewing my game and recollecting several of my shots, which for me were of the phenomenal order, I felt more than satisfied with the result of my day's outing. E. W. L.

R., Chicago, Ill.—*Adv.*

WORCESTER'S GREAT FUR HUNT.

WORCESTER, Mass.—Thursday, Nov. 20, the day selected for the annual hunt of the Worcester Fur Co., was a "roarer." It was a great day for wind. It was a great day for foxes, a great day for the Worcester Fur Co., and a veritable "corker" for Uncle Nathan Harrington, who had the honor of downing the first and handsomest fox of the day. In fact, it was a red letter as well as a red-nosed day for about every one who participated in the hunt.

A preliminary meeting was held at the Bay State House the evening before, at which the final details of arrangement were perfected. The meet was at the Hayward farm, about three miles east of the city, as usual, and 7 A. M. was the hour.

President Kinney, of the Fur Co., organized the hunt, sending the bands of hunters to the different hills on their arrival at the meeting place.

When the barges which took down most of the out-of-town hunters arrived, the farmyard was completely filled with private teams. A small army of closely-muffled hunters scurried about anxious to be given a location, while some of the more impatient hounds gave vent to their pent up thirst for fox blood in prolonged howls. Everything was animation, the cold north wind keeping horses and men both prancing in a frantic endeavor to keep from freezing to death.

About seventy-five men and fifty hounds were finally assembled and the start was made. The hunt was divided to cover as much ground as possible and keep the driving within hearing of a central point.

Webster Thayer with two hounds went to Burncoat Plain where his black dog Towser soon had a fox up. He ran him for about an hour, taking him in sight, but just out of reach of Judge Clark of Willimantic. Mr. Norcross of Monson also got a good look at him, but he was out of gunshot. The red finally bothered the dog on the ledges, and before he could straighten the trail out the scent was too cold to follow. The fox, however, came to grief. Paul Wheeler of Rutland occupied a stand only a few rods from the meeting point, where he found a sheltered corner in the stone wall. Paul had been holding quite a reception all the morning, and during a lull and while Dick Luther was making a trip to the city for the purpose of replenishing the supply of fuel, a fox appeared and Paul cooly tumbled him over. No dogs came to him, but it was thought to be the one Towser had been driving.

Will Brigham with a party from West Boylston put out their dogs near the Diamond hedges back of Old Pot, and soon had three foxes going at a lively pace. Mr. Brigham killed one, and Mr. Ball and Mr. Newton each had a shot at the others but failed to stop them.

John M. White, of Millbury, the man who gets and makes more fun at a fox hunt than any other man on earth, took his pack to Straw Hollow, putting them out near the cider mill. They soon had two foxes up, both taking a swing north toward Rocky Pond, out of hearing. John and his party sat around a few hours, then kindled a bonfire and camped down beside it to wait for a return of the dogs, who came straggling along toward night. John for once was out of the hunt, his party hearing very little driving.

A. M. French put in his dogs at Rocky Pond. They started a fox, made a few long turns and about 9:30 Mr. French killed him.

Uncle Nathan Harrington and W. R. Dean went to Sewall's Hill, as did John R. Thayer. They put out their dogs near the Harlow place, and in a few minutes Thayer's Guess and Leap, with Uncle Nathan's flyer, Slippery Sal, took up a fox, which made to the westward.

The dogs soon came into hearing again, when it was discovered that Guess now had a separate fox. This one swung over on to East Ridge, the other going south and passing within 20 rods of Uncle Nathan.

About this time Dean's Tramp and Bat were to be heard driving on the east side of Sewall Hill, and Uncle Nathan lit out for his favorite stand on the Rocky Pasture, to guard the crossing by the big chestnut.

By this time Charlie Crompton, with Will and Allie Perry, constituting the "20-bore party," had arrived and taken up positions. A little further north, back of the Shoemaker, were President Kinney, Capt. David Earle, M. D. Gilman, C. B. Hedden, George Newton and a half-dozen others. I was there myself, as you will see.

The dogs soon turned toward Rice's, and every one was on the lookout. Uncle Nathan was the lucky one, however, and bowled him over; what a shout went up when the boys saw that he had stopped him. You would never have dreamed (seeing Uncle Nathan tip-toe up to that fox ready to give him another barrel if he showed signs of getting up) that his seventy-sixth birthday was almost here.

E. T. Whitaker and A. C. White, with Whitaker's dog Tilden, went to the north end of East Ridge but did not start a fox. I went with them (teamster), came back to the shoemaker's to put up the horse, and started down the road to hunt up somebody to talk to. I am not much of a fox hunter, take me alone. I soon came across Cyrus Holden, and together we set out to find a place where we could be in the sun and out of the wind, if possible.

We soon found a place that offered partial protection from the wind, and as we hopped about the road, perfectly "numb" from the cold, we heard a pack driving to the west of us in the sprouts but nearly out of hearing. Soon we heard a dog sing out once or twice a little nearer than the main pack, but just audible in the high wind. All at once a fox jumped into the road about two rods from us and started down the road. I spoke to him as he came along, but he didn't stop. Of course he was a strange fox to me and I didn't know whether he was "red fox," or "dog fox," or just plain "Mr. Fox," so I just sung out at random, but he kept right on, and as quick as I could I put on to him, but I was so clumsy that he got about seven rods away before I could get my gun up. I hit him from the same direction that his tail did, but only skewed him around a little. Cyrus gave him a gun as he went into the brush.

In about five minutes Thayer's Guess came upon the trail, but was bothered in the road, and by the time we got him on right the fox had been gone ten minutes. We followed Guess down through the sprouts, where we met Whittaker and put his dog on. Following after them we soon came to the burrow, where both dogs were in out of sight. So I'd got him, you see, right where I want him. It was lucky I didn't kill him, for you had to show them up at night with pelts on, and I never could have carried that tremendous big dog fox around all day. Will, Cyrus and I went back to our old stand, lit our pipes and waited for the next one.

Soon John R. Thayer came along muffled a la Johnnie Slocum. We told him about our killing the fox ahead of Guess, which pleased him mightily; but when we explained where he was John shook us. Just now another pack came into hearing, and John dusted for the ledge just southeast of the shoemaker's, where M. D. Gilman had been since daylight and just left. Roraback, of Chester, stood there all day a year ago. The fox made a turn or two down toward the pines, where some one shot at him.

Charlie Howe, of Milford, had a stand behind a sapling pine and saw the fox coming straight to him, but when about twelve rods off another party saw him and stood up to get a good look at him, which caused the fox to change his course. Perhaps Charlie wasn't hot when he inquired of that man as to his reasons for standing, etc. Later on Will Perry came across the party and told him confidentially that Howe was the one who scared the fox and that he would have killed him easy if Howe had kept out of sight, which he firmly believes.

After being shot at the fox went east and crossed the ledge John R. was watching. He brought him down with the first barrel, but seeing signs of life gave him the second.

Tilden, Leap, Guess, Bat and Fannie were driving him, and lively music they had been making for a few moments. We all gathered around and congratulated the Senator, who remarked that this was a great year for the Democrats anyway.

By this time it was noon, and the only chance to start another fox was to jump one, so we started for a likely looking piece of sprouts a mile or more to the north. There were about a dozen or fifteen men and half as many dogs. Leaving the road we struck out for the ledges and had not got ten rods into the woods when Tilden winded a fox and sung out. Leap and Bat circled toward him and struck the scent, and in a moment the entire pack were off and such driving as we heard for the next half hour would make a successful day's hunt. Around and round they went, the dogs in full cry, running like the wind, for they were so close up that they carried the scent in the wind and ran with heads up.

The fox was heard or seen by three men, yet no one got a shot at him, the sprouts were so thick. Leaps and Bats led the pack and a half hour's exercise ahead of them satisfied the red and he went in.

Not starting another we turned back to the shoemaker's which had been the center of the hunt all day. Gradually the different parties came along till about 3 o'clock all started for home, but had not gone a half mile when a couple of dogs took a fox across the road right in front of the party and the dogs were all thrown out and men scrambled for crossings and a new hunt was going in a minute. No one got a crack at him, however, though he played around East Ridge for an hour, and at dark the dogs were out of hearing over Rawson Hill and were left driving.

At 7 P. M. came the supper at the Bay State, which though not quite up to scratch, was relished by those who had been out all day. Mr. Kinney presided. Congressman J. H. Walker, a veteran fox hunter, spoke at some length, telling some very amusing incidents of his fox hunting with Uncle Nathan. All the successful hunters of the day were called on and gave their experience during the day's hunt. The post-prandials are not long, as every one is known to be tired from the long day's hunt, and at 11 P. M. the gathering broke up. The Worcester Fur Co. may well congratulate themselves on the success of this year's hunt.

The day was one of the worst imaginable, a cold northwest wind blowing all day, but the record of 5 foxes killed and shown at the supper, pelts on, shows that we have a good supply of foxes. A number of prominent business men were out for their first fox hunt, and had the day been calm they could have heard driving nearly all day. As it was some of them heard scarcely a bark, and probably did not carry home a very pleasant impression of the sport.

Another hunt will be held later in the season, on snow, when we hope that the success of this hunt will draw more hunters from out of town. HAL.

DEER IN MICHIGAN.

Editor Forest and Stream:

F. S. Campbell and myself have returned from our annual hunt in the northern peninsula of Michigan. We were accompanied by Jay Campbell, of Janesville, Wis. We killed only six deer and but very few partridge. Deer were uncommonly wild, but the lumbermen and residents there say the deer were more plenty than they have been in several years past. There were many wolves, and that may account for the deer being so wild. We had a heavy fall of snow during the last ten days of the hunt, and some cold weather, the thermometer indicating at one time 2° above zero.

When the snow first came we contemplated a good time, but contrary to expectation and experience no amount of cautious trailing would put us within rifle range of deer. The snow showed the wolves were trailing also.

The resident hunters accounted for the scarcity of partridge as follows: Last winter there was a heavy fall of light snow, and the weather being cold the partridge, in accordance with their habit, took shelter in the snow; then it suddenly became warm with a slight rain, so as to soften the surface of the snow, and then suddenly froze, forming a crust, confining these birds until they perished with starvation.

We killed one three-year-old buck singularly marked. One of its antlers had four points, the other antler was simply a spike. A company of hunters near our camp killed a spotted four-year-old buck. It face and cheeks were mottled. The spots were white, ranging in size from a quarter of a dollar to the size of the palm of the hand. It was the first spotted grown deer I ever saw.

I talked with an old resident hunter there, and his theory in regard to the cause of the spots was that the deer had been attacked by wolves and its hide lacerated, and when the wounds healed the hair came in white, as we sometimes see in horses where they have been galled by the harness or packs. He said he had seen several deer thus marked.

If any of your patrons should go into the Northern Peninsula by way of Metropolitan, I recommend they call on Swan Anderson, who keeps a livery stable and hotel. His charges are reasonable, and he and his good lady are very attentive for the comfort of their guests. It is but just that I mention the names of Peter McCrimmon, foreman of Camp 8, of the Ford River Lumber Co., and Mr. McGregor, their general superintendent. That company are fortunate in having the services of those men. In short, that company show much common sense in the management of their affairs, at least that part of it which fell under our observation. It treats its employes well, gives them good quarters and an excellent table, thus securing No. 1 men. H. LORING.

CHICAGO AND THE WEST.

CHICAGO, Ill., Nov. 28.—Thanksgiving Day was very generally celebrated by the devotees of the trap in this city, as will duly appear by scores published elsewhere. Garfield Club, on the west side, held an all-day shoot at live birds and inanimates, and Excelsior Club, of Morgan Park suburb, also had a full field day. The *recherché* Washington Park club shot live birds all day. Grand Calumet Heights Club shot inanimates, about thirty members being down. At Watson's Park at Burnside, sweep shooting at live birds was kept up all day with two dozen or so entries. By "live birds" turkeys are not meant, though long ere nightfall the birds may have seemed as large as turkeys to some of the faithful. The lower clubs, like Cumberland, Mak-saw-ba and English Lake, had small attendances. The results are not yet in from the field shooters, of whom very many departed on the great fall holiday for widely scattered localities hereabout. Beyond doubt the enjoyment of the day was general and hearty. The weather in this region was cool, but pleasant, and it was a shooting day.

The night before Thanksgiving day was sharp and cold, and apparently there has been a cold storm above us, for all that night there were hurrying hosts of wildfowl passing down over this city, including a good many geese. The big lake has been full of bluebills off Twenty-second street and lower down. To-day reports come in from the lower marshes that the game is in. It is very probable that within the next fortnight we shall have the best shooting of the fall so far, and probably, too, the closing up of all the duck shooting. We hear reports that it is to be a very hard winter, also that it is going to be a very open winter. You take your choice. But at any rate the usual time for serious weather is now nearly upon us.

The Tolleston marsh should be having good shooting now, for a time at least. The trouble with that marsh is that this summer when the marsh was all dried up the cattle got over it and ruined most of the natural feed. The club built its dam and has lately had a good stage of water, but not very good feed, so the ducks have not staid on that marsh so well as usual. At least, so goes the story.

Mr. McFarland, of the Hennepin Club, tells me to-day that he has had very fair shooting down at that plucky and lucky little organization's headquarters, on the Illinois, within the last few weeks. Just below Hennepin, on the old standby, Senachwine Lake, the shooting has been very good, and of late there has been a little exodus of duck hunters for that point, partly, perhaps, excited by one or two good bags made there two or three weeks ago. Last week I mentioned that Dick Turtle had had good luck on Senachwine. I saw Dick to-day, and he told me that in two days he bagged 147 ducks, mostly bluebills, besides 13 jacksnipe. This bag requires very special mention, for nearly all the shooting was done with a 16-gauge gun, and much of the time with No. 9 shot. Dick says he thought he would use the fine shot on cripples, but when he saw how he could knock down the bluebills at 30 and 35yds. with the No. 9 shot he kept on using them for quite a while. The ducks were in then on Senachwine in goodly numbers, and Mr. Turtle sent 15 telegrams up to friends, but not one came down. That's where they missed it. Since then Mr. Turtle has been down at Water Valley on the Kankakee, that was last Saturday, but he only got 5 mallards. He says he counted 16 hunters who got off the train at Shelby, and 7 at Water Valley, a mile further on.

So far, the Illinois River country has had the best of it. Mr. Benton Leiter and Mr. W. H. Haskell have bought 1,000 acres near Chilicothe, including the famous rice marsh known as the "Rice Lake," and will hold entire possession of it after this fall, much to the discomfiture of local shooters. These gentlemen were down trying their new grounds a whirl or two about a week ago. It was quiet weather and the birds were not working much, but the two guns in two days bagged 80 splendid mallards. Chilicothe way is where Fred Kimble and his old field partner Long used to crimp the mallards. It is naturally a great duck country. Abe Kleinman has got his eye on a piece of marsh somewhere down that way, but he won't tell where it is.

Mr. Geo. T. Farmer is the only Cumberland man I have seen lately who has been down on that marsh. On last Saturday and Monday he knocked down 30 mallards, over at the east end of South Island, between the two ditches. That is right near where I had a splendid half-day's shooting a year or so ago, with Alf. Dodd, the Cumberland pusher. By the way, Alf. has long since quit pushing, and is now at work for Charlie Gammon, here in this big and busy city, or was a little while ago. A change from his old life on the edge of the duck marsh.

Another change of that sort has happened. The Mak-saw-ba Club has lost its old and excellent stewart, Ira Pease, who this week retires from the position he has so long and ably filled, and goes out into Iowa to superintend Mr. T. Benton Leiter's big farm. Mr. Leiter is a member of Mak-saw-ba Club, and he saw that Ira Pease was a manager of more than ordinary ability. Mr. and Mrs. Pease therefore go to other fields, more's the pity for the club, and Sam Austin, late keeper of the Pittsburgh club, near neighbor to Mak-saw-ba, will take the vacant place.

Ira Pease is in town to-day, and he tells the boys that just before leaving the grounds to come up he saw large numbers of new ducks circling in over the marsh. There will probably be some parties going down. Lately the boys have not done much shooting at that club. A few days ago Roll Organ got eight quail and six rabbits, and Haskell about the same one day, and a few others of the members also prowled around in the woods and got a few birds and cottontails, but no hard shooting had been done,

Your uncle Jo Card has been down at Toledo, O., again, and has had a barrel of fun on the big club marsh near there. He and his brother and another gun killed 128 mallard and black duck there one day, and they averaged about seventy a day in the better part of their shooting.

Mr. Cy. Clark, of Clark & Neltnor's place on Fox Lake, was at Swan Lake Club, on the Illinois River, a couple of weeks ago, and sent up about fifty ducks to his friends.

From Fox Lake we do not hear such very good reports just now, but there ought to be some shooting there now within the next few days. John Gillespie, of the Jenney & Graham Gun Co., was up at the lake a week ago, but says he only got one shot at a duck. Charlie Wilcox, who does most of his shooting at Fox Lake, says he has had poor luck lately, and awaits Ed. Howard's telegram before going up again.

Mr. V. Hicks, son of Valentine Hicks of the Rising Sun Game Park Association, near Ashton, about eighty miles west of here, was in town this week. He says the prairie chickens have been doing very well indeed this year, and only last week he killed a dozen out of the corn in one day. Young Mr. Hicks says they have been expecting Mr. Mussey and the writer out for a fall chicken hunt, but there are so many less pleasant things to do that it is hardly likely we will see the big farm this year. It is with the sincerest regret that we hear of the death of old Mac, the old liver colored pointer that found our chicken for us, the one we killed by moonlight. Poor old Mac. He was a truly gritty hunter, and I hope he's happy now.

Mr. C. McCammon, in company with his friend Mr. Harry Sanborn, had a very pleasant little fall hunt out in Dakota last month. They went to Huron, S. D., and shot in the country thereabouts and around Oaks, further south. They seem to have had better luck than the average North Dakota party and found some sport, although the very dry weather bothered them later. They bagged 113 ducks in one day and got a number of geese also, but say they were all native birds, the northern flight not yet being down. Yet at one point in Dakota Mr. McCammon and his friend saw a field so packed full of geese and "tiger brant" that at first they thought it was a tremendous flock of sheep. On this trip Mr. McCammon was seriously hurt by being crushed between the wheel and the bed of the wagon, and from this he is by no means recovered yet. He had just alighted from the wagon and was caught by the wheel as his attention was engaged elsewhere. These two gentlemen say they saw simply millions of prairie chickens, but they hunted these birds very little.

The Dakota shooting tourists unite in a loud complaint against the rapacity of the natives around Devil's Lake, and indeed pretty much all through the shooting part of Dakota. Ben Dicks says that on their trip to Devil's Lake they had to pay $10 to get their guns and shells hauled twenty-two miles. For a team they had to pay $8 a day, and for a team and driver $8.75 a day. Mr. McCammon says they had to pay any farmer at least $2 before he would hitch up and help move their decoys from one field to another. If a team came to take them in to dinner, a mile and a half, it cost $2 and another $2 to get back to the field again. All this is pretty tough on foreign shooters. A great big healthy, large-sized boycott on just such localities is what is wanted.

Reports come from Fort Smith, Ark., that the country down there is fairly overrun with quail. Things are so torn up in the Indian Nations just now that it is far from advisable to cross the line this fall, unless one is careless about losing his outfit to the military patrol. The land and the game thereof will belong to the galvanized boomers; but after all one cannot regret any action that will keep outside hunters from shooting in the Nations, and so give the little remaining game a chance.

From the wild and woolly locality, Jackson's Hole, Wyoming, reached via Kaintuck, Idaho, comes a letter from Mr. S. N. Leck, whom I never met and don't know anything about, but whom I envy right now at this big game season. Mr. Leck writes as follows:

"I take FOREST AND STREAM, and noticing your writing I thought I would write you for information if you will be so kind as to give it to me. I am a resident of Jackson's Hole, on Snake River, directly south of Yellowstone Park, between Teton Mountains on one side and Gros Ventres on the other. This is a great place for game, both large and small, and trout fishing is splendid.

"I have been in the West about 15 years, and have put in a good deal of the time hunting and trapping in the mountains. I would like to get hunting parties to guide through the mountains. Now what I want to know is how to get them. I suppose there are lots of men in the East that, if they knew a good responsible guide, would like to come and have a hunt. If there were several parties who wanted to come at the same time there are a number of men here that I could recommend highly that would like to act as guides, that could furnish all the horses necessary, also camp outfit. We could meet parties either at Eagle Rock on the Utah Northern, or at Cinnabar, and come down through the Park.

"I can give reference as to my character and experience if necessary. If it's not asking too much, I would like to hear from you."

I did let Mr. Leck hear from me, and told him non-residents could not hunt in Wyoming. A good many letters drift in from Western men who would like to act as guides to Eastern tenderfeet at so much a per, but in the lot there are doubtless many who would be trustworthy and valuable guides. For Mr. Leck I want to say it is an almighty good sign that he reads the FOREST AND STREAM regularly.

From Pasadena, southern California, comes word that the coyote coursers of the Valley Hunt, of that burg, are now leaning to the staghound, in preference to the greyhound, for coyote hunting. They can't have seen all the greyhounds in the world, and when they speak so I am forced to remember a deer hunt in the Indian Nations a few years ago, when a few of us saw the two strains tried together, at least to a limited extent. The use of greyhounds in the chase is a sort of hunting without a gun which sometimes results in meat, and a good deal of it.

Speaking of guns. The whole tendency is to light guns nowadays, as we all know, but just how light does everybody suppose double-barreled shotguns are made? There are now in Chicago four shotguns of .44cal. One of these was made to order for F. P. Taylor, a Diamond Daly, and I suppose he has it yet. That is a double gun and a dandy. Mrs. R. B. Organ owns a .44 shotgun, and shoots it too. This is a single barrel, and Mrs. Organ has killed a couple of dozen rail with it in a day. And now I have just seen a pretty pair of little .44cal. double guns, W. Richards, at Jenney & Graham's. These little guns seem like toys, but they say they shoot quite hard. Col. Felton, as is well known about here, shoots a very strong pigeon race with a 20-gauge Scott, and we have just heard of Mr. Turtle's use of a 16-gauge on ducks. *A bas le* ten-bore.

Baked possum suppers are just now interesting our Chicago sportsmen as a form of giddy and delicious dissipation. And hereby hangs something, which FOREST AND STREAM is probably the first paper to get hold of. The early organization is very probable of a social, game dinner-eating, lie-swappling club of Chicago shooters under the name of the Possum Club. The Possum will go. It will be a success, and its history will be apples of gold in pictures of silver. Wait till you hear from the Possum Club, for it will pale the ineffectual stars of all the other Chicago clubs, gustatorial or shootatorial. The list of members is not yet fully determined, and it would hardly be best to publish the probable but uncertain list, already formulated.

Summing up the shooting situation for the immediate present, more especially in regard to duck shooting, the fact must be reached that the season has been a rather poor one. Above, mention has been made of what would seem to be a good number of very fine bags, but it should be remembered that it is only the good ones we hear from. Only success gets chronicled, and meritorious effort receives not half the reward it should. Our ducks are not with us to any tremendously alarming extent. The situation reminds me of the remark of the North Side Hebrew that Billy Mussey tells about. The Hebrew in question was pondering over the dull times, and with a sigh finally remarked, "Vell, if pizness vasn't any bedder last veek as it vas nexdt veek, I'm a sonn of a gun, dot's all I hope!"

We hope for better business next week.

Nov. 30.—The quickest sort of an amendment ought to be made to what I said about the Possum Club yesterday. The lapse of a day has covered a year of event. History moves fast with the Possum Club. Yesterday afternoon the Possum Club was still in the air, and its probable membership was not yet fair news to publish. This morning the Possum Club is fully organized, its charter members are enrolled, and provisions are made for doubling the list at the next meeting. The Possum Club will make swift history in this city. In many ways it will repay watching, and a brief synopsis of its sudden growth ought to be given.

A week ago the first movement of the Possum Club began. Billy Mussey, George Andrews and W. S. Haines went down that Saturday evening to a possum supper at Billy Werner's restaurant on Michigan avenue. Billy Werner is Kinsley's old *chef*, and he made Kinsley's reputation, and staid with him till Kinsley began to serve too much illegal game, and then he left. Billy Werner can cook a boot leg so it tastes good, and as for possum—well!

These gentlemen were the very first movers of the club. They came back to Billy Mussey's hall exuberant. They had revelled in optimistic possumistic possibilities of which they had never before dared dream. When Billy told the boys about it—all the boys are at Billy's Saturday night, and most all of them on any other night—his eyes fairly glared through his glasses and his hair stood up all over his head.

Then some one said, "Why not start a possum club?"

Seventy-five voices yelled, "Possum club!" The thing was done. It was a song that carried the French revolution, a revenue stamp that carried the American revolution, a cow's kick that burned Chicago. It is the little thing that impinges sharpest, and the pointed idea that sticks in the face of possibility. In the heart of each man present there was a certainty that the Possum Club was destined to success.

Last night the Possum Club held its first meeting for organization, and at Billy Werner's board there sat down the following charter members: W. P. Mussey, G. W. Andrews, W. S. Haines, W. N. Low, C. E. Felton, C. B. Dicks, L. M. Hamline, P. F. Stone, F. A. Place, J. P. Hayde, E. Copland, Fred Pfeffer, A. H. Harryman, E. Hough, Billy Werner being chosen charter member *ex-officio*.

The first thing the club did was to eat some possum. Then they ate some possum. There were "sweet 'taters" too, and English muffins and possum, and some glasses and possum. Then everybody ate a little possum, and settled down a little to the necessary business. Just about this time it was that Col. Felton came in with champion Jim Elliott, who is at present the guest and protegé of Chicago, and who was thought to be lost somewhere in the wilds of Washington Park. The club gave Jim Elliott an ovation which made him blush, and then offered him some possum.

Mr. Low was called to the chair. It was decided not to complete any iron-clad organization, and not to recruit the club necessarily from shooters only. It was thought best to elect a permanent secretary, and Billy Mussey was chosen, but it was voted to elect a chairman for only one meeting at a time, each time in advance of the next meeting. Mr. Low will preside at the next meeting. The FOREST AND STREAM representative was called on to recount the history of the club's origin, and pointed out the three who first set the ball rolling. Mr. Low then spoke on call, and said that he could see how the club could unite all the clubs, and indeed bind together all the craft of sportsmen in Chicago, shooters, anglers and all others. He did not think it a wild thought to prophesy for the near future a great meeting room and a great body representing the best of Chicago's sporting fraternity, and he could see the place and the means whereby, on such an occasion as a visit of Kansas City to this city, an entertainment could be offered which should make the Possum Club a name synonymous with the hospitality and generosity of Chicago. He saw in this movement a building better than we all might know at present. It meant a unification of Chicago sportsmen, the wiping out of every clique and faction, and the nucleus of what might be a mighty movement in the matter of more influence for sportsmen as a class, for better game laws and better enforcement of them, for better relations with other States in such matters, for a better and a higher standard yet than even that high one which is now necessary to be attained before one can be accepted into the guild of the sportsmen of to-day.

Col. Felton moved that all the sportsmen of Kansas City should be honorary members of the Possum Club, the honorable guest, Mr. Elliott, first on the list. Carried with cheers. A question: "Is Macalester in it?" and shouts of "Not in it with Jim."

It was moved and carried that at the next meeting each member should propose the name of one gentleman, who should be chosen a member thereupon; further increase of membership to be considered thereafter. All such names were to be handed in to the secretary a week in advance.

Mr. Mussey was called on to say what he thought of the Possum Club, anyhow, and said he thought it was all right. It would be a better idea than most of us here tonight would probably imagine.

Mr. Fred Pfeffer, of baseball fame, was ordered up, and said he would feel proud to see others of his profession besides himself members of the club. Mr. A. H. Harryman, editor of the *Sanitary News*, said he could see a national reputation in store for the Possum Club. The name would soon be as famous as that of the Beefsteak Club of New York, as the Gridiron Club, or any other club. Messrs. Haines and Place and Mr. Copland, general freight agent of the Santa Fé road, also made felicitous remarks. Col. Felton thought the club should be as informal as possible, as that would constitute its chief charm. He did not wish to see names of members mentioned in reports of the club from guests, or long formal speeches. It was the sparkles of the sportsman reporter, the brightness of the table talk, that had made this evening so truly enjoyable. The reporters solemnly promised not to say a word. And indeed it would be impossible to chronicle the beginning of all the bright and apt sayings that abounded through the evening.

It was determined that the next meeting should be two weeks hence, on Saturday evening, at Werner's. It is very probable that these game dinners will be given throughout the winter season by the club, that being its ostensible and immediate reason for existence. It is no merely complimentary belief, however, to think seriously that there is in this red hot little meeting the beginning of quite a noticeable movement. The Possum Club is going to unite Chicago sportsmen in a way they never knew before. It will hold the cream of all the shooting clubs, the most active and prominent sportsmen of the city, and will wipe out every clique and faction, every jealousy and little fear. It will leave us a people united and inseparable, whose platform shall be sweet potatoes, and whose creed shall be baked possum, beyond which there shall be no discussions, and over which there can be no quarrel.

The following will be nominated for admission at the next meeting: Mr. W N. Low will nominate Mr. Chas. Kern, treasurer of this county; Col. C. E. Felton will nominate Mr. M. J. Eich, Mr. W. P. Mussey will nominate Dr. J. M. Hutchinson, Mr. W. F. Pfeffer will nominate Mr. Fred C. Donald, vice-chairman of the Central Traffic Association; Mr. E Copland, Mr. J. A. Hanley, freight traffic manager of the Santa Fe; Mr. J. P. Hayde, Mr. R. B. Organ; Mr. C. B. Dicks, Mr. H. D. Nichols; Mr. L. M. Hamline, Mr. Geo. Hoffman; Mr. G. W. Andrews, Mr. C. E. Willard. Mr. A. H. Harryman, Mr. C. S. Burton; Mr. F. A. Place, Mr. W. W. Foss. Dr. N. Rowe will also be nominated, and Mr. Haines and Mr. Sloan will name their friends later.

The only thing harsh about the club is the fact that the possum dinner is very hard upon the colored waiters, who were nearly in a state of insubordination when the banquet closed last night. "Mistah Wernah," said the head waiter, "Ef these all men keep comin' heah an' eatin' possum thisshер way right befo' mer eyes, I done got to 'sign mer job, that's all I got to say!" This is the only complication which has thus far arisen.

E. HOUGH.

A WINTER CLUB.

Editor Forest and Stream:

I am asked by a number of readers of FOREST AND STREAM to elaborate my ideas concerning the organization of a winter club, to which I referred in my former communication, and I trust you will allow me to trespass your columns for their information.

I would organize a club with a paid up capital of $25,000, to be divided into twenty-five or fifty shares. With this money I would purchase a plantation with a large, roomy house, capable at once of entertaining a large number, and which could be easily enlarged to accommodate all the members. This plantation should have tenant cabins for negroes as well as servants quarters and other outbuildings already standing. It should be located near a railroad station, and also steamboat navigation with New Orleans. It should be in the midst of a region where quail, woodcock and ducks are plentiful, while larger game like turkeys, deer and bear should be in easy reach. Now this may seem an ideal location, yet I know just where to buy such a plantation. It can be done now at a low price, but every year is curtailing such chances.

I will give illustrations of the abundance of game in this proposed locality. I have had three deer driven to my stand in one morning, and this within half a mile of the house where I was then stopping. I have in one morning's shooting in the fields about the same house, without bothering after coveys that took long flights, brought in 36 quail, and stopped only because I had more than I needed. I have seen in January, February and March mallard and woodducks more plentiful than any Northern sportsman ever sees them except at the great feeding and breeding grounds. Annual bear hunts are carried out once a year in the canebrake with great success. This plantation shall be on the edge of a tangled wilderness hundreds of miles in extent, such a wilderness as only exists in the South, and yet in a country of good roads and good people, though not many of either. The winter climate is delightful, but not warm enough to be enervating, and the land upland, high and dry the year round.

Such briefly are my notions, and although they may seem strained, I know what I am talking about, and it can be done. I am ready to take a share in such a club and to go ahead and acquire the property, but I shall not give away my knowledge except to a club.

ARTHUR M. VALENTINE.

JANESVILLE, Wis., Nov. 27.

A BOOK ABOUT INDIANS.—The FOREST AND STREAM will mail free on application a descriptive circular of Mr. Grinnell's book, "Pawnee Hero Stories and Folk-Tales," giving a table of contents and specimen illustrations from the volume.—*Adv.*

PROTECTIVE LEGISLATION.

THE reference to "The New Iowa Fish Law," by Wm. H. Steele, in FOREST AND STREAM, of July 31, bears directly on the general inutility of protective legislation as at present applied.

That laws for the protection of game have to some extent a value in restraining the useless and wanton waste which the unrestrained impulses of man thoughtlessly engender, and that they also in a measure educate the masses to the necessity of the preservation and husbanding of natural food resources will be admitted by all. But that in a greater measure they are ineffectual in bringing about that general recognition of their necessity and value, and that general sympathy and coöperation in their enforcement upon which their usefulness depends will also be generally admitted.

And why, we may well ask, is this the case? It is certainly not always on account of a determination of any class of our people to destroy wantonly, or in utter disregard of the law, or of the general good. Violations of the laws often arise from the stern necessity of want, which knows no law, but more frequently, perhaps, through a lack of proper understanding of the question in all its bearings. It is true that in the bitter struggle for existence the thirst for gain stamps out of many all but the most sordid considerations.

Still, in every community the great majority may be considered not only as themselves law-abiding, but also in full sympathy with laws which they feel are of general benefit in their tendency, unless they believe that they are enacted in the interest of the few. There is greater excuse for the illegal capture of game by the illy-fed and suffering poor, for it is with them a question of existence which all at least who have endured the struggles of poverty will recognize.

There is, however, another influence actuating the poorer people who are not actually driven by necessity, and that is the belief that game laws are made for the sole benefit of the wealthier classes, the "rod and gun" clubs, angling associations, etc., the sole object of which is the fostering of sport, in which they can have but little share except by stealth.

Whether or not this is the case, the prejudice exists, and must be recognized and treated with intelligent and politic consideration and conciliation, if there is ever to be brought about a general recognition of the necessity and value of the protection of game, and a cordial sympathy and coöperation by all classes and conditions of our people.

The constant lamentations over infractions of the laws will not induce compliance with them, nor any number of game wardens be able to enforce them. Most of the violations occur in the darkness of the night, or in unfrequented places, with snares and nets. Every deep place in a trout stream for a distance of two or three miles will be seined out in a single night with a seine very clumsily formed out of coarse bagging (burlap), by pulling out some of the threads to make it more open, and by constructing a bag-like extension of the net to trail behind. Such a net fastened to a pole at either end will prove destructive at night, as the fish when frightened huddle in the deepest holes. By wading in the water to the armpits these will be completely cleaned out. Gill and fyke nets are also set after dark and removed before daylight. How is the game warden to discover these things unless the community, and particularly the farming and laboring classes, are in sympathy with him? And even where they may be in full sympathy with the spirit of the game laws how many would inform on a friend or neighbor? Either on the score of friendship, business advantage, or dislike of the notoriety, to say nothing of probable retaliation in some way, but few would be found to give information even if much greater rewards were offered. Nor, in the opinion of the writer, are they much to be blamed. For they see constant violations of the laws by those to whom they look for example as well as precept. As well might we expect our hoodlums to be always gentlemanly and decorous while our college youths, the representatives of our culture and civilization, often demean themselves as savages, or worse.

As an example of the apparent disregard of the law or of the thoughtlessness existing concerning the consequences or influences of such disregard on others—especially the young—by those who should be exemplars, an article by the writer published some years ago in a paper devoted to nature will be repeated here, with the names of place and persons changed in the present publication, and for the sole purpose of practically illustrating the point in question: "I want to say a few words concerning a matter in which I think I will have your thorough sympathy, although you may not always agree with me. While waiting for a train at A., in New Jersey, the other day, I was eye-witness to a shooting match in which glass balls were used instead of pigeons. Although not taking any special interest in the sport myself I like to see others enjoy it. Of course I formed a high opinion of the gunners because of the absence of the cruelty attending pigeon shooting. But judge of my surprise when I saw them occasionally drop a swallow, many of which were circling about, low in the air, busily engaged in feeding upon flying insects. The climax was capped when a whippoorwill came swiftly gyrating to the ground, mortally wounded. Possibly in consequence of this sport several broods of young birds will starve.

"The fruit trees in and around A. are richly festooned with the webs of the caterpillar, which some years ago so beautifully ornamented the shade trees of Philadelphia. The mosquito crop about A. is also a full one.

"The English sparrow comes in for much abuse for driving away our native insectivorous birds. What do you think of men who wantonly shoot them? Now, who do you suppose were the individuals engaged in this delectable amusement? Of course you will conclude that they were roughs and hoodlums. Let me give you some of their names, first giving you notice that they are members of the A. Rod and Gun Club. First there was Judge V., with whose name many of you are familiar. It was he who shot the whippoorwill. Then there was Squire C., the justice of the peace of the borough, the man before whom prosecutions for such offense would take place. Among the others were U. I. M., Capt. M. D. and K. N. O. There were others, some of them small boys in knickerbockers, among the shooters.

"You will no doubt be able to imagine the judicial air of severity with which Squire C. would give sentence to a poor laboring man who would shoot a few robins, or a quail or rabbit, out of season as food for his illy-fed family.

"Why did not I make a charge against these violators of the law and of wise policy you may ask? Well, my dear reader, to be frank, I could not afford the time and money necessary, and I question whether I would not have been subjected to much annoyance and animadversion. Another thing, 'it was not my funeral,' not being a New Jersey agriculturist. If the good people of A. can stand it of course I can. I was informed that it is a common occurrence. I would, however, be glad to be one of a grand organization formed to prevent just such violations of the law and good public policy, to say nothing of the wanton cruelty involved, and I would be glad to hear from any of you who feel interested in the subject."

There is no doubt in the mind of the writer that this violation of law was the result of mere thoughtlessness.

What is a bird or two, more or less, is the plea of the inconsiderate. But the aggregate of wanton destruction in a single State, if it could be known, would probably be somewhat startling.

During the spring migration northward of the robins they are killed by thousands in the vicinity of Washington, under the very shadow, so to speak, of the Agricultural Department and the Smithsonian Institution. Scores of hundreds made by single individuals in a day's shooting are recorded in the local Virginia and Maryland papers, and they are treated in all respects as being as much game as the reed bird is in the fall. But while the reed bird is wholly graminivorous, the robin is largely insectivorous and one of the most useful of our birds.

The existence of conflicting sentiments in the different States becomes here a matter of interest, and must be taken into consideration. And now the question arises, how may a general uniformity of protective legislation be secured, and how, also, may a general respect and sympathy for such legislation be promoted throughout the land?

At the last meeting of the American Fisheries Society a paper was read, suggesting, in the case of fish protection at least, the development of that society into a great national organization, having State branches, these again having subordinate branches ramifying through the counties and even to the townships and boroughs, thus to form in every community throughout the land an association of individuals not consisting of anglers and gunners only, but of all classes interested in any way whatever in game protection. In this way a means of disseminating a proper knowledge of the objects of the laws enacted would be afforded, tending to a higher appreciation of their value to all. There would also be a complete system of observation and espionage of the waters of the country, and, furthermore, the necessary means for the apprehension and prosecution of violators of the laws, independent of individual obligations and entanglements by throwing the burden of prosecution upon the broad shoulders of a great association. This is the way in which all reforms in political, industrial, or other matters are promoted, and until some such movement regarding game protection is inaugurated, it is probable that but little except the stereotyped lamentations will be heard. WM. P. SEAL.

PUBLIC AND PRESERVED.

NEW YORK, Nov. 26.—*Editor Forest and Stream:* In your issue of this week, speaking of the famous game resorts mentioned by an Ohio correspondent, you ask, "Why should every favored locality where fish and game are to be found be picked up for a private club?"

The reason is simply that as soon as such a spot becomes known to the public, particularly if the foreign element is strongly represented in that vicinity, it is so hunted—in season and out—that a few years only are needed to wipe out everything that lives or moves.

What has become of the pinnated grouse and the wild turkey in the East? Where are the thousands of wild pigeons I used to see a few years ago? And what has become of the herds of antelope, elk and bison that the Indians left on the prairies? And where are our salmon? If you can tell me a single locality where the public has free access and where game is plenty, I should like to know it. The few deer that are killed in the Adirondacks are those bred in private grounds, which escape over the boundaries. If any one in the Raquette Lake region wants venison he goes to the edges of the private clubs for it, for he knows his chances are slim on public grounds.

Until people have to buy a license to kill public game under wise and strict laws, and said license is only issued to those who obey these laws, not until then will game have a chance. I spent two days last week beating through beautiful grounds, where I used to in years past find game enough to satisfy my modest wants, and not one feather did I stir. For the past five years the number of men and boys that swarm over our fields and through the woods of Bergen county is something beyond belief. While I sat in a little piece of woods eating a cracker the other day I counted nine different parties file through there; and I do not believe I sat there over twenty minutes. WAKEMAN HOLBERTON.

MEAT WE DID HAVE.

HOW many sportsmen come home from a hunting trip empty handed and minus game. The writer recalls to mind an expedition in which he participated a few years ago in Wyoming, where this was reversed.

There were but two in the party—Dick and myself. Starting out one frosty September morning, for a two days' hunt, with a team, we drove past fine herds of cattle on the sage brush plains, occasionally startling and putting to flight a jack rabbit or timid sage hen. With our .40-82-260 Winchesters we were in quest of better game and looked not upon this small fry with any degree of longing. Arriving at the foothills we are soon ascending a cañon characteristic of these regions. The trees grow more plentiful and of larger growth, as we ascend and reach an old deserted tie camp, close to a dancing brook, whose source is among the snowy peaks yonder. Our horses are soon tethered, coats, blankets, eatables, etc, stowed away in the only log hut, which had seen better days.

A band of elk had passed this ground but recently, their tracks were fresh, and we began to have hopes of elk meat for supper. Following their trail was an easy matter. Stealthily we proceeded through the pines, but no big buck jumps up—where is the band? While we are thus meditating, up jumps a blacktail deer scarcely five rods ahead of Dick. Standing motionless it surveys us a few seconds and bounds away into a clump of quaking asp. My main desire is a pair of elk antlers fit to show Eastern friends, but the fates are against us. Night comes and sleeping on the trail, we resume the hunt at sun up. But they are traveling, not stopping to feed, and our chances are slim. Our allotted time is drawing to a close and sorrowfully our steps are retraced to camp, skunked.

Dick, who is an old timer, and up to all the ways of the country, astonishes me by saying, "Meat we must have, meat we shall have, meat we will have." He kept repeating this over and over again until I began to have doubts as to his sanity. Our hunt was finished. Too late to jump any more deer. But Dick was equal to the emergency. Our traps packed up, no time is lost and soon we are out again upon the plains.

"Meat we must have, meat we shall have, meat we will have." That is all Dick can give utterance to. Is he crazy? No. His eagle eyes soon discern a young maverick (unbranded calf). Up goes his rifle and bang the old Winchester talks; 260 grains of lead has sped sure as fate through the brain of that yearling. It being alone, far from other cattle and unbranded, he argued, it has no owner. At any rate, to skin him took but a short time, and meat we did have for a fact. MERRITT.

PHEASANT AND QUAIL BREEDING IN CALIFORNIA.—"California may well boast of its big trees, its waterfalls of the Yosemite, and its mammoth fruit and vegetable products, but it has added another laurel to its crown in possessing the largest aviary in the world," says the San Francisco *Chronicle*. "An hour's journey from San Francisco by water and rail brings one to the quiet little town of San Pablo, in Contra Costa county, and a short drive from there is the old and well-known Alvarado Rancho, now owned by Henry F. Emeric. Over an area of 2,500 acres of fertile ground are scattered orchards and wheat fields that yield wonderful crops, and near the center of this domain is the old home of Mr. Emeric's father, now deceased. It is a quaint structure, with shaded verandahs, and its roof is robed at present with a mantle of pure white Castilian roses. Fronting the house are parterres of choice flowers of innumerable kinds, bright with color and as fragrant as the breeze-wafted odors of Ceylon. There are, in fact, 310 varieties of roses alone to be seen, and in the conservatory there are rare orchids and other valuable plants. Through the vista of weeping willows and peach and apple trees, heavily laden with bellflowers and winter Nellies, the aviary is seen. This feature of the place is an airy structure of closely netted wire sustained at intervals of fifteen feet by wooden uprights, forming a perfect cage. It is 175ft. long and 60ft. wide. Within its confines is a miniature forest of quince trees, the tops of which emerge through the netting. This, in addition to a covert of thick brush, affords admirable shelter for the birds in summer, while in the winter they have the use of a large house that is in the cage for their protection against the elements. With commendable foresight Mr. Emeric has stocked this aviary with English pheasants and Chinese golden pheasants, and there are also hundreds of quail there, merely as a side issue. Mr. Emeric estimates that he will have over 400 pheasants next season and he proposes to set loose 100 or more of them each year to run wild through the country, and will give many away to those who desire to propagate them. This will, of course, be of great benefit to all lovers of bird shooting, and besides will assist materially in increasing the numbers of what are now a rare species of fowl in this State. The pheasants are fed with wheat and occasionally chopped liver is given to them. They are crossed with bantam hens, the result being game cocks that are as pugnacious as their imported sires, and the pheasant is notably a fighting bird. The golden pheasants are only fitted for an aviary, and occupy the position that a Sevres vase does in a drawing-room. Mr. Emeric has just completed negotations to have a large invoice of Bob Whites sent to him from the East next spring, and then he will increase the proportions of his aviary to three times its present size. This bird is similar to our California quail, only a little larger, and is better flavored. It is a great favorite with Eastern hunters, and will be gladly welcomed by local sportsmen. The same course will be pursued with these birds as with the pheasants. The propagation of these valuable and interesting birds is a hobby with Mr. Emeric, an expensive one naturally, but one that he can afford, and his efforts should receive the earnest support of all who are interested in the introduction of new birds on this coast."

HE STUDIED THE OWL.—Calais, Me.—I thought perhaps some of your readers might like to know of a new way to study owls. Some friends went out shooting a day or two ago. One shot at and wounded the wing of a big Virginia horned owl. He was advised to kill the bird but would not do so. He was going to study the bird alive, so he put the big bird down behind him in the blind. Soon a duck came flying along, and he stooped so low in shooting he sat on the owl. The owl not liking this way of being studied fastened its claws into his back and refused all attempts to make it let go, and the more they tried to get him off the harder he pinched, and from the howling of the man it would appear as if the owl was studying the man instead of the man studying the owl. The bird had to be killed before he would let go, and although the man's back may not be as smooth as usual, and it may be some time before he can sit down, he knows more about owls than he did.—GEO. A. BOARDMAN.

CONCERNING PLURALS.—*Editor Forest and Stream:* I rise to remark that when the words brace, couple, pair and score are preceded by a numeral they are grammatically used only in the singular number. As, 1 brace, 2 brace; 1 couple, 2 couple; 1 pair, 2 pair; 1 score, 3 score and ten. It would be as correct to say 2 dozens apples as to say 2 pairs of shoes. Macauley tells us of "a garret up four pair of stairs." Yet birds mate in pairs, and hounds hunt in couples, and so on.—Q. E. D.

DAYTON, O.—A note is received from Mr. Wickersham stating that his party, consisting of Al. Zeiner, E. J. Thomas, Wm. Zeiner and himself were the guests of L. J. Voglesang, at Gallia Furnace, O., that Mr. Voglesang had given them the exclusive privilege of shooting over 3,000 acres of furnace land, and that the party had in four days killed 642 quail, 131 rabbits, 2 woodcock, 7 pheasants, 7 doves and an owl.—BROWN.

Camp-Fire Flickerings.

"That reminds me."

GEORGE COLE, of Fairhaven, Wash., who has had charge of a Port Townsend Southern party of engineers for some time past, was in the city the other day and talked freely of the experiences the "boys" had with big game in that wild region. One of the stories which he relates is as follows: "During the summer we had a pet bear—one that we caught when it was only a few weeks old, and kept until it got to be a nuisance. We had trained it down to a fine point. You have heard of the educated hog that could read? Well, Ruby couldn't do that exactly, but he could play cards, and when it came to a bluff at poker he simply couldn't be beaten. He was sublime. I've seen him when there was a pot of fifty or more lumps of sugar—we always played for sugar when Ruby was in it—bluff the entire gang and rake in the stakes when it proved he had nothing better than a pair of twos. No, he couldn't talk; but he'd wag his head if he wanted to pass, and his eye stood him in good stead when it came to anything else. Wonderful eye had Ruby, and I don't suppose we would have killed him if we hadn't caught him one day, after he had won nearly all the sugar in the outfit, scratching his ear and pulling out an extra ace from one of the big wrinkles in his neck. Alas, poor Ruby, he was a thoroughbred, but too smart for this country, and we had part of him for dinner that day." Jo.

SEATTLE, Wash., Nov. 20.

Reading the "coon hunting stories" in the FOREST AND STREAM of Nov. 20 reminded me of coon hunt not according to the code, which I witnessed in Spartanburg, South Carolina, while residing there several years ago. Arising very early one beautiful, warm Sunday morning, I took a walk down through one of the principal streets of the town, and came across a party of three darkies trying to capture a coon that had taken refuge in a large shade tree. They had neither weapons nor dogs, but were planning to capture the animal alive. One had a small box to put the coon in, and one went up the tree to shake it down. His coonship was near the top on a small limb, from whence the darky could not dislodge him. Approaching too near, the coon made a snap at the negro, who became so frightened he lost his balance, at the same time dislodging the coon, and both tumbled together. I think it was the most laughable sight I ever witnessed. The limbs and leaves were so thick on the tree that they saved the negro from being hurt, and the two darkies on the ground were making every effort to capture the coon, and when all got mixed up in a general melee it was the most beautiful scrimmage ever seen. It took the coon about three minutes to clean out the three negroes and take a hasty departure, and then the "gentlemen of color," being awful mad at something, went to thumping each other. J. S. H.

WYALUSING, Pa., Nov. 20.

Sea and River Fishing.

THE FULL TEXTS of the game fish laws of all the States, Territories and British Provinces are given in the *Book of the Game Laws.*

TROUT FISHING IN NORTH CAROLINA.

II.

ON the morning of the first Tuesday in June a party of four of us started from Osborn's for the upper waters of the west fork of Pigeon River. Osborn was guide and general manager; the Parson, the Professor and your humble servant, the "drummer," made up the party. The Parson and Professor were from Charleston, S. C.; they were spending the summer at Flat Rock, N. C., about forty miles from Osborn's. They came over to Osborn's to spend a few days and get some trout; they had been there the year previous, and informed me that they were "old trout catchers," in fact they gave me the impression that they "knew it all." They were jolly good fellows, and I was very glad to meet such up in those wilds, where people of my own kind were so rarely met.

Well, at 6 o'clock that bright June morning we started up the trail, following the east fork of the river, bound for the mouth of Shining Creek, about five miles from Osborn's, where we were to camp the first night after having fished the creek to its mouth, about half a mile from where the trail crosses it.

The Parson and Professor had each a saddle horse. They came on horseback from Flat Rock. They loaded the horses with fodder, provisions for the party, pork, meal, corn pone, salt, pepper, a little butter and sugar, coffee and pot, etc., etc. We looked very much like genuine mountaineers, and I had been there long enough to feel very like one.

Our path was through dense woods the entire distance, and we did not feel the heat as we should had the country been an open one, but about 9 o'clock, when we came to the foot of the third and last mountain before reaching the creek the perspiration fairly rolled down the sides of my face and my shirt was reeking wet; we rested a little and then commenced our last climb for that day; it was only about 1,500ft. to the summit, not much of a hill in those regions; the natives don't mind such hills as that; they girdle the trees and burn off the undergrowth of those low hills and plant corn and rye on them. Our trail led in a zig-zag course, so that the climb was not a very difficult one, and at the end of half an hour we were on the summit, a gentle descent of about 150ft. and we reached the creek.

Shining Creek is a beautiful stream; it is about 15yds. wide on an average and contains a very large body of water, a great many big rocks, series of deep pools and a few long stretches of lovely ripples; it is the very ideal of a trout stream. It can be fished about three miles from its mouth with good results, provided the angler is an experienced one. After he has followed it that distance it is not worth his time to go further; he had better turn about and fish back to the river, if he has not caught all he can carry; that's most likely to be the case.

Shining Creek finds its course under old Shining Rock Mountain; it springs from several large, ice-cold springs and supplies more that half the water that goes to make up the East Fork of the Pigeon; it is the clearest and coldest brook water I ever saw in any section where I have fished for trout. I fished that creek several times in midsummer and its waters were so cold that unless I wet my head before wading in, it would ache and throb for hours as if it had been beaten.

We fixed up a place to keep the horses, gave them some fodder and then started toward the river, fishing down the creek; we used stick worms on our cinnamon-hackled flies, at least I used such a contrivance, I had too much to attend to just then to notice what the others were using. Osborn sent the Parson and Professor on ahead in order that they might have the "first pickings;" we kept as far behind them as we could; it was slow work with us; we had to take to the rocks in the stream, jumping from one to another and slipping into the water, and frequently we could do no work from the banks, owing to dense thickets of brushes and vines; the water was rather too high for our comfort, but not too high to prevent the trout from biting furiously; the sport was all we could wish it to be, but none of our fish were large ones—from ¼ to ½ of a pound each was about the average. We returned to the water scores of fish under 6in. in length. We reached the mouth of the creek at three o'clock; our young men had reached there half an hour ahead of us, they had caught 25 fair-sized trout, the Professor had fallen off a big rock into a deep pool and got well soaked, the Parson got wet in helping him out, and both of them were badly disgusted with the whole "business."

Osborn and I had caught 90 in all; they were beauties, nearly all of a size and of the most perfect shape, and the most brilliantly colored trout I had yet seen.

It seemed almost cruel to kill such beautiful fishes, but no doubt they were made for man's food and when man is hungry he don't stop to think of beauty before satisfying his hunger. The young men said they would return to camp, clean the fish we had caught, prepare a camp for the night and have things in good order when we came. We waited to try the big pool at the mouth of the creek. The lofty mountains hid the sun from our view and it was more like evening than mid-afternoon; trout were breaking water frequently and we thought we could get a dozen or two good-sized ones before night. The pool is about 150yds. long by 100 wide, and has an average of 30ft. depth of water. It can be fished to the best advantage from the west side, where we then were. I used a white-coachman at first. Osborn did the same, but could get only two rises, one of which I struck and landed. It was a small one and I returned it to the water. Osborn crossed the creek and fished the upper end of the pool. We both fished up stream. The trout continued breaking water, but I could not get a rise. I put on my old favorite cinnamon-hackle again and yet could get no rise. I then tried a worm, but they would not take that, and I began to think that my day's sport was ended.

I had whipped the pool up to the creek without getting another fish; could see Osborn haul one in occasionally, and I made one more effort. I did not want to be beaten after doing so much earlier in the day. I made a cast in the long, swift ripple which forms the mouth of the creek; my hook struck the water near its head, floated down a few feet, and then I saw a big fellow come to the surface, bend his form in the shape of a bow and sink to the bottom, fully 15ft. I struck him gently, and then he started for the big pool; my line fairly smoked for a moment; I gave him at least 40yds. of line, then he sank to the bottom and sulked. That little bamboo rod of mine didn't seem strong enough to bring him from the bottom; but I worked him almost twenty minutes, and at last brought him to the bank, where the water was not more than 6in. deep, held my rod with one hand, reached down and put thumb and forefinger of the other into his mouth and gills and took him ashore. He was 17in. in length and a beauty.

I caught 12 more fine ones from the same ripple before Osborn came; he had caught a dozen very good-sized ones. Could not catch any until he baited. The water was not warm enough for good fly-fishing.

We started for camp as soon as we could put up our tackle. When we arrived there, at 6 o'clock, the Parson was just finishing up the trout. We took those we had just caught and cleaned them; the Professor was putting the last piece of bark on to the roof of the rude camp; a big hard wood fire was blazing on a big flat rock in front of the camp, coffee was all made, and as soon as Osborn could wash his hands he set about cooking some trout. I cut two straight dogwood sticks about the length and size of a ramrod, drove down four crotched sticks before a big bed of coals, put skewers into the fish to hold them open; Osborn cut four thin slices of salt pork, rubbed the trout in meal, salted and peppered them, and then strung them on to the sticks with pieces of pork between them, and hung them before the coals. When they began to cook I placed corn pones under them to catch their juice. About twenty minutes after they were hung before the coals they were "done to a turn," and we fellows fell to and began to destroy them. We ate fifty before we began to feel that we had eaten enough; we had eaten all we had cooked; I think I could have eaten one or two more if I had been called on to do so.

After supper and a smoke we turn in for the night, rather the others did, I was to take the first watch from 8:30 to 11. The young men had laid our camp floor with a thick bed of laurel and hemlock twigs, and with our heavy blankets we could sleep as soundly there as we could in the best bed in North Carolina.

I sat outside the camp wrapped in my blanket, and watched the fire and smoked until it was time for me to turn in. Just before I called the Parson to take my place I noticed heavy, black clouds coming down from the vicinity of old Shining Rock; the wind was also from that direction and I made up my mind that we should get wet before daylight. The Parson said it looked that way to him, but he would go on watch all the same. I went into camp, rolled my blanket about me and in a few moments I was sound asleep. About 2 o'clock A. M. I was started from sound slumber by a fearful clap of thunder. I jumped to my feet, the others did the same, and after making sure that we were all right we sat down and saw the rain fall. I had never seen such a storm as that one was; the thunder rolled incessantly and the flashes of lighting were nearly blinding; the horses became restless and the young men and Osborn had to go out where they were tied several times to keep them from breaking their halters, and, of course, got beautifully soaked. The fire was long since extinguished and we all felt cold, but we could not better our condition unless we could do it with a little whisky. We all drew our pocket pistols and fired good strong charges down our throats, and as the stuff circulated through our cold system we soon felt some relief.

I shall never forget that fearful storm; it was grand beyond description, but I don't want any more such experience. It was rather dangerous, too; those tall hemlocks, under which we were camped, might have been struck and we might not have lived to relate our experience of that night. But "all's well that ends well," the storm spent its fury before daylight, and when it became light enough for us to find kindling wood to start our fire Osborn said we should have a pleasant day to complete our journey in.

It would have been useless to attempt fishing the creek that morning; it was a roaring torrent. We ate breakfast at 5 o'clock, and after packing our wallets with corn pone, fried trout and pork we were ready to start.

The Professor came up and said that he and the Parson were going back to the house, that they had had enough of camp life; it didn't contain a blanked thing worth living for.

He said he'd be blanked if he would go through another such Hades as he did last night for all the trout there were in Haywood county and several counties adjoining. We did our best to persuade them to go with us, but did not succeed; they had been pretty badly frightened, and were very much disgusted with their own luck as fishermen, and really had had enough. We sent back all of our cooking utensils except a tin for baking pones on, made our load as light as we could, bid the boys good-by, and crossing the creek on a log started for a hard tramp of seven miles to the upper waters of the west fork.

The work we had done the day before and the experience of the night had left no bad effects behind, so far as Osborn and I were concerned. The Parson said he would meet us on Saturday at Blacock's Mills, nine miles below Osborn's, near where the two big forks unite, and carry us home in a wagon, and he hoped we would have a big string of fish for him to carry back to Flat Rock. We did not make them any promises, and as they disappeared from our view we commenced climbing a big mountain on our way to our "land of promise," and as we believed, to streams swarming with trout.

At 8:30 o'clock we had covered fully four miles of the seven that laid before us when we started and had reached the upper waters of the east fork. We rested there an hour and refreshed ourselves with lunch. We left the stream then and turned northward, and at the end of an hour or so came to a mountain called the Devil's Court House. I do not know what the devil wanted of a court-house in such a wild place as that is. It struck me that there had never been any inhabitants, either good or bad, in that region. Perhaps some of his imps once lived there and made "moonshine" whisky, and when they tried to avoid paying internal revenue tax they were brought to court.

It is a wild, rocky mountain, one of the few bald ones in the west end of the Alleghany range. The trail runs between the Devil's Court House and another peak fully as desolate looking for two or three miles. The sides of those mountains are covered with a rich growth of balsam, spruce and hemlock. Many of the balsams grow to an immense size. I saw hundreds of them that would measure from 3 to 6ft. in diameter, and from 40 to 80ft. from the ground to their first limbs. They are valueless now, but when railroads find their way through those woods the owners of that timber will reap fortunes.

At 2:30 P. M. we reached the east fork of the West Fork, where we were to spend our first night, and perhaps other nights—that was to be decided by how good the fishing was in two of the three creeks which unite two miles north of where we were, and from the main body of the river, the West Fork.

We found a bear trap, or pen; it could be fixed up easily, and would make a good camp; it was built of logs. We tackled it and cleaned it out, spread about 2ft. of balsam twigs on the floor, pealed three or four large hemlocks and made a watertight roof, covered the sides with bark, and at the end of an hour or so had things in good shape for a permanent residence if we chose to reside there.

We went out to the creek and caught about thirty good-sized trout; had to wade it, as there were too many bushes on its banks. The water was not very deep; the bottom was sandy a good deal of the distance we fished; banks were low, and there were hundreds of hiding places under them. I would put on a worm, cast ahead 20ft. or so, draw the hook toward me, and sometimes get two at a cast. They were very gamy, much more so than they were in Shining Creek. I do not think any one had fished there up to the time of our coming during the season. Probably those creeks are not fished three times a year on an average.

We returned early to camp. We were both pretty tired. I took the fish to the spring near by and cleaned them. While I was doing this work Osborn was baking corn pone, making coffee, etc. Very soon we had a string of broiled trout and pork lying before us upon a piece of clean hemlock bark, and being very hungry, we paid our warmest respects to them. They were broiled "to a turn" and strengthened and comforted the "inner man" wonderfully. My appetite had not served me so well in twenty years as it was then doing. I had come from south Florida less than three weeks before, "chock full" of her poisonous malaria, and had not eaten a fairly good meal for two months when I reached the mountains. People said I would starve to death up there, because the women did not know how to cook, and if they did know how they didn't have anything to cook that a civilized man could eat after it was cooked. Just tell such people that they don't know what they are talking about when you hear them say it.

We did not have many dainties except trout, honey and bushels of the finest wild strawberries I ever saw. The wagon loads of blueberries and blackberries that came later I do not make special note of. There was plenty of milk, fresh-made butter daily, cream by the gallon, corn pone and hot biscuit. These articles might not be considered dainties by some—Bill Nye, for instance—but they just put the flesh on to my lean sides and made my cheeks as rosy as a girl's; and the expense for the entire three months was less than one would have to pay for three weeks at the Rangeleys, including fare from New York.

We sat by the fire and made plans for to-morrow and the succeeding days we expected to spend there, smoked our pipes and then turned in for rest. RUSH.

CHICAGO.

A CROPPIE ROOST.

Editor Forest and Stream:

I presume every one has heard of a pigeon roost and a crow roost, but who has heard of the "croppie roost?" Well, we have at Creve Coeur Lake, a lake about twenty miles from this city, what I call a croppie roost, and it is a made roost. Near the shore there is a space in the lake about 40x60ft. where about a dozen large piles have been driven. Between these piles some one has filled in with brush, so that the bottom of the lake is covered therewith to the depth of a couple of feet or more. Here the croppie gather in large numbers, and the space is a veritable roost. The fishermen use only short poles and a few feet of line. Some men have five and ten poles in use at once, hanging over the edge of the boat. Of course, this is pot-fishing of the worst kind, but that has nothing to do with the roost. I presume ten thousand croppie at least have been taken this summer from this small space of 40x60ft. The point I would make is that this roost gives a good hint to angling clubs as to how to protect and build up good fishing grounds.

I was pleased to see the article on the fresh-water drum in the last issue of FOREST AND STREAM. In Missouri the fish is known as drumfish, rock perch and stone perch, and is found generally in the lakes and rivers and even in the smaller streams. I have caught the fish with live minnows both in Michigan and Missouri, and it makes a good fight equal to any bass, except it does not break water like that fish. If it were more edible it would undoubtedly rank as a game fish. That the fish is eaten I know, for I see it frequently at the fish stands in the Union Market, where it is sold as "rock perch." Some time ago some correspondent to your paper said the fish was very palatable if properly cooked. Suppose he tells how the cooking should be done. IZAAK, JR.

ST. LOUIS, MO., Nov. 21.

VERMONT FISH AND GAME LEAGUE.

RUTLAND, Vt., Nov. 26.—The Vermont Fish and Game League for the purpose of securing and enforcing proper restrictions upon the taking and killing of food fish and game, the promotion, culture and introduction of new species of the same, was organized at the Pavilion parlors Monday night with 110 charter members. The officers elected for the ensuing year are: President, H. R. Dorr, Rutland; Vice-Presidents, M. R. Colburn, Manchester; Henry Ballard, Burlington; Thad M. Chapman, Middlebury; W. W. Miles, Barton; Herbert Brainerd, St. Albans; E. J. Titus, Wilmington; George W. Hooker, Brattleboro; Treasurer, J. W. Brock, Montpelier; Secretary, J. W. Titcomb, Rutland. Executive Committee—Addison county: W. R. Peak, Bristol; Bennington, C. F. Orvis, Manchester; Caledonia, J. Ritchie, St. Johnsbury; Chittenden, Wm. W. Henry, Burlington; Essex, Nathan Hobson, Brighton; Franklin, E. C. Smith, St. Albans; Grand Isle, N. W. Fisk, Isle LaMotte; Lamoille, C. S. Page, Hyde Park; Orange, R. J. Kimball, West Randolph; Orleans, W. W. Miles, Barton; Rutland, Ed. Smith, Pittsford; Washington, John E. Hubbard, Montpelier; Windham, F. W. Childs, Brattleboro; Windsor, F. S. McKenzie, Woodstock. Committee on Membership, H. R. Dorr, J. W. Titcomb, M. S. Colburn. Auditors, E. C. Orvis, H. W. Kemp, W. W. Walker.

A constitution and by-laws were adopted and the admission fees and annual dues fixed at $5 each.

We start off under more auspicious circumstances than we had anticipated. In the face of the most parsimonious legislature on record we have secured an appropriation of $2,400 for a fish hatchery. This after defeating the World's Fair bill and appropriation for the immigration commission. J. W. TITCOMB, Sec'y.

BLUEFISH AND SPANISH MACKEREL.

Editor Forest and Stream:

I notice in the FOREST AND STREAM Nov. 27, that Dr. Hugh M. Smith states that the bluefish are known in Rhode Island waters as Spanish mackerel. Will the Doctor kindly inform me through your paper in what section they are thus known? In our vicinity both bluefish and Spanish mackerel are well known, and very large numbers of the bluefish are taken. Several gangs of gill net fishermen are located in the summer on what is known as the second beach, and I think for the number engaged in the fishing that more bluefish are taken at this point than any other in the United States. Several takes of lifts of the nets, which are made twice daily, have yielded over a ton to a gang during the past season, and there are miles of nets used here for the capture of bluefish. Spanish mackerel are taken here, but in no large quantities, in the set nets. They are, however, to be found in all the principal markets during the season, and are received daily from the New York and Boston markets, and are as well known as any variety of fish in this locality. I was much surprised to learn that bluefish and Spanish mackerel should be confounded in any Rhode Island waters. The natives of Rhode Island, that is many of the inland portion, call the bluefish horse mackerel, and in fact I have heard many of the fishermen use that name, but I never heard of their being called Spanish mackerel before. WM. M. HUGHES.

POUND FISHING IN LAKE ERIE.

Editor Forest and Stream:

Has Cattaraugus any rights in the waters of Lake Erie? The north line of that county joins Erie and Chautauqua about four miles from the mouth of the Cattaraugus Creek, which is about fifty miles long and nearly the whole distance bordering on Cattaraugus county. Large numbers of bass, pike and pickerel used to run up the creek from the lake before the destructive pound net fishing was carried on near its mouth in Lake Erie. Since that has been permitted the fish have diminished from the creek until it is rarely that one is caught in that stream with hook and line. There was comparatively no scale fish caught last season with hook and line within three miles of the mouth of the creek. The pound net which has been set within a mile of the mouth of the creek, is so constructed that almost every fish passing along within a mile of the shore is taken. A bar net is extended from near the shore about a mile out into the lake where it connects with the pound, and the fish running against that turn and work along toward deep water and get into the pound, where they take them by the tons, including scale fish as well as sturgeon.

The rapidly diminishing number of bass and pike ought to admonish the people that it is time to put a stop to pound-net butchery. It was not until Chautauqua Lake was nearly depopulated that spearing through the ice was prohibited. The fishermen pretended that spearing fish increased the number, for the grown fish destroyed the smaller ones, and many were so credulous as to believe it, but a resolute member from that county in 1885 put an end to it by procuring the passage of a law forbidding the use of a spear in that lake. The subsequent increase of fish there has demonstrated the fallacy of such a theory.

The interior of the counties of Cattaraugus and Erie have a right to the natural advantages offered them by their connection by the creek with the lake, and the supervisors of Chautauqua have no right to muzzle the mouth of the creek with pound nets under a pretended authority conferred by Chapter 122 of the Laws of 1878. On the payment of a mere pittance of about $70 a year to the board the fisherman's story is credited that by netting the sturgeon the bass increase, for the reason that the sturgeon destroy the bass spawn. If this is so, why do the bass constantly diminish where pound nets are used? The black bass is the boss of the pool, except as against the bill fish, and has more resources for safety than any other fresh water fish, and their instinct teaches them to keep away from dangerous ground. Besides sturgeon are caught in water from twelve to forty feet deep and bass invariably go in shallow water near the shore to spawn. No man can truthfully say that he saw bass spawning beds in water twelve feet deep.

Again fishermen say their pound nets will not take a two-pound bass. That is not true. Ciscos and pike are taken in by the barrel, not exceeding one pound in weight. There is no scale fish that escape. Last of all the fishermen's argument is that they do not catch any scale fish in their net, that they can prove it by their men who work the nets. This is equally false. Fish carts are supplied almost daily with fish from their net, weighing from half a pound to four pounds and upward.

The lake in Erie county is forbidden ground for pound net fishing, and there is no reason why that part in Chautauqua should not be. It is a parsimonious policy that permits it, and if Chautauqua cannot get along with her shore line of forty miles without blocking Cattaraugus Creek, the State ought to grant the supervisors an annuity to compensate their loss, and leave unobstructed the distance of a cannon shot from the junction of the waters of the lake and creek for what of right belongs to Cattaraugus. It may be that the number of scale fish taken in the pound net does not account for the scarcity in the creek and the vicinity of its mouth, but one thing is certain, the fish are gone, and all agree that that is the cause. The same has proved true wherever pound-nets have been used for any length of time. Even now the report comes from San Diego Bay, Cal., that pound-nets have used up the fishing there for game fish. The same intelligence that tells the wild goose to mount aloft and fly from the approach of the Arctic winter tells the fish that it is unsafe to go where none ever return.

If Chautauqua persists in the barbarous practice Cattaraugus should demand that no pound-net fishing be permitted in the lake within five miles of the mouth of Cattaraugus Creek west of the Erie county line. JUSTICE.

GOWANDA, N. Y.

SMALL RED SALMON.

ON Nov. 26, 1888, and Oct. 8, 1889, Professor O. B. Johnson, of the University of Washington, Seattle, Wash., collected for the Smithsonian Institution a series of fishes from the waters in the vicinity of his city. Among them were a number of mature males and females of very small red salmon. Some of the individuals do not much exceed 8in. in length, yet their ovaries were full of large and apparently ripe eggs; the males also had the spermaries well developed. These salmon belong to the form described many years ago by Dr. Suckley as Kennerly's salmon, which is now believed to be only a small race of the red salmon (*Oncorhynchus nerka*). Professor Johnson writes that the fish were taken in a small stream tributary to Lake Washington, near Seattle. They were not accompanied by any large fish except an occasional silver salmon (*Oncorhynchus kisutch*. Out of a thousand or more taken the females were as plentiful as the males. The Professor further states that the large red salmon (*O. nerka*) is not so common at the mouth of Lake Washington as the others, and does not run up the stream much south of the Noohsack River. Kennerly's salmon was first described by Dr. Suckley from Chiloweyuck Lake near the Fraser River. Mr. Gibbs had the fish from the Nahol-al-pit-kun River, west of the Cascade Mountains. Dr. Kennerly found his specimens in a small stream tributary to the lake. Vast numbers of fish were seen. In company with Captain Woodruff and several men Dr Kennerly went to the brook Aug. 17, and the party caught 180 of these fish. He was informed by an Indian that the fish are common in two other lakes of the region, and that they never descend into smaller streams and never go to the salt water. The Doctor believed the fish to be peculiar to Chiloweyuck Lake, appearing at the mouths of all the small streams emptying into that lake about the 10th of August in such immense numbers that they can be caught with the hand. The chief enemy of the little salmon was the *Chewagh* or salmon trout of the region. In trying to escape their enemies they crowded into shallow brooks, where they are readily caught with hand nets. The Indians of the Chiloweyuck Lake region call them *Tsi-mia*. Dr. Kennerly states that the fish disappear very suddenly about the first of September. The *Chewagh* is the Pacific red-spotted salmon trout of Dr. Suckley (*Salmo campbelli*), now known as the dolly varden or *malma*.

POTOMAC BASS.—Washington, D. C., Nov. 29.—*Editor Forest and Stream:* I notice in your issue of Nov. 20 that black bass fishing in the Potomac has been very poor this fall. This has probably been the case; but on Friday last, Nov. 28, Harry K. Hodes, a High School boy, 15 years of age, landed a black bass from the waters known as the Little Falls measuring 23in. in length and weighing over 5lbs. A number of the older fishermen hereabouts were granted the privilege of seeing the fish, which brought out expressions of congratulation from them all.—T.

CHANNEL BASS BY MOONLIGHT.—Mr. B. C. Rude has made a discovery of interest to those who like bass fishing. He says no matter what the tide may be, these large fish bite best in the evening when the moon is shining brightly. Recently when there was a full moon he went down and threw in his hook and took five almost as fast as he could haul them in. On other evenings he was quite successful, on one occasion taking in a 6ft. shark in addition to the bass.—*St. Augustine News.*

FLORIDA FISHING.—The special Florida Number of the FOREST AND STREAM for Jan. 9, 1890, contains an elaborate paper on the fishes of Florida and the fishing for them. There are illustrations of all the chief varieties. Florida tourists should have this number in their gripsacks.

ONONDAGA ANGLERS' ASSOCIATION.

FROM the Syracuse *Times* we take the following very creditable record of the year's work of this live association:

The work done by the game and fish authorities during the past few months toward routing the fish pirates from their stronghold on the shores of Oneida Lake is deserving of more than a passing word. It is highly probable that the determined efforts of the authorities now being put forth will, in the course of a year at furthest, result in the extinction of one of the most dangerous, fearless and determined bands of miscreants that ever existed in this part of the State. For years a bitter war has been carried on between the State game authorities and the pirates, though the former has never made so determined and vigorous attack upon them as it has during the past few months, thanks to the Syracuse Anglers' Association. The pirates, in their crimes heretofore, have proven themselves craftsmen not unworthy of their name and calling. All efforts on the part of the criminal authorities to detect the perpetrators of the ill deeds committed have been ineffectual, and the pirates have escaped from their just deserts at the hands of the law. Such good fortune, of course, had the effect of rendering them more daring in their crimes, and less fearful of detection and the law. So inconstant was the war carried on, however, that latterly the pirates, believing that fear of them would be their protection, have carried on their practices openly and with the greatest freedom. However, they reckoned without their host, for their own acts served to make the authorities more circumspect and wary in their operations. The crimes of the pirates served another purpose. It served to make those who would have otherwise been their friends their enemies, and who determined to route them from the lake. A few years ago many people who are now in favor of exterminating the pirate were just as strongly in favor of letting people fish as they pleased and when they pleased. About five years ago a raid was made on the nets of Oneida Lake, and at the time George Crownheart, who was keeping a hotel on the shores of the lake, was prominently identified with the game officers. As a result Crownheart's hotel was laid in ashes.

Charles Shackelton owns valuable property on the lake shore near Bridgeport. Lately he has been fighting the gang, partly from personal motives, for success to them meant disaster to him in that it depreciated the value of his property, and partly because he is paid by the Onondaga Anglers' Association for doing so. As a result of Mr. Shackelton's efforts to rid the lake of the pirates, an attempt was made to blow up his house with gunpowder. But Shackelton secured the co-operation of the State authorities and began in earnest the deadly strife against the pirates.

The authorities now say that the pirates may burn every house on the lake shore and may resort to even more violent deeds, but they will be pursued until not a net will dip the waters of Oneida Lake or any other adjacent lake. The end is here, they say. Up to the present time the authorities have succeeded in "pulling" 114 nets this season. On the average these nets are worth $40 each. Some of them are worth much more, but the average is fair. At this rate, the value of the nets destroyed this season will already amount to $4,560 and the hunt is by no means at an end. One of the largest nets ever captured in Oneida Lake was taken by Mr. Shackelton and his party one day last week. The net had above 20 bushels of fish in it. Mr. Shackelton, in speaking of the raids on the nets, said to a reporter that all the nets taken had been captured in deep water. "We had to hunt for them," said he, "at least a mile from the shore."

The search for the nets is generally carried on in row boats. The men start out over the water to be searched in boats a few rods apart. If they do not succeed in finding nets they change their course and traverse new ground, and so on until they find that which they are seeking or are satisfied that there are no nets in the water. The smallest number of nets taken at any one raid during the season has been two, the greatest number fourteen. It is claimed that some of the pirates make as high as $100 per week by shipping fish to the New York markets.

It is very doubtful if this determined war upon the fish pirates would have been carried on had it not been for the Onondaga Anglers' Association. The association is not a large one nor is it a rich association. Since the recent raids were started this association has been under a continuous expense which averages $15 per day. They are now threatened with bankruptcy, but they are determined as ever to rid Oneida Lake of the dangerous class that has for years defied the authorities and openly violated the law. The Anglers' Association is young, but it includes some determined men among its members. So hard pressed have they been lately that they have issued the following call for help:

ANGLERS, ATTENTION.

We are doing great work. The association needs money. Our expenses are $15 per day. We want new members and money. Our initiation fee is $2. Any contribution, large or small, will help us, as the few members cannot stand the whole of the expenses. If you do not assist us the work will have to stop.

Send postal addressed to Onondaga Anglers' Association, stating if you will be a member, or how much you will contribute toward the good work. ONONDAGA ANGLERS' ASSOCIATION.

While great credit is due the association for the work they are doing, Edward Hawn, the deputy game protector, who has been working directly under the auspices of the association since July last, is no less deserving of praise. Had it not been for his earnestness and sagacity the association might have expended many dollars in vain. At the present time the association is in need of nothing so much as members and the $2 they will each contribute. A prominent member of the association said last night that it was a shame that so few of the anglers of the city were identified with the work. Auburn has an anglers' club and the club has 5,000 members. The Onondaga Association has but 159 members. Five hundred new members at the present time would put the association beyond want, and secure for the fishermen of the city and surrounding places good sport for all time to come.

It is not generally known, but it has been hinted that in the near future a State hatchery will be located on the lake.

Willis S. Barnum was served with papers yesterday in an action brought by Deputy Game and Fish Protector Hawn to recover a penalty of $125 for having a fish spear in his possession and using it in the waters of Onondaga Lake in the town of Geddes. Mr. Barnum admitted last night that he had speared suckers and bullheads, but claimed that the spearing was done on his own land, which is now flooded. Mr. Barnum is proprietor of Maple Bay.

Fishculture.

PENNSYLVANIA FISHCULTURE.

THE report of the State Commissioners of Fisheries of Pennsylvania for the years 1887 and 1888, recently published, contains the usual account of the proceedings of the board, records of fish and eggs distributed, and of the condition of the hatcheries at Allentown, Erie and Corry. A brief description of the construction and location of carp ponds is drawn from Logan's "Carp Culture." Illustrations are given of the exterior and interior of the hatcheries, and of a number of valuable fishes, which are reared and distributed by the Commission. The appendix is devoted to a compilation of the laws of Pennsylvania relating to fish and fishing, by Frederick Geiger, Esq. This extremely valuable compendium was prepared for the Anglers' Association of Eastern Pennsylvania, now the Pennsylvania Fish Protective Association, and presented to the Commissioners of Fisheries of Pennsylvania.

The condition of affairs in this State is very encouraging, as may be seen from the following paragraphs of the report:

"It has afforded the Commission much gratification to see the steady and rapid development of public sentiment in favor of the object for which it was created.

"The people realize that fish propagation is no longer an experiment. Hundreds of depleted trout streams now restored to good condition and filled with fish attest the success of restocking. Large numbers of carp ponds, with their prolific tenants, give to our agricultural population removed from the larger streams and rivers of our Commonwealth, food fishes for domestic consumption and profit.

"The increase in the catch of shad in the two great rivers of the Commonwealth, the Susquehanna and Delaware,

bears witness to the beneficial results of artificial propagation of this delicious fish, and indicates a future plentiful supply that will cheapen its price to all.

"Nor must we forget the wonderful increase in the catch of whitefish in Lake Erie, where, as late as the year 1885, the supply was so nearly exhausted that the fishermen most largely engaged hesitated to embark in an enterprise that promised but scant and profitless returns. This result is directly traceable to the great plants of fry in that lake by the hatcheries of Pennsylvania and those of the neighboring States bordering on the lake.

"The yield of whitefish in Lake Erie during the past season has been greater than the yield of any season for the past twenty years, and larger than the combined catch of all the other great lakes, and brought to our city of Erie alone a return of over three hundred thousand dollars.

"So well convinced are the fishermen of that city of the benefits accruing to them from the work of the Commission that they give the Commission their tugs free of expense to plant the young fry in the portions of the lake best adapted to their maturing. When practical benefits like these are the outcome of the Commission's work, it is not surprising that the citizens of the Commonwealth are quick to appreciate the importance of the Commission's efforts and show an avidity to avail themselves of its aid that would hardly have been deemed possible a few years since."

The Pennsylvania Commissioners believe that fish protection should supplement fish propagation. Illegal devices for capturing fish have been destroyed by them in great numbers. The Delaware River was rid of baskets and weirs from the New York State line to tidewater. This was not accomplished without difficulty and danger. Mr. Moses W. Van Gordon, the warden of the Delaware from Port Jervis to the Water Gap, was fired upon while in the discharge of his duties, but the offender was promptly arrested, his weirs destroyed and intended violators of the law deterred from accomplishing their object. From the Water Gap to Trenton Mr. John J. Bruce, of Easton, has patrolled the river and kept it free from unlawful apparatus. From the nature of the Susquehanna its fish baskets have been more difficult to handle than those of the Delaware, but Commissioners Stillwell, Powell and Demuth have destroyed hundreds of them, and the fish weir will probably soon be unknown in that river. Six additional fishways of the Rogers pattern have been constructed in the dam at Columbia, by which means shad have free access to the river as far as Clark's Ferry dam, above the mouth of the Juniata.

Species which have been planted by the Commission include black bass, rock bass, wall-eyed pike, brook trout and carp. In the Susquehanna the work of the Commission is greatly interfered with by the existence of illegal devices in Maryland waters, in the lower fourteen miles of its course. Attempts have been made to secure the coöperative action of the Maryland Commission against these destructive appliances, but so far without avail.

The Commissioners ask for larger appropriations, and for a car for the transportation of fish and eggs.

The following is a brief statement of the chief fishcultural work accomplished by the Commission: The Erie whitefish station planted 14,600,000 fry in Lake Erie. Of brook trout 1,268,000 were distributed, of rainbow trout 491,500, of lake trout 385,500, besides 5,560 yearlings. Through the help of the U. S. Fish Commission 17,186,000 shad fry were planted in the Susquehanna, Delaware and Juniata rivers.

TROPICAL FISH AS A FOOD SUPPLY.

DURING the past month many of our city newspapers have noticed a subject that carries with it considerable interest, inasmuch as it refers to the possibility of an increase, from a new source, of the fish food supply of the future, which of itself demands greater consideration and publicity than a passing notice in the news columns of our contemporaries.

For the last century, perhaps longer, what are known to the trade as fish stuffs—that is, fish preserved by salt for food in a dry and wet state—have been cured in the colder climates and shipped in large quantities to those within the equatorial zones, thus providing the principal animal food of the inhabitants of some countries situated within the tropical belt. This trade has been carried on, year by year, to the value of millions of dollars, and consequently a few of the fish of the northern hemisphere are to be found, in a more or less preserved state, in the markets of every tropical country of the world.

This trade, which up to the present time seemed destined to preserve its monopoly, has been maintained not because the waters of the importing countries lacked in the quantity and quality of their fish, but by reason of the difficulty—hitherto thought insurmountable in warm climates—of curing fish for commercial purposes. We are not aware that any careful and extended trial has ever been made, outside the section we shall presently refer to, to prove the practicability of preserving fish for food in low latitudes; and it would seem that the impossibility of curing has always been accepted *communi consensu*.

"Coming events cast their shadows before them," and the aphorism speaks truly. There are in this city samples of fish, late denizens of the Caribbean Sea, caught and cured eleven months ago that are, to-day, as sound as at the time of capture. That they are thoroughly preserved and in a position to contend, as wholesome and nutritious food, for commercial honors with those of colder regions there can be no denying, and in the fish food supply of the world's future we are prepared to see a very considerable stir at no distant day. The pioneer in this great enterprise is a gentleman who has resided in the island of Jamaica for the last twenty years, during the last half of which he has spared neither time, energy, nor money in bringing to a successful issue the question of fish curing there. Being, to use the words of the leading local newspaper, "a practical naturalist of great ability, and with no lack of common sense or sound knowledge of the subject," he undertook the self-imposed task to ameliorate the incongruities of the fish food supply of the island. This, he felt convinced, could only be done after the enigma, the thorough curing of the local fish, had been solved, and that he has carried his object in this respect there can be no doubt.

The island of Jamaica presents an anomaly in its fish food supply not altogether singular to that country. With a population of 620,000 the yearly consumption of each person aggregates 37½lbs. of fish, of which 35½lbs. are imported at a cost, to the consumers, of $1,695,000 or thereabouts. This abnormal and phenomenal import is not caused by a preference for imported over native fish, nor by any paucity of fish life in the surrounding waters, but by the non-existence of local fisheries and an apathetic indifference to the vast marine wealth living to waste in the encircling sea. In addition to the reality that Jamaicans are peculiarly a fish-consuming people it is positively asserted that the individual yearly consumption would run into extended figures were the native fish placed within the reach of the people; and these facts, coupled with the no longer uncertainty as to the possibility of curing on the spot, go to prove that a great and remunerative industry is open to capital in that section. Accepting not only as possible, but as an accomplished fact, the curing of tropical fish, it needs no argument to show the great and valuable industry that is rising on the horizon.

The Legislature of the island of Jamaica, alive "to the great importance of feeding the people with food procured locally in place of spending annually large sums in its purchase abroad, and the island chemist being of opinion that Mr. Earle's process of fish curing is free from any ingredient injurious to health," has strengthened that gentleman's efforts to form a fishery and fish-curing station by granting him a subsidy of $2,000 yearly for five years; an example that will soon, we fancy, be followed by many other tropical countries.

Mr. Earle, who is now in this city, brought with him a remnant of cured fish, eleven months old, and these, together with his plans for the working of a fishery and fish-curing business in that section, he has submitted to State Fish Commissioner Blackford; and Mr. Blackford has stated that he was "quite unprepared to witness such results from the tropical curing of fish," and furthermore that "Mr. Earle has a great enterprise in hand that will lead to great results;" an opinion that must carry confidence and conviction coming as it does from one of so great a commercial and practical experience.

The utilization of the life to be found in the waters of the tropic zones, as food and manufactured commercial products, must lead to valuable and interesting results, and it is within reason to assert that the future benefits can hardly at the present time be estimated, or adequately realized. Putting on one side the increase in the supply of a nutritious and universal food there are other considerations that commend themselves to the support and hearty coöperation of capitalists, scientists, sportsmen and labor. Science will have added to her wonderful storehouse numerous new and interesting forms, facts and habits of marine life; capital will realize a rich harvest; the lover of sport find new waters over which to roam; while labor will engage tens of thousands of her votaries in a healthful and invigorating employment that will seldom be subject to tempestuous blasts and stormy seas, and never to the freezing temperatures of the northern fisheries.

Mr. Earle, with the enthusiasm of an angler and keen energy of a naturalist, has accumulated during his lengthy sojourn in the West Indies, a large store of valuable knowledge bearing on the fish, fishing, and marine life in the Caribbean Sea section, all of which he has brought to bear upon his projected enterprise; and seeing that he has cleared the path, by his successful method of curing, the barrier that blocked the way at the commencement of his labors, the road over which he has now to travel appears straight and easy.

Denied the support of the people of Jamaica he has paid us a visit to find men with capital capable of grasping his ideas and supporting his efforts in bringing into existence an enterprise that will benefit mankind, and at the same time return a remunerative and handsome profit. A total stranger, unknown personally to or by any one here, he has approached his object in a way that must secure confidence, and proves his appreciation of the difficulties under which he had had to labor, by at once engaging the attention of a thoroughly practical man, and in the person of Mr. Blackford he has found not only a commercial and extended experience of high value, but sympathy and coöperation in his enterprise which he offers to the energy and capital of the American people.

The facts surrounding Mr. Earle's project, supported by his knowledge and experience, must bring about returns of a decided character from all parts of the tropical world, and in the effort he is making here it is not difficult to predict the result.

RESTORING THE WHITEFISH.

FISHERMEN have been having good success in catching whitefish on what is known as the north reef, which extends from Thunder Bay Island to Middle Island. Many years ago that was one of the best fall fishing grounds on the lakes. Thousands of barrels of whitefish were caught there. It was a favorite spawning ground for whitefish. To catch a barrel of fish to a gill-net in one night was not considered very extraordinary fishing. The destructive plan of fishing that was then pursued nearly exterminated the fish. The fish were caught at spawning time and thus the greater part of their spawn was destroyed. Then came many years of very poor fishing, and fishermen met with small reward for their labor. The Fish Commission then began planting whitefish. For several years many millions of young whitefish have been planted in the waters adjoining Alpena. The work of the Fish Commission is now bearing fruit, and whitefish are again becoming numerous in the Alpena waters. The improvement in fishing was very noticeable last year, and the present season fishermen have caught large amounts of the fish. One tug recently brought in 4,000lbs. of whitefish.

The hatchery officials at Alpena have also had less difficulty in obtaining a stock of eggs. In former years they had to depend to a great extent on the Lake Michigan fisheries for whitefish spawn. This year they have gathered and have now in the Alpena hatchery over 200 jars of whitefish eggs, most of which were gathered in Alpena waters, or along the shore between Ausable and Alpena. It is probable that the hatchery will be able to obtain its full supply of 300 jars from the fisheries adjacent and those gathered in Lake Michigan will be sent to Northville for hatching. These facts speak very highly for the success that the Fish Commission has had in restocking Lake Huron with whitefish.

About 2,000,000 trout eggs have been sent to the Northville hatchery from Alpena, about half of which were obtained in Lake Michigan.—*Detroit Free Press*, Nov. 20.

CALIFORNIA SALMON PROPAGATION.—The egg taking season at the Clackamas station of the United States Fish Commission has just closed and the number of eggs secured is 5,859,800. With a view of interfering as little as possible with the supply of salmon in the upper part of the river the Commissioner of Fisheries deferred putting in the rack to prevent the ascent of the spawning fish as late as possible. The rack was not put in place this year until in July. Last year it was put down on April 12, and the station obtained 2,766,000 fry, besides 1,000,000 eggs. In 1888, when there was an unusually large run of salmon in the river, the rack was put down in March, yet the yield of fry from eggs taken that year was only 4,500,000. In all probability, therefore, this season's work will be fully equal to that of 1888, and the inhabitants along the upper portion of the stream have had the benefit of an open river for several months longer than formerly. This plan was adpoted by the Commissioner notwithstanding prophecies of many persons that eggs could not be secured in sufficient number if the penning of the salmon did not begin soon after their first appearance in the river. The result justifies the course taken and at the same time assures the hearty approbation of those who depend on the salmon for food or profit.

CALIFORNIA SALMON FOR MEXICO.—In October, 1890, fifty thousand eggs of the California salmon were sent from the Baird Station of the U. S. Fish Commission in California to Mr. E. Chazari, Superintendent of Fishculture of Mexico. Mr. Chazari is greatly encouraged with his success in rearing rainbow trout and is desirous of adding the California salmon to the list of Mexican fishes if it can be accomplished.

FOREST AND STREAM, Box 2,832, N. Y. city, has descriptive illustrated circulars of W. B. Leffingwell's book, "Wild Fowl Shooting," which will be mailed free on request. The book is pronounced by "Nanit," "Gloan," "Dick Swiveller," "Sybillene" and other competent authorities to be the best treatise on the subject extant.

NAMES AND PORTRAITS OF BIRDS, by Gurdon Trumbull. A book particularly interesting to gunners, for by its use they can identify without question all the American game birds which they may kill. Cloth, 230 pages, price $2.50. For sale by FOREST AND STREAM.

The Kennel.

All communications must reach us by Tuesday of the week they are to be published; and should be sent as much earlier as may be convenient.

FIXTURES.

DOG SHOWS.

Dec. 30 to Jan. 3, 1891.—First Dog Show of the Buckeye Poultry and Pet Stock Association, at Canton, O. James Sterling, Sec'y, 39 North Market street.

1891.

Jan. 6 to 9.—Delaware and Susquehanna Poultry and Pet Stock Association, at Binghamton, N. Y.

Jan. 13 to 17.—Third Annual Dog Show of the South Carolina Poultry and Pet Stock Association, at Charleston, S. C. Benj. McInness, Jr., Secretary.

Jan. 20 to 25.—First Annual Dog Show of the Louisiana Poultry and Pet Stock Association, at New Orleans, La. A. E. Shaw, Secretary, Box 1658.

Jan. 20 to 25.—Dog Show of the Georgia Poultry and Pet Stock Association, at Augusta, Ga. A. H. Vonderleith, Secretary.

Jan. 21 to 26.—Dog Show of the Elmira Poultry and Pet Stock Association, at Elmira, N. Y. Carl Hart, Secretary.

Jan. 27 to 30.—Inaugural Dog Show of the South Carolina Kennel Association, at Greenville, S. C. F. F. Capers, Secretary.

Feb. 24 to 27.—Fifteenth Annual Dog Show of the Westminster Kennel Club, at New York. James Mortimer, Superintendent.

March 3 to 6.—Second Annual Dog Show of the Maryland Kennel Club, at Baltimore, Md. W. Stewart Diffenderffer, Secretary.

March 10 to 13.—First Annual Dog Show of the Duquesne Kennel Club, at Pittsburg, Pa. W. E. Littell, Secretary.

March 16 to 19.—Inaugural Dog Show of the Washington City Kennel Club, at Washington, D. C.

March 24 to 27.—Second Annual Dog Show of the Massachusetts Kennel Club, Lynn, Mass. D. A. Williams, Secretary.

March 31 to April 3.—Seventh Annual Dog Show of the New England Kennel Club, at Boston, Mass. E. H. Moore, Secretary.

April 8 to 11.—Third Annual Dog Show of the Mascoutah Kennel Club, at Chicago, Ill. John L. Lincoln, Jr., Secretary.

April 14 to 17.—Fourth Dog Show of the Cleveland Kennel Club, at Cleveland, O. C. M. Munhall, Secretary.

Sept. 1 to 4.—Dog Show of the Youngstown Kennel Club, at Youngstown, O.

FIELD TRIALS.

Jan. 19.—Eighth Annual Field Trials of the Pacific Kennel Club, at Bakersfield, Cal. H. H. Briggs, Secretary.

Feb. 2.—Third Annual Field Trials of the Southern Field Trials Club. T. M. Brunby, Secretary, Marietta, Ga.

DOGS OF THE DAY.

THE Collie Club medals which have just been distributed are particularly handsome. In fact they are far ahead of anything I have yet seen, and completely throw into the shade any club medal I have seen. The medal is about 2½in. diameter, and one side is embellished with thistle leaves, a shepherd's crook and the words "Collie Club of America, awarded to," the letters C being rams' horns. This side is oxidized silver, while the reverse is polished and bears the inscription of what it was for and where won.

I won two of these medals with champion Clipper, and I might as well record the sale of this dog to Mr. Geo. H. Sherman of Poughkeepsie. Clipper's home is now at Meadow Brook Farm, Verbank, N. Y., and letters regarding him can be sent either to Mr. Sherman or to Mr. Eugene Ham, Verbank. Clipper is one of the nicest and cleverest dogs I ever owned, and it was with a feeling of regret I had to part with him. He has been in the hands of a good many persons during his show career, Ben Lewis, W. Silvey, Frank Smith and Fred Kirby all having at one time or another had the care of him, and I seldom hear men speak of a dog as they always do of Clipper. He never forgot a man or a place, and is in every sense of the word a gentleman's dog. In writing to me of his whereabouts Mr. Sherman said after he had had him two or three days, "Clipper and I have become very well acquainted, and I regretted very much to have him go to the country, but it is the best place." It was so with every one. Mr. Hinckley writes: I never felt so sorry about a dog going as Clipper," and that is just my case. I know he is in good hands and will be well cared for, otherwise nothing would have tempted me to let him go. Clipper is one of the few sons of Mr. Krehl's Eclipse and out of that wonderful brood bitch Nesta. With his limited opportunities at the stud he yet made an excellent record, siring something fit to show and win out of almost every litter. This sale practically put me out of collies, for there are only a few brood bitches and puppies left at Mr. Hinckley's in which I have an interest.

I was glad to see Mr. Mason's letter regarding the attack on Mr. Krehl. My opinion regarding my best friend abroad is too well known, and being such a partisan of his, known to be such, I may say I rather felt that an espousal of his cause at my hands would not have the same effect than one from an independent pen. I thank Mr. Mason very much for what he has done. I once heard Mr. Winslow say of a friend "He is one of the best men God ever allowed to live." That just fits George Krehl, and to think that one who knows him and knows his reputation in England should have made such an attack on him is most discreditable to the man who penned this statement.

Mr. J. P. Willey advises me that he has a nice litter of black and tan cockers, bred from the dog whose death I spoke of a few weeks ago and which broke up the project of a team of black and tans for New York next February. The whole litter is colored with tan.

And now for another fact to add to several I have given regarding the difference in effect of a voyage to England from one to America on bitches. Dr. Foote doesn't quite agree with me, but this seems to be something of a clincher. The Swiss Mountain Kennels, of Germantown, recently imported two St. Bernard bitches, both of which were bred about the middle of August. One was Donna Silva, from Mr. A. J. Goslin's kennel, and she was bred to his Scout on Aug. 20. She failed to have a litter and last week she was bred to champion Hesper. That is an interval of but three months between the breeding dates. The other bitch Dart was bred to Lord Bute before coming over and she also had no puppies. I believe it is thought that she is coming in, but it is too early yet to speak with any confidence.

As the service to Dart was paid for, with the stipulation of the right to one to another bitch in case of no result with Dart, the English agent of the Swiss Mountain Kennels has purchased the brood bitch Veda for that purpose. I look for something good from this union from the fact that that astute judge Mr. S. W. Smith purchased a puppy out of each of Veda's last two litters, both by Lord Bute. I would not have thought so much of his buying two of one litter, but to buy one and then be so well satisfied with that as to come back for another from the next litter speaks volumes for Veda as a brood bitch. She weighs 158lbs., and it may well be understood that her body is massive and her bone great. Out of her last litter there is one bitch which at four months weighed over 70lbs. J. W.

GREENVILLE SHOW.—South Carolina Kennel Association.—Greenville, S. C., Nov. 24.—H. A. Bridge of Columbus, Ohio, will superintend the show and John Davidson will judge all classes. Our premium lists will be ready for mailing about Dec. 1. For all information address the undersigned.—F. F. CAPERS, Sec'y-Treas.

COURSING AT MERCED.

THE Interstate Coursing Association may justly feel proud of the success they achieved in their three days' meeting on the plains of Merced. Much of the credit for this success is due to Mr. Dominick Shannon, the president of the association, who has coursed in California for twenty-seven years, and to Mr. J. R. Dickson, the secretary, also an experienced courser. Both gentlemen displayed great energy and tact in the general management of the meeting. The most striking evidence of their good judgment, however, was in the selection of the judge, Mr. John Grace. Not a single murmur of disapproval was heard as to any of his decisions, while his quiet, gentlemanly bearing won the admiration of all. Integrity is an essential element in the character of a judge of a coursing meeting, but it is of scarcely greater importance than a thorough knowledge of the rules of coursing, and the ability to apply those rules correctly. Mr. Grace combines these qualities and might well be called the American Hedley. The slipper, James R. Wren, performed his duties admirably.

The Californians are said to be of the opinion that their dogs are the fastest and best in the world, and it must be admitted that they have as yet no reason to change that opinion. If the blue ribbon is to be taken away from them and carried eastward, it must needs be with better dogs than those that strove for the honor this year.

The plains of Merced afford the grandest coursing ground in the world. For several miles on all sides the land is in some places perfectly level and in others gently undulating. There are also creeks wide enough to test a dogs ability to leap, and, in one part of the field, a board fence high enough to satisfy the ambitious of the most agile fencer. There is no wire to injure the dogs, and the soil is for the most part sandy, affording excellent running. Jack rabbits are so plentiful that five courses an hour, including the delay incidental to picking up the dogs, were run without any difficulty or undue haste. The courses were, in some instances, from one to five miles, according as the jack rabbit chose either to run into a hole or to take a straight line and run merrily away from the dogs. If any of our English cousins should think of coming over with their dogs to win on these plains, they ought to be warned that short-winded sprinters, that may do for inclosed coursing at Haydock Park, will be of no use whatever here.

The winner of the Interstate Cup, Al Farrow, a dark-brindle dog, by Menlo Chief out of Black Bess, was whelped in March, 1888, and weighs 65lbs. He has been carefully trained for three months, and came to slips in the pink of condition. He won all his courses meritoriously. Sam Nash, the runner up, is a white dog 3⅛ years old, weighing 60lbs., and is by Chickopee out of Lilly of Killarney. He was unfortunate in that he had several gruelling courses before he met the winner, but in spite of this he ran a good game dog. King John, winner of third place, is a black and white dog 16 months old, by Pat Molloy out of Banshee, and weighs 58lbs. He ran with great fire, and proved himself to be a great puppy. He was bred by Father Mac, the genial Catholic priest at Merced, who is one of the most enthusiastic of California's coursing men.

In the Consolation Stake the winner, Nellie Bly, a red bitch, is a fast and close worker, 2½ years old, weighing 41lbs., by Tullamore out of Lady Cleveland. El Rio Rey, the runner up, was much inferior in speed and did not appear to be especially clever. Drytime, who took third place, is by Britain Still out of Haytime, and ran better than her owner expected her to, considering that her condition was not of the best.

The reception accorded to the gentlemen who came from the East to attend this meeting was a most cordial one and emphasized the fact that Californians are a very hospitable people. If the trip across the continent shall result in establishing closer bonds of sympathy between the coursing men of the East and West the losers should be as happy as the winners. J. HERBERT WATSON.

First Day.

Wolf Tone—Faugh-a-Ballagh.—The latter dog was young and not in good condition, and Wolf Tone won the course with points to spare.

Whip—May Boy.—A long course in which Whip showed superiority in speed and working qualities and won easily.

Prima Donna—Nettlefield.—Prima Donna led and taking the jack and working it well won with ease.

Verdure Clad—Fanny.—A short course. The dogs ran even to the jack; Fanny then took the jack and made three points. The jack ran through the fence and got away too soon for Verdure Clad.

Babazoun—Juanita.—Juanita took the jack at the turn after a long run up, which was pretty even; then Babazoun darted forward and killed too soon, the course going to the bitch.

McGinty—Hoodoo.—The former led by several lengths, and taking possession won easily.

El Rio Rey—King John.—After a long gruelling course King John won with several points in hand.

Baby—Play Boy.—A closely contested course; Play Boy falling, Baby put in some work, but Play Boy recovering himself joined in and won.

Sea Shell—Saturday Night.—Sea Shell led by a little, Saturday Night following was left behind and Sea Shell finished with plenty to spare.

Maud Jones—Norwegian.—Maud Jones came up well clear of Norwegian, and beat him after a course of considerable length in which the bitch did most of the work.

Al Farrow—El Rey.—Al Farrow led to the jack and taking possession easily beat El Rey.

Maid of Erin—Kingston.—Both ran well to the jack; Maid of Erin took possession and won after a good deal of close work.

Snowball—Examiner.—The pair came up on even terms, but Snowball taking possession worked closely and after a few exchanges won.

Brunette—Dan B.—Brunette led by several lengths and won easily. She then sighted a fresh jack and ran a very long course alone, being so exhausted that she died shortly after being picked up.

Catherine Hayes—Susie S.—Catherine Hayes led and won easily.

Jim Corbett—Waterwitch.—Jim Corbett led by several lengths and won the course with several points to spare, Waterwitch doing no work whatever and running a perfect sloven.

Dexter—Bessie.—After a close run up, Dexter took possession and kept it to the finish, Bessie having lost her chance by a bad fall at the turn. An unlucky trial for the bitch.

Lookout—Lady in Blue.—Lookout led and did all the work, Lady in Blue never being in the course.

Sam Nash—Freestone.—Sam Nash came up well clear of Freestone, and after several exchanges won with little to spare.

Ben—Geraldine.—Ben had a slight advantage in the run up, and after several exchanges made a fine kill and won.

Mischief's Last—Joe McCauliffe.—The former led to the jack and did most of the work, winning easily.

Drytime—Nellie Bly.—Drytime led to the jack, took possession and worked the jack for several points in excellent style, when Nelly Bly came in on the second turn and killed too soon, Drytime winning.

Tralee Boy—Dandy Jim.—A long course in which Dandy Jim did most of the work and won easily.

Governor—Bo Peep.—Governor led up to the jack, and made four points before Bo Peep came in and killed too soon to wipe off the former's score.

Second Day—First Ties.

Wolf Tone—Whip.—Whip led six lengths and made first and second turns, kept possession of the jack and finally killed.

Prima Donna—Fanny.—Prima Donna led four lengths and made two turns before Fanny nicked in and made two turns. Prima Donna then got the jack, and showing superiority in speed and cleverness, won.

Juanita ran a bye with Tralee Boy, and after killing went after a fresh jack, thus effectually spoiling her chances of winning the stake.

King John—Play Boy.—King John led in the run-up by very little, but scored all the strong racing points in a long course and won easily, the jack being lost.

Sea Shell—Maud Jones.—Maud Jones came up four lengths in front of Sea Shell and got very little help from her opponent in a long course, in which the jack finally ran into a hole.

Al Farrow—Maid of Erin.—A close fast race to the jack, Al Farrow leading all the way and keeping possession during a long course, in which the dogs killed together.

Snowball ran a bye.

Catharine Hayes—Jim Corbett.—Catharine Hayes led up by a little, turned, and taking command of the jack did not let the dog come in at all.

Dexter—Lookout.—Dexter did very fine work in this course, working his jack perfectly after leading up clear of Lookout.

Sam Nash—Ben.—Sam Nash led up by two lengths and took first and second turns. Ben then came in, and after several exchanges Sam Nash picked up the jack, making a good kill.

Mischief's Last—Drytime.—Drytime led two lengths to the jack and took first turn. In straightening out Mischief's Last took possession of the jack and did considerable work. Finally they got together and made two points each. Mischief's Last then tripped and both dogs were picked up, being too tired to keep the jack. Drytime showed a fine burst of speed, but was not in condition to stand so gruelling a course.

Dandy Jim—Governor.—Governor led to the jack and took first and second turns. Dandy Jim then came in, and after some exchanges they killed together.

Second Ties.

Whip—Prima Donna.—Prima Donna led to the jack fully three lengths, and took first and second turn. Whip then got possession and worked the jack for several points. Prima Donna got a bad fall, and Whip then took possession and turned the jack to Prima Donna, when she fell a second time, and then Whip had it all his own way to the finish.

Juanita—King John.—The weeds were high where the dogs were slipped; each dog was in turn unsighted, the jack taking his course across a ravine, King John leading. The bitch then came in and made a turn. King John then made two turns. The bitch then made another turn, and King John then took possession and in the scramble at this stage the dogs killed together, King John winning with not much to spare.

Maud Jones—Al Farrow.—Al Farrow led eight lengths. The dogs coming together the bitch made a turn and Al Farrow then took the jack, turned and killed.

Snowball—Catharine Hayes.—Snowball led and coming toward a ditch made a drive for the jack but missed picking it up. Both dogs fell into the water, and following the jack Catharine Hayes took possession and worked it for several points. About 300yds. from the place where Catharine Hayes finished with a kill Snowball stopped in the course.

Dexter—Sam Nash.—Dexter was unsighted at the start, Sam Nash made a straight run, the jack being killed before Dexter had a chance to join in. A no course.

Mischief's Last—Governor.—Governor led to the jack and after a closely contested course killed, winning by very little. Mischief's Last fell in the middle of the course.

Third Ties.

Whip—King John.—Whip had a little the better of the run up. The jack swerved toward King John, who put in some good work at close quarters. After an exchange the dogs killed together, King John winning.

Dexter—Sam Nash.—These dogs having run a "no course" were again put into slips. Sam Nash led three lengths and after making first turn a racing jack took the dogs a long distance before Sam Nash made the second turn. Some close work followed, Sam Nash having the better of it and winning easily.

Al Farrow—Catherine Hayes.—Al Farrow led four lengths and beat the bitch pointless.

Sam Nash—Governor.—Sam Nash led four lengths to the jack, making several points before Governor for no apparent reason stopped and watched the other dog go on a long distance to a kill. A very disgraceful performance upon the part of Governor.

Fourth Ties.

King John—Al Farrow.—Al Farrow led six lengths to the jack, and took a turn, keeping possession for several points, and winning easily with a good kill.

Sam Nash ran a bye.

Final Course.

Al Farrow—Sam Nash.—After a half hour's rest these dogs came together for the final course. Al Farrow led three lengths to the jack, and after getting possession made several points and soon widened the gap, and after several points in the racing stretches killed, winning easily. Sam Nash is a fine greyhound, but his feet were badly cut up when he was put into slips for the final course, and he was thus placed at a disadvantage, his opponent coming to slips in fine condition.

SUMMARY.

INTERSTATE COURSING ASSOCIATION, Merced, Cal., Nov. 18 and 19, 1890. President, Mr. D. Shannon. Secretary, Mr. J. R. Dickson. Field Stewards: Messrs. Brady, Butterworth, McDonald, Fleming, Given and O'Brien. Flag Steward, Mr. W. Halpin. Slip Steward, Mr. J. R. Dickson. Judge, Mr. John Grace. Slipper, James R. Wren. International Cup, for all ages, at $10 each. Winner, $500; second, $300; third, $100; winners of two courses, $20 each; 48 subscribers.

I.

Mr. B. Grogan's brindle dog Wolf Tone	beat	Mr. P. Gallagher's black and white dog Faugh-a-Ballagh.
Mr. P. Canty's brindle dog Whip	beat	Mr. A. Tracey's black and white dog May Boy.
Mr. J. Douglass's black bitch Prima Donna	beat	Rookwood - Landseer Kennels' white and black bitch Nettlefield.
Mr. J. Baker's blue and white bitch Fanny	beat	Rookwood - Landseer Kennels' brindle dog Verdure Clad.
Mr. J. Shea's brindle and white bitch Juanita	beat	Rookwood - Landseer Kennels' Babazoun.
Mr. P. O'Connell's white dog McGinty	beat	Mr. W. F. Watson's black and white dog Hoodoo.
Mr. McInerny's black and white dog King John	beat	Mr. P. Kelly's fawn and white dog El Rio Rey.
Mr. P. Canty's blue dog Play Boy	beat	Mr. D. J. Healy's black and white bitch Baby.
Mr. D. Shannon's black and white bitch Sea Shell	beat	Mr. J. E. Watson's black and white dog Saturday Night.
Mr. M. A. Howard's brindle bitch Maud Jones	beat	Rookwood - Landseer Kennels' brindle and white dog Norwegian.
Mr. J. J. Rademaker's brindle dog Al. Farrow	beat	Mr. D. Shannon's brindle and white dog El Rey.
Mr. J. Eagan's white and brindle bitch Maid of Erin	beat	Mr. D. J. Healy's fawn dog Kingston.
Mr. E. O'Connell's white and brindle dog Snowball	beat	Mr. P. Canovan's white dog Examiner.
Mr. J. E. Watson's black bitch Brunette	beat	Mr. T. J. Cronin's black and white dog Dan B.
Mr. M. Tiernan's white and red bitch Catherine Hayes	beat	Mr. E. O'Connell's black and white bitch Susie S.
Mr. J. Shanahan's white and brindle dog Jim Corbett	beat	Mr. J. H. Watson's black and white bitch Waterwitch.
Mr. J. Hough's white and brindle dog Dexter	beat	Mr. J. Eagan's white and black bitch Bessie.
Mr. T. J. Cronin's white and black dog Lookout	beat	Mr. H. Wormington's blue and white bitch Lady in Blue
Mr. T. J. Cronin's white dog Sam Nash	beat	Mr. P. F. Canovan's black and white dog Freestone.
Mr. McInerny's white dog Ben	beat	Mr. D. J. Healy's black and white bitch Geraldine.
Mr. McInerny's black dog Mischief's Last	beat	Mr. T. Hall's black and white dog Joe McCauliffe.
Mr. J. H. Watson's fawn bitch Drytime	beat	Mr. J. Byrne's roan bitch Nellie Bly.
Mr. J. R. Dickson's white and black dog Dandy Jim	beat	Mr. E. O'Connell's black and white dog Tralee Boy.
Mr. J. Eagan's blue and white dog Governor	beat	Mr. H. Boyd's white and black bitch Bo Peep.

II.

Whip beat Wolf Tone.
Prima Donna beat Fanny.
Juanita a bye.
King John beat Play Boy.
Maud Jones beat Sea Shell.
Al Farrow beat Maid of Erin.
Snowball a bye.

Catherine Hayes beat Jim Corbett.
Dexter beat Lookout.
Sam Nash beat Ben.
Mischief's Last beat Drytime.
Governor beat Dandy Jim.

III.

Whip beat Prima Donna.
King John beat Juanita.
Al Farrow beat Maud Jones.

Catherine Hayes beat Snowball.
Sam Nash beat Dexter.
Governor beat Mischief's Last.

IV.

King John beat Whip.
Sam Nash beat Governor.

Al Farrow beat Catherine Hayes.

V.

Al Farrow beat King John.
Sam Nash a bye.

Mr. J. J. Rademaker's brindle dog Al Farrow beat Mr. F. J. Cronin's white dog Sam Nash.

CONSOLATION STAKES.

Babazoun—Nelly Bly.—Nelly Bly led up three lengths and after taking the turn lengthened out a long lead; after her second turn a few exchanges were made, and the jack then ran to a hole, Nelly Bly winning easily.

Maid of Erin—Joe McCauliffe.—Maid of Erin led to the jack one length and made first turn, after which Joe McCauliffe took possession and after several points won easily.

Norwegian—Geraldine.—Geraldine led by a length and made first turn, and Norwegian going around very wide, the bitch went on for a turn, and after a few exchanges the bitch drove the jack to a hole and won.

Bo Peep—Examiner.—Examiner led to the jack by three lengths, serving himself to two turns. Bo Peep then made a turn. Examiner then turned, and thereupon Bo Peep went on to the jack and killed too soon to wipe off Examiner's score.

Wolf Tone—Jim Corbett.—Jim Corbett led four lengths to the jack and did all the work, Wolf Tone not giving him any help whatever.

May Boy—El Rio Rey.—This was nearly a repetition of the course just described, El Rio Rey leading three lengths and doing all the running.

Faugh-a-Ballagh—Dan B.—Dan B. was unsighted from the slips. Faugh-a-Ballagh got on the line of the jack, and when Dan B. was sighted he was fully a quarter of a mile behind. Before Faugh-a-Ballagh could get to the jack Dan B. overtook and passed his opponent, and then made three turns and a kill, winning easily.

Fanny—Freestone.—This was a great race to the jack, Freestone coming up two lengths in front. After a long give-and-take course down the field Freestone turned the jack to Fanny, who killed, Freestone winning.

Bessie—Drytime.—Drytime led to the jack by three lengths, took first and second turns. Bessie took third and fourth turns, after which Drytime took possession and killed, winning the course.

Lady in Blue—El Rey.—Lady in Blue was not in this course, El Rey leading three lengths and doing all the work in a long course.

First Ties.

Nelly Bly—Joe McCauliffe.—Nelly Bly led up three lengths in front of Joe McCauliffe, took a turn and kept possession for three more points. Joe McCauliffe then wrenched strong twice and killed. Nelly Bly won.

Examiner—Geraldine.—Geraldine led two lengths and made the turn. Examiner then came in for possession, and after a long course made two turns and a kill, winning the course.

El Rio Rey—Jim Corbett.—El Rio Rey led up three lengths in front, took first turn and kept possession for second and third turns. Jim Corbett then made a turn and then El Rio Rey drove the jack to a hole and won.

Freestone—Dan B.—Both dogs ran even to a creek; the jack crossing both dogs fell into the water. Coming out together they ran together to the jack, Freestone being the first to score. After exchanging several times Freestone took the jack in hand and killed, winning the course easily.

Drytime—El Rey.—El Rey led and took first turn. The jack then took a straight line and Drytime in a long run made several points before the jack ran to a hole, Drytime winning the course.

Second Ties.

Nellie Bly—Examiner.—Examiner led by a length and made two turns, after which Nellie Bly took possession and made four points before Examiner got a turn. The bitch then got in and kept the jack to herself until he got into a hole, winning cleverly.

El Rio Rey—Freestone.—El Rio Rey led Freestone fully three lengths to the jack, making five points before Freestone got in for a wrench and a turn. El Rio Rey then went on and killed, winning the course.

Drytime ran a long bye with Joe McCauliffe, in which the bitch showed great speed and cleverness in handling the jack.

Third Ties.

Nelly Bly—Drytime.—When slipped Drytime dashed ahead two lengths but was then unsighted, and when she came up to Nelly Bly she came in on Nelly Bly's second turn and made a turn herself. Nellie Bly then getting the jack drove him to a hole and won, an unlucky trial for Drytime.

El Rio Rey ran a bye with Bessie, in which Bessie picked up the jack after a very short course and in which she proved herself a very fast bitch.

Final Course.

Nelly Bly—El Rio Rey.—This was a fast course, Nelly Bly leading two lengths to the jack and making two turns. El Rio Rey then got in for a turn. They then ran into a dry creek, coming out together, the bitch in possession of the jack. Nelly Bly then almost immediately killed and won, a fine performance upon the part of this bitch.

CONSOLATION STAKE, for dogs beaten in the first and second courses in the Interstate Cup Stake at $5 each; $100 added by the Interstate Coursing Association. Winner $95, second $45, third, fourth and fifth $20 each; 20 subscribers.

I.

Mr. J. Byrne's fawn bitch Nelly Bly	beat	Rookwood-Landseer Kennels' red dog Babazoun.
Mr. T. Hall's black dog Joe McCauliffe	beat	Mr. J. Eagan's white and brindle bitch Maid of Erin.
Mr. D. J. Healey's brindle and white bitch Geraldine	beat	Rookwood - Landseer Kennels' brindle and white dog Norwegian.
Mr. P. Canovan's white dog Examiner	beat	Mr. H. Boyd's white and black bitch Bo Peep.
Mr. J. Shanahan's white and blue dog Jim Corbett	beat	Mr. B. Grogan's brindle dog Wolf Tone.

Mr. P. Kelly's fawn and white dog El Rio Rey	beat	Mr. A. Tracey's white and black dog May Boy.
Mr. T. J. Crouin's black and white dog Dan B.	beat	Mr. P. Gallagher's black and white dog Faugh-a-Ballagh
Mr. P. F. Canovan's black and white dog Freestone	beat	Mr. J. Baker's blue bitch Fanny.
Mr. J. H. Watson's fawn bitch Drytime	beat	Mr. J. Eagan's white and black bitch Bessie.
Mr. D. Shannon's brindle and white dog El Rey	beat	Mr. H. Wormington's blue and white bitch Lady in Blue.

II.

Nelly Bly beat Joe McCauliffe. Freestone beat Dan B.
Examiner beat Geraldine. Drytime beat El Rey.
El Rio Rey beat Jim Corbett.

III.

Nelly Bly beat Examiner. El Rio Rey beat Freestone.
Drytime a bye.

IV.

Nelly Bly beat Drytime. El Rio Rey a bye.

Mr. J. Byrne's fawn bitch Nelly Bly beat Mr. P. Kelly's fawn and white dog El Rio Rey.

EASTERN FIELD TRIALS.

CHAMPION STAKE.

THE Eastern Field Trials Club brought their meeting to a close with the Champion Stake. The meet on Monday, Nov. 23, was at the old Holton schoolhouse, consisting of an abandoned log cabin without any sign of habitation around. The first brace,

GATH'S MARK AND ROWDY ROD,

were cast off in a sedge grass field at 9 A. M. The weather, as usual, was pleasant, getting warmer during the day, a slight south wind blowing. Gath started off with a wide range, and had not been going many minutes before he dropped to a good point at the edge of some weeds. Walking in, Stoddard, his handler, put up a covey, shot and killed; dog steady and then retrieved the dead bird. A move was then made to where the birds had been marked down in some woods. Sent in, Gath began roading to the birds, which had scattered. Coming to a point Rowdy backed, when Stoddard flushed three singles in quick succession in different directions. Then some nice work was indulged in by both dogs on scattered birds. Rowdy was the first to drop to a point, when Bradley, his handler, put up two more; Bradley killed and Rowdy retrieved, two singles getting up at the same time behind him. The dogs were then taken up and a move made for the field where they first found. In edge of oaks Rowdy pointed a single. On, both dogs ranging wide, Gath pointed in a ditch, and Rowdy brought to back did so indifferently. No bird being put up Gath roaded on down and a covey flushed 25yds. to one side into the pines. Sent in, Gath pointed where the covey had run; nothing found. After some more work in sedge fields, both dogs quartering their ground well and ranging wide, dogs were ordered up at 9:47. Gath's Mark was the better ranger, though, and had a little the best in style. Gath, for a dog of his age, kept up a good gait all the time.

RIP RAP AND DAISY HOPE.

These two were put down at 9:55 in a field of weeds. Capt. McMurdo handling Rip Rap and Titus Daisy Hope. Both went off well and soon Rip broke in, in sedge grass and flushed two birds, then pointed a brace and several others getting up in different directions, McMurdo fired and killed, and Rip sent on to retrieve did so, and in retrieving, with the bird in his mouth, stiffened on a picturesque point at the top of a deep gully, McMurdo flushed a single, dog steady to wing and then brought the first bird to his handler. This was a piece of work one reads about but seldom sees. On, the dogs parted company, Daisy Hope ranging off into pines, where she pointed and Titus flushing, killed, and Daisy retrieved nicely. Dogs were taken up and moved to fresh ground where, ten minutes later, they were cast off in a stubble field. Rip then did a nice piece of work, roading up to a bevy which McMurdo flushed, dog steady to wing Daisy in the meanwhile had gone off and was seen far ahead on a hill side, Mr. Lorillard and Titus went off after her but it was some time before she was found. After waiting till 11:15 dogs were ordered up and

KING'S MARK AND CHANCE,

put down in sedge. Both started off at a good gait, and ranging over corn stubble and through oak woods, at edge of sedge grass, King's Mark pointed a covey and Chance backing nicely. Barker handling King's Mark, put the birds up, shot and killed; both steady. Mark sent on to retrieve did so in fine style. On in woods Chance got a point on the scattered birds, Avent shot and killed; dog steady, and retrieved the dead bird fairly well. Further on in sedge grass, King's Mark pointed and Chance backed, but no bird was found. Both roading on to clump of trees, Mark dropped to the point, but no bird was flushed, and Chance coming up to the same place, repeated the performance. Mark pointed again further on, but the birds had run on. Down the hill Chance pointed and a single flushed; dog steady to wing. Mark pointed foot scent again. In hollow Chance got on to the bevy and pointed nicely, Avent flushed and killed, but Chance retrieved only fairly well. Dogs were then taken up at 11:46. A few minutes later they were sent on in wheatfield and then into sedge grass, where Mark pointed by a fence, but nothing came of it. Working on over a good deal of ground both dogs were eventually lost. Avent returned and said his dog had been on a point. At 12:50 King's Mark turned up, trotting along the road to the school house. Chance showed more speed and range, style about equal. The judges after lunch consulted for some time and then the second series began with

RIP RAP AND GATH'S MARK

at 2:30 P. M. Alongside some sedge grass Rip had hardly gone fifty yards before he stiffened to a point, Gath having passed ahead and ranging wide. Rip was held on his point for some time for Gath's Mark to be brought to back, but finally McMurdo flushed the birds, killing one and Rip sent on to retrieve, though he made several casts, failed to locate the bird which had fallen some distance away. Rip roaded on in sedge grass and soon pointed a single which McMurdo flushed, dog steady. In edge of sedge, Gath got on to a covey which Stoddard put up, shot and killed, Gath sent to retrieve, though given every encouragement, failed to do so. On, Rip pointed a single some distance away, then Gath pointed a covey, birds flushed, dog steady. Gath then in pines dropped to a point, but birds had gone on, this was repeated, Rip backing; still another no-bird point was made by Gath, evidently where the birds had run through. Sent on in open ground for a while, nothing further being done dogs were taken up at 3:21. Rip was not himself and was not under good control. Gath ranged with his usual vigor.

KING'S MARK AND DAISY HOPE.

Down at 3:32 in sedge. Further on in weeds after winding Daisy roaded to a nice point side of oak woods, King's Mark being brought up to back, did so some distance away. Titus flushed, shot and missed, dogs steady. In woods, Daisy scored another point on a single, which Titus put up. Mark in roading up to some birds dropped to a single which flushed. Outside of woods Mark pointed, no bird. Daisy then pointed, moved on and Mark backed. Mark then pointed the covey that Daisy had been roading, Barker shot and killed and Mark retrieved. Dogs taken up at 3:44. Sent on afterward through scattered pines, Mark came to a point at the edge of some oaks, but Barker failed to flush anything. After working out this ground, Daisy secured a nice point in some pines and Mark backing, Titus flushed a bevy. Dogs were then ordered up at 4:21. Daisy had the best of it in style and range. After some consultation

CHANCE AND GATH'S MARK

were put down for a final heat at 4:30 in some weeds. Chance soon come to a point, but nothing was found, he roaded on, pointed again, and moving on he came up to the bevy, pointed, and birds flushed, dogs steady to wing. Sent on into woods where birds had been marked, Chance, under a bank, pointed a bird which flushed wild. Mark then higher up pointed where birds had run, Chance backed. In woods Mark then pointed a bevy which Stoddard put up, dog steady to wing. Sent on after this covey, Gath, after roading, located the bird, pointed and single flushed wild. Then Chance pointed and Gath backed, a brace got up when Avent shot and several more flushed to one side. Chance then got a single which Avent flushed. Then Chance pointed several times on running birds. Further on a single got up in front of the horses. After a good deal of ranging and several likely places had been worked out the dogs were ordered up and a start made for home, thus ending the meeting for 1890. After supper the judges decided that Gath's Mark was the winner, the decision being received with acquiescence on all sides, as he had really done some sterling work, and for a dog nearly seven years old ranges with wonderful vigor and endurance.

SUMMARY.

H. Hulman, Jr.'s Gath's Mark with G. W. Ewing's Rowdy Rod.
Charlottesville Kennels' Rip Rap with W. S. Titus's Daisy Hope.
Col. Ridgeway's King's Mark with A. M. Avent's Chance.

Second Series.

Rip Rap with Gath's Mark.
King's Mark with Daisy Hope.
Chance with Gath's Mark.
Gath's Mark won first prize.

The bench show in the evening for the Lorillard medals was judged by Major Taylor and Mr. W. Tallman. There was some little disagreement between the two judges at first, but they eventually decided that Mr. O. W. Donner's Roi d'Or was the best of the dogs, thus winning one of the Lorillard medals, and Mr. F. R. Hitchcock's Annie F. won that for the best bitch, though on Saturday evening Daisy Hunter was the choice, but she did not appear on the Monday evening. Throughout the meeting there was very little kicking, the only murmur occurring when only four were reserved for second series out of twenty-six dogs in the All-Aged; but as this was soon remedied the next day all was serene again, and it was acknowledged that the judges had done their work well. On Saturday evening Mr. Johnson returned to his home in the Far North, and Mr. Pierre Lorillard, Jr., took his place.

H. W. L.

HIGH POINT, N. C., Nov. 25.

THE CENTRAL FIELD TRIALS.

LEXINGTON, N. C., Dec. 1.—The trials commenced auspiciously this morning. There are not many visitors present, but as the meeting will last some time, many gentlemen have signified their intention of putting in a few days later on. The owners and handlers began to arrive Sunday morning and by evening those who intend taking part in the trials were all on hand. All the well known handlers are here and among the new faces, that is those who did not attend the Eastern trials, are Messrs. Frank Windholz, D. E. Rose, E. R. Coleman, C. M. Hunt and the judges, John Davidson, J. M. Tracy and N. Wallace. The drawing for the Pointer Derby took place at 8 P. M. last night with ten starters as follows:

DERBY—POINTERS.

First Series.

TAPSTER (Charlotteville Kennels), liver and white dog (King of Kent—Hops),

with

BEACON (A. P. Heywood Lonsdale), liver and white dog (Ightfield Dick—Polly Peach'um).

ZIG ZAG (Charlotteville Kennels), liver and white dog (King of Kent—Hops),

with

RUSH OF LAD (T. H. Gibbes), liver and white dog (Lad of Bow—Westminster Gladisla).

PENELOPE II. (Lebanon Kennels), liver and white bitch (Lebanon—Penelope),

with

TRAY (N. L. Rockwell), liver and white dog (Tory White—Lapford Pearl).

NASO BOW OF THE ELMS (The Elms Kennels), liver and white dog (Naso of Kippen—Lass of Bow),

with

MAID OF KENT (Charlotteville Kennels), liver and white bitch (King of Kent—Hops).

SPOTTED BOY (Chas. Proctor), liver and white dog (Trinket's Bang—Nellie Bow),

with

TYKE (A. P. Heywood Lonsdale), liver and white dog (Ightfield Dick—Perdita).

The morning dawned as we have been accustomed to see it for the last two weeks or more, frosty and bright, the sun gathering strength towards noon, when it became quite warm and drying the ground up, as usual, affected the running of the dogs at that time. A start was made from the hotel about 8 A. M. I might as well remark here that the trials are managed, in the absence of Col. Odell, by Messrs. Tracy and Coleman, but as there is a very small field of horsemen to keep in order, the duties of the marshal are not very arduous. About a mile from the town, the first brace,

TAPSTER AND BEACON

were cast off in sedge grass at 8:39, Tapster being handled by C. E. Buckle and Beacon by A. Cameron. Both dogs started off at a slow gait, and in fact the running all through was not at all like the high pressure gait kept up at High Point, but partook more of an ordinary day's shooting, as the rules of the Central Club require. The country traveled over was considerably more open than at High Point and there was little cover work done. Birds were scarce, especially in the early part of the day. After working over a good deal of ground without result, it was 9:07 before the first point was made in weeds by Beacon, no birds being found, Tapster backing indifferently. Then some little time after Tapster pointed a bevy at the edge of some pines. Further on Beacon again pointed false and then pointed a rabbit, afterward adding another point to his score. Going back he pointed again and a single flushed; dog steady to wing. As the dogs had now been down an hour and ten minutes, they were ordered up. Tapster was the better ranger, equal in style, though Beacon did not get out from his handler, pottering around too much.

ZIG ZAG AND RUSH OF LAD.

These two were put down in a cornfield at 9:58. Capt. McMurdo handling Zig Zag and Lott, of Chappard, S. C., handled Rush of Lad. Nothing was found till 10:20, though a good deal of likely ground was worked out. Zig Zag was the first to make game, and roading to an uncertain point a single flushed ahead of him. In pines Rush pointed by a fallen tree and his handler claimed the birds flushed from a tree above the dog; moving on both roaded and then in a swamp, Zig pointed and was held till Rush could be brought to back which he did for an instant and then moved on further into the swamp, Zig following made another point, Rush backing, when birds flushed all round them, both dogs steady to wing. They then roaded on through swamp and pointed, when birds flushed wild ahead of them, both steady. Further on Zig made a good point and McMurdo putting up a single, shot, Zig was steady to wing and shot. After some more work of no moment, the dogs were ordered up at 11 o'clock. Zig Zag showed much better range and style but neither ranged wide enough, though better than the previous brace in this respect.

PENELOPE II. AND TRAY.

Down at 11:02 in corn, both started off well. John White handled Trap and S. S. Barker, Penelope II. In a few minutes both pointed in an orchard, when White flushed and Tray broke in, which unsteadied Penelope, who followed suit. Going on down the field Penelope pointed, but no bird was found. Tray then pointed and birds were flushed, dog steady to wing. Moving on Penelope made a point on a cat, which started, and a single flushed. By the side of a ditch Tray pointed a snipe, and Penelope backing nicely, White shot, and though Tray was steady, Penelope broke in a little. Then Tray at the edge of a road made game and came to a point, but no bird found, Penelope backing to order. Some woods were worked through and then the dogs being moved out, Penelope, in sedge grass, pointed, no bird; moving on Tray pointed and White flushed, when Pen chased for some distance.

The dogs were then taken about three-quarters of a mile further on and put down in an orchard. Working on into pines Tray was seen to point, but no result. Out of woods by the side of a road Penelope pointed where birds had evidently been. For a few yards further on she pointed the bevy and was steady to wing, and Tray coming up to back flushed a single, when balance of bevy got up. Working on after the scattered birds Tray pointed and Penelope backed; White flushed a single; both dogs steady to wing. Tray secured another single. On in high sedge grass Tray repeated and was held on his point till Penelope could be brought up, when he moved on and roaded to a flush, and shortly after pointed again, but failed to locate. They were then ordered up at 12:02. Neither dog showed very good work and were about equal in style and range, and both were unsteady at times.

NASO BOW OF THE ELMS AND MAID OF KENT.

Though near lunch time, these two were called up to work toward the luncheon rendezvous, and were put down at 12:06 in sedge grass, Frank Richards handling Naso and Buckle Maid of Kent. No game was found, and at 12:15 dogs were ordered up until after lunch. After an hour's intermission they were cast off in corn, on into sedge; Maid pointed a covey, Naso backing nicely. Then both pointed in woods and Maid broke in to the flush. Moving on Naso made game along a fence and pointed, but nothing came of it; in woods Maid again made a barren point in the sedge grass, Naso pointed false, and after some more ground had been gone over but nothing more found, dogs were ordered up at 2. Maid had the advantage in range and speed, though very indifferent work was done, the heat no doubt being accountable for lack of scent.

SPOTTED BOY AND TYKE.

The last brace in the first series was cast off at 2:12 in some weeds, Tyke handled by Cameron and Spotted Boy by Richards. It was not very long before the Boy pointed a bevy in edge of pines; Richards flushed and dog was steady to wing. Then in some oaks Tyke came to a point, the Boy backing; a single was flushed by Cameron, both dogs steady to wing. On after the scattered birds a single was flushed by the handlers and the Boy pointed at edge of woods, no bird; roading on he came to a point on a single about 25yds. ahead. Sent on in sedge grass the Boy made a false point, then Tyke pointed again, and at the same time a single flushed wild. Birds were running and points followed in quick succession to both dogs. On in sedge grass the Boy pointed, moved up, pointed again, and Tyke coming up at a gallop backed, and at the same time the covey flushed; both dogs steady to wing.

On through some woods into the open, where the Boy pointed and Tyke backed. The latter was a little unsteady, moving up when Richards flushed two birds, dogs steady to shot and wing. In some woods to the right about 20yds. away, the rest of the covey flushed, just as Spotted Boy pointed; moving on at edge of woods he pointed again, no result. In woods the dogs seemed to get into the thick of the scent, and made point after point and moving on, birds having run. As time was up the first series was brought to a close. Spotted Boy showed the best work, though in range and style they were about equal. Spotted Boy seemed to have more nose for the likely places.

The judges now consulted, and at 3:42 decided that Tapster and Penelope II., Zig Zag and Tray, Spotted Boy and Maid of Kent, Tyke (bye) should remain in and run another hour each.

TAPSTER AND PENELOPE II.

The last heat of the day began at 3:50 with these two dogs. Cast off in sedge grass, they worked on toward some woods, where near the edge Penelope pointed, when the birds flushed wild into woods. Two singles were then flushed by a judge, birds which the dogs, who had passed on, had failed to locate. Sent on, Tapster pointed a single which Buckle put up and shot, dog steady to shot and wing. In woods further on, Penelope made game, but passed on and strangely enough her owner, Mr. Coleman, riding up, flushed the single about 20yds. to one side. In sedge, while roading, a single flushed soon after they had moved on. In an orchard, Penelope was dawdling along just in front of her handler, showing no inclination to get out and range for birds, when a bevy flushed a few yards ahead of her, which would, if she had ranged out, have fallen to her score. Both dogs then pointed foot scent, and coming out of woods dogs were ordered up at 4:51 P. M. Tapster showed far away the better work, Penelope seeming to have no heart in the game. The heat was won by Tapster.

After this we all hurried home thoroughly tired out. In the evening the draw for the Setter Derby took place in the club room and resulted as follows:

DERBY—SETTER.

First Series.

GOSSIP (P. H. O'Bannon), bitch (Roderigo—Belle of Piedmont),

with

DATCHA (Nahmke Kennels), bitch (Roger—Chintz).

OLGA (Nahmke Kennels), bitch (Roy Monarch—Saddlebags),

with

FAN (A. P. Heywood Lonsdale), dog (Woodhill Bruce—Lucy).

ANDY (J. M. Avent), dog (Jean Val Jean—Sheena Van),

with

ATALANTA (L. W. Smith), bitch (Jean Val Jean—Sheena Van).

RUPERT (J. M. Avent), dog (Roderigo—Bo Peep),

with

TORY LIEUTENANT (F. R. Hitchcock), dog (Jean Val Jean—Princess Helen.

SAM R. (Geo. P. Jones), dog (Dash B.—Daisy Hope),
with
PHŒNESS (A. P. Heywood Lonsdale), bitch (Woodhill Bruce—Lucy).

TRAP, JR. (Sam Grant), dog (Ruby's Druid—Trap),
with
WHYTE B. (P. H. Bryson), dog (Roderigo—Florence Gladstone).

PEG WOFFINGTON (Francis S. Brown), bitch (Ben Hill—Nora),
with
MARGUERITE (D. E. Rose, agent), bitch (Gath's Hope—Sue J.).

It is very likely the Pointer Derby will be settled soon after lunch to-morrow, and I shall furnish you results up to press time. H. W. L.

LEXINGTON, N. C., Dec. 2.—*Special to Forest and Stream.*—The weather this morning was bright and frosty, but very warm during the middle of the day. The first brace down to-day in second series was Zig Zag against Tray. Zig Zag did the best work and won the heat. Next came Spotted Boy running against Maid of Kent. Spotted Boy did the best work and won. Tyke was a bye. In the third series Tapster run against Tyke and the work done was very poor, but Tapster made fewest mistakes and won. After lunch Zig Zag ran against Spotted Boy. The latter did some good work, finding birds, and rightly won. He will run with Tapster to-morrow for first place and is pretty sure to win, as he is much better class. Two heats of the Setter Derby were run this afternoon, Gossip and Datcha, Ian and Olga. Mr. J. Otto Donner was on the field to-day.

THE GORDON SETTER CLUB.

NEW YORK, Dec. 1.—At a special meeting of the executive committee of the Gordon Setter Club of America, held at 44 Broadway, this city, on Nov. 28, the following members were present: Dr. J. M. Lordly, Dr. H. Clay Glover, F. W. Bennett, Dr. John H. Meyer and L. A. Van Zandt. Dr. J. M. Lordly in the chair, L. A. Van Zandt, secretary pro tem. The minutes of the previous meeting were read and adopted. Election of officers followed to fill the places of Messrs. H. Malcolm, president, Dr. J. Whitaker, vice-president, and I. T. Norris, secretary-treasurer, whose resignations took effect Oct. 29, 1890. On motion the follow officers were elected: Dr. H. Clay Glover, Pres.; Dr. J. M. Lordly, Vice-Pres.; L. A. Van Zandt, Sec'y and Treas. Election of members followed, and Dr. J. F. Clark and Dr. Geo. L. Lamson were elected. The resignation of J. W. E. Clarke as member of executive committee was read and accepted with regret. Dr. J. F. Clarke was elected a member of executive committee to fill vacancy caused by the resignation of J. W. E. Clarke. The resignation of F. M. Bennett as delegate to the A. K. C. and as a member of the stud book committee was read and accepted with regret. L. A. Van Zandt was elected delegate to the A. K. C. in place of F. M. Bennett. On motion of Dr. Glover, Dr. Meyer was appointed a committee of one to be known as the stud book committee. On motion of Dr. Meyer it was

Resolved, That the club donate the sum of $25 for prizes at the Westminster Kennel Club show, Feb., 1891, to be divided as follows: Ten dollars to best dog in open class, $10 to best bitch in open class, $5 to best dog or bitch in puppy classes.

Resolved, That a committee of one be elected to be known as the bench show and field trial committee, whose duty it shall be to look after the interests of the Gordon setter at bench shows and field trials, and to make all arrangements with the clubs; subject to the approval of the executive committee.

Resolved, That in order to facilitate the business of the club it is desirable that a full quorum of its officers should be voted for who reside in one city or vicinity. It is therefore

Resolved, That the secretary when sending the list for election purposes request the members to have this commendable object in view in making their selections.

Resolved, That the secretary address a circular letter to all owners of Gordon setters requesting them to join our club.

Resolved, That the secretary is hereby instructed to send a copy of the minutes of each meeting to the principal sportsmen's papers, including the *Gazette*.

Resolved, That the secretary is hereby empowered to spend whatever amount of money is necessary to equip his office.

Resolved, That the following gentlemen be elected honorary members of the Gordon Setter Club of America: August Belmont, President American Kennel Club; Pierre Lorillard, Jr., President English Setter Club; Wm. Dunphy, President Irish Setter Club; Dr. J. Frank Perry, President Associate Members; Hon. John S. Wise, President Pointer Club of America; Dr. N. Rowe and J. M. Tracy.

A bill for $10 dues for membership in A. K. C. was voted paid. The treasurer reported a balance on hand of $53.67. The committee then adjourned.

L. A. VAN ZANDT, Sec'y (Yonkers, N. Y.).

MARYLAND KENNEL CLUB.—In November a bill was filed in Circuit Court No. 2 by five of the board of governors against the other five asking that the proceedings of a meeting held on Nov. 15 be declared void, alleging that sufficient notice was not given. The case was to have been heard yesterday before Judge Wright, but the defendants, George W. Massamore, Charles R. Diffenderffer, James Thompson, Wm. C. Farber and W. Stewart Diffenderffer, by lawyers Isidor Rayner and Edwin J. Farber, filed their answer, which will make it necessary to take testimony. The bill admits that the meeting was held, but denies that Charles J. Peshall, who represented H. Malcolm, was ever elected or sent as a delegate to the club, and alleges that Harry Malcolm, at his own instance, had been previously named as such delegate and without the authority of the club sent Peshall to represent him, that Peshall claims to be a resident of Jersey City, N. J., and that he is and at that time was an objectionable person to the members of the Maryland Kennel Club and also the American Kennel Club, having been recently permanently disqualified from membership or from any participation in its proceedings. The answer further alleges that Harry Malcolm has upon more than one accasion threatened to break up the club unless W. Stewart Diffenderffer "got out of it," and has openly stated that the Maryland Kennel Club should never have a "bench show" until Diffenderffer was displaced as secretary, nothwithstanding the fact that Diffenderffer did resign on June 7, 1890, the club refusing to accept the resignation, as the remaining defendants claimed that the acceptance would be detrimental to the interests of the club. The bill denies that Harry Malcolm and Henry R. Von der Horst made any proper demand on Nov. 17 on Diffenderffer, secretary, to show the minutes of the meetings, and avers that they were never denied access to the minutes of the meetings, and asks that the bill of complainants be dismissed with costs.—*Baltimore Herald Dec. 2.*

GLADSTONE, the setter of field trial fame, died at Memphis, Tenn., on Nov. 20.

DOG CHAT.

SOME time since we spoke of a dog show being held this winter in Providence in connection with the Rhode Island Poultry Association. We hear now that the judges selected are Mr. C. Fred Crawford for the sporting classes and Mr. T. M. Aldrich the others. If a successful show is held this year a move will no doubt be made to join the A. K. C. and hold a proper show.

We hear that Mr. Wixom has exchanged his champion beagle bitch Myrtle for Mr. Kreuder's champion Rattler (Dan O'Shea's). From a letter we have received we judge the National Beagle Club will see the Wixom dogs at their next trials.

Mr. T. H. Stretch, the noted collie man in England, had three teams out the other week and won with each. What a far-fetched pun one could make on this, but we spare our readers this time.

Stock-Keeper alludes to a letter which Lady Blanche Innes-Ker has written in favor of having whippet racing at dog shows. We have not had time to allude to this sport much lately, but we certainly agree with the above paper in the opinion it advances that shows would be vastly benefited by some such extra attraction as this. It is all non sense to suppose that because it is a sport that is indulged in by miners and working people in the north of England it cannot be made a means of amusement for refined people. What is horse racing but a sport, in which we find the riff-raff of the world engaged? and at the same time we find men of the highest honor and integrity, heart and soul in the sport; and it is such people as the latter who, by just example, have raised the sport from the depths to which at one time it had fallen in this country. Then why, if respectable people wish to indulge in whippet racing, should they be discouraged by the cry of—Pitch! We are more immediately interested in its development as far as dog shows and especially those held at fairs are concerned, and it would not be a very difficult matter to keep the racing of these dogs as clean as the judging in the bench show ring. We should consider bench show committees very short sighted if they do not soon tack this harmless racing on to their list of attractions.

Many of our readers have a faint idea as to the origin of bench shows, so we think it would be of interest to them to look upon the face of the man who, at his own expense, got up the first dog show ever held, which was at Birmingham, Eng., in 1859. We are enabled through the kindness of Mr. Brailsford to copy the face on the solid silver medal which was given to his father in commemoration of the event. The medal is 2½in. in diameter with a solid silver chain 30in. long attatched to it. On the one side is an engraving of Mr. Brailsford, as represented in our illustration, and on

"THE ORIGINATOR OF DOG SHOWS."

the reverse side is the following inscription: "This medal with a purse of £80 was presented to Richard Brailsford as a testimonial for originating and his exertions in carrying out the national shows for improving the breed of sporting dogs, the first of which he carried out at his own expense at Birmingham, in 1859." Then Mr. W. Brailsford, his son, who has charge of Mr. Heywood Lonsdale's dogs at the trials, has another silver medal of the same size with a similar chain attached. On one side is the following inscription: "Presented at the National Pointer and Setter Field Trials, 1889." On the reverse side: "This medal with a purse of £95 was given to William Brailsford as a public testimonial for originating pointer and setter field trial competitions; for establishing the first national field trial meeting in 1866, and for his continued exertions in the management thereof for 24 years." In the case is a paper, on which are written the names of the subscribers to the testimonial, and one recognizes at once names which are familiar to every one interested in English field sports. Mr. Thos. Johnson, of Winnipeg, Manitoba, was also a subscriber. Messrs. Brailsford and Cameron have made many friends by their quiet and courteous manner, accepting their defeat with a good grace, and should they succeed in pulling off any of the Central stakes, we are sure they will receive the hearty congratulations of their fellow handlers and sportsmen.

The noted pointer Sandford Mike was claimed at the late Crystal Palace show by Mr. J. Lloyd William for Col. J. H. Allen, of Louisville, Kentucky, who intends to bring the dog over with him. There is nothing said as to his showing him at our shows.

The latest Barzoical question, shall the "Krilutts" of the future have long or short necks? This is quite an important question with a severe winter fast approaching.

Mr. P. T. O'Bannon and Mr. H. Hulman, Jr., have decided to amalgamate their kennel forces and signed agreements to that effect during field trial week. With such dogs as Reverdy, Gath's Mark, Fanny M. and a host of other well bred ones, this kennel will hold a strong hand. They are very much in favor of breeding for dogs that can win on the bench as well as in the field.

In a chat with Mr. Brailford, who has the English dogs in charge, we asked him what he thought of the style of work in our trials and the way the handling is done. The former he calls forehunting or scampering; he says the dogs lead the handlers, the handlers lead the judges and the judges lead the spectators. Is he right? In speaking of the handlers, he describes them as a fine body of men, temperate and men of clear discernment, and men who, if he had them in his hands for six months, he would make of them the finest trainers in the world.

The *Fancier's' Gazette* (Eng.) draws ttention to a clause in the new tariff law dealing with live stock, which says that "no such animal shall be admitted free unless pure bred of a recognized breed, and duly registered in the book of record established for that breed," and surmises that the latter part of that sentence may provide a loophole for the Custom authorities to impose the duty on dogs, as each breed is not provided with a separate stud book. All the same, we think that the separate classification of the English Stud Book covers all this, each breed having to all intents and purposes a separate division of its own, so that we cannot see how this will affect the case at all, and any such interpretation of the law will defeat the end in view—the improvement of our canine stock. If the dog imported is duly registered and a certificate of the same from the secretary of the stud book, together with the affidavit of the owner or importer, that such is the identical dog described in said certificate, be obtained, will, we are informed, be all that is necessary.

Among the dogs sold during the Eastern field trials were Spot and Joy, Jr., owned by Capt. Mears. Spot went for $300 and Joy, Jr. for $150. Mr. Pierre Lorillard, Jr., was the purchaser. Mr. Merriam, of Boston, also sold Razzle, Mr. Avent selling two youngsters, Royal C. and Rodney Royal C., both Roderigo dogs, to Mr. Royal Carrol, of New York.

Many of the handlers who were unsuccessful at High Point are looking forward to better luck at Lexington, having faith that the dogs will run at not quite such a high pressure speed at the latter place, especially as the heats are, in the first instance, of one hour's duration.

After the Eastern trials and reports were finished, we journeyed on to Thomasville, a few miles from High Point, putting up with friends Tallman and Bradley, who have been located there for some time preparing their dogs for the trials. No better place could have been selected for the purpose. Birds are plentiful and the land of such varied character that a dog can be fitted to any style of work needed of him. Messrs. Tallman and Bradley are both well know in the field trial arena, and two harder workers it would be difficult to find. This training of field dogs is not the child's play some people suppose, and they only need to put in a dog with either of these men to find that it is real downright hard work; especially when one of those naturally perverse, head-strong dogs, that are sometimes to be met with, has to be brought to a sense of its duty. Three months of this sort of work, day after day, will make the strongest man stale. We had the pleasure of shooting over several bench show celebrities in "Billy's" charge. The first day we had out that smart little bitch Princess Beatrice, owned by Mr. Windholz, and in her own quiet way she gets over the ground and finds the birds without making mistakes. Then there is the great Count Howard, who would be better were he not quite so fond of his own way. A Count Howard—Princess Beatrice pup also shows good promise, and is withal a handsome little fellow. "Billy" has also the renouned Beaumont, who hunts with all the fire and vigor of a two-year-old, though we believe he is close on to eight years old. He is, as all bench show habitué's know, a handsome dog, and we can hardly blame the Gordon men, and especially the owner, Dr. Meyer, over their enthusiasm for their fancy in the field, for Beaumont is very stylish, and his handsome coloring makes a pretty picture as he glides through the short sedge grass. Bendigo is another Gordon, owned by Mr. Hunt, though young yet and one which was what Tallmon styles "a terror" to break, is now coming along nicely, and did quite a pretty piece of work on the way home from the last day's shoot. Gronie, a pointer, is one of the best in Mr. Tallman's string, and ran in hard luck in the Eastern All-Aged, but if he goes ahead and does work like that of Friday last, almost without a fault, he ought to be near the top in the pointer All-Aged at the Central. Mr. Bradley's dogs are all field dogs first and last. Such animals as Rowdy Rod, Harry C. and others doing honor to his ability as a trainer. Rowdy was being trained more especially for the four-hour race, and we trust the result will justify the expectation of his handler. The farmers in this section seem to be the right sort, and it is the exception to him a gruff "Here, you, get off that land." In the first place they are treated considerately, and as soon as they understand that the trainers are not intent on killing all the birds they can scare up, they are always willing to give kindly directions where the birds are to be found. Space forbids more on this subject, but any one bent on having some good sport could do worse than spend a week with these two gentlemen at the Mock House, whose comfortable quarters and bountiful table will be appreciated when the shades of evening drive the sportsman home with a ravenous appetite and tired limbs.

A very handsome picture of Mrs. Fergus and her St. Bernard bitch Coralie appears in last week's *Canine World*, and in speaking of this lady, who occupies the same position to the English kennel world that Miss Whitney does to ours, being the only lady judge of St. Bernards in the ring, if we may use that term without any direspect to these ladies, this paper says she is promoting a society a little ahead of the S. P. C. A. in that she thinks prevention is better than cure and proposes, by the aid of a committee, to watch over the manifest kindness to animals and at the end of the year give prizes ranging from $50 downward to the parties treating their animals kindly. Each recipient will also receive a silver medal to be worn on the coat. This idea is of course chiefly aimed at the drivers, cabmen and so on in her city of Glasgow, but it is a god one and might be carried out in other cities to advantage. Speaking of pictures, that is a clever two-page sketch by George Cruikshank the second in the same paper. It represents different members of the English kennel world and their dogs taking part in the Lord Mayor's show. America is not forgotten, for the "member for Hulton" and "Manhattan" occupy choice seats in the C. W. coach. Mr. Wade looks quite overpowered in a high hat, though he keeps a tight grip on the stars and stripes. We fancy there is a good deal of hidden meaning in the title, "This is not a two-point show."

At the forthcoming St. Bernard show in London, Dec. 10, Mr. L. C. R. Norris-Elye will judge the rough coats and Mr. L. Oppenheimer the smooths. By the amalgamation of the club with the E. K. C. their challenge class wins rank equally with those of the Kennel Club, for it is now what is termed a two-point show.

The noted Irish terrier Breda Rattle has been sold, and as he has sailed from England it is presumed he is consigned to America, though his destination and owner's name are enveloped in strict secrecy. He is described as a grand coated dog and one possessed of the best legs and feet a terrier could possess.

The noted St. Bernard, Prince Battenberg, is dead. This handsome animal was the only dog we believe that succeeded in lowering the colors of the great Plinlimmon, which he did at Birmingham under the judgment of Mr. Betterton. He was unfortunately owned by a man who could not take his defects with the stoical indifference all exhibitors should possess, and consequently he has not been seen on the bench as much as his great beauty and splendid character entitled him to. He died of heart disease and was but five years old.

We hear that Mr. John Davidson will judge all classes at South Carolina dog show at Greenville, S. C., in January next.

"Namquoit" expects four Welsh terriers over on the Rich

mond Hill. They are some of Mr. Boyd's stock, and expected to be clinkers. We are glad to hear Prudence, the St. Bernard bitch, is very much on the mend and out of danger.

WHITE WONDER.

NORTH WILMINGTON, Mass., Nov. 24.—*Editor Forest and Stream:* The following appeared in your issue of Sept. 4:

Mr. Harris's bull-terrier formerly called White Wonder, that was protested against at the Boston show for being deaf, was deaf when born. He was bred by Mr. Pratt, of Oak Hill, Stoke-on-Trent. He is by White Sam out of White Rose. Mr. Pratt thought that the puppy was deaf when born and sold it to Mr. Hughes, a postman at Stoke, for £1. The postman soon discovered that the puppy was deaf but kept the matter as quiet as possible, but in spite of his precautions the dog finally became known throughout the section as the "postman's deaf dog." Mr. Hughes made up his mind to get even with Mr. Pratt and laid his plans very shrewdly. He wrote Mr. Heath, the former owner of Miss Glendynne, now called Attraction, Enterprise and other good ones, and got him to make a date to call and see the dog. He then goes to Mr. Pratt and tells him how wonderfully the puppy has improved and that Mr. Heath is talking of purchasing him. (Mr. Heath and Mr. Pratt were at that time trying to outdo each other.) Mr. Pratt not wishing to see his rival with the best dog in the country and supposing the puppy must have outgrown his deafness purchased him on the spot for £10. Of course he soon discovered that the dog was totally deaf and threatened suit, but as he had first sold the dog when deaf he was advised to let the matter rest. This much I know to be the facts. It is furthermore stated by those who ought to know that the White Wonder was soon after reported dead and the same dog was represented as another dog under another name. I have not questioned Mr. Harris in regard to the affair, but if he paid the price stated, £20, he was badly sold, whether he knew him to be deaf or not. If Mr. Hinks sold the dog to Mr. Harris and did not say anything about the deafness he is a swindler of the first water. Hinks & Pratt are one firm. American readers must not get this Hinks mixed up with James Thorpe Hincks, the Clumber man, at Leicester, or E. C. Hincks. It is Fred Hinks that sold White Wonder.

We desire to say that the above is false in every particular; in proof of which we submit the following letter from Mr. Hinks:

BIRMINGHAM, Oct. 9.—Mr. Harris. Dear Sir: Your favor of the 19th ultimo is at hand inclosing a cutting from the FOREST AND STREAM, of Sept. 4; and in reply I can only say that it is absolutely false from the commencement to the finish, as Mr. Pratt never owned or had in his possession White Wonder, and that he never was out of this town until he was sent to you. Moreover, he is by Gully the Great out of Kit, and the story related in the cutting from FOREST AND STREAM respecting White Wonder is an entire fabrication altogether. And it is a pity reporters cannot find something else to do than drag a gentleman like Mr. Pratt into a matter which he knows nothing about. Yours truly, FREDERICK HINKS.

White Wonder is by Gully the Great out of Kit, by Ducrow out of Eclipse; Gully the Great is by Gladstone out of Florrie. Breeder, Mr. Brooks. Whelped June, 1888.

H. A. & W. L. HARRIS.

MR. PESHALL'S CASE.—Chas. J. Peshall, president of the New Jersey Kennel Club, who was recently indicted for libeling A. P. Vredenburgh, secretary and treasurer of the American Kennel Club, in a communication published in FOREST AND STREAM of July 19, in which he charged Mr. Vredenburgh with falsifying and juggling the accounts of the club, appeared yesterday at the bar of General Sessions before Judge Fitzgerald to demand an immediate trial. "I can prove my entire innocence, your Honor," said Mr. Peshall, "and I demand a trial. I have been pursued with the utmost malevolence, and even the gentleman, Mr. Leslie C. Bruce, of *Turf, Field and Farm*, who became my bondsman, has been assailed on account of his friendship for me. I want to put an end to this. My reputation is dearer to me than my life." Mr. Bedford said that the entire week must be devoted to prison cases. "Well," rejoined Mr. Peshall, "if going to the Tombs will help me to get a trial, I am inclined, particularly as I hear the food is good there, to surrender myself and take my chances of trial with the other prisoners there." "You had better not," replied Mr. Bedford. "You might have to remain there longer than you wanted to." Judge Fitzgerald suggested that Mr. Peshall should confer, out of court, with Mr. Bedford, and try to settle upon a near date for trial.—*New York Sun, Dec. 2.*

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

BRED.

☞ **Prepared Blanks sent free on application.**

Flossy—John Bull. Tom Caruther's (Cincinnati, O.) pug bitch Flossy (Fred—Hazel Kirke) to Eberhart Pug Kennels' John Bull (champion Loris—May Queen), Nov. 18.

Nun Nicer—champion Kash. A. E. Pitts's (Columbus, O.) pug bitch Nun Nicer to his champion Kash, Nov. 15.

Ruby N.—Kash. Mrs. J. N. Newton's (Toledo, O.) pug bitch Ruby N. to A. E. Pitts's champion Kash, Nov. 5.

Mobie—champion Kash. M. L. Jackson's (Greensburg, Ind.) pug bitch Mobie to A. E. Pitts's champion Kash, Nov. 11.

Toody—champion Bradford Harry. G. W. Dixon's (Worcester, Mass.) Yorkshire terrier bitch Toody to P. H. Coombs's champion Bradford Harry (Crawshaw's Bruce—Beal's Lady), Nov. 26.

SALES.

☞ **Prepared Blanks sent free on application.**

Reginald. Red Irish setter dog, whelped April 10, 1890, by Blaze out of Gladys B., by R. H. Burr, Middletown, Conn., to C. Bywater, Middletown, Conn.

Duke of Warsaw. Cream fawn pug dog, whelped March 17, 1890, by Sniffles out of Toodles III., by Eberhart Pug Kennels, Cincinnati, O., to J. Carlton Jacks, Rochester, Minn.

Clarissa. Red Irish setter bitch, whelped March 16, 1886, by Bravo out of Leonie, by R. H. Burr, Middletown, Conn., to F. E. Adams, Middlesborough, Ky.

DEATHS.

Bella Donna. The Niagara Kennels' (Lockport, N. Y.) blue belton setter (champion Rockingham—Donna), Nov. 19. Distemper.

KENNEL MANAGEMENT.

There is no charge for answering questions under this head; we are always glad to give advice on the care and management of dogs; and we shall make this a special feature.

R. C. M., New York.—My St. Bernard bitch had a litter of 6 last June. They stayed with her 6 weeks, whereupon I began feeding a variety of food with a view to getting her into condition, but my utmost efforts have been unsuccessful. She is still in very poor flesh; has irregular appetite, and stomach rolls violently both before and after eating; coat thin and unhealthy. I have doctored for worms, but without the desired result. Can you prescribe for her through your valuable paper. Ans. Feed generously. Give her a dessertspoonful of syrup of buckthorn every other day for a week. Give morning and night, either alone or in her food, a table spoonful of cod liver oil. After meals give her a couple of papsin tablets.

Dogs: Their Management and Treatment in Disease. By Ashmont. Price $2. Kennel Record and Account Book. Price $3. Training vs. Breaking. By S. T. Hammond. Price $1. First Lessons in Dog Training, with Points of all Breeds. Price 50 cents.

Rifle and Trap Shooting.

RANGE AND GALLERY.

NEW YORK RIFLE CLUB, Nov. 27.—The New York Rifle Club wound up its long range season with the last of five rest matches at Creedmoor, L. I., on Thanksgiving Day. The prosperous season enjoyed by the club this year during the handicap match induced the members to introduce an innovation, a Thanksgiving Day dinner, to which the ladies were invited. The conditions for shooting were not altogether favorable, but, considering the tricky wind, the scores which follow were fair. Twenty-shot rest match, 200yds. distance, any rifle with 3lb. trigger pull or more, Standard American target, possible 200 points: Dr. Chadbourne 188, average 9 40; E. B. Barker 184, average 9.20; T. J. Dolan 184, average 9.20; M. Herrington 183, average 9.15; J. Klein 183, average 9.15; C. C. King 173, average 8.65. The highest scores on the first string of 10 shots were made by Messrs. Herrington and Klein with 96, but Dr. Chadbourne, who was only one point behind, overcame this lead easily in the second string, and won hands down. The club will begin its gallery season at the range of the German-American Society, 12 St. Marks Place, on Dec. 11, and thirteen meetings will be held there altogether. The club began its outdoor competition early last year, meeting first on the Cypress Hill Park range and later at Creedmoor. The earlier matches had been all strictly off-hand on the Standard American target, strings of 10 shots, possible 100 points. The best score on each day was to count only, and of these the aggregate of the five best scores entitled the marksmen to prizes. The match was a handicap contest, the executive committee awarding the necessary number of points and altering the handicap during the progress of the match whenever they thought it advisable. The five best scores as well as the club averages of the shooters during the year were as follows:

	Five Best Scores.					Total.	Average.
T J Dolan	37	90	89	88	85	439	87.80
G A Strong	83	87	85	93	86	434	86.80
M Herrington	82	87	90	85	81	425	85.00
E B Barker	85	78	89	88	84	424	84.80
J S Case	84	89	77	86	83	419	83.80
V B Daly	81	82	81	92	82	418	83.60
A H Isbell	80	77	90	87	84	418	83.60
T Lloyd	81	88	82	81	82	414	82.80
G A Shorkley	90	80	80	76	77	403	80 60
C E Gensch	81	82	81	73	82	399	79.80
J Duane	80	78	81	81	78	398	79.60
Dr E W Chadbourne	65	88	82	80	70	385	77.00

BOSTON, Nov. 29.—The regular weekly shoot of the Massachusetts Rifle Association was held at its range to-day. A good number of shooters were out, but found very unfavorable conditions for high scores. A strong S to 11 o'clock wind blew all day and a bad light caused low scores. C. H. Eastman won the gold membership badge and J. L. Fowle won the silver military medal. Below will be found the best scores made to-day. Distance 200yds., standard American targets, re-entries allowed:

All-Comers' Off-Hand Match.

C H Eastman	82	J B Hobbs	66
A B Loring	77	D Martin	62
W Hawley	73	M T Day	61
S C Sydney	72	A S Hunt	60
A S Gunn	68		

All-Comers' Rest Match.

S Wilder	106	A S Hunt	98
F Daniels	105	M T Day	98
A H Ballard	105	S T Crawford	96
J N Eames	101	D Martin	95
John French	100	J B Hobbs	93
F W Chester	99		

Pistol Match, 50Yds.

G L Hosmer	83	M T Day	75
A D Stevens	82		

SAN FRANCISCO, Nov. 25.—Col. G. A. Howe, of the Hawaiian Rifle Association, is at present spending a vacation in this city in company with his wife. He states that great interest is taken at the Islands in regard to rifle matters: They have a fine range there of from 200 to 1,000yds., and often have competitive matches with the visiting men-of-war men, in which the home company usually come out victorious. While here the Colonel will inspect the different ranges around the city and take advantage of any improvement he may notice for the benefit of his association.

CASED BULLETS.—The English army is to have a new ball cartridge for the magazine rifle. The old black powder will be used. The principal change is in the bullet. It has been found that the lead core of the old pattern bullet has been often driven through the envelope in which it was encased, the latter being of course left in the barrel with a probability of disastrous results. In the new pattern cartridge a bullet having a thick envelope and extending further over the base than in the previous pattern has been introduced.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

THE NEWARK TOURNAMENT.

AT Erb's Shooting Park, Newark, N. J., last week, was inaugurated the first of the annual tournaments of the Newark Gun Club. The meeting began on Tuesday and was brought to a successful conclusion on Friday. The first two days was given to the throwing of Keystone targets, about 7,000 being disposed of. On Thanksgiving Day and Friday live birds only were used, and over 1,000 in number were trapped. In the inanimate contests the committee carried out an idea that has of late caused considerable discussion among trap-shooters, namely, the barring of experts. The innovation evidently met the approval of all who attended and certainly proved a success. The meeting coming in the very height of the game season with the shortest of days and a family holiday in the middle of the week, a large attendance was not looked for, consequently the entry list came fully up to the expectations of the management. The club hereafter will give an annual meeting, claiming date in the early fall, and from the experience derived from this, their first attempt, should be able to give the greatest tournament ever held in the East. The grounds at Erb's have been recognized for years as the best live bird grounds in the country, and the targets thrown in this tournament were the first ever shot upon them. Mr. Erb's reputation for furnishing birds of the highest grade did not suffer during this tournament, for a better lot of flyers never were trapped. On Thursday, with the shooting, over 800 birds were shot at; and on Friday fully as many more left the traps. Of the entire number but 14 were called "no birds." This will give some idea of their quality. The weather throughout the entire meeting was all that could be asked for. For this season of the year on Tuesday the weather was perfectly delightful. Wednesday was a trifle colder, with a stiff breeze from the northeast that played pranks with the targets and havoc with the scores. Thanksgiving day opened with snow squalls and the thermometer registering about 20 degrees; however, before the shooting began it cleared away and the enthusiasm of the contestants kept the cold from interfering with the sport. Friday was another raw day, but everything went smoothly. Among the contestants from a distance were noted Al. Spangler and George Mosher, of the Hunter Arms Co., from Fulton, N. Y.; Arthur Du Bray (Gaucho), just from Walla Walla, who is about to enter the employ of Parker Bros.; W. H. Whitney, of Florence, Mass., and his able representative W. H. Skinner, of Chicago; Frank Pidgeon, of Saugerties, N. Y.; Capt. C. W. Minerd, of Atlantic City, N. J.; C. B. Manley, of Danbury, Conn.; H. B. Schumeier, of St. Paul, Minn.; W. S. Gettle, Sing Sing, N. Y.; Mahlon Fox, of Trenton, N. J.; W. C. Smith, of Orange, N. J.; Riss Van Riper and Frank Post, from Cherry Hill; Milt Lindsley and Eddie Collins, from Hoboken; Jack Elliot, of Pelham Bridge, N. Y.; and Fred Quimby, of this city. On Thursday Harvey McMurchy put in an appearance, accompanied by Phil Beakeart, a popular sporting goods dealer of San Francisco. Harvey was the only one of all the experts barred from the artificial contests who put in an appearance to shoot in the live bird events, and said he had just dropped in to see what kind of amateurs there were around. As usual, at the conclusion of each day's shooting there was the regulation amount of match talk and at least two matches was the result. The first, between John Ryan, of Hackensack, N. J., and Jack Elliott, of Pelham Bridge, is to be shot at Erb's, on Dec. 12, at 12 o'clock. The conditions are 50 birds a man, for $100 a side, trap, find and handle, Ryan to stand at 21 and Elliot at 25yds. rise, use of one barrel only. The second match is between Phil Daly, Jr., and Elliot, and is to take place at the conclusion of the first match. The conditions are 100 birds a man, for $250 a side, Hurlingham rules, Mr. Jacob Pentz referee and stake holder. Mr. Elliot is the crack shot of the Washington Heights Gun Club and is considered a good match-maker, and as both the gentlemen he is to shoot against are well to the front in trap-shooting circles an interesting exhibition should be the result. The target events were run on the rapid firing system from one set of 10 traps, your correspondent acting as referee, Mr. Jacob Pentz refereeing the live bird matches, the same being shot under modified Hurlingham rules. All ties div. unless otherwise noted.

First Day, Nov. 25.

First shot off, miss and out, and won by McMurchy, Lindsley and Riggott.

WALNUT HILL, Nov. 26.—The usual party of shotgun experts assembled at this range to-day for the double purpose of adding to their aggregates in the prize matches and getting up robust appetites for the Thanksgiving dinners of to-morrow. To the eye the weather was all that could have been wished, but a cold and stiff breeze made the attainment of high scores more than ordinarily difficult. In spite of all drawbacks the shooting was very strong, and the scores of Messrs. Nichols and Wheeler in the Keystone trophy match are creditable in the extreme. Mr. Bowker broke one bird more than his nearest competitor in the "diamond pin" match, and his performance enables him to wear the champion medal of the association until the next meeting, which is on the card for Wednesday, Dec. 10.

Diamond pin match, 15th competition, 20 keystone targets, squad system of firing, and 5 pairs standard targets:

Bowker	10111110101111111111—17	10 11 11 10 10	7—24
Gale	11111111110011110111—17	00 10 11 00 11	6—23
Parham	01111111011111111111—17	10 10 10 11 00	5—22
Wheeler	10111101111101111111—17	11 10 10 00 00	5—21

INTERESTING TRAP QUESTIONS.

CHICAGO, Ill., Nov. 29.—*Editor Forest and Stream:* I wish to correct a statement in your report of the Chicago—Kansas City shoot, which is not quite accurate in regard to my match with Mr. Vories. At the same time I wish to go on record to the effect that the referee made an erroneous decision against me on the second bird I shot at, which was scored lost. The report states that failing to kill my second bird, by reason of a misfire, I was ordered to shoot another bird, using a blank shell in the first barrel and a loaded in the second, and that I "pulled the loaded barrel first." This was the general idea on this matter, but it is not really exactly the case and I wish to state the matter precisely as it was.

My gun, a Scott premier hammerless, was, as I found later, in need of a touch or so at the mechanism of the strikers, and it troubled me with misfires. On the second bird I shot at I hit the bird with the right barrel, but the left barrel failed to fire. The bird lit just within the flags and on a line for the coops. I was afraid to try the left barrel again for fear it would be too long a shot and would start the bird out of bounds. I stood looking at the bird to see what it would do. I claim I had a right to stand and watch it, and to gather it at any time within 3 minutes, under the rules, if I wanted to, but the referee asked what we were going to do, and we agreed to shoot at another bird. Then I did go to the score with a blank and a loaded shell, the blank in the right barrel, which I shot first, and then happened what nobody seems to have just right. I pulled on the right barrel first, the blank shell, but not hard enough to discharge it. My finger slipped to the left, or loaded barrel, and this barrel missed fire and was never discharged at all. So no shot whatever was fired at this second or alternate bird. Yet the referee gave it a "lost bird."

Now, what I claim is that this bird should not have been scored lost, but I should have been given another bird, and if necessary another and another, under just such circumstances. My reason for this is that I was entitled to action on that second bird, as the rules are two-barrel rules. My second shot was unused on the second or on any bird for that bird's score, and I was barred from a right thereby. The referee had no right to assume that I would miss until after I had shot at least, and the fact that I snapped the loaded barrel cuts no figure in the case.

I claim that on my second bird instead of deciding "lost bird," the referee should have decided "another bird." On this point I should be glad to have a decision from the editor of the FOREST AND STREAM. The rules shot under were the new American rules.

A. S. KLEINMAN.

CHICAGO, Ill., Nov. 29.—*Editor Forest and Stream:* I wish to raise a question in regard to the action of the referee at a certain point of the Abe Kleinman—Jones match in the Chicago—Kansas City shoot. Many shooters of this city wish further to get a decision upon the authority of FOREST AND STREAM bearing upon a point which was not actually raised during that match, but which came very near being raised, and which may come up at any time in an important match, and indeed often has done so. The matter in question transpired when Mr. Kleinman shot at his second bird. Mr. Kleinman hit the bird with his first barrel and the left missed fire. The bird lit just within the boundary and the shooter stood looking at it. The referee, very widely transgressing his duties, as it seems to me, for a referee is there only to decide questions, and not to raise them, did not call "Dead bird," but called out "What are you going to do about that bird?" The captain of Chicago team did not answer, but Mr. M. J. Eich, who was at the time extending the courtesies of a handler to Mr. Kleinman, said, "We claim another bird." Mr. Kleinman being apparently afraid of the distance, acquiesced with Mr. Eich, and the claim was made and honored for "another bird." Before this was settled the bird began to wobble, and in point of fact, died within bounds before the second bird was in the trap.

On this much of the statement I wish to ask,

1. Was not the referee wrong to ask, "What are you going to do?" instead of calling "Dead bird," and waiting for the shooter or his opponent to raise the question?

2. Was it not the shooter who should be heard from before the referee could act, and not his handler?

3. If Mr. Kleinman had not agreed to handler Eich's call for "another bird," would not his, the shooter's, voice be the deciding one and the one on which the referee should act?

I wish now to raise yet another question on the contingency which did not actually arise, but nearly did so. Now, if the call and agreement for another bird had not been made, and if that bird were still on the ground, undecided, I claim that the shooter had the right, before he forfeited it by calling for another bird to send the gatherer out after that undecided bird, and if gathered, it to be scored "dead bird," and if not gathered, then he had the right still to another bird, with his one blank and one loaded shell, under the new rules of the American Association. Here is where I think Mr. Kleinman let go a right that he could have used. I would formally ask, therefore: 4. In case of a bird fired at with first barrel, the second barrel misfiring, and the bird lighting within boundary, has not the shooter a right to claim any action that may be given him by his first barrel, by sending out his retriever to gather the first; and in the event of the retriever failing to gather has not the shooter a right to claim another bird, with a blank cartridge in his first barrel and a loaded one in his second?

Your decisions on the specific questions asked will please and benefit a number of shooters in Chicago and everywhere else, for these questions are such as arise at nearly every big tournament or match, and no set of rules really covers all the points. The new American rules were those in use in the Chicago-Kansas City match.

W. P. MUSSEY.

KANSAS CITY—CHICAGO MATCH.

THE full individual summaries of the great Kansas City—Chicago match will be given in our next issue, and they will supplement, or put the gilt edge on what is universally conceded to be the best report of that famous meeting of the giants. These summaries tell the story of the scores completely, and will be read with great interest.

MACOMB, Ill., Nov. 27.—Macomb Gun Club's Thanksgiving shoot, 10 bluerocks, 3 bluerock traps, 18yds. rise, Keystone rules, 3 prizes:

In the first match Kunse first; Head, D. G. Tunnicliff and Blaisdell div. second; in shoot off for third Bartleson won. In second match D. G. Tunnicliff first; E. Allison and Cherry div. second; in shoot off for third D. Curtis won. In justice to the shooters will say that most of the scores were very much poorer than usual.—EN AMI.

MIDDLESEX GUN CLUB.—The lessee of the Middlesex Gun Club grounds at Dunellen, N. J., has notified said organization that under the terms of the lease, the fence, buildings and grounds shall be vacated by Jan. 1, 1891, as the premises are wanted for building purposes. At a meeting Nov. 29, a resolution was passed that the property of the club, consisting of club house, office, grand stand, fences, blue rock, Keystone and live bird traps, pulling stands and all other property be offered for sale, and if not disposed of by Dec. 8, the same be offered at public sale on the club grounds at 3 P. M. on the afternoon of Dec. 11.

WATSON'S PARK.—Burnside, Ill., Nov. 27.—Sweepstake shooting, Am. Ass'n rules, 10 birds, $5 entrance:

G Hoffman	2212021222—9	Cap Anson	0102121011—7

B Rock	11112—5	Warpool	10220—3

First and third div., second won by Babeuf.

Miss and out: Abe Kleinman 12, Cap Anson 5, Geo. Kleinman 3, G. Hoffman 12, E. M. Steck 4, A. T. Torkington 4, Jim Finn 10, Ike Watson 2, Williams 1. Kleinman and Hoffman div.—RAVELRIGG.

THE DEAN RICHMOND CUP.—*Editor Forest and Stream:* There seems to have been a good deal of controversy at the State Sportsmen's Convention, at Lyons, last June, as to the conditions under which the Dean Richmond cup was presented to the State Sportsmen's Association, at Batavia, in 1873. Therefore I inclose you a copy of the original conditions presented at the business session of the convention at Batavia, for publication.—CHAS H. FINCH. [*Copy.*] Mr. Peck, of the Dean Richmond Club, after some explanatory remarks, read the conditions under which the State cup was given, in effect, that the club winning it shall give proper security for its production on the following year, and shall not obtain absolute possession till after winning it three times; that the funds obtained from entries shall be set apart to the amount of $1,000 or less for the purchase of another cup when this one becomes the property of some club. The Dean Richmond Club will surrender all right to the cup on the signing of this agreement by the president of the State Association in behalf of that body. The convention unanimously authorized the president to sign the agreement.

CHICAGO, Ill., Nov. 29.—Mr. J. A. R. Elliott, the champion pigeon shot, is in town to-day, *en route* from Kansas City to New York, whither he is drifting to complete a few preliminaries to the act of washing off with $20,000 of Mr. Macalester's money, or leaving an equal amount of his own in the long New England's stern and rock-bound shore. It is not thought here that the great match will be shot within a month or so, but it seems certain it will be a go. Mr. Elliott has shipped his guns East, probably in the hope of trying some with Edgar Murphy, or any other gentleman who desires to meet him on the bloody sands. The opinion here is common that Elliott has found $20,000, but the older judges know it is no one's race. To-day Mr. Elliott is shooting live birds as the guest of the Washington Park Club, of this city, and the boys here are doing what they can to entertain the genial Kansas Cityan. Mr. Elliott in his late race with Billy Crosby killed 48 out of 50, Crosby only getting 39. The other day, in trotting a friendly heat with Jim Riley, at 200 birds, he killed 183 to Riley's 170. Elliott is certainly in good shape and dangerous company.—E. HOUGH.

BOGARDUS.—Capt. A. H. Bogardus was married recently, at Lincoln, Ill., to Mrs. Lucy Heimer, of Philadelphia. The Captain has been a widower for several years.

New Publications.

SPORT.

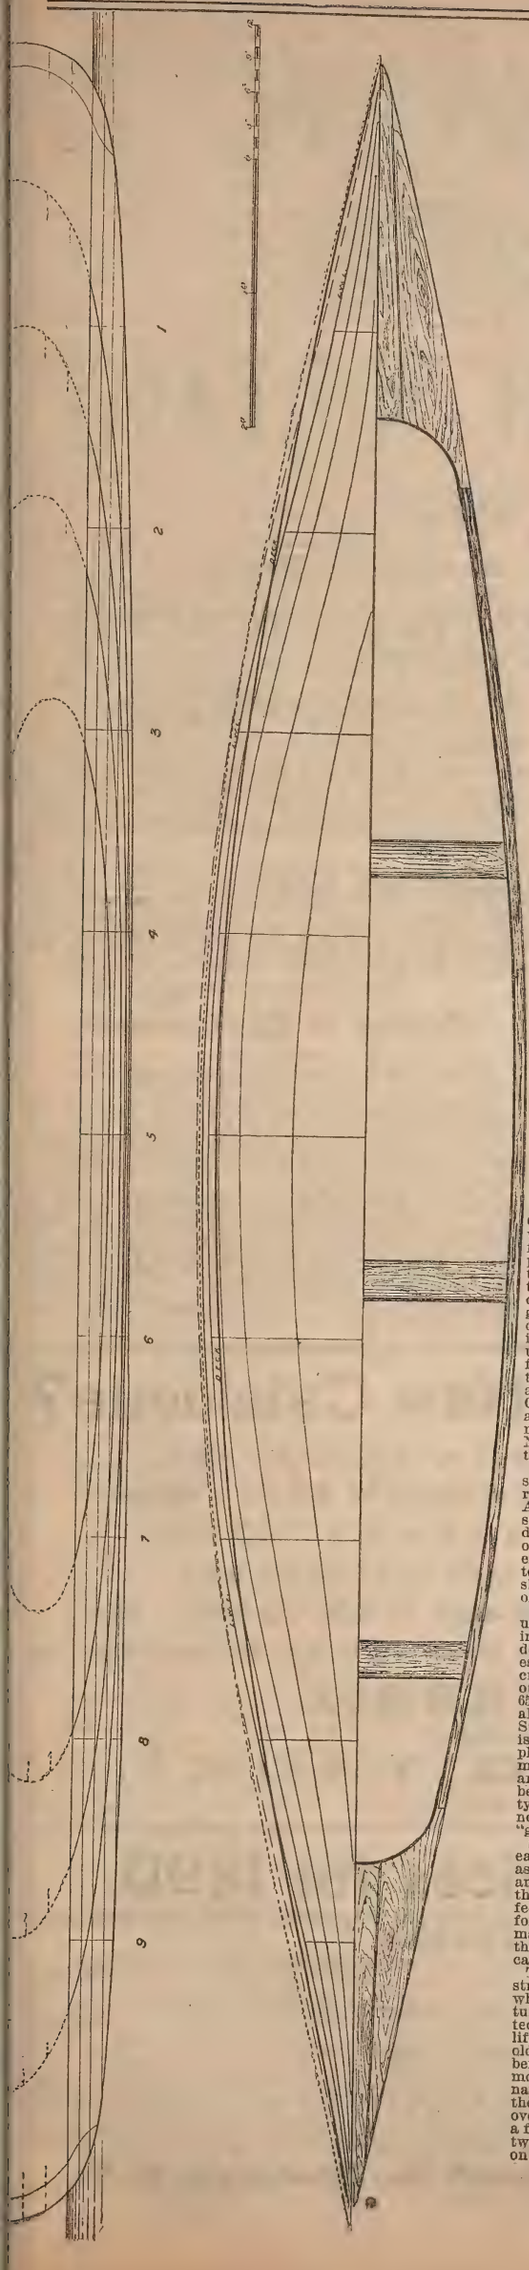
SPORT; OR FISHING AND SHOOTING. Edited by A. C. Gould, and illustrated from the fifteen original water colors by A. B. Frost, Henry Sandham, F. H. Taylor, F. S. Cozzens, Frederic Remington, R. F. Zogbaun and S. F. Denton. Boston: Bradlee Whidden. Published by subscription.

This is a very carefully studied piece of work. Every one knows the extreme difficulty of picturing a hunting or fishing scene in a satisfactory manner, for the conditions are exacting, and those for whose delectation the artist paints are critical to a degree. We have few capable artists in this country who have studied wild life and field sports closely enough to depict them with faithfulness. More than one artist essaying the task has failed miserably. It is to be said for this latest enterprise in the field that rare good sense has been shown in the selection of artists. Those whose signatures appear on these plates are all men of pronounced ability in the special branches assigned to them, and they have filled their commission so well that "Sport" may be pronounced the most satisfactory series of sporting scenes yet produced in America.

The subjects include both large and small game, and the principal game fish. One of the best of the series is the plate of Black Bass Fishing, in which the angler bears a striking resemblance to Mr. Henry J. Thayer, of the Massachusetts Association. Sections 3, 4 and 5, now before us, comprise the Mallard, the Wild Turkey, the Mascalonge, the Bluefish, the Virginia Deer, the Pinnated Grouse, the Big-Horn, the Canada Goose, and the Wapiti. The plates are 12×18 on a sheet 18×24, and are suitable for framing. Each plate is accompanied by a page description of the species and another relating experience in its capture. These are, as a rule, well written and acceptable, but the letter press would be more useful if the publisher had broken away from the traditions of subscription work publishers and had put his text into a handy book—a handbook—to go with the plates.

Sport is deserving of a large sale, and Mr. Whidden's enterprise will no doubt be suitably rewarded.

WEBSTER'S INTERNATIONAL.



WEBSTER'S INTERNATIONAL DICTIONARY OF THE ENGLISH LANGUAGE. Edited by Noah Porter, D. D., LL. D., of Yale University, Springfield, Mass. G. & C. Merriam & Co. Price $10.

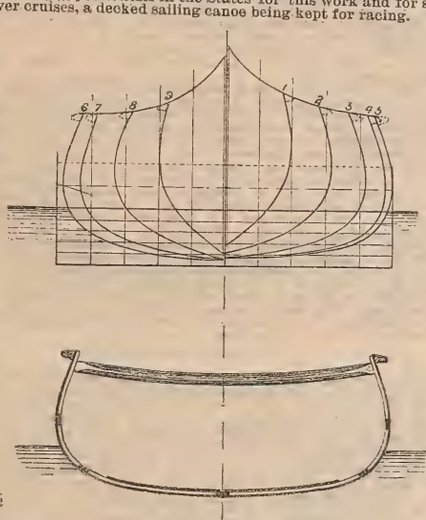
Webster's was the highest court of appeal for our fathers; it is our authority; it will be that of our children. The "Unabridged" has stood for years a monument of learning and practical usefulness. Of late years it has been found wanting. So rapid has been the progress of the age, with its multitudinous inventions and new processes, and new products, its scientific and industrial strides, its social and political changes, that new terms have multiplied, and at a rate that put the old standard dictionary inevitably and irretrievably behind the times. This is not to say that the Merriams—the publishers, whose names have been indissolubly linked with that of the lexicographer's own—were blind to the requirements of the hour. Years ago they set themselves to the gigantic task of modernizing the "Unabridged," and now their work has been crowned by an admirable result. The "International" is the worthy successor of the "Unabridged."

The publishers tell us that the editing has been done under the supervision of the same editor-in-chief, and under the auspices of the same publishers who conducted the previous revision. They have never wavered from their aim to maintain its progressive supremacy. They began this revision, not as a speculative venture, but as a duty to scholars and to letters, before the signal of new rivalries was sounded. They have carried it patiently and suitably through to completion. Their labor has been directed to perfecting what was already acknowledged by eminent scholars to be the best. With what liberal expenditure of time and toil and money this duty to scholarship and to the public has been performed, partly appears in the following statements: Work having direct specific reference to the publication of this dictionary has been in progress for over ten years. The staff of paid editorial laborers has numbered not less than one hundred persons. Besides these, a large number of interested scholars have freely contributed in important ways to its completeness and value. Within the ten years that the work has been in progress, and before the first copy was printed, more than three hundred thousand dollars was expended in editing, illustrating, typesetting and electrotyping. These facts are presented as an assurance, which under existing conditions is due to the public, that Webster's International Dictionary is the rightful heir to the pre-eminent favor which for more than half a century has been given to the great work of Noah Webster and its successive revised editions.

CAMP LIFE IN THE WILDERNESS.—A tale of the Richardson Lakes with thirty illustrations. By Capt. Chas. A. J. Farrar. Boston: Lee & Shepard. 1890. Price $1.

FROM LAKE TO LAKE; OR A TRIP ACROSS COUNTRY.—A narrative of the wilds of Maine. With thirty illustrations. Boston: Lee & Shepard. Price $1.

Canoeing.



Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

THE OPEN CANADIAN CANOE.

THE accompanying drawings, for which we are indebted to Mr. G. H. Duggan, of Montreal, were taken from a representative open canoe, of the type commonly known as Canadian, Peterboro or Rice Lake canoes; the latter title being the proper one for this boat, as she was built by the late Mr. Daniel Herald, of Gore's Landing, Rice Lake, one of the principal builders of the open canoe. The origin and history of the Canadian canoe has been very fully given in previous numbers of the FOREST AND STREAM, especially in those of Dec. 29, 1887, and Nov. 1, 1888.

Though hardly known in the States prior to the introduction of the English canoe in 1870, with the growth of canoeing and especially through the mingling of canoeists from the States and Canada at the annual meets of the American Canoe Association, the open canoe has become deservedly popular, and is found in every canoe club in the country. In England it is very generally used, there being a large class of canoeists who follow the sport solely in the form of river paddling in these canoes, imported from Canada.

Owing to ignorance and misconception on the part of the early writers on canoeing, the open Canadian canoe was placed in direct rivalry with the decked sailing and paddling canoe of English origin, and at times heated controversies have waged over the respective merits of the two. At the present time, however canoeists have learned that each has its peculiar uses, and that the two are in no sense rivals. For cruising as it is done in Canada, mainly river work with frequent portages, and especially as the most important part of a hunting outfit, the open canoe is as near perfection as can be. Also for afternoon paddling, especially with one or two companions, and for a ladies' canoe, it answers better than the decked craft, being cheaper, lighter, simpler, and in every way more convenient to handle. It is also used by many canoeists in the States for this work and for short river cruises, a decked sailing canoe being kept for racing.

Canoeing in the States is essentially different from that in Canada; about the great cities, the centers of canoeing, the waters are broad and best fitted for sailing; there is little field for gunning and hunting, and no need to use the canoe for this purpose, while canoeists as a rule have less leisure for extended trips than their Canadian cousins, their spare time, outside of a two weeks' vacation, being limited to a few hours of an afternoon or a day a week, on Sunday. Under these conditions racing has grown at the expense of cruising, and the canoe that has been developed is first of all a sailer, either for racing or ordinary sailing, and next to this is fitted for cruising under sail rather than under paddle. The deck and compartments, too, afford facilities for keeping bedding and duffle dry, and it is no disadvantage that the canoe will not carry two or three men and dogs and perhaps a slain deer, as such work is never expected of it. When the first Canadian members of the A. C. A. arrived at Lake George in 1881 and inspected the decked canoes there the first objection they made was that it would be impossible to carry a deer in them. The New York men met this promptly by the statement that for them the chief difficulty would be in getting the deer.

Fitted with leeboards and a large lateen the open canoe is often sailed, and some very skillful work has been shown at times in the races at the meets; but at this work it cannot compare with the American decked canoe with centerboard, rudder and racing sails. In the paddling races, though the single blade has been discarded for the double long since, the open canoe has held its own with the decked racing canoes from the States, but under existing conditions it seems probable that the spoon-shaped bottom of the Canadian canoe will be driven out by the deeper and sharper models of American origin when it comes to a question of speed only, as in the trophy races at the meets.

At the same time, racing has always been one of the principal uses of the open canoe, and more good races have been paddled in just such canoes as the one here shown than in all varieties of decked canoes combined. In Canada a great deal of racing, especially tandem, is done in boats like this, ordinary service craft of good model and light build, but designed primarily for other purposes than racing. The present craft, with a weight of 65lbs., used constantly by her owner as a yacht's tender, has won all the tandem races on Lake St. Louis last year, besides the Lake St. Louis cup, the "blue ribbon" of the single blade racing. There is a danger now that this most useful type of boat may be supplanted by the new 40lbs. paddling shell, the trouble being not so much in the races at the meet as in the ordinary club races which are held under A. C. A. rules; and some special provision should be made for the encouragement of racing in service boats of this type. As sailing is not the special forte of the open canoe, it is not likely to come under the influence of the new definition of a "general purpose" canoe.

So far as the bottom is concerned, with its ample bearings and easy, graceful form, it is admirable for sailing, and has served as a model for more than one decked canoe; but its other features and fittings are not the best, the sheer, the freeboard, the stem, the tumblehome of the sides, and the wide gunwale, though perfect for running rapids, are not those of a sailing craft. Transformed by the addition of deck, centerboard trunk, rudder and mast tubes, the open canoe loses her special good qualities and at the same time is inferior to a regularly built decked sailing canoe.

The material used for these canoes is mainly basswood, a strong, tough wood that can be had entirely free from knots, which cannot be said of cedar. It is liable to decay from moisture, but in a canoe, which can be kept dry and completely protected by paint or varnish, this is no serious objection, and the life of a good basswood canoe is indefinite, some being 20 years old and in good condition. In building the stem and stern, of bent oak, with the keelson, are set up on a last or complete mould, over which the ribs are first bent. The planks are then nailed to the inside keel, stem and stern, and ribs, after which the boat is removed from the last, and narrow battens are nailed over each seam and between the ribs. The canoes are decked for a foot or so at each end, and have two or three fixed thwarts between, as shown, the paddlers kneeling on the floor, partly seated on the thwarts. The dimensions are as follows:

Length over all	16ft.
L.W.L.	15ft. 6in.
Beam extreme	2ft. 6in.
L.W.L.	2ft. 5in.
Draft	4½in.
Freeboard	8½in.
Sheer bow	6in.
stern	5in.
Weight	65lbs.

Station 1, 1ft. 9in. from stem at waterline. Stations 1 to 9 spaced 1ft. 6in. Waterlines 1in. apart below water and 2in. above.

RED DRAGON C. C.—*Editor Forest and Stream:* The fire fiend has again rendered the Dragons homeless: the club house went up in smoke on Tuesday, Nov. 25, fortunately in the day time. The loss will be very trifling compared with our past experience, and is covered by insurance. This style of smoker is entirely original with ourselves, any claims to the opposite will be earnestly disputed. We have obtained quarters in an unoccupied dwelling house until proper buildings can be erected. Luckily none of the fleet were destroyed.—MAX.

BOATBUILDING IN FLORIDA.—A correspondent asks for the address of a competent boatbuilder in Florida; perhaps some of our readers can furnish the information.

Yachting.

Yachtsmen who do not see what they want under this heading will please look under the hatches of the *Canoe*, peep into the *Kennel*, squint down the barrel of the *Rifle*, open the *Fish Car* and *Game Bag*, inquire of the *Sportsman Tourist*, and if their yearnings are still unsatisfied, push their explorations into the *Editorial* and *Advertising Departments*.

CLYDE YACHT BUILDING.

IT is acknowledged that the annals of Clyde yachting contain no brighter record than that of 1890, and the preparations already rumored for 1891 promise a still brighter record. Perhaps the most startling intimation of what may be expected of the Clyde racing season of 1891 is the changes that have been made in the building yard of Messrs. Fife, of Fairlie. As English yachtsmen will remember who have visited the famous yard, the only hint of having arrived at Fife's was the bow of some famous clipper overlooking the roadway. The Fifes, with their conservative opinions, had some belief that to smooth down the rough ground on which so many really splendid vessels had been built might lead to spoiling the spell that hung over the place. They have avoided any sort of alteration that might endanger the famous hollow bows or any other point which insured the speed of the Fairlie clippers. The Fairlie yard has been modernized as much as the Fairlie clippers have been. Draughting sheds, offices and other arrangements have been completed, besides a new palisade of planks that completely surrounds the building yard—and one is left to doubt whether or not he has arrived at Fairlie.

Messrs. Fife have not commenced the building season, but the firm never had a more promising future. Mr. John Inglis (of Messrs. A. and J. Inglis, Glasgow) has commissioned the firm to build a 40-rater, which will be a fine addition to the class and assist in its resurrection. This craft will be a wooden vessel all over, with enough of lead to keep her all right, and Mr. Inglis has perhaps the best amateur hands in the Clyde at his command. This Fairlie forty will no doubt be a big Dragon, which means she will make a big record. Dragon is for sale, but it is not known whether she will be replaced or not. Besides this forty, a 20-tonner is to be built for an unknown owner. The firm has a 10-rater for a Welsh owner, and another for a St. Petersburg owner of the name of Fansmith.

For Clyde owners, the firm has four new 2½-raters of the Bandersnatch type, which means that all the canvas will be put into the mainsail, with a spitfire jib to stay the boat. With the mast stepped into the bows of these cutters, the rig is simply the old Una rig with a trifle of a jib. The rig is uncommonly handy in the Clyde or elsewhere, except when the mainsail cannot be shaken through a heavy squall. Off Arran, in the famous Ardrishaig match in autumn, the Una mainsail of Bandersnatch was not shaken through a squall, and, as a consequence, the mast and all that was on it went over the side. But the rig and tonnage are in favor as the newest fad, and, as a consequence, four of these 2½-raters have been ordered from Fife. They belong to the particular class in favor at Calshot Castle, and the Clyde amateurs ought to take a few lessons from the fair timoneers of the Castle Club. Other 2½-raters are spoken of at Fairlie, where the keels of these craft are lying about to pick and choose from, as if the saw mill had been running them off by the score.

Mr. G. L. Watson, of Glasgow, has completed his design for the new 40-rater which is being built in the yard of Messrs. A. and J. Inglis, at Partick. This forty is for Prince Henry of Prussia, the younger brother of the Emperor of Germany. She will be a composite craft, and her model is represented as being another Creole. The model shows a heavy rake in stern post, a very deep keel, very little camber in the keel, and less forefoot than any of Mr. Watson's cutters, Thistle not even excepted. Mr. Watson is quite satisfied that a deep forefoot has nothing to do with a cutter holding her wind, and of course he can refer to Iverna, which vessel, with her deep forefoot, was no use turning to windward against Thistle, the latter surprising even Americans by her shallow draught forward. Mr. Watson has in hand a 10-rater for the Messrs. Allen to replace their 10-rater Doris, which has won 103 prizes, but, being built under the old rule of the Y. R. A., is getting outruled. This new boat is to be built by Mr. Adam, of Gourock, the builder of the 10-rater Phantom last sping, which cutter showed uncommon qualities in turning to windward in a strong breeze and bad sea.

Of course Messrs. Allan will sail their new 10-rater in the same perfect style their Doris was sailed in. Mr. Watson has got no order for any new 6-rater, but young Fife has, and he will build a sister to his famous Nan of last summer, the fastest 6-rater that was ever built at Fairlie or anywhere else.

But it is in steam yachts Mr. G. L. Watson is most engaged. He has been commissioned to design a new vessel for Mr. Ninian Stewart, of Glasgow, of 900 tons displacement. Mr. Watson designed a previous boat for Mr. Stewart, and the new one is to be finished and fitted up in magnificent style. The vessel is to be built of steel by the Ailza Shipbuilding Company; she will be schooner-rigged, and have triple expansion engines put in her by Messrs. Rowan, of Glasgow, to drive her at 13 knots an hour.

Another steam yacht of 350 tons, designed by Mr. Watson, is for Messrs. Allan, to be a tender to their new 10-rater. This vessel is being built of steel by Messrs. Fleming and Ferguson, of Paisley, and will be fitted with electric as well as a search light.

Mr. Watson has also been commissioned to design a steam yacht of 340 tons for the Hon. F. G. Wynne, of Carnarvon, and which is to be built in first-class style by Mr. David Dunlop, of Port Glasgow.—*Field.*

ORIOLE, schr., Mr. George Gooderham, of Toronto, will have her lead keel and sail plan increased this winter under the direction of Mr. A. Cary Smith, the designer of the yacht.

A NATIONAL MARINE BOARD.

CONSIDERING the benefits which accrue to every maritime nation from a permanent and well organized pleasure navy, it would seem but natural that private and individual enterprise in this direction should receive at least the passive encouragement and support of the national government. Without asking for special aid or subsidies, yachtsmen have at least a right to just and reasonable laws, and to such privileges as can be granted them without conflicting with other interests. That these are often denied them here is a fact too well known to many yachtsmen, and the recent discussions of the same question in the English and French papers proves that yachting, in spite of an occasional "Queen's cup," receives little more consideration at the hands of foreign governments than our own. Save in immunity from customs duties, granted in 1849, the laws of the United States do not recognize pleasure vessels, either sail or steam, but both come under the ancient and often absurd laws governing the merchant marine. In the case of steam in particular, the laws are so utterly impracticable that if enforced literally they would put out of use nearly all the small classes of steam craft. Fortunately it has been the custom of the supervising inspectors and of the customs officers to interpret and apply the laws in a spirit of fairness and common sense in most cases, but at the same time the power is vested in every petty official to cause unlimited trouble and annoyance to yachtsmen at will.

The greatest sufferers from the enforcement of laws never intended to apply to yachts are the owners of small steam launches, but this year an instance is found in a larger and different class of vessel in the rigid enforcement of the regulation compelling the painting of the yacht's name on a black ground. Although but a small matter, necessitating merely the disfiguring of the yacht to no purpose and some incidental trouble and expense to unwary owners, it is a very good illustration of a useless and unnecessary restriction which should in justice be removed from pleasure vessels.

The spirit, the enterprise and the liberality which has placed the American fleet at the head of the pleasure navies of the world, and at the time, too, when the nation possessed neither a war navy nor a commercial marine of creditable proportions, is at least deserving of recognition in the way of the speedy enactment of special laws for the regulation of steam and sailing yachts; laws that shall be up to modern requirements and as liberal as the circumstances will permit. The importance of a pleasure navy to a nation so situated as ours can hardly be over-estimated. It does not lie in the mere material advantages of the few thousand seamen who would be available for the manning of warships in the case of need, or in the dozen or so of steam yachts that might be utilized as dispatch boats or for similar service, but in the strong pride and interest in nautical matters which it awakens and keeps alive in all classes of the people, not alone on the seaboard, but throughout the length and breadth of the land.

In this latter respect the late international races have had a far-reaching influence that but few have suspected, in bringing home to the whole inland portion of the country, to people who never have seen the ocean or a vessel larger than a river steamer, the facts that our rivals in sport may sometimes become enemies in war, that some day great ships may be necessary to uphold our national honor, in place of mere yachts, and that the vast sums they are now called on to pay are not being wasted on something intangible, but are supplying means of protection to them as well as the dwellers on the coasts.

Unfortunately laws do not make themselves, however just and necessary they may be, and if yachtsmen are tired of the existing condition of things they must combine and work themselves for a change. In this connection they cannot fail to be interested in a movement now under way for a most important reorganization of the departments of the Government in the establishment of a marine board which shall combine in one body the various bureaus connected with the mercantile marine. As is well known, the long existing arrangements have been of the loosest and most unsystematic description; though of no less importance than the internal affairs of the nation, while the latter have long been entrusted to a separate department, with an officer of the Cabinet at its head, the vast maritime interests, in addition to the neglect they have experienced in other ways, have been a mere detail of the Treasury Department, divided in a way that has proved most unsatisfactory in the course of long experience. The delegates from the United States to the International Marine Conference, held in Washington last winter, suggested in their report the establishment of a board to have charge and general superintendence of matters relating to merchant vessels and seamen, and in accordance with these suggestions the Secretary of the Treasury on Oct. 11, of the present year, appointed a committee to consider the subject. The report just made public contains the following proposed bill:

A BILL TO ESTABLISH A MARINE BOARD FOR THE ADVANCEMENT OF THE INTERESTS OF THE MERCHANT MARINE.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That there shall be in the Department of the Treasury a Marine Board, under the direction of the Secretary of the Treasury. The Marine Board shall consist of one of the Assistant Secretaries of the Treasury, who shall be ex-officio Chairman of the board, to be designated by the Secretary of the Treasury, and the following named officers, who shall be ex-officio members: The Chairman of the Light-house Board, the Supervising Inspector General of Steam Vessels, the Surgeon General of the Marine Hospital Service, the General Superintendent of the Life-Saving Service, the Commissioner of Navigation, the Superintendent of the Coast and Geodetic Survey, the Chief Hydrographer of the Navy. None of the members of the board shall receive any additional compensation by reason of any services performed under this act, but shall receive mileage at the rate of 6 cents per mile when traveling under official orders.

Sec. 2. The Marine Board shall meet for the purpose of organization within sixty days from the passage of this act, and thereafter it shall meet on the first Tuesday of January, April, July and October of each year, and at such other times as the Secretary of the Treasury shall direct, for joint consultation and recommendation to the Secretary of the Treasury, for presentation by him to Congress, of any changes in existing laws or enactment of new ones that in their judgment may be necessary for the protection of the interests of the Government, and the benefit and improvement of the merchant marine of the United States or for the relief of the merchant marine from any harsh or injurious laws operating to its detriment, and for the transaction of any other business that may properly come before it. The board shall, upon application, grant hearings relative to any of the above matters to any persons of practical knowledge and experience in the building, repairing and navigation of vessels, the authorized representatives of any organized bodies connected therewith, and any other persons interested in the merchant marine, or receive their statements in writing, or may, upon its own instance, take the examination of any such persons upon any of said matters.

Sec. 3. The said board shall have supervision of all laws affecting the merchant marine not assigned by law to any other branch or bureau of the Government, and the Secretary of the Treasurer shall, upon the recommendation of the board, if he approve, assign to either of the bureaus of offices under the charge of either of the *ex-officio* members of the board the execution of any provisions of law relating to the merchant marine not otherwise assigned. The board shall collect all information and intelligence available affecting maritime interests, and from time to time shall publish for the benefit of the Government and of the merchant marine so much of the same as shall be deemed useful, and all officers of the Government having in their possession at any time such information are hereby directed to furnish the same to the Marine Board when not incompatible with the public interests. The board shall also make an annual report of its operations to the Secretary of the Treasury for transmission to Congress.

Sec. 4. The board is hereby authorized to make all necessary regulations for its government and for the management of its affairs not inconsistent with law, subject to the approval of the Secretary of the Treasury.

Sec. 5. The Secretary of the Treasury shall furnish all necessary clerks, messengers, rooms for the meetings of the board, stationery, printing and other things necessary for the use of the board, the expense thereof to be paid from any moneys in the Treasury of the United States not otherwise appropriated.

Sec. 6. All acts and parts of acts inconsistent with this act are hereby repealed.

As will be seen, the change recommended is in the form of a marine board attached to the Treasury Department, and though the interests involved are of sufficient magnitude to warrant the creation of a separate department, similar to the Treasury and Interior Departments, even the partial measure proposed will be a great advance from the present state of affairs. By bringing together the heads of the various sub-departments connected with the maritime interests, the whole business of amending and enforcing the laws will be simplified, and should it follow out conscientiously the requirements of the second section of the proposed act, the new board will have little leisure time on its hands for some years to come. The creation of such a body, with the specific duties imposed on it of considering complaints against existing laws, and of providing means for their removal, offers a fitting opportunity to yachtsmen for such action as has long been needed, and in view of the probable passage of the bill it is now time to take counsel as to what changes would be acceptable to yacht owners. The matter is one in which the clubs can well afford to interest themselves this winter, and in the meanwhile we shall be glad to give space to any suggestions.

RACING IN NOVEMBER.—The last yacht race of 1890 was sailed on Nov. 21, a private match between Broncho and Sibyl, the course being from Buoy 15 around the Scotland Lightship. Broncho is a 40-footer, designed and built by Capt. Louis Tonns, and Sibyl, 35 l.w.l., was built last spring at Nyack, being copied from a Burgess boat. The former is owned by Messrs. Vredenberg and Hartley; the latter by Mr. Jerome B. King. The start was made at 9:57, Sibyl crossing first, and both running off with a W. N. W. wind with balloon jibtopsails set. These were carried to Buoy 10, when spinnakers were set to the point of the Hook, the balloon jibtopsails being carried again from there to the turn. The times at Buoy 10 were: Sibyl 11:20:05, Broncho 11:25:20. At the lightship the times were: Sibyl 1:03:00, Broncho 1:13:48. The two beat in as far as the South West Spit, there setting clubtopsails and reaching home, being timed thus: Sibyl 3:13:10, Broncho 3:29:50. Sibyl wins by 15min. 35sec.

FRANCE AND THE AMERICA'S CUP.

A FRENCH yachtsmen, Mr. Phillip Daryl, has lately contributed to the *Temps* a series of important articles on yachting as a national sport in France, in which he has urged an organized and systematic movement on the part of yachtsmen and of the national government as well, for the advancement of yachting and yacht racing. Mr. Daryl evidently realizes how great a benefit, direct and indirect, may be derived by a maritime nation from its pleasure fleet, and especially from successful, or even creditable competitors with other nations. His appeals have met with the most encouraging support from French yachtsmen, as well as from others whose interest is purely patriotic, and as a result a preliminary meeting was held on Nov. 11 at the office of *Le Yacht*, in Paris, at which the first steps were taken toward the organization of a national body whose object should be the advancement of French yachting to such a point that it can enter the field of international racing, thus far held exclusively by America and Great Britain. This body, the title of which is the Comité du Yacht Francais, will include a number of leading yachtsmen, with naval officers and engineers, and its immediate work will be the promotion of yacht building in French yards, and the building up and training of a body of yacht sailors for the formation of racing crews.

It is hardly necessary to say that a challenge for the America's Cup will form a leading feature of this scheme; but as we now understand, there is no intention of challenging in the immediate future. We believe that the promotors of this scheme are sufficiently well informed in the history of international racing to know that the present is no time for a challenge from any nation, and that even if it were, France is in no position at present to attempt the task in which England has so often failed.

The readiness of British yachtsmen to challenge again for the Cup, and the reasons which deter them, are clear enough to all who are not wilfully blind, and it would be foolish in the extreme for another nation to make a trial under conditions which British yachtsmen recognize are so unfair and one-sided as to make the defeat of the challenger a foregone conclusion.

Even if such conditions did not exist, and the America's Cup was as free as its owners intended it to be, it is only too plain that France, thus far without a victory to boast of in such international contests as she has entered against Great Britain, is in no position to throw down a challenge to a distant nation, and for a race 3,000 miles from home. Before this is possible she must win races in the Channel and in the Mediterranean, and only by earnest and laborious work can French yachting be brought to a point where a cutter of 80 or 90ft. will be a natural growth, and not a spasmodic and abnormal effort.

We have no desire to discourage this laudable attempt for the elevation of French yachting, we wish to it the success which it deserves; but such success can only come from a thorough understanding of the many obstacles, and an intelligent attempt to surmount them in detail. It would doubtless be possible at once to raise a sum of money for the construction and manning of a 90-footer, and to have her in New York by next August; but only two results could follow from such a venture, she would be defeated beyond question by the representative of the New York Y. C., and French yachting would receive a blow from which it would not recover for years. The successful advent of a new nation into the field of international yacht racing would be welcomed by both of the present contestants, and yachtsmen here and in Great Britain will watch with interest the result of the new experiment across the Channel.

CORINTHIAN NAVY.—The Admiral has appointed Messrs. Robert Center, Thomas Fleming Day and W. D. Stryker as a Board of Education. This board will carry out the new rules regarding the examination of members for certificates as seamen and navigators. The high standing of the gentlemen forming the board will add weight and value to these certificates, and speaks well for Admiral Connolly's sincerity in carrying out the new act fully and with good intent. Proposed for membership, S. M. Rewey.

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

READER, Seabrook, N. H.—We do not know the manufacturers of the gun you name.

C. F. B., Salem, Va.—The strain of the powder on the gun is not considered injurious. Its force depends very largely on the manner of loading. For table of charges and loading instructions send to the manufacturer's agents.

M. D., New York.—In an editorial in your edition of Sept. 11 you speak of a Maine game law preventing the sportsman from taking home his venison. I have understood also that there was a law forbidding the sportsman from taking home the hides and horns of any game killed in Maine, and yet I can find no such law in the *Book of the Game Laws*. Will you kindly ascertain if there is such a law and if it is enforced? Ans The law limiting the number of game animals lawfully had in possession has been held to apply to transportation companies. Deer are taken out of Maine, but as personal baggage, or packed and shipped to pass as something besides deer meat.

Names and Portraits of Birds

Which Interest Gunners; with descriptions in language understanded of the people.

BY G. TRUMBULL.

Contains the local names in popular use, and eighty-nine illustrations, which, with the clear descriptions in the text, will enable any man who can read to identify the contents of his game bag.

OPINIONS OF THE PRESS:

It is the first, so far as we know, of a class of books of which the need is felt in every department of natural history.—*Troy Press.*

To all dwellers by the water and in the country and especially all who shoot, the book will supply a great need, and every one who is interested in birds will be interested in it.—*Boston Evening Traveller.*

The book should find its way to a choice place in every sportsman's library.—*Chicago Inter-Ocean.*

There is a delightful dearth of dead languages in this book. The sportsman who looks between the covers for a description of some game bird—a description which will enable him to identify the creature should he meet it in the woods or on the water—is not compelled to shut the book, drop a bad word or two upon it and go in search of some Greek and Latin dictionaries to find out what the description means.—*New York Herald.*

WILD INDIAN LIFE.

PAWNEE

HERO STORIES AND FOLK-TALES.

With Notes on the Origin, Customs and Character of the Pawnee People.

By GEORGE BIRD GRINNELL ("YO.")

Cloth, 417 pages. Illustrated. Price $2.00.

Pawnee customs and beliefs are richly illustrated by the folk-tales and in the copious notes Mr. Grinnell gives an uncommonly spirited account of Pawnee life in peace and in war. There is an account of the defense of a Pawnee village by 200 sick men, cripples, old men and squaws, against 600 Sioux warriors, which for sheer gallantry and indomitable pluck will match almost anything in military history. The Pawnee warriors were all away at the time, and the Sioux counted upon an easy victory. But the Pawnee cripples and women actually beat them off after a hard day's fighting, and at last so terrorized them that the bold assailants fled in panic and sustained a heavy loss. Mr. Grinnell also has written a picturesque and vivacious sketch of one of the last Pawnee buffalo hunts, in which the Indians commonly reverted to primitive weapons and usages, often hunting quite naked with no other arms than their bows and arrows. A particularly interesting part of the book is that which treats of the Pawnee doctors or medicine men. The statements of Mr. Grinnell show the possession by some of these men of a kind of skill in sleight-of-hand far beyond that usually attributed to Indians; some of the facts here described are as puzzling and unaccountable as those performed by the famous jugglers and fakirs of Hindostan, while one of their tricks is a close parellel to the East Indian mango feat. . . . Those who desire to learn of the many other wonders done by the Indian doctors must refer to its pages for themselves. As it is certainly one of the best works on Indian life, legend and character that has been written for a long time, it should obtain a wide circulation.—*N. Y. Tribune.*

Holiday Gift.

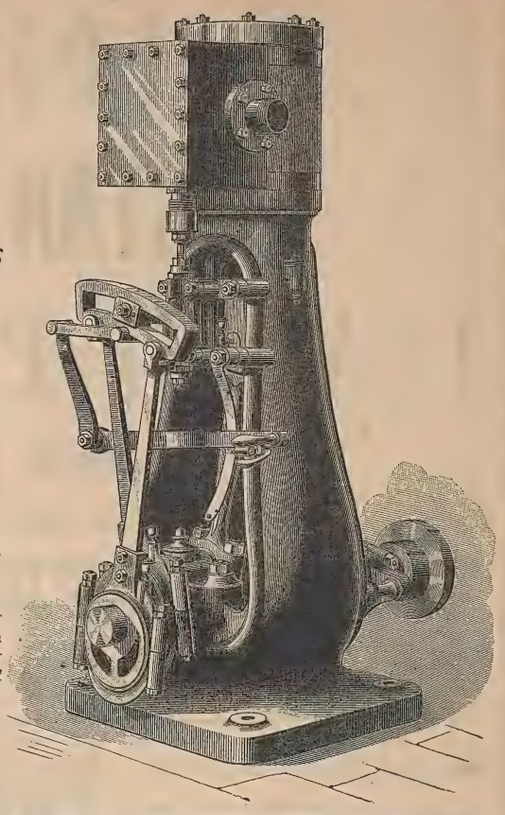
Merwin, Hulbert & Co.'s Automatic Ejecting Revolver, .32 and .38-cal., with long barrel for target shooting and short one for pocket use, interchangeable.

PRICE, $15.50.

Send 10 cents to cover postage, and we will mail you our 200-page catalogue, 10×12in. of Holiday Goods.

MERWIN, HULBERT & CO.,

26 West 23d St., New York.



Steam Yachts and Launches;

THEIR

MACHINERY AND MANAGEMENT.

A Review of the Steam Engine as applied to Yachts; Laws Governing Yachts in American Waters; Rules for Racing; Rules for Building; Pilot Regulations; Specific Types of Machinery; Design of Hulls; Etc. With 96 Illustrations.

By C. P. KUNHARDT.

CONTENTS.

Theory of the Steam Engine.
Boiler Efficiency.
Boiler Mountings.
The Engine and its Parts.
The Screw.
Laws Applicable to Steam Yachts.
Extracts from Lloyd's Rules.
Racing Steam Yachts.
Management and Care of Machinery.
Principal Types of Yacht Machinery.
The Design of Hulls.
Addenda: Tables, etc.

SCOPE OF THE VOLUME.

Few new buyers of steam yachts have more than a vague comprehension of the driving power of their vessels, and few have the time or inclination to enter upon a prolonged scientific study of the theory of steam machinery, particularly when the practical results to them do not seem proportional to the efforts put forth. This volume is intended to be sufficiently comprehensive, and elementary at the same time, to suit the yacht owner's object of acquiring a general understanding of the subject as a whole, with specific information and data covering the most recent practice.—*From Author's Preface.*

Cloth, 240 pages. Price, postpaid, $3.00.

Old Colony Trout Ponds

ESTABLISHED 1869.

Three million brook trout eggs for sale. Can be transported with safety to any part of the world. Ready for delivery December and January. Also young trout in the spring.

Unsurpassed fly-fishing in its season.

DENVER, Col., Oct. 21, 1890.

W. L. Gilbert, Esq., Plymouth, Mass.:

MY DEAR SIR—In regard to the trout eggs received from the "Old Colony Trout Ponds" I can say that the best possible results have been had from them at all of the points to which they have been shipped in Colorado. I know of no better packing than that employed by you. After a journey of nearly two thousand miles by rail and stage I have had a loss of less than 1 per cent. in a lot of 250,000. I do not want any better. Very truly,
GORDON LAND, Col. State Fish Commissioner.

W. L. GILBERT, Proprietor,

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, DECEMBER 11, 1890.

VOL. XXXV.—No. 21. No. 318 BROADWAY, NEW YORK.

CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications on the subject to which its pages are devoted are respectfully invited. Anonymous communications will not be regarded. No name will be published except with writer's consent. The Editors are not responsible for the views of correspondents.

ADVERTISEMENTS.

Only advertisements of an approved character inserted. Inside pages, nonpareil type, 30 cents per line. Special rates for three, six, and twelve months. Seven words to the line, twelve lines to one inch. Advertisements should be sent in by Saturday previous to issue in which they are to be inserted. Transient advertisements must invariably be accompanied by the money or they will not be inserted. Reading notices $1.00 per line.

SUBSCRIPTIONS

May begin at any time. Subscription price for single copy $4 per year, $2 for six months. Rates for clubs of annual subscribers:

Three Copies, $10. Five Copies, $16.

Remit by express money-order, registered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canadas and Great Britain. For sale by Davies & Co., No. 1 Finch Lane, Cornhill, and Brentano's, 430 Strand, London. General subscription agents for Great Britain, Messrs. Davies & Co., Messrs. Sampson Low, Marston, Searles and Rivington, 188 Fleet street, and Brentano's, 430 Strand, London, Eng. Brentano's, 17 Avenue de l'Opera, Paris, France, sole Paris agent for sales and subscriptions. Foreign subscription price, $5 per year; $2.50 for six months.

ANSWERS TO CORRESPONDENTS.

Readers of FOREST AND STREAM *who are contemplating the purchase of books for Christmas presents will do well to send at once for a copy of our free illustrated catalogue of publications.*

WHAT ABOUT THE PARK?

IN his report just published, the Secretary of the Interior calls especial attention to the value to this country of the forests, and urges that measures be taken for their protection. The forests of Yellowstone Park, which protect the sources of two great rivers, are especially important, and, as we have so often said, their destruction would be a public disaster. It will be remembered that the summer of 1889 was marked by terrible conflagrations in the Park, no less than seventy fires having occurred. Some of these were very extensive, and it was only through the faithful and unremitting work of his troops that Capt. Boutelle was able to prevent the burning over of a very large part of the Park. The danger to these forests is increasing each year and it is only by a strict system of policing and patrol that they can be kept under in dry seasons. The Park needs now, more than ever, a government—a law to warn the careless and to punish the malicious. All this was provided for in the bill which passed the Senate during the first session of the present Congress. This bill, however, went to the Public Lands Committee of the House of Representatives, where, as usual, it had a railroad amendment tacked on. This amendment, however, has been characterized as an outrage by most of the best papers between the Atlantic Ocean and the Rocky Mountains, and so the bill has been held in committee and has never been reported.

If anything is to be done for the National Park this session it must be done between now and March 4, 1891, and it will be interesting to see which influence is the more potent in the House of Representatives, that of the private interests which long to seize on a part of this wonderful domain which belongs to the whole people or that of public opinion as it has been voiced by the press.

In his previous annual report Secretary Noble very well expressed the way in which the self-seekers attempt to turn to their own advantage this reservation, which belongs to the whole people, when he said:

So long as this tract of country shall remain a national preserve for science, curiosity and pleasure, it will of course be an object of cupidity to the covetous, who will see or imagine countless ways in which its exhaustless wonders and resources can be turned into private advantage and who will invent many artifices to beguile and circumvent the guardians of this national treasure into granting them footholds of one kind or another whereby they can make personal gain out of this great public benefit. If it is not to be thus frittered away, deprived of its most attractive features and measurably lost to science and wonder, if not to pleasure, the best and surest way to protect it is to permit no trimming down, no incursions and no privileges except such as may be deemed absolutely necessary for its protection and regulation, and for the proper accommodation and comfort of visitors.

It is high time that the House of Representatives should pass the bill for the proper protection of the Park, and before it is passed the amendment authorizing the railroad should be cut out. This is the opinion of the Secretary of the Interior, as it is of every one who has studied the subject with an eye single to the public good. In his report he says: "The passage of the bill that is already before Congress is earnestly recommended, without the provision allowing a railroad to be built therein."

We have so frequently discussed the provisions of this bill that it is needless to go into it again. The great body of the people who know what the National Park is wish to see it protected as a matter of patriotic pride, but the preservation of the forests is a more important reason for passing the measure.

ABOUT "STRIKING COLORS."

A CORRESPONDENT, whose views on subjects relating to game protection we highly value, sends us, and we print to-day, an impassioned criticism of the FOREST AND STREAM for what he is pleased to term its "treason," as shown in two recent articles, "Serious Charges" and "On a Runway, Or in the Water?" A friend of "Saint Lawrence" told him that in these editorials this journal had "struck its colors to the netter and the hounder."

This bit of intelligence might be "important if true." It was news to us. We did not know that we had struck our colors to anybody, least of all to two classes whom we have been opposing for, lo! these many years, and shall continue to oppose to the best of our ability for lo! these many years to come.

It does not appear that "Saint Lawrence" read the editorials he alludes to before writing his letter; but manifestly he accepted as true somebody else's statement that they revealed the "treason" he denounces. If he will read them for himself, he will find as will every other intelligent person that there is in them not one word of approval of fish netting, not a suggestion of sympathy with the water-butchery of deer as carried on in the Adirondacks, not a shadow of solicitude for the gratification of the hotel man and his guest.

With respect to the deer law, we pointed out that the Adirondack landlords had in the past proved themselves powerful to shape legislation on the subject at Albany; that an efficient law forbidding killing deer in the water—because it would interfere with their patronage—would not be approved by them; and that such a law would either prove a dead letter, or in due time be repealed by the Adirondack landlord influence. Now, in such a statement of the case, there was intended to be no indorsement of the hotel men's attitude; no approval of water butchery, no satisfaction at the spectacle of the Legislature bamboozled by Mr. Paul Smith and his allies. In short, there is in the article nothing whatever to justify the meaning ascribed to it by our correspondent; and this he may discover for himself by reading it.

It is equally only by an honest misapprehension or a willful twisting of the meaning of what we have said relative to the "Serious Charges" preferred against the New York Fish Commission, that there can be discovered in these one single word in advocacy of the fish netter. Let us look at the facts in this case.

At a meeting of the Commissioners, four of the five members being in attendance, it was voted to make a change in the office of Chief Protector. The four Commissioners present were unanimously of the opinion that such a change would benefit the service. The fifth Commissioner, who was absent, did not agree with them. The Commission thus stood four to one. The one resigned; and a new Commissioner has been appointed in his place. So far from there being any "split," as "Saint Lawrence" avers, the five Commissioners are united; and not only united in a conviction that the change of Chief was wise, but united in an honest, public-spirited solicitude for the cause of game and fish protection. There is no "split." And if the "crisis" depends on a "split," there is no "crisis."

The chief offense of this journal appears to have been that when Mr. Drew was retired to the ranks we did not fall in with Mr. John D. Collins, of Utica, in his slanderous charges that the change had been made because Mr. Drew had interfered with the shipping of illegally netted fish to the President of the Commission. In the article to which "Saint Lawrence" alludes we said—and we repeat—and if there is treason in it our friends and our enemies (if we have any) may make the most of it—that until Mr. Collins shall "substantiate his accusations their acceptance will be confined to those who are ready to believe evil of the Commissioners because they do not know them; while that portion of the public, which now esteems the members of the board, honors them for their public services and trusts them as men of integrity and high character, will demand that these charges against them be proven or withdrawn. Until such proof shall be forthcoming the Commissioners will continue to enjoy public confidence."

THE AMERICAN WOODCOCK.

THE article on the woodcock, contributed to this week's FOREST AND STREAM by Mr. Gurdon Trumbull, is perhaps the most important essay on this bird that has ever been published. To the sportsman, and more especially to the sportsman who is a naturalist as well, it is as entertaining as a novel, and holds the attention from its beginning to its end. While many of the observations recorded in this article are merely confirmatory of those which have been made by others it contains several points which are entirely new and would seem to finally dispose of the vexed question as to how the woodcock whistles. Every one who has followed the literature of this subject will remember what diverse views have been held on this point, and how earnestly it has been debated *pro* and *con*, such an eminent naturalist as Mr. Brewster, with a vast number of sportsmen, taking the ground that the sound is made by the wings, while an almost equal number of writers, some of them well-known, have held that the woodcock literally, as Mr. Trumbull puts it, "talks with his mouth."

We do not recollect that any man has ever before stated that he has seen the woodcock curve up the tip of his upper mandible as recorded by Mr. Trumbull, although the bird's ability to do this was inferred from an examination of its boring holes, in a note published in FOREST AND STREAM of Nov. 6 last.

Mr. Trumbull's observations were conducted with the extremest care, and the results will delight all who are interested in shooting, or in natural history. The value of such a study of our game birds can hardly be overestimated.

It must be remembered that Mr. Trumbull is a trained ornithologist, a careful and accurate observer, and thus that his observations are entitled to much more weight than those of a man who—however honest he might be—could not weigh evidence and draw just conclusions with the certainty of a scientific man. Mr. Trumbull's important and fascinating book entitled "Names and Portraits of Birds Interesting to Gunners" has a place in every ornithological library in the country, and we doubt not in most sportsmen's libraries. It is a piece of good work, well done, and is to our mind the most entertaining book on game birds ever written.

IT is not a pleasing picture which is presented this week of the condition of affairs in Maine. The responsibility for the non-enforcement of Maine game and fish laws is rightly to be laid upon the last Legislature of that State. It was only because of changes in the statutes then made that any such outrageous reign of lawless defiance has been possible. Our correspondent has done well to write of the facts that have come to his knowledge. The exposure will accomplish its purpose if it shall lead to a movement to provide a remedy. We do not understand that the Commissioners are at fault. The defect is in the law; and it will rest with the next Legislature to make a change.

THERE are more coon hunters in this country than we dreamed of when we promised a page the other day, and there is material on hand for another page—and more too. It will be given in a week or two.

The Sportsman Tourist.

STILL-HUNTING.

A WINTER IN MICHIGAN.—I.

BY NESSMUK.

SOME 280 miles west of New York city stands the village of Corning, at which point the Corning & Blossburg Railroad intersects with the Erie Railway. Suppose, reader, if you be a dweller in Gotham and have a hankering for fresh woods mold and a natural carpet of gold and crimson—if you have a taste for the rifle and can man the breech end of one effectually—suppose, I say, you leave your ledger for a week and come to the forest with me; it is likely you may not only find pleasure, but ultimately profit thereby.

An all-night ride shall take us from Jersey City to Corning, and here we lay off just long enough for a royal breakfast. We leave Corning on the Blossburg cars and have an exceedingly pleasant ride of twenty-five miles, the country rapidly getting more mountainous and woodsy; also, it begins to wear a look decidedly suggestive of venison.

The last twenty-five miles has brought us to Berry's Bridge, and here we bid adieu to railroads, taking the "covered conveniency" called a stage, and making the next seventeen miles over a very decent plank road, to Wellsboro. Here we may as well decide on taking it easy. For the last twelve miles our road has followed a winding valley inclosed on either side by steep hills, and the face of the country has rapidly grown wilder, until, as we approach within three miles of Wellsboro, you may look off your course to the right, and see, stretching away to the westward for miles, the sharp, pine-crested ridges which inclose the valley of Marsh Creek, or, as the chart has it, "Third Fork." We are now in a game region. There is not a ridge or point in sight on which a man may not find fresh deer sign, but we will not desert the slow-going conveniency yet. Three miles further and we are in Wellsboro, a clean, quiet country village of wide streets and many shade trees. Here, as the stage goes no further, we may as well clamber out, have a wholesome dinner, and a cigar, after which we will make speedy preparation for the woods.

As for me, my knapsack is always at hand with a miscellaneous assortment of small stores ready packed, and yours—you have none? Let me tell you how to make and pack one in fifteen minutes. All country stores have grain bags for sale; buy one, and holding it perpendicularly, drop a small apple or potato into the lower corner of the bag directly under the stout strings which are fastened above; now bring the upper and lower corners of the bag together, tying the strings firmly around the latter, and you have just as good a knapsack as a hunter need carry, with this recommendation, that it may be gotten up on five minutes notice, including the time spent in purchase, and we have need to hurry. Already it is past one, and the Cedar Run "mud-jerker" starts at two with the mail and as many passengers as choose to risk the dug roads between here and Jersey shore.

As it will save us several miles of tedious walking we will chance the "mud jerker" and the dugroads; and now for the packing, and first of all the small stores. First, 4oz. best green tea, 8oz. best sweet cavendish, three or four short-stemmed clays, 1lb. butter, a broad tin cup holding three half-pints, some salt, a compass, a small towel and a bit of hard soap, match-safe, tomahawk and a light, well-made knife, 6lbs. breadstuffs of some kind—rye is best in the woods, but anything in the bread line will answer—your ammunition, blanket, and an extra flannel shirt, a flour sack which you may buy for a dime, with a yard of cotton flannel completes the outfit, and should enable you to keep the woods for a month. Envelop the butter in a wet cloth. press it firmly into the tin cup, wrap the cotton flannel around it, and drop it with the other small stores into the bottom of the knapsack. The lower part of your blanket should be double and sewed up like a bag as high as your armpits, leaving the upper portion free to be wrapped about your head and shoulders as convenience or the weather may dictate. If it be made thus, put your bread in the flour sack and the sack in the bag part of the blanket, wrap the latter snugly together and put it in the knapsack; now don the latter by putting your head and right arm through in such a manner as to bring the mouth of the bag in front, with the weight mostly bearing on the left shoulder. Not a bad impromptu knapsack, you will admit, and it weighs with its contents less than 12lbs., which, with the addition of a 10lb. rifle, is as much as an ordinary man cares to tote on a forest tramp.

But "Hi" is waiting for us, so placing our camp impedimenta in the mail wagon we jump aboard, Hi touches up the ready team and we are heading for camp at a rattling pace. The pace only holds for some five miles, however, when it becomes, for the horses, a weary, muddy drag. We are on Wilson's Creek, going due south down a narrow valley with a high mountain ridge on either side. The ridge on our right separates Wilson's Creek from Stony Fork, while the steep mountainous ridge on our left divides Wilson's Creek from Second Fork or Beaver Creek.

As we pass the last vestige of a clearing and enter the narrow hemlock-shaded valley it becomes evident that walking is easier than riding, and we take to our feet accordingly, leaving Hi to navigate the mud-jerker to the best of his ability. We are willing to pay our fare and then foot it, but we will carry no rails to pry out with.

Five miles of southing takes us out of the woods, and we bend to the last, pass around the end of the high ridge, which has loomed on our left for the last seven miles, and Hi stops in front of a wood-colored building to change the mail. We can ride no further; our route from here lies in a northwest direction, and while the mail is changing let us take the lay of the land. We have made ten miles of southing, one of easting and are now standing on the rustic bridge which spans Second Fork. To the southeast lies a mountain ridge, which terminates in an abrupt spur a mile below where we stand. Just where Second Fork sweeps its base Wilson's Creek empties, and on the lower side of the spur Stony Fork comes in—all three beautiful trout streams of from twelve to eighteen miles in length. To the southeast lies a succession of mountainous ridges, shaggily whiskered to their very brows, on each and all of which deer are yet somewhat abundant. To the eastward is a narrow valley, and down this flows the Blockhouse Run, another good trout stream; between Blockhouse Run and Second Fork is a high ridge, around the point of which the former sweeps, while the eye may trace the course of the latter for miles up and off to the northeast. Of all the many points and spurs in sight from where stand there is none more steep and rugged than the one between Second Fork and Blockhouse Run; it terminates abruptly half a mile to the eastward, and directly up that spur, straight by the jagged, pine-crowned rocks near the top, lies our route; from the highest point of it we will follow the crest of the ridge some four miles to the northeast, then leaving Second Fork to our left turn down the hill a short distance into a basin, where rises a small stream, which empties into Blockhouse Run, and in the head of that basin—at the "utmost spring" of the aforesaid stream—stands the shanty, where for a couple of weeks, more or less, we may hunt and ruralize to our hearts' content.

We will not go there to-night, however, partly because it is capital hunting on the ridge and we wish to "go slow"—partly because we couldn't get there if we tried. Neither will we stay over night at the one-horse tavern on the flat, though to do him justice, Friend Crawford gives a capital spread for a country inn. It happens, however, that we did not come here to sit in conventional chairs at civilized tables, nor to sleep in a bed, or under shingles, or for any tame or civilized purpose whatever; had we cared for such vanities, we had not left the fleshpots of Gotham and the fatness thereof. But across the cleared flat and up the point, by the huge rocks with their feathery tufts of stunted pines, up, still up, and at last we are at the summit. And now, as you are full of short breaths, sit down for a five-minutes' rest while you take a more extended survey of the country. To the east, the west, the south, far as the eye can command the view, forest and mountain; not a clearing nor a vestige of civilization in sight, save on the flat below. Could you get a view for fifty miles to the west and southwest, you would see only mountains and forests, while in other directions the clearings, though somewhat nearer, are mostly from ten to twenty miles distant. Take the hint, and should you chance to wound a deer, do not follow too fast and too far.

And now, as the edge of a mild October sun seems to touch the hazy, smoky ridge to the west of us, we will don our knapsacks again, but only for a trifling walk of some fifty rods, which brings us to the "Rock Shanty," where we are to camp for the night. You might pass the huge rock which bears the above name scores of times without suspecting the "shanty" part of it; even if you noticed the jutting shelf at the southeast end you would hardly think it might afford comfortable shelter for three or four men; it will do so, however, though, from its vicinity to the clearing, it is seldom used as a camp, save by some hunter who prefers the bracing outdoor air and the crisp balmy fragrance of hemlock browse, to a close room with the smell of feathers and cabinet ware.

At the Rock Shanty we have the three indispensable requisites for a comfortable camp, viz.: wood, water and browse. The latter is at hand among the bushy young hemlocks, there is a clear, cold spring in a tiny basin some 20yds. east of the rock, while several uprooted hemlocks of huge dimensions will furnish an abundance of thick, resinous bark, than which there is nothing better for a camp-fire. An hour's busy work with the camp axe and tomahawk gives us an abundance of feathers, and a rousing fire built with green beech sticks, chinked in thickly with dry bark. While the fire is giving out its bright, crackling blaze, let us get out and overhaul the knapsacks; first, take the bread from the flour sacks and envelope it in a newspaper. then take the butter out of the cups, lay the former on the rock away from the heat and fill the latter at the spring, setting them to boil while we get out the tea and slice some bread. When the water boils very hard (not before) take the cups from the fire, let them stand a minute to cool, then add the tea, and putting them back again, let the tea boil fiercely for one minute, take quickly away from the fire and smoke and your tea is made as well as the best French cook could do it.

Much of the discomfort experienced by tyros in camping out comes of not knowing "how to do it," rather than of necessity; there is, as a rule, no need of drinking tea that tastes like a mild infusion of creosote, nor of catching cold through sleeping with your back to the damp earth, nor of tiring yourself out the first day, nor of making yourself miserable and sick in any way or manner whatever. One suffers enough in the clearings—especially in villages and cities—let us at least enjoy freedom in the forest for the few weeks or months it may be permitted us to sojourn therein. Wherefore, having finished our simple meal, let us put the flour sacks to use by filling them with fine picked browse and making pillows of them; not a bad idea you will admit after trying it one night, also, you will find that it pays to spend an hour in picking an extra quantity of browse and arranging the camp so that you are morally sure of a healthful comfortable night's rest. It does one no harm to get well fatigued through the day, but to enjoy the sport one must fairly recuperate his exhausted energies by a good rest at night and rise from his bed of browse in the morning fresh and lively.

And now that we are snugly settled for the night, with the pipes drawing to perfection and the fire burning so cheerily that even I, who delights to poke a camp-fire, am content to let it burn in peace, how shall we pass the hour or two that intervenes between supper and bed time? Shall we spin yarns? Content, though to say truth I have spun them so often that I begin to tire of them myself. Suppose I discourse of a trip that Neil Miller and I once took to the Muskegon in search of sport and adventure—not that anything wonderful in the way of adventure or sport ever came of it, but somehow my mind reverts to that trip more frequently than to any one of the many I have made; also it was "the turning point in life" for one of the parties and came tolerably near being the turning point out of life for the other. We have a spare hour on our hands, let me perforate your patience with a drowsy yarn.

Ned Miller and myself were hunting chums and sworn friends for years. We are friends yet, though Ned hunts but seldom, having "of his own domestic cares" to a pretty considerable extent (*i. e.*, a wife and seven children. It is nine years this blessed autumn since Ned and I climbed the point and stopped at the Rock shanty on our way to the head of Bear Run. All through the long hot summer we had looked forward to the time when the first autumn frosts should have made hunting pleasant as well as practicable and legitimate. Often on a hot summer's eve had we met to discuss the merits of various localities, finally agreeing on the vast forest region lying in the southeast portion of Tioga county as affording the best promise for still-hunting; and just at sundown of a glorious October day we unslung our knapsacks at this very Rock Shanty. Hardly had we got a fire started, when we were joined by Sam Hoover, a man whose life was passed almost entirely in the woods, and who was usually conceded to know more of the deer's habits than any hunter in the country. He had been prospecting the swamps about the head of Bear Run and thence to Little Pine Creek, with the intention of hunting and trapping through the fall and winter, but had "found the sign so sca'ce that he was goin' to peg out for the West. Anybody could have his chances in them woods 'at wanted 'em. He knowed a place in Gratiot county, Michigan, whar ther' *was* bar, an' no mistake. He was jest goin' to tote his plunder out thar, and the devil might hunt Tioge county for him. He had hunted a week an' only got one shot—a runnin' shot at that."

This put a new face on our pet project. If old Sam couldn't kill a deer in a week's hunt we might as well subside on the venison question, and after several conference pipes we decided to take the back track in the morning, go home, take three or four days in which to get a good ready, take our guns, traps, camp equipage and selves to Buffalo, thence to Canada or Michigan as the spirit might move us, and spend the entire fall and winter months in the depths of the forest. That would be something like hunting we both said and thought. In the morning we ate what we wished of our provisions, gave old Sam the rest (he seemed mighty tickled at the gift, somehow), and pulled out for home, where we got laughed at "consumedly," but we kept our own counsel and quietly made our little arrangements for a rather protracted absence.

Now, it frequently happened that it became necessary to confer with Ned concerning said arrangements, and I always had to go over to his mother's for the purpose of finding him. It further usually happened that Ned wasn't at home, but was to be found half a mile further on at the widow Needham's. The widow was a decidedly good looking, well-preserved woman of thirty-six, and her daughter Hannah was a rustic beauty of the first water. Round and shapely about the waist, plump in the bows, a clear, rosy complexion and good teeth, with a dark, wicked looking eye, she was well calculated to upset the mental equilibrium of soft-hearted fellows, such as Ned was at that time. Moreover, she had an appetite, and wasn't ashamed to eat—a good sign of common sense in a young woman, as you may have had occasion to observe. She had a pleasant knack of getting good dinners, too, and was not ashamed of that, either. On the whole, few families got along more pleasantly or comfortably than the widow Needham's, consisting of herself, daughter, and a hired man, one Jonas Sprague from "C'netticut," as he always pronounced it. There was no good reason why the widow and her lively daughter should not get on comfortably and enjoy life to the utmost. They were industrious, healthy, had the good will of the whole country side, and were "well-to-do." Also, they were both indisputably good-looking, and never quarreled. At church you would have taken them for sisters rather than mother and daughter, and premising that matrimony is a predestined and necessary evil (which admits of a doubt) a man might have been excused for falling in love with either, or both.

Deacon Needham, peace to his manes, had made his advent into this wicked world somewhere in Connecticut, had there learned to tan and curry hides and skins, had worked faithfully at it until the age of thirty, at which time he was the possessor of fifteen hundred dollars and a deaconcy in "the Fuust P'esbyteeian Chuuch," as the Connecticut Yankees (who can't sound an r in the middle of a word, though they think they can) usually pronounce it. About this time the deacon's mind became sorely exercised on the high and increasing price of bark—a subject that lay near his heart—and he thought long and deeply on it. The result of his cogitations was, that although bark would not bear transportation, hides and leather would. So the deacon turned his worldly possessions into hard cash, bestrode the ewe-necked old mare that had been the motive power of the bark mill for ten years, and taking his papers from the church, wended his way westward. Land, particularly hemlock land, was cheap on all the upper streams of the Susquehanna at that day, and the deacon bought 300 acres, erected a tannery, sent for his man Jonas, who was then a youngster of sixteen, put out a sign offering "Cash for Hides and Skins," and settled quietly into a thrifty, paying business.

Nearly twenty years of the deacon's life had been passed away in improving his land, enlarging his business, and attending to his social duties like a good citizen and a Christian, when his man Jonas, now advanced to old bachelorhood, received a letter from a niece in the land of wooden nutmegs requesting information as to the chances for a school teacher, or, the letter added, a good housekeeper. She could keep house, teach school, sew or weave. Inclosed was a recommendation from the minister setting forth the good qualities and piety of Hannah Sprague, and declaring her "capable of managing a school, a dairy, or a well ordered household." A pretty strong recommendation for a damsel of seventeen summers, and as it turned out a well-deserved one. Jonas conferred with the deacon and showed him the letter. Now the deacon had, like a true Yankee that he was, built a large shingle palace as soon as the state of his finances would warrant it; for more than twelve years he had "kept house," and one of his chief troubles had been the difficulty of obtaining and retaining the proper sort of person as housekeeper. It seemed to him that the handmaid could not do better than to come on at once and take charge of his household matters, in which case the deacon could promise her good home, and he even hinted something about being a father to her, should she prove equal to the minister's recommend. Jonas wrote back accordingly, and in due course of time arrived at

the deacon's fine mansion, *imprimis*, the handmaiden, Hannah Sprague, rosy, blushing and neat; *item*, one bandbox; *item*, one hair trunk. That was all.

Goody Brown, who had mis-kept the deacon's house for a year, and whom Jonas irreverently styled an "old gnawpost," was discharged at once, and the tidy, quiet Hannah installed as mistress of the house. No plumper, whiter hands were ever seen mixing bread or working butter; no prettier turned arms or ankles ever gladdened the eye of a deacon (supposing deacons ever notice such trifles, which they probably don't), and no lonely deacon's ear was ever cheered by the dulcet notes of Old Hundred from a sweeter voice than Hannah's.

Why spin it out? I am not writing a novel, and the reader has already guessed the sequel.

At the end of a year people had begun to surmise that Hannah Sprague was "settin' her cap for the deacon," when, one fine June morning, the deacon and Hannah put a sudden stop to all further scandal or surmise by standing up in church and being duly married. People talked, of course; they always will. Slatternly mothers with frowsy daughters who would have jumped at the chance of sharing the deacon's bed and board, declared that it was a shame; "a young gal like that to marry a man old enough to be her father, 'cause he had property!" Three old maids of the most husky and primitive pattern left the church and went over soul and bones to the Wesleyans, because they "couldn't conscientiously countenance any sich venal proceedin's;" the truth being that each one of them had been making a dead-set at the deacon any time for the last ten years. On the whole, however, the marriage made less talk than such marriages usually do in a country town, and the deacon took it all so meekly. His youthful, pretty wife took to her new honors so naturally, and everything went on so much after the old style, that, after the conventional nine days were past and each had had his or her say on the matter, people began to see that it was not such a misalliance after all. For my part, I think the marriage was a right and proper one for both parties. If the deacon could become the possessor of such a nice, thrifty piece of calico through being able to support, protect and care for her, it was a fair reward for a life of probity, industry, and self-denying economy. And, on the other hand, if the habits of industry, prudence, cheerfulness and virtue, which had been instilled in the soul of the pretty Hannah, could win a virtuous, upright, truth-loving man for a helpmate—a devoted, doting, well-to-do husband and a most comfortable home—I, for one, think the investment not such a bad one.

I know such things are of a past age—people don't marry for money or position nowadays—not at all. The accomplishments taught at modern boarding schools are doubtless of a nature to add to the comforts of a home and the happiness of a husband in a far greater degree than any old-fashioned out-of-date skill in the vulgar matters of cooking or prudent housewifery. Frederick Augustus is above a low hankering for well-brewed coffee with his morning steak, and Laura Matilda, fresh from boarding school, doesn't own to an appetite at all. Pity that they could not subsist on sentiment and moonshine, and that the appetite should recur sometimes when there is not even bread wherewith to satisfy them.

The deacon and his young wife were not troubled with sentiment—or the want of bread. He was a shrewd matter-of-fact man, and she proved herself a smart, capable woman. The quiet, but resolute and decided manner in which she assumed control over all household matters was well calculated to silence opposition or complaint had there been any, but there was none. The husband was but too glad at being relieved from the cares of indoor arrangements, and as the wife never meddled with outdoor affairs or offered anything that looked like hen-pecking it was no wonder they got on in a pleasant, amicable manner.

Five years after the date of the marriage one of those little accidents which are usually ludicrous, but sometimes serious, happened to the good deacon while working overhead in the tannery. He had taken up a rough loose floor and was replacing it with a better, when, happening to step on the end of a board he was suddenly dumped into one of his own vats—not necessarily a serious affair, as the vat was nearly full of water and hides, but, unfortunately, the adze with which he was working preceded him, and when he scrambled out of the vat the blood was spouting from a ragged gash in the neck—spouting in dark purple jets which kept time in ghastly unison with the pulsing of the heart.

Long ere the doctor could be summoned the deacon was gone and Hannah Needham was a widow; a widow, but not childless, for, in little more than a year after her marriage, Hannah had given birth to a female infant, which I, the present veracious narrater, recollect having seen when it was a few weeks old, and thinking it decidedly the reddest, ugliest little squab my eyes had ever rested on. And this little squalling, ill-looking lump of humanity had grown up to be the rosiest, freshest, smartest young woman in all the country round-about. It seemed but yesterday since she was a little chubby thing of six years, and now she was setting up for herself as a belle and heiress; dressing, doubtless, with an eye to masculine approbation and playing the deuce with such soft-hearted spoons as Ned, who was evidently "head over heels" in love with her.

Deacon Needham had, like a thoughtful, prudent deacon as he was, made a will, in which he had left his young wife the use of the property during her "natural life," to revert at her decease to the younger Hannah. There were no churlish restrictions in the will, but the young widow had been left free to manage her affairs—matrimonial or other—in any way she might choose. Like a sensible young widow as she was, she had chosen to remain single, and had managed the large farm and tannery so well as to have improved the value of the very pretty estate left in her charge. Now, it was but reasonable to suppose that the young and handsome widow would have any number of chances to change her state and name, and, sooth to say, numerous wooers, most of them respectable and some of them wealthy, had paid suit to her charms during the first six years of her widowhood. They had all, however, been steadily and persistently refused, until at last people came to understand that the widow rather preferred her independence and power as mistress of the Needham estate to the soft blandishments of any masculine whatever. It was understood likewise, for the widow had intimated as much, that any likely young fellow who succeeded in winning the younger Hannah to wife would have the use of the estate during the life of the blooming "relict," with the most sanguine prospect of reversion. In the country, where few of us ever get very rich, this made the youthful Hannah rather an heiress, and, as nature had made her a beauty beyond all dispute, it is little to be wondered at that she should cause a commotion beneath the vests of rural Brummeldom.

Thus stood matters at the time Ned and myself were to start westward on a hunting tour. We had arrived at home from the Rock Shanty on Wednesday, and were to set out on the following Monday for an all-winter hunt. So, to make sure that Ned was all right and ready, I stepped over to his mother's on Sunday evening. He was not at home, but as his sister Kate said, "Over to the widow's, as usual." Over to the widow's I went, and I found not only Ned, but one Mr. Enoch Daniels in the field. Enoch was a Vermonter and a most inveterate inventor; he had a penchant for patents and had taken out three of them before his twenty-first birthday, one of which had netted him several hundred dollars. Some nations have a genius for painting; others for music; others for poetry or sculpture. History will decide that the New Englander has a genius for machinery—the intricacies of belts, eccentrics and drums; the complications of cogs and the perplexities of pinions are to him a simple sum in addition, while he reduces the multiples and multipliers of speed and the rule of three. He can poetize too, after a hard, dry fashion, can your genuine Yankee; but poetry is not his forte; his specialty is edge tools and machinery.

It happened that Enoch had invented and patented a "power wheel," as he called it, and his ostensible business at the widow's was to dispose of a "right" to use one of his wonderful wheels in the tannery, a project which Jonas Sprague, who had grown to look on himself as part and parcel of the tannery, had been induced to look upon with favor. So Enoch had made his appearance on the previous Friday with a two-horse load of implements and "fixin's," had gone to work forthwith and was fairly installed at the widow's until the job should be completed. As Enoch's "folks" were old acquaintances of the Spragues and known to be respectable, pious people, it was no wonder the widow received him kindly and invited him to make her house his home so long as he might sojourn in the country, an offer he was not backward in accepting, and one which was evidently much to his taste, whatever Ned Miller might think of it. The latter did not appear to view the arrangement at all favorably, but sat sulky and sullen in the corner while the two Hannahs joined Mr. Daniels in singing "Greenland's Icy Mountains," "Days of Absence" and "When Shall We Three Meet Again." Undoubtedly the course of true love wasn't running any too smoothly with Ned, and I am sorry to say I took a malicious pleasure in joining the party for the purpose of playing into Enoch's hand, to the confusion and distress of Ned, who scowled most savagely at all of us and was in a detestable state of jealousy that greatly amused the widow, who, I could see, with difficulty kept from laughing outright. I could not help thinking that he was not only savagely jealous of Enoch Daniels, but also looked on my visit with distrust. I, who, as he ought to have known, would not relinquish the rifle and tomahawk for any angel in calico that ever wore gaiters. What did I care for his inamorata? Had I not lived within two miles of her for years without caring a straw for her beyond the natural and involuntary admiration we all feel for a handsome young woman? What was the love-sick spoon thinking of? Not of hunting, certainly; for it was with difficulty that I could get him to converse about our intended hunt at all. Nevertheless, he contrived to put in a sulky appearance early on Monday morning, and, "with much heartfelt reluctance be it said," put his traps on board the stage, followed them himself, took a rather lugubrious leave of his friends, and started off much as though he were going to the gallows.

THE STORY OF TWO SHOTS.

A BOY of fourteen, alert, but too full of life to move slowly and cautiously, is walking along an old road in the woods, a road that winds here and there with meanderings that now seem vagrant and purposeless, but once led to the various piles of cordwood and logs, for whose harvesting it was hewn.

Goodly trees have since grown up from saplings that the judicious axe then scorned. Beeches, whose flat branches are shelves of old gold; poplars, turned to towers of brighter metal by the same alchemy of autumn, and hemlocks, pyramids of unchanging green, shadow the leaf-strewn forest floor and its inconspicuous dotting of gray and russet stumps.

How happy the boy is in the freedom of the woods; proud to carry his first own gun, as he treads gingerly but somewhat noisily over the fallen leaves and dry twigs, scanning with quick glances the thickets, imagining himself the Last Mohican on the warpath, or Natty Bumpo scouting in the primeval wilderness.

Under his breath he tells the confiding chickadees and woodpeckers what undreamed of danger they would be in from such a brave, were he not in pursuit of nobler game.

Then he hears a sudden rustle of the dry leaves, the *quit! quit!* of a partridge, catches a glimpse of a rapidly-running brown object, that on the instant is launched into a flashing thunderous flight.

Impelled by the instinct of the born sportsman, he throws the gun to his shoulder, and scarcely with aim, but in the direction of the sound, pulls trigger and fires.

On the instant he is ashamed of his impulsive haste, that fooled him into wasting a precious charge on the inanimate evergreen twigs and sere leaves that come dropping and floating down to his shot, and is thankful that he is the only witness of his own foolishness.

But what is that? Above the patter and rustle of falling twigs and leaves comes a dull rebounding thud, followed by the rapid beat of wings upon the leaf-strewn earth. With heart beating as fast he runs toward the sound, afraid to believe his senses, when he sees the noble grouse fluttering out feebly his last gasp.

He cannot be sure that it is not all a dream that may vanish in a breath, till he has the bird safe in his hand, and then he is faint with joy. Was there ever such a shot? Would that all the world was here to see, for who can believe it just for the telling?

There never will be another such a bird, nor such a shot, for him. He fires a dozen ineffectual shots at fair marks that day, but the glory of that one shot would atone for twice as many misses, and he need not tell of them, only of this, whereof he bears actual proof, though he himself can hardly accept it, till again and again he tests it by admiring look and touch.

Years after the killing of grouse on the wing has become a matter-of-course occurrence in his days of upland shooting, the memory of this stands clearest and best.

Sixty years later the old wood road winds through the same scene, by some marvel of kindliness or oversight, untouched by the devastating axe, unchanged but by the forest growth of half a century and its seemly and decorous decay. A thicker screen of undergrowth borders the more faintly traced way. The golden-brown shelves of the beech branches sweep more broadly above it, the spires of the evergreens are nearer the sky and the yellow towers of the poplars are builded higher, but they are the same trees and beneath them may yet be seen the gray stumps and trunks mouldered to russet lines, of their ancient brethren who fell when these were saplings.

The gray-bearded man who comes along the old wood road wonders at the little change so many years have made in the scene of the grand achievements of his youth, and in his mind he runs over the long calendar to assure himself that so many autumns have glowed and faded since that happy day. How can he have grown old, his ear dull to the voices of the woods, his sight dim with the slowly but surely falling veil of coming blindness, so that even now the road winds into a misty haze just before him, and yet these trees be young and lusty?

As they and the unfaded page of memory record the years, it was but a little while ago that his heart was almost bursting with pride of that first triumph. Would that he might once more feel that delicious pang of joy.

Hark! There is the *quit! quit!* of a grouse, and there another and another and the patter-rustle of their retreating footsteps, presently launching into sudden flight, vaguely seen in swift bolts of gray, hurtling among gray tree trunks and variegated foliage.

True to the old instinct his gun leaps to his shoulder, and he fires again and again at the swift target. But the quick eye no longer guides the aim, the timely finger no longer pulls the trigger, and the useless pellets waste themselves on the leaves and twigs.

The woods are full of grouse, as if all the birds of the region had congregated here to mock his failing sight and skill. On every side they burst away from him like rockets, and his quick but futile charges in rapid succession are poured in their direction, yet not a bird falls, nor even a feather wavers down through the still October air. His dim eyes refuse to mark down the birds that alight nearest; he can only vaguely follow their flight by the whirring rush of wings and the click of intercepting branches.

He is not ashamed of his loss of skill, only grieved to know that his shooting days are over, yet he is glad there is no one near to see his failure. He makes renunciation of all title to the name of a crack shot, too well knowing that this is no brief lapse of skill, but the final, inevitable falling off of the quick eye and sure hand.

Slowly and sadly he makes his way to where the shaded path merges into the sunny clearing. There, from the cover of the last bush, a laggard bird springs as if thrown from a catapult, describing in his flight an arc of a great circle, and clearly defined against the steel-blue sky.

Again the gun springs instinctively to the shoulder, the instantaneous aim is taken well ahead on the line of flight, the trigger pressed in the nick of time, the charge explodes, and out of a cloud of feathers drifting and whirling in the eddies of his own wing-beats, the noble bird sweeps downward in the continuation of the course that ends with a dull thud on the pasture sward.

The old sportsman lifts his clean-killed bird without a thrill of exultation, he is only devoutly thankful for the happy circumstance which made successful the last shot he will ever fire, and that not as a miss he may remember it.

Henceforth, untouched by him, his gun shall hang upon the wall, its last use linked with the pleasant memory of his last shot.

ROWLAND E. ROBINSON.

DUCKS ON THE POTOMAC.

Editor Forest and Stream:

I made a little flying trip on Nov. 28, of about 9 miles down the Potomac, as far as Broad Creek, to look for ducks and quail. The only ducks that were at all plentiful were the butterballs (*Charitonetta albeola*) and they were as wild as deer. I saw only two black mallards, or black ducks (*Anas obscura*), and about a half dozen stiff-tails, or pintails (*Dafila acuta*). No decoys were on the river between Washington and Fort Washington for the reason that the ducks had all been driven off by the big-guns, steam launches and Sunday shooting. The unlawful means, however, had been temporarily withdrawn on account of the cruise of the Maryland police boat as far up the river as Fort Foote, in search of these type of law-breakers. A fine king rail, "as fat as butter," fell to my gun in Broad Creek. The head was shown to Mr. Ridgway, ornithologist of the National Museum, so there is no doubt about the identification, although I have rarely seen the species in this locality. Quail were moderately common, but they had been forced into the marshes, and I saw a gunner wading after them with rubber boots and picked up one of his dead birds with the help of my boat. This is an unexpected development in quail shooting and one which I should not enjoy.

WASHINGTON, D. C.

THE FREE LUNCH MAN AGAIN.—Golden City, Mo., Dec. 3.—The following was clipped from last week's *Lamar Democrat:* "A number of farmers are advertising by signs posted on their fences, 'No shooting allowed on this farm.' In some parts of the county the owners of the land have a monopoly of the fowls of the air and the fishes of the stream. In strange contrast with this sign is that of a farmer living near Verdella; it is as follows: 'Shooting allowed on this farm. Warm dinner at 12 o'clock'." If there are any reserved seats in Heaven that granger will have one with an extra cushion on it. —R. W. A.

A BOOK ABOUT INDIANS.—The FOREST AND STREAM will mail free on application a descriptive circular of Mr. Grinnell's book, "Pawnee Hero Stories and Folk-Tales," giving a table of contents and specimen illustrations from the volume.—*Adv.*

Natural History.

THE AMERICAN WOODCOCK.

Editor Forest and Stream:

I have read with peculiar interest, and sometimes with great surprise, the articles that have appeared in your paper concerning the "ways of the woodcock," about which such diversity of opinion exists. The details of the many theories advanced, the various "facts and fancies" need not be entered into here. Your readers must have become already very familiar with the literature of the subject—not to say weary of it. I have earnestly wished for an opportunity, such as I have lately had, of more thoroughly investigating the bird's manner of feeding, its notes, etc.

On Wednesday, Nov. 19, a live woodcock was brought me by a friend. It had, I was told, been already "three or four days" in confinement. It was apparently unhurt, and a perfectly strong, healthy bird, and remained so until the following Monday, when, with my full consent and best wishes, it flew rapidly away. I kept it in a long pine box with a wire netting in front, at a greenhouse near by, where in a bright light I could easily watch its movements. A piece of carpet, however, was thrown over one end of the coop to afford the little fellow a shady retreat. He came into my possession about 11 o'clock in the morning, and from that hour until 11 A. M. Monday, the day of his release, I devoted myself almost exclusively to studying his ways. He ate, by actual measurement, about a half-pint of earth worms during each day (twenty-four hours); the worms being measured without any dirt, of course; each one picked up by itself, shaken clean, and dropped into the measure. A few "white grubs" of different sizes were also supplied: he ate the little ones but refused the larger. None of the angle worms, however, seemed too large for him.

The worms were kept at the brightly lighted end of the coop in a box of earth which afforded a feeding surface of a little over 12x6in., the earth having been flattened down with the hand and sprinkled with water. He fed at very irregular hours, and ate fully as much by daylight as in the dark, and food was accessible to him at all times. I say "him," believing that this bird was a male, but I could not bring myself to determine the matter by dissection—he was such a winning little creature.

The intervals between his meals were perhaps from half an hour to three hours, this very rough estimate being founded upon the day and evening feeding. I did not watch him so constantly during the evening as I did in the daytime. I visited him, however, every evening once or twice, sometimes making him a long call by the light of a lantern. All that I know about the remainder of the night and the early morning was gained by re-measuring the worms and finding how many were gone.

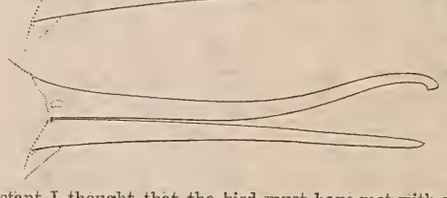
After eating all he wanted—from four to seven worms, let us say—he would sometimes retire to his shady corner, at other times stand or squat exactly where the last worm was swallowed, remaining motionless until moved again by hunger. He took no exercise unless forced to, and was often found with his big head turned backward and his long bill beneath his wing. A dish of water was always by his side, but I never saw him touch it.

I will add to my estimate of the number of worms eaten at a single meal, that there were certain occasions in which he quite regularly ate less than three; for example, when friends or mine called, as many did, to see the bird. I could start him to "boring" by driving him about the coop very gently. He would then get upon the dirt, and with very little of the preliminary teetering, which I describe further along, make a few rather short, hasty, nervous thrusts, and finally extract and swallow a worm—at the most two worms—not hungrily at all, but rather as if he were trying to make sure of a little more of his property before we stole it. He never (to my knowledge) picked up a worm that lay upon the surface, or any worm that was not entirely covered with soil. I have several times seen him walk directly over those that were exposed without paying them the least attention. Once a worm that he had extracted slipped from his bill and lay squirming about in plain sight, but he made no effort to recover it.

His manner of feeding was very nearly like that of Mr. Eldon's woodcock, mentioned in your issue of Nov. 27, 1890, but as corroboration is always a good thing—and my bird did not act precisely like his—I will include my own observations. I am writing in the past tense, but my narrative is a summary of copious notes made daily while the bird was with me; in no instance am I trusting to memory.

When hungry my bird would walk out of his dark corner and step up, or hop up on the wet earth, stand there usually for a short time motionless, then slowly and methodically teeter or swing himself up and down as if trying to throw his fullest weight upon his feet (but I will speak of this further on), then, generally without any preliminary pecking, thrust his bill into the mud, sometimes two-thirds its length at the first trial, but oftener pushing it in by degrees a third of its length perhaps at a time, pulling it a little outward again to give the next thrust greater force, and when probing deeply there was a rooting shake or energetic tremor to the head. If he found a worm—and he almost always did, they were planted so thickly—the bill was entirely withdrawn with the worm held more or less crosswise between the partly opened mandibles; it was quickly worked around, however, until one end—it made no difference which—was started straight and then swallowed. I never saw him pull out a worm by its end, its position always had to be changed, a little at least, before it was worked upward and the swallowing really began. While watching, my eyes were usually within three or four feet of him, and often—after he had become more tame—within eighteen inches of his bill. Sometimes after a momentary and thoughtful pause, he would suddenly pull his beak from a hole that he had made, and hurriedly start another very near it, as though he had located the fellow while in the first hole, but could not quite reach him.

Though no one will claim that all the birds of any species conduct themselves precisely alike upon all occasions, yet it now seems entirely reasonable to infer that no woodcock ever sucks a worm into its throat before withdrawing its bill from the ground; that the term "bog-sucker" is a misnomer, and that Audubon would not have "concluded" as he did, had he not watched his woodcock in a "partially darkened" room.



After a worm had been swallowed there was commonly a decided pause during which the bird remained motionless—from forty-five seconds to three minutes let us say—then the preliminary teetering began again. I never saw him "cock his head on one side" in the act of listening, and though he once made a quick little backward jump while feeding, I saw no "dancing" or "stamping." While the teetering was going on both feet remained upon the ground, and his wings were at all times closely folded while standing or squatting, and though while moving quickly or excited his tail was lifted, I never saw it spread while the bird was on his feet.

Whether this preliminary teetering or swinging lift and fall of the body was to cause the worm below to move and thus reveal its whereabouts, or whether the bird was simply pulling himself together for the muscular effort that was to follow—as a boy swings his arms and body before jumping—remains an open question; but the movement was more vigorous when it followed one of his long periods of statue-like repose. A very mild form of the teetering often preceded an evacuation.

When, as sometimes happened, a worm which he had extracted squirmed into a position that seemed to baffle the powers of the bill alone he would lift his foot—as others have described—in an impatient manner, brush it quickly along the side of the bill and knock the worm into place. He also used his toes to wipe the mud from his beak; but I regret to say that my little woodcock was sometimes very careless about his personal appearance, and that he once sat for nearly an hour with a large lump of mud resting on the upper mandible and the pretty feathers of his forehead.

He had no particular position for his feet while feeding; at one time they would be side by side, at another time one or the other would be advanced. His thrusts were made at all sorts of angles; now directly downward or perpendicularly, another time to the front at an angle of forty-five degrees perhaps, or inwardly beneath his breast, almost as far back as his toes. Once while probing in the last-named fashion he lost his balance and was very near turning a forward somersault.

I had heard from Dr. S., who secured this woodcock for me, that he and his friend Mr. B. had seen the bird turn up the end of its upper mandible in a very peculiar and inexplicable manner. I was urged to watch carefully for a repetition of the occurrence. At the time I paid but little attention to the statement, I was watching for so many other events, but while carrying my bird out into the country that last day of its confinement, my friend's remark was most vividly recalled. I was holding the bird in my hand with a handkerchief around him, covering all but the bill, when suddenly, as he was making one of his frequent struggles to get away, I saw that the upper mandible was thrown upward as I have represented it in the lower outline of the accompanying woodcut. For an

instant I thought that the bird must have met with an accident in some way, but as I touched the lifted mandible it was lowered to the usual position. Twice more during my walk he threw up the mandible in the same fashion, and each time I held him directly in front of my eyes and studied most carefully the exact curvature. There was no "dilation," nor any change of form other than that which I describe. He once held the bill in this strange position for nearly, if not quite, half a minute.

After liberating my captive and reaching home, I immediately procured a woodcock that had been recently killed, and found that I could easily curve into the mandible into the precise position into which my live bird could curve his own at will. Though my outline was made from the dead woodcock, it was drawn while the aspect of the live bird was thoroughly fresh in my mind (within two hours after I had witnessed the occurrence). For the purpose of comparison I have also drawn the bill as it is commonly seen.

During the first day with me my bird made no sound of any kind, and was somewhat frightened or depressed, though not as much so as most birds would have been under the circumstances—the woodcock is one of the most gentle and trustful of birds, as every one knows, and so many have testified—but on the following morning he seemed quite reconciled to his surroundings, and but little disturbed by my reappearance. He was so much at home, indeed, that when I reached my hand for the worm box he did not move away as he had done before, but stood his ground manfully, uttering two very positive notes of remonstrance. At this point of the proceedings the owner of the greenhouse (Robert Marchant), who was standing about ten feet from the cage, jumped for the outside door with the exclamation, "Wild ducks going over—don't you hear 'em!" I quickly motioned him to be silent and to come nearer; and when it uttered a few more notes, more squeaky than the first, Robert, who little knew what important evidence he was bearing, said: "That's the noise they make when they jump up in the woods. It sounded before like ducks a long way off."

From that morning (Nov. 20) until I gave the bird its freedom (Nov. 24) I could call forth these or similar notes, day or evening, whenever I chose to do so, and more and more easily as the bird grew tamer, by simply putting my hand into the coop and moving it very slowly and hesitatingly toward him. The notes, though having decidedly similar qualities, varied from an almost dovelike murmur to a positive and almost ratlike squeak. They were sometimes uttered singly and sometimes two or three in succession.

The bird created quite a sensation locally, and a number of sportsmen came to see and hear him, and all these gentlemen agree with me that the notes heard, or rather some of those notes, were undeniably the sounds which have caused so much discussion—the sounds, that is to say, which are made by the flushed cock, and to which the words squeal, whistle, piping alarm note, twitter, jingle, etc., have been applied.

While my bird was "talking," there was not the least movement of the wings nor of the bill, the mandibles remaining tightly closed. The only movement anywhere, with the exception of a very slight drawing backward as my hand advanced, was in the throat or breast; it is impossible to say which, as the bird rarely showed any of his neck while in the coop. He sat, stood, walked and hopped with head drawn in to the shoulders, his breast touching or nearly touching the base of the bill.

The notes were seldom so loud or energetic as those of the flushed bird, nor were most of them like those heard in the cover. Yet at almost every trial there was at least one squeaky enough to be regarded as very nearly the sound we were listening for, certainly enough like it to convince any doubter who happened to be present, that a flushed cock "talks with its mouth."

Some of the notes seemed absolute reproductions of those of the flushed bird as we remember them; it is, of course, impossible to recall them literally enough for nice comparison, no matter how often they have thrilled us. Once as I held the bird pinioned in my hand he made a violent and almost successful struggle to free himself, uttering at the same time two notes so thrillingly like those of his wilder brother that for an instant I was really unconscious of my surroundings, and the words "mark cock" were very near my lips. I have listened many times while my bird was flapping his wings, as I held him (sometimes by the bill and sometimes by the legs) suspended in the air, for those sounds which certain writers have mentioned as being heard at such times. Once—and once only—in over twenty trials I heard two very faint peeps. Upon all other occasions there was no sound but that of rapid fanning, and when the motion was at its highest the cutting *whit, whit, whit* of the wings that would be made by many kinds of birds under similar conditions. The two *peeps* (I do not know how better to describe them) were the only doubtful sounds that the bird was heard to make. They were so very faint that my friend Mr. N., who was with me at the time, heard only one of them, and our heads were as near the bird's wings as we could get them without being hit. Was that little sound, we asked each other, vocal, or was it an intensified, whistling *whit* of the wing?

Two of the sportsmen who witnessed my bird's performances had been lifelong believers in the wing-twitter theory, and they were very watchful critics; but after the bird had been induced to utter a number of its notes, and had been held up for the wing-beating or flapping performance, and each wing had been carefully examined to see if the attenuated primaries and pollex feathers were in place, these gentlemen acknowledged that the sounds about which so much has been said are vocal beyond question, and that the *whit, whit, whit* of the pinions—no matter how loudly and shrilly made in rapid flight—is not liable ever to be confused with the vocal notes by any one with an experience like ours.

When a woodcock "twitters" he squeals, pipes, squeaks, rather than whistles. The sound made in swift flight by the wings of this and other species—many of our ducks for example—is perhaps more appropriately termed a whistle. Frank Forester makes the same distinction. He speaks of the woodcock's flight after the leaves are off the underbrush—of its darting away "on a vigorous and whistling pinion, with sharp-piping alarm note, swift as a rifle bullet."

GURDON TRUMBULL.

HARTFORD, Conn.

THE CHICKADEE.—Number Four, N. Y.—Your correspondent "Hermit" in his notes on the blackcap chickadee carries the idea that it is a migratory bird, which much surprised me, as I have always supposed that the chickadee of the Adirondacks was DOT migratory in its habits. I do not remember a winter in the past forty years but what I have seen these interesting birds at midwinter brisk and lively seemingly to enjoy the cold weather. For many years past they have wintered in my yard, feeding upon meat hanging on the back porch and are very tame. I saw chickadees last winter in the Indian Territory, which induces me to think they might be partially migratory in their habits, as they are naturally a habitant of a colder climate.—MUSSET. [The chickadee is a resident species in our Northern States. That is, the bird may be found here at all seasons of the year, but it is probable that the individuals seen in winter are not usually those which breed with us. The black-capped chickadees have a wide range north and south, and east and west, and there is no doubt more or less of a migratory movement among them as the seasons change.]

Game Bag and Gun.

THE FULL TEXTS of the game laws of all the States, Territories and British Provinces are given in the *Book of the Game Laws.*

WILD TURKEYS IN THE OVERFLOW—II.

THAT alarm clock, with its tenacious, hang-on rattle, is a good one to arouse a pair of sportsmen. No one but L. could sleep through that, and he only pretends to. Still on this morning, and I believe every morning during the trip, he was reasonably easy to get up. It is on the duck hunts, in cold weather, with rain pattering on the roof, that he is difficult to arouse, though even then his sportsman's blood brings him to time after a bit.

The lamp is first lit, the pot, which had been filled last night, was put on the little stove, the mosquito bar taken down and put away, the bed rolled up in the oil cloth and pushed well back toward the stern, and the provision and dish box made convenient, when a search is instituted for provender.

"Lawrence, what do you think Allen & Son have done?"

"Why, packed up for us sundry good things as per order, of course."

"Here is our parched coffee—and not ground."

"The deuce!"

"The deuce!"

"Did Allen & Sons send a mill?"

"Not much. Let's have tea." And tea we had.

In the meantime William had busied himself making a fire on the bank of such rubbish as he could find in the dark. It cracked and lit up the surrounding timber and brush with a lurid light. It had a comfortable look.

After breakfast it was still not quite light enough to make out the walk. So we carried out our camp stools and talked over the situation. The unground coffee came in for part of the conversation. There was not sufficient tea. It was soon devised to make a mill of the stew pot and pestle of the engine hammer, using William as a motor. At our next meal the scheme was shown to work very well indeed. It gave William occupation when alone, and so far as we could discover the coffee was as good as if ground in a mill. We let up on Allen & Son.

At the first light L. and I parted, he taking through the woods on the ridge below and I above. I had not gone far when I discovered that there was plenty of water in the vicinity and that the unoverflowed part of the ridge, as to width, was not very extensive, and that all sloughs and depressions were full of water. The overflow on the rear generally reached within 150 or 200yds. of the river. We were on the east bank. It was full seven miles from this ridge east to the Big Sunflower as the crow flies, and it was all overflowed. On that side of the river it was twenty-five miles by water to land on the south at the mound; to the north for miles and miles we knew of no land likely to be out except a small patch or two northeast on Howlett Bayou. Now what had become of all the game we had found in this swamp on our January trip? Might not some of it be on this narrow ridge, 200yds. wide by half a mile long? It was so surmised. It can be put down in your little book that I proceeded cautiously and with some expectation.

The first thing I saw was a rabbit. The next thing I saw a rabbit, and in very short order I saw another rabbit, and in getting through some brush I frightened another rabbit. After this rabbits became quite plentiful, and I had company enough. Most of them ran on up the ridge ahead of me, though occasionally one bolder than the others would break back and take down in L.'s direction. I didn't complain at that; I could spare him a few. Presently I could hear plunges in the water—was that a deer? Not quite, only rabbits. They took to water freely until it began to get too deep to wade; then they would take a circuit through the water, making sufficient noise to frighten forty deer and hundreds of turkeys, could so many have heard it. It is no exaggeration to say that at times three, four, and even five rabbits could be seen at one view. I did not say 500, as L. accused me, but five at once, and I stick to it.

I wade across the slash into a patch of ground of several acres that has been burnt. This I enter cautiously, for there ought to be something besides rabbits here. *Out! out!* quick, short and sharp, greets my ears. Every turkey hunter knows what that is—"Be careful, old fellow, you're too fast." This remonstrance I make to myself. I sit down with my back to a large sweet gum tree and await developments. Even yet the woods are not thoroughly light, and the blackened ground and old burnt logs lend aid to the indistinctness of all surrounding objects. In twenty minutes more some turkeys are seen out of range. I keep still, hoping they will feed up. After a while they disappear. They do not pay a continental to my call. "Thank you, we have all the company we want just now." I wait a long time, and not seeing nor hearing more of them, I get up and proceed cautiously. Suddenly there is a commotion in the woods. One hundred and fifty yards ahead of me they take wing and go off with much bluster and flopping of wings. That's my luck; I can flush turkeys. Crackey! what a drove—fifteen or eighteen. That's our Howlett flock—a grand one. Well, let 'em go. This is our first day. We don't care for a turkey to-day anyway. Could not keep him until we get home if we got him. We will put in the day exploring.

Now these turkeys had gone into the trees not 300yds. away. On moving up some of them could be clearly seen. It soon occurred to me that one would be good for camp use, why not take him in? I got a tree on a couple of fine looking fellows, examined my gun carefully to make sure all was right, and moved on down the line to get in range for a dead-sure shot. I had not gone far when there was another stir in the woods. What was it all about? Would you believe it? A hawk was after them. Could it be possible a hawk would attack so large a bird as a turkey? Indeed it was so. Here came the turkeys down through the treetops directly over my head. It was a grand sight, first one, then another, then two and three, until all had passed overhead and gone behind me. I was a shade rattled, or I could have counted them as they went by. Again I was in bad luck. I had the wrong gun. The premier Scott hammerless was snugly in the rack on the Greenwing. I had my essence of concentrated virtue telescope Marlin. I am not a wing shot with a rifle. With my 10-bore shotgun some of those turkeys would have gone to grass, or rather, in this case, to ashes, on the burnt ground.

Well, I would have one yet. There they were only 200yds. below me in the treetops, except one, which was seen to go to the ground in a thicket. A tree with two in it was again selected, and an intervening tree brought into line. When nearly within range, sure as I live, the hawk pitched at those identical two turkeys. But hold! one lights in the top of a tall tree near me and within range. I'll try him, but before I can aim, in fact as swift as a hawk could fly, this turkey is again put to flight, and so, for that matter, are all the others in view. It beat anything I had ever seen. I had never heard of such a thing.

I next approached the thicket where the nice gobbler was seen to go down. I watched and examined this thicket carefully both with my eyes and sight, but could not find the game. I stirred up rabbits on all sides. I finally entered the thicket and found the further edge overflowed, and was about to abandon the search when the turkey, with considerable splashing, took wing beyond the thicket in water eighteen inches deep. Here again I wanted a shotgun. But, thunder! I forgot, I did not want any turkeys to-day. They had all now gone well back to the east, out of sight, and over water entirely too deep for my hipped rubbers, and sure enough I didn't want any of them.

I went back to L. kicking up rabbits on the way. They annoyed me; I was not in an over good humor. L. had not shot, but I would learn what he had found. William is first met at the camp-fire.

"William, have you seen any rabbits?"

"I seen one," was the laconic reply.

"Lawrence, did you see any rabbits?"

"Rabbits? well I should smile. Rabbits, rabbits, and nothing but rabbits. I went on down the river and the rabbits kept jumping up and running on ahead of me until they got so thick they jammed up, and I could go no further, so I came back. I saw no turkeys."

We then stayed in camp until after dinner trying who could tell the biggest fiction about the rabbits, but those jammed-up woods of L.'s had put me to a disadvantage at the outset, and I had to succumb, in the end, to his magnificent exaggerations.

After dinner L. took the Amateur and paddled down stream on a tour of prospection. He came back in an hour or so reporting a vast layout of water and very little land.

And the writer went back to camp without game and in a state of taciturnity. L. suddenly developed into an inquisitor more annoying than otherwise.

"Old Telescope, what did you shoot at?"

"Shoot at?"

"Yes, shoot at."

"I thought you were going to paddle down stream two miles?"

"I did not get too far away to hear a rifle shot."

"What direction?"

"Oh, up the river where you were. Say, no dodging now, tell about it."

"I shot at a turkey hen and missed her."

"Missed her?"

"Yes, missed her."

"How far?"

"Thunder and blixen! twenty yards."

"Flying?"

"Double thunder and blixen, no, standing stone still. Say L., which way shall we go next?"

"Wait a minute, not so fast. What did you shoot those other two shots at in quick succession?"

"Charles Lawrence Warner, let's go home. This gun is a grand fizzle. I can't hit a barn door with it. Those last two shots were made at a gobbler on the ground, in a perfectly open spot at not over fifteen yards. He must have been disgusted with the overflow or he never would have flown into me after my shooting at his mate; and after my taking the first shot at him have stood for another shot. I strained my eyes to detect a wabble in him as he went away and, when he was out of sight, listened for him to fall. But he went on over toward Hugh L. Foote, at Egremont, whom he knew could kill him. Don't tell this on me at home."

"Will you let up on me?"

"Yes. Hereafter I am a clam."

But L. smiled in a way that boded me nothing good.

Then we got into the Amateur and paddled up stream together, L. occupying the bow with his fine hammerless gun at his side.

When only one boat was used it was always the Amateur. The Boss was also a nice boat in her way. Being short, broad and flat, she was very steady, so much so that it was perfectly secure to shoot from her standing. She was the darling and pet of Mr. Warner, who invariably stood up and propelled her with a single blade. He would stand with his legs akimbo and row vigorously away, down or up stream, to his blind, and woe unto the ducks that turned down to his decoys when he got there. But L. and I preferred the narrower, more unsteady, but swifter-running boat. We always wanted to get there at once, and the Amateur could come as near meeting our wants in that respect as any boat we had ever been in. She was built from offsets obtained from FOREST AND STREAM. But she was rather unsteady, which made a shot from her somewhat uncertain.

Let me relate an incident that took place the first trip of this canoe three years ago. My son Walter and I had paddled down a narrow slough full of logs, trees, etc., until nearly two miles from camp, Walter in the bow and I in the stern. Presently we came to a large cypress log reaching from bank to bank and projecting above water about six inches. Rather than go to the bank, get out, and drag the canoe over by hand, we determined to cross in the channel. The canoe was paddled alongside and we both got out on the log. Then the boat was brought, bow foremost, until half over, when Walter was directed to get in. This he did. I then slid the boat on its keel until within a couple of feet of the stern, and got in myself, sitting on the deck with my feet in the cockpit, as is usual when using a single blade. I took the paddle and began to push on the log, when my son, who was a shade nervous in a canoe, said, "Father, you will turn this boat over."

Now, I had made this boat myself and had done no inconsiderable bragging over its many virtues, and especially its steadiness, and I was a shade nettled at the remonstrance which implied an aspersion on my pet, the Amateur, and I said, with emphasis, "Walter, you can't turn this boat—"

The word "over" was said by the canoe. It was the first I ever knew she could talk, but I let up on her steadiness after that, we both went sprawling into the water, 4½ft. deep, Walter head first, and I with an ungainly motion to the rear in search of the log. Both guns were tumbled out and went to the bottom, and the boat was half filled with water. We were indeed drenched, and took the back course for camp at once, but did not rely on the steadiness of the Amateur to get us over that log. Ever since that accident I have been unable to brag on the Amateur at all in Walter's presence but that I am taken down at once.

One thing about that upset has puzzled me a little. As soon as we recovered ourselves smoke was observed to issue from the water in the canoe. I said, "Walter, look at that smoke, a gun has been fired." "It must have been yours," he replied. "No, you can't shoot off a Scott safety block that way. Your hammer gun did it." And so it proved to be. With the butt resting on the bottom of the boat, and barrels on the coaming, it had slid backward, the hammer striking on one of the ribs. The canoe proved to have a hole in her side about 2in. above the waterline, but we were still able to use it. The discharge took place under water and was not heard by either of us, nor did it burst the gun as one would naturally suppose it would have done under the circumstances.

But to resume with L. When above camp about half a mile, on the west side, we discern land, back a little piece through the timber and bushes. This we scan very closely through the openings, rather limited in number and size. Presently L. in an undertone calls attention to some turkeys at no great distance, in rather an open spot. Three are seen, one gobbler and two hens. They walk about quite unconcernedly, but soon disappear behind a very heavy sweet-gum windfall. Hurriedly the canoe is turned about and pointed for the land, which is overflowed well back in the timber. We get out and cautiously approach the windfall, then peer over and find the turkeys have disappeared. L. sits down with his back to the stump, facing the direction the turkeys are supposed to have gone. I move off to flank them around a thicket near by. Suddenly *cut* greets my ears, the note of the gobbler signifying I had been seen. I move back then, and take the other direction around the thicket. It is not long before the turkey is too smart for me, discovering his danger before I have been able to see him, and takes wing. He flies in L.'s direction, but does not give chance for a shot. He crosses the river a little below the canoe. I go up to L. and find that his keen eyes have marked him in a tall tree well back on the opposite shore. I determine to take a shot, and wade as far as my rubber boots will allow. The turkey is judged to be 100yds., and the rifle having a point blank at 75yds., the cross-hairs are made to intersect at the top of his back. At first shot he shows not the least sign of disturbance. The aim is too low. Another shot and he moves quickly up the limb as if touched and turns around. Evidently he has not caught on to the racket, but soon will; and very quickly another aim is taken, still higher this time, with the left end of the horizontal hair running across his head, which is at an inquisitive elevation. He finds out what is the matter and goes down at an angle of forty-five degrees and falls with a splash in the water. We hasten over and find him quite dead and a very fine bird, weighing fully 20lbs. gross.

We returned to camp, drew the gobbler and hung him up to drip. He gave quite an interesting appearance to camp.

Not delaying we next paddled Howlett Bayou to the high ridge or island. This swamp was so low that water was well up in the limbs of the undergrowth, which was abundantly thick. The bushes on either side of the bayou often overlapped, and several times we were uncertain as to the channel and would lose it for a time. It was a gloomy part of the swamp, mainly a tangled mass of bushes and vines of many kinds, interwoven and knit together. The trees overhead were thickly festooned with gray moss, which luxuriates so abundantly in the swamps of this latitude and adds such a somber appearance to the forests.

During the day several shots had been heard in the direction of Howlett Lake, which led us to suspect that game was being killed there. We anticipated that it would be driven away. However, we were going to investigate.

On entering the lake two men were seen in a dugout a hundred yards off in the timber. We hailed them and made inquiries concerning game. They reported having flushed turkeys on the ridge, but did not state whether any had been killed. We were then asked whether any cattle had been seen on the ridges on the Little Sunflower. Receiving a negative reply, they paddled off through the swamp and were seen no more.

We found no game on the ridge which borders the lake on the east side, though there was plenty of fresh turkey scratching. We had made the entire circuit of the overflowed ground, and were about to return to the canoe, when, on looking through the timber across the lake a fine old gobbler was seen in a tall tree full 200yds. away. An investigation of him with the telescope proved him to be quite a desirable bird. Cautiously stepping behind cover, we discussed the matter. He was too far for anything but a chance shot, and the probability of being able to paddle within range and shoot him from the boat, was not deemed favorable. Evidently we had been seen, for the glass showed considerable alertness on the part of his gobblership. He would stretch out his long neck, displaying a magnificent beard, and move his head about in a rather inquiring way. We did not think that with his suspicious symptoms he could be called to us. We did conclude, however, that others were somewhere out of sight in his locality. It was not at all likely he was monkeying in those big woods alone. We determined to call. On making the second attempt, a hen replied, and very soon she replied again. We felt sure that there would soon be a flight in our direction, and we at once became interested, even animated. We sought favorable locations, some distance apart, and repeated the call, and here came the turkeys, a half dozen of them. It was rather sudden to me. I made a shot, with rather unsteady nerves, through a thick cluster of vines, at a young gobbler, and missed him. L., with his shotgun, did better, and killed a hen, which fell in the edge of the lake. All live turkeys suddenly disappeared. The old gobbler was a little too cautious to venture in. He knew a thing or two, and they generally do. We did not see him again; he had vacated.

As it was growing late, we hurried out of that dismal swamp. It was an easy place to get lost, and would be very hard to get out of should night overtake us before getting back to the river, which was nearly two miles. By sundown we were back in camp.

* * * * *

How restless we were! There we were with two turkeys the first day in two weeks' hunt, and not satisfied. In half an hour we were back of the camp watching and listening for turkeys going to roost.

I had no luck, and returned to camp by the time it was dark. It was twenty minutes or more before L. came. I had gotten to know that boy pretty well. This lingering in the woods was significant. On coming in, with a quick step, he reached his hand across the camp-fire to me and said, "Shake!"

I reached out and we shook. Well, I knew what his "shake" meant. Many times he had done that before, and filled my thoughts with bright prospects for the morning's sport. He is a lucky boy at roosting, and excels me at that two to one. And when he has seen turkeys go to roost, his fear in the woods don't amount to much. I doubt whether a panther's scream could scare him away then, at least until it was too dark for him to disturb the roosting birds, when he would steal away as silently as an owl could fly, and crawl into the launch with his welcome "shake," and then with entire unselfishness turn the game over to me for disposition on the morrow.

Up to this time we had never attempted or desired to shoot turkeys on the roost. It was our choice by far to be within sound the next morning when the first gobble was made. He was awake then with all his faculties, and we considered it fair to bring him to bag in any way we could, using the call, however, by great preference.

Now it was different. The males would not gobble. We had been among turkeys all day and not a gobble was heard. The flood, which was so very high on their feeding grounds, and hourly but slowly rising higher, had taken all the amorous spirit out of them. We felt sure not a gobble would "open up" at the crack of day in the morning, so we determined for once to resort to this more unsportsmanlike way of taking game while at roost.

L. said two turkeys—a hen and a gobbler—had gone to roost just back of camp but a short distance; in fact, the camp-fire was within their view.

We waited some time for the moon to come up over the treetops, so as to have plenty of light. We then tried our sights at sundry dark objects, such as gray moss, bunches of mistletoe, etc., L with his shotgun and I with my rifle, to make sure we could see to get good aim. Then we left the comfortable fire and walked as indicated by L., rapidly at first, slowly when near, and finally resorted to a creep, when L. whispered that the turkeys were somewhere "there," pointing to indicate direction. He then lingered behind and left me to locate. By this time we had reached water probably a foot deep, and it was possible to move about with the least bit of noise. It was not long ere a dark object with familiar form was found. This was observed with the telescope and identified as one of L.'s turkeys. It was doubled up in a knot on a limb half way up a medium-sized tree. A low whistle and a motion soon brought L. noiselessly to my side, who indorsed the location as correct.

"Where is the other?" in a whisper.

"Over there probably in that tree with the heavy moss."

"You remain here to shoot this, while I search for the mate. When I locate I will give a low whistle, and you answer to indicate that you have heard, then at the crack of my rifle put in your work quick. Can you kill it from here?"

"I think so."

I then went slowly and carefully searched the mossy tree, but could not make out a turkey in the hundred forms in its wide-spreading branches; still, he might yet be there securely concealed in a cluster of limbs or behind a heavy bunch of pendant moss, I could not tell. I moved on silently to search other trees. Once I thought I had him, but my useful sight told better than my eyes. On moving further—

Ah! there he goes. Zounds on the luck! So he was in the old mossy tree after all.

Bang! and down comes L.'s turkey. It was done quicker than telling it. We returned to camp and talked the matter over. It was a new experience and the last one of its kind. We had enjoyed it only after a fashion. We preferred to do 'em up in daylight.

We went to bed and slept. W. L. P.

MAINE DEER DOGGING.

IT is not a pleasing duty to complain. Indeed I have had the facts that I am about to state in possession for some time, and have questioned the matter a good deal as to whether it were best that they should ever become public property, by inserting them in the FOREST AND STREAM, where they are sure to be seen by every live sportsman who takes any interest in the literature that pertains to his beloved pastime. I have held the facts mentioned below in hand till after the shooting season on Maine deer was well advanced, for the reason that it was best for the few deer left that it should be so. The outrageous killing of deer in that State out of season, that has been going on all summer, might have been told of early in the summer, or at least a part of it, but it is better that such facts should have been kept back, for the reason that if it had been generally known that sportsmen could go down into Maine and hunt deer without molestation in July and August, it might have induced many to have tried to take part in such hunting who would have otherwise staid at home, and hence a few more of the deer have been saved. But the Maine Legislature convenes in a very short time, and it is possible that if the real facts of the case are made known, it may lead that body to grant such legislation as shall enable the Commissioners to make at least some show of enforcing the deer law. The last Legislature to convene in that State took away all the fines that had formerly gone in part to the game wardens and gave it to the counties, and, worse than this, it left the Commissioners with no money to pay the wardens for enforcing the law. What has been the result? Why, simply that the law has not been enforced. Hunters who were so disposed have hunted deer in almost any locality in Maine, in the close season of this year, without fear of arrest. More than half a dozen improved jack lamps came under my notice as being made and taken down into Maine, some of them In July and nearly all were taken down before the end of August.

I have it from good authority that some fifteen deer were killed in the neighborhood of the Richardson and Beaver ponds at the Rangeleys and twice as many at Cupsuptic and Kennebago before the beginning of October. It also comes from good authority that hunting was carried on at these ponds and lakes almost every night in July and August when the weather was suitable. Deer were plenty around these waters in the early summer, but by the end of the close season they had nearly all been killed. Then, as if to render the case still more aggravated a pair of hounds were running deer into these waters several Sundays in succession late in August and in September. The dogs were owned over in the Magalloway settlement and were kept for hounding deer. They are doubtless there now in spite of anything that the Maine game law has done. Indeed they were hounding deer on the west side of Aziscohos last year, but this season they have run deer over on to the east side and into the Beaver and Richardson ponds, where deer-doggers have killed them. I understand also that there has been an arrangement with certain parties all summer that a pair of hounds were in readiness for dogging deer, owned in the Magalloway settlement, and that hunters had only to engage the dogs beforehand and that they would be put out and taken care of, the hunters only had to shoot the deer. Again I am told hounds have been taken into the woods by way of Upton, then taken in charge by guides and let loose at the right spot for dogging deer, the hunters to come to a point designated by some other route. The deer could be dogged and the hunters not be mistrusted at all. Yet none of this shameful work has been done in such a way that a warden at all fit for the office could not have caught the hunters and destroyed the dogs.

Then the dogging of deer in the open season is not all. Fox hunting has all at once assumed remarkable proportions in Maine. Indeed the fox hunting is really excellent, but nine out of every ten of the hounds employed are good for running deer. The hunters have taken numerous bands of foxhounds into the Maine woods and have come out with a certain number of foxes and a deer or two apiece. Those who know say that these deer have been hounded, run to the water, where the hunters have shot them. Deer have already come back to Boston in the possession of the fox-hunting parties who have gone into Maine with their dogs. It is very safe to conclude that a good deal of deer hounding is being done in Maine this fall under the name of fox hunting.

If the legislators of Maine have any hope of saving the deer in that State they will have to devise some form of statute that will prevent fox hunting parties from hounding deer. Either the dog law will have to be changed or fox hounding will have to be forbidden. If the sentiment among the guides was only as good in regard to keeping the deer law as it is in regard to the trout law, there would be but little trouble. Why, some of the very guides that have assisted parties in getting deer this summer in close time, are strenuous for the enforcement of the trout laws—nay are members of a prominent fish propagating and protective association. They thoroughly believe in the protection of trout and landlocked salmon, but they will guide a man to jack a deer in July or August. The Legislature of Maine refused to add September to the open season on moose, deer and caribou at its last session, though the addition was recommended by the Commissioners, and ever since this refusal the deer law has been very unpopular with the majority of the guides. They argue that the deer are not of any benefit to them, since the sportsmen are all gone before the open season comes. The granting of September as an open month will be received in the light of a beneficence that is just and reasonable, and the gift will redound to the benefit of the giver, so far as the guides are concerned.

The deer have suffered in Maine this season by this shooting in the close time, and, worst of all, the hounding mentioned, to an extent that it will take some years to recuperate—years of protection. Why, venison has been served on many of the camp tables in the backwoods camps—I might enumerate the camps, if it would do any good—in the close season. Deer were plenty early in the summer, and the tables were served in more cases than one dozen, to say the least. Sportsmen visiting these camps, ostensibly for fishing, have, if they have expressed a desire to do so, been quickly initiated into the mysteries of jack-shooting deer, and the deer, provided it is not a nursing doe, has been served on the table. A doe, too thin to be taken back to camp, was killed in August on the shores of a pond well known to me, and the shooters, being a little ashamed of their hunting, buried the deer in the sand on the shore. Later the foxes dug out the carcass and fed upon it for some weeks. A gentleman, who spent several weeks at Kennebago this summer, says that while he had no desire to hunt deer himself in the close season, he was greatly surprised at the boldness with which the guides and hunters got ready their jacks and started off deer hunting. This gentleman got back to business in Boston before the 20th of September. Nobody seemed to think that anything out of the way was being done. If deer were killed, they were not kept out of sight, unless they were does in a state which would make the hunters ashamed to show what they had done. One case is mentioned where two does were killed in the same night, before the hunter got "his buck" that he was not ashamed to take back to camp.

In the above statements I have made known only what I have the best of reasons for believing are facts, and I have written what I have only that the fish and game interest may be alarmed at what is going on in Maine. I candidly believe that there are not half as many deer in Maine as a year ago. This inside news of killing deer in close time does not come all from one section of the State, and in many cases it comes to me from the hunters who have taken part in the shooting. The harm is done. The deer season is about over, and there is nothing to be done now but for the Maine Legislature to make such laws as shall tend to give the Commission some chance to enforce the law. If only July can be thoroughly protected as a close month, it will be much better than what has been going on the past season, only thoroughly enforce the law on the months that are closed by the statutes. I hate to speak disrespectfully of my native State, but I have often thought that if Maine had even considerably less of law, with a little law thoroughly enforced, it would be better for all interested. If the deer of that State can be thoroughly protected from crust and deep-snow hunting and then through May, June, July and August, there will be fair hunting for all in the open season. But right here let me add, in connection with the able editorial published not long ago in the FOREST AND STREAM, that it is mighty discouraging to the honest hunter, who desires to kill game in open season, to visit his favorite hunting grounds, as early as he can legally do so, only to find that the illegal shooters have completely obliterated the game or hounded it away. Such were my feelings when I made my annual trip to the wilds of Maine this fall. Where deer were plenty in May, there were none to be seen or tracked in early October. If game laws exist at all, then let us have them enforced thoroughly. So long as it is a penal offense to kill game out of season, the question of morality falls before the fact that the other fellow is breaking the law unmolested on the very ground that you are only waiting for the open season to hunt over. I will do anything reasonable for the honest enforcement of the game laws of Maine, but if such openhanded breaking of these laws is to go on, right under the very noses of the wardens, as was the case during the close time of last summer, I am afraid than I am no friend of such laws.

Maine venison is also coming into the Boston market in spite of the non-export game law of that State. The old barrel game is again being played this year. It consists simply in cutting the legs off a back-half of venison in such a way that the whole, with the hide, will go into a barrel. The barrel is then securely headed and sent to a receiver here, generally some well-known commission dealer. I saw the other day a barrel unheaded at one of these commission houses. There were pulled out the back-half of a big deer, together with the hide. Excelsior was used for packing, and out of the excelsior were pulled four partridges. A buyer was quickly on hand and soon bid 14 cents for the deer and 50 cents each for the partridges. The salesman owned to me that the deer was from Maine, and I know from as good authority as my own eyes that deer and partridges are constantly being received by this house and others from Maine. The barrels and boxes come by both steamer and rail. SPECIAL.

BOSTON.

THE ALL-AROUND GUN.

Editor Forest and Stream:

Mr. Cleveland's article is very interesting and informing as showing the inventive genius of Dr. Maynard, but I do not think his interchangeable gun fills the "aching void" as well as a "three barrel," because the greater number of effective different loads you have at instant command, the more nearly your weapon approaches the ideal "all-around" gun. If it were not for the weight, a double rifle combined with double shot would more perfectly equip a man than a "three barrel." But there is a limit to effective weight. The auxiliary rifle barrel came into the world with a hurrah, and was thought to have solved the whole problem, but the hurrah is now very faint. The auxiliary sportsman soon found out that he didn't want his rifle barrel at home or in a leather case dangling round his spine when it was needed in front pointed at game. If he kept it in his shotgun the very barrel he wanted very badly for shot was the one filled with the rifle, and he couldn't carry it in his teeth very handily. This interchangeable business is all very well to practice at home or on paper. Your interchangeable gun only affords two shots in the field the best way you can fix it, unless you can slow up your deer or grouse until you can unlimber your other barrel. I'm not arguing that more than two shots are necessary in nine out of ten cases, only imagining a case, and the need of an "all-around" gun is purely imaginary in greater proportion than that.

And herein lies the reason that these perfect all-around guns are not more largely manufactured. There is no demand for them. There is really no need which will warrant their manufacture in sufficient quantities to pay. This appears to me a better reason than Mr. Cleveland's viz.: "The willingness of the great mass of our people to take an inferior substitute at less price." Though that is true, take the country over and ninety-nine shooters use a shotgun where one uses a rifle. If a man lives in a deer or bear country he chooses a repeater, if he wants more than one shot, not a double rifle or interchangeable gun. If he lives in a bird country and wants a rifle now and then when he is after birds, he wants that rifle always at hand where he can "turn loose" without any foolishness, and he can't have it with double shot, other than in a three barrel. The weight is within bounds and accuracy is sufficient. Half a dozen rifle cartridges don't occupy much room, you've got combination a-plenty, and your gun is all there every time. If there is ever occasion to shoot more than twice, then three beats two, don't it? O. O. S.

VINELAND, N. J.

NEW YORK FISH AND GAME INTERESTS.

Forest and Stream:

Salutations! 'Tis long since I've been inside your portals.

But nothing obliterates the memory of past services, nor the gratitude grown of troubles, and trials, and triumphs, in a beloved cause. "The past at least is secure," and we cling to it. Be there apathy, defection, treason, they are but incidents in an advance, and we cling the closer.

"There's a crisis in game and fish protection," said a Stalwart to me just now.

ST. LAWRENCE: A crisis? Please explain.

STALWART: Hasn't FOREST AND STREAM struck its colors to the netter and dogger?

ST. LAWRENCE: And, if so, a crisis, say you?

STALWART: Haven't you read the last two editorials "Serious Charges," and "On a Runway or in the Water?"

So much of the colloquy, in indication that tongues and brains are busy with the situation.

And it *is* a crisis, in full proportions, made as are most crises, by clashing interests and authority.

The commission indirectly charged with the enforcement of laws protective of game and fish, split. What is the significance of it? With the general conceptions of the relationships between market interests, and protection interests, and with reported incidents attendant upon the event, or preliminary, there results uneasiness and distrust. Demoralization in the service is accepted by protective sentiment, as the logic of the fact, and 'tis said either protection, or the commission's relation to it must go.

Quite natural, such sentiments. By common understanding and concurrence of protective sentiment, the market-hunter and the market-fisherman are the active combative forces that threaten the extinction of game and fish. The market—the complement of these destructive agencies—is the receptacle into which, through the tortuous channels of fraud and deceit, the contraband spoils of poacher and netter find safe conduct, and so profitable investment.

Now, with a marketman at the head of a commission charged with a vigorous enforcement of protective fish and game laws, must not demoralization in the service follow? Is it so?

We speak not of persons, but of things. No aspersion of "character," no question of integrity, is made. It would be beside the matters, and so, fol-de-rol—as much an injustice to gentlemen officials as irrelevant to a proper understanding of official fitness. It will occur to many thinking people that interest is the crucial test of fitness. Somehow that has got into the big popular cranium. Old-fashioned folk always query how men can hold the balance even between the conflicting claims of public and private interest. At the suggestion of interest does not the judge step down from the bench? How much—or how little—"character" would retain him there? and how such action conciliates a public sense that pervades like an instinct. It is a decent thing to do.

Now is there not absolute parity in the public relationships of all public functionaries? And will FOREST AND STREAM explain how, putting that and that together, 't possible to avoid painful impressions of inefficiency in the administration of fish and game protective laws? There is no essence of distrust or reserve in this request, believe there is not. We covet explanation and understanding-

with entire concession of high character to the *personnel* of the Commission.

A broader view may suggest organic defects in our Fish Commission, which must disappoint any hopes of effective protective service from it. Is it overloaded with the work of propagation and distribution? Is the *personnel* of any commission, charged with such duties, as the principal end of their organization, likely to possess gratifications and experience in so opposite and foreign direction as the practical enforcement of the game laws? It is significant that at the last meeting of the Codification Commission, at Albany, a very decided expression was given to the necessity for a new Commission.

But, as to the crisis: It will be met by steps in advance. The history of game and fish culture, and protection, in the State makes that a safe prediction. No sentiment of economic reform has a more flattering history, nor a steadier development, in its first ten years. Its first authoritative expression was in the town game constable. The game constable was a failure, and worse. It was an attempt to set the dog on his master. Public sentiment soon resented the burlesque and created the game protector.

Results have been admirable. The source of his authority, his statutory line of duties and his responsibility to supervisors make him in the public judgment stand the representative of the impersonal authority of the law always respected by the best citizens. Hence the moral support at his back.

Legislation has steadily advanced. Don't mistake this fact. The Curtis non-hounding law was not a protectionist triumph, but a tentative effort, shorn of a section (in the bill), compelling accomplices in the crime to testify against each other. So made impossible of enforcement the doggers cared nothing for it.

The triumph came after, when, the following session, they mustered for a repeal. Protection lost nothing by the repeal, but gained everything in the record the hounders made for themselves and their cause. That record is the first and last attempted justification of the use of dogs in deer "protection."

Gentlemen—to mention names would belittle controversy—aired ideas and preferences in the press and in pamphlet too ridiculous for serious refutation and now treated with utter contempt. Remember that with the repeal came shortening of the open season. This was in advance. Other restrictions have been enacted and more are demanded by the popular sense, notably the shortening of the open season and prohibition of water slaughter. 'Tis gratifying to notice that "firm advocate of deer-hounding," the gentleman from Albany, yielding to prohibition.

So far as appears, not a voice was raised at Albany against water-slaughter. You should know the pain given the stalwart protective sentiment by your utterances in "On a Runway, or in the Water?" Did FOREST AND STREAM ever before disparage protective effort by even a seeming concession to the morbid tastes of its worst enemy?

I hate implication, and to make a clean breast of it, ask what does this mean: "With such a law" (a law against water-slaughter) "one of two results would follow. The statute would be a dead letter, or *if enforced*, the hotel men would quickly cry out for its repeal. A large portion of their patrons, for whom the landlords wish to preserve the privilege of hounding, are, *as we have said*, wholly incapable of killing a deer anywhere else than in the water. If the privilege of water-killing is taken away from them, that will in effect be taking away the privilege of hounding. This class will no longer frequent the Adirondacks, * * * and his allies will again appear at Albany asking permission for their guests to kill game in the water."

Add to this your suggestion of their "hundred thousand dollar" interest in the matter, and that hotel men with accruing "board bills" will "*see to it that a non-hounding law shall not be enacted*," and point and purpose can hardly be mistaken. The italicising is not in the original.

What! abandon Adirondack deer to be made merchandise of? Egad, do not sportsmen guests who pay "board bills" there have their surfeit of "mountain mutton," in season and out? Would you have the game absolutely sold out to them on the hoof by men who don't own it, with every circumstance of cruelty and brutality in its destruction, guaranteed in the contract?

Zounds! Think of this, with all the revolting history of water-slaughter, and blood yet boiling at the atrocities of that Chateaugay Lake horror, that illustration of depraved and debauched tastes in the supreme act of their gratification. You applied to that infamy the epithet "brutal," and I would have you recant that cruelty to animals. Call the creature who perpetrated it a brute, at the expense of apologizing to the swine that lifts a snout from the gutter and challenges you with a grunt.

But, solicitous for the gratification of the hotel man and his guest, is there no manly way of its accomplishment? And if there is, should exceptions be made to other than manly and sportsmanlike tastes and practices?

Your familiarity with the Adirondacks (?) tells you that shooting "on a runway" is just as feasible there as in the South and other sections." The runways are well defined, and practical knowledge of them is illustrated in the tactics of the guide when he appoints the watchers to their stations. He knows where the game will take the water no better than he does the route it will take to get there. Occupation of the runway involves nothing more than a short walk up the hill, along the cozy margin of the brook, or to the ridge dividing marshes, or leading to the water. Would this be too severe a strain, perhaps the "faithful guide" could extemporize a sedan that would discount exertion and afford the luxury of a nap, betimes.

Does your solicitude still insist the sportsman has not the skill to hold a rifle true on a bounding buck?" Ha! Let me confess you. Did not a tinge of pride and possession thrill your nerves, and flash along the steel when you penned that sentence; and that, too, without a particle of alleged contempt, for 'tis to be born so, you know. Perhaps the scatter gun, with splutter of buckshot, may help the difficulty. It is in great and growing demand just now.

It is admitted, gladly, that with best facilities, and venue and luck, the runway is not so fatal as the water. From a protective standpoint, that's its recommendation; from a sportsman's, that's its glory. There, in the battle, it wains against speed and instinct, chances are nearly equal, and with every clean miss a sportsman sends his hearty greeting. Prohibit water-slaughter and shorten the period for dogs, is the sentiment asking recognition. The dead letter threat is ungracious in advance. As a prophesy it assists its own accomplishment. With proper administrative provisions, restraining laws would be living letters against the water dogs.

Fish protection, in its advancement, excites a round of gratulation everywhere. It has passed the crisis of every nascent reform, and confronts now only the abuses incident to healthy progress. Following the banishment of nets comes the abuse of night-lines or set-lines, traversing the waters in every direction. The supplemental use of nets, so safely practiced by the night-line watchers, day and night, insure destruction unlimited. Angling with hook and line "held in the hand" is a restriction now confined to Jefferson county and to Lake George. It ought to be general, and night-lines and set-lines prohibited. And may not an angler right here confess that organized protective sentiment requires hygienic treatment? One of its early struggles was to subvert the parent, that selfishness is its active principle. There was excuse, if not some justification for it.

Professed protectionists indulged (indulge) so ostentatious display of fin and fur and feathers as justifies the belief of reckless slaughter and wanton waste. Hog expresses the reprobation of sportsmanlike and manly sentiment, but what does hog care for that? He has an ally, and a helpful one, and his ravenous greed has no better ambition than to adorn, in name and figure, the "biggest string" in the shop window of the tackle dealer. Waste exposes quantities of our best game fishes, dead and stinking, along our water courses; snobbery having all to do with it. How long will it be before public sentiment will restore netting as a sovereign remedy?

Notwithstanding the best conception, and the clearest and most direct expression the codifiers may give protective statutes, their efficiency must depend upon their administration being made possible. The State officials, limited in number, have been unable, with the best support given them by local organizations and sentiment, to bring to justice but a small percentage of the most notorious offenders.

Deer-doggers and netters in organized gangs concert secrecy in their movements with every facility in the woods and on unfrequented waters and with unlawful spoil in their possession confront the officers of the law with mendacity and defiance. Conviction would be easy could proof be obtained. There is no lack of witnesses could they be made to testify. Why can they not be? Simply because the Legislature has not secured their constitutional immunity against self-crimination by a provision that shall exclude the use of an accomplice's testimony in any action or proceeding against himself. A provision compelling accomplices to testify is familiar in criminal statutes—always with the saving clause, to be sure—and the reasons that justify it in other cases make it a necessity in offenses against the game laws. It is a necessity that cannot be ignored without bringing protective legislation into contempt and so paralyzing effort to enforce it. Will not the Codification Commission realize the necessity and meet the demand?

Now, to recapitulate, it is submitted that,

First—Dogging deer should be prohibited, or if that is now premature, prohibit water butchery by the severest penalties, and shorten to a minimum the open season for the dogs. And herein, as absolutely essential to practical results, make the use or presence of any dog or bitch, of a breed or kind used in the pursuit of deer, in any territory inhabited by any wild deer, in the close season, a misdemeanor by the owner, harborer, or person, or persons in possession of such dog or bitch.

Second—Prohibit any angling, except by hook and line held in the hand, and prohibit the use of night lines and set lines.

Third—Abolish spring shooting of ducks and waterfowl.

Fourth—Provide that accomplices shall be witnesses against each other as follows: No person other than a defendant shall be excused from testifying as a witness in any criminal or civil action or proceeding, under any of the statutes or laws of this State, designed for the propogation, preservation or protection of game or fish, on the ground that such testimony would criminate, or tend to criminate or convict, or tend to convict, such witness of a crime or misdemeanor, or prove, or tend to prove, any act or omission by such witness, to which a penalty is attached by law, but no testimony to be given by any such witness shall be used against such witness in any civil or criminal action or proceeding.

Fifth—Muzzle the fish-hog. SAINT LAWRENCE.

OGDENSBURG, N. Y., Dec. 5.

VERMONT INTERESTS.—Rutland, Vt., Dec. 8.—*Editor Forest and Stream*: At the last session of the Legislature much was accomplished in the interests of fish and game protection. In fact, there was an unusual number of sportsmen among its members. The deer law was amended (Act 54) to read: "A person who, prior to the first day of November, 1900, pursues, takes or kills, within the State, a wild deer, or has in his possession a wild deer or part thereof so taken or killed, shall be fined one hundred dollars, and the possession of the meat or hide or any part of a wild deer shall be presumptive evidence that the person having it in his possession is guilty of a violation of this section." The law protecting deer previously extended to Nov. 30, '90, and the fine was $50 instead of $100 as above. It is a matter of great satisfaction to a large majority of the fishermen of Vermont that the so-called "6in." law for the protection of trout was not repealad, and that the close season on trout was changed back to Sept. 1 and May 1. The law which provided that no person should use a dog in hunting the ruffed grouse or partridge has practically been a dead letter, but sportsmen are pleased that this clause was stricken out by the last Legislature.—WHEELOCK.

WORCESTER, Mass., Dec. 6.—The association of gentlemen who have for a few years had a meet each year for the purpose of hunting the fox, have now formally organized as the Worcester Fur Company and elected officers as follows: President, A. B. F. Kenney; Vice-Presidents, Hon. John R. Thayer and N. S. Harrington; Secretary and Treasurer, Elisha S. Knowles; Committee on Constitution and By-Laws—C. H. Howe, A. H. Perry, John R. Thayer; Executive Committee—W. R. Dean, E. F. Snow, C. E. H. Higgins.

CHICAGO AND THE WEST.

CHICAGO, Ill., Dec. 3.—As was anticipated, the present cold wave has driven the ducks down from the North in great numbers, and such marshes in this section as have any feed have birds on them now. Ed Howard is in town to-day, and says the mallards are not at Fox Lake and have not been there this fall. No ducks of any consequence at Fox Lake except a lot of greenwing teal a few days ago. There were three or four bunches of those, 400 or 500 in a bunch. Below here, however, at Cumberland, Water Valley and other points on the Kankakee, the birds have been in for a few days in large numbers. There were thousands of mallards on the marsh between Cumberland and Water Valley last Sunday and Monday, and probably on Tuesday, but no bags were made. The birds are very crafty, and do not come in on the marsh till after dark. They go out early in the morning to feed, just where, no one knows, but as the flight is nearly all mallard and greenwing teal it is no doubt the case that the birds have some distant fields located, where they hold up all day and only attempt the dangerous marsh at night. The only shooting possible is just at dusk or dark, when they come in. At this sort of work Charlie Gammon got a little over a dozen birds during his short visit at Cumberland Club.

Henry Ehlers went down to the Diana Club, at Thayer, early this week in response to a telegram notifying him of the abundance of mallards. I hear to-day that he killed 26 rabbits in the woods around Thayer, and from this infer that the mallard shooting was not good.

C. S. Burton announces his intention of going rabbit hunting next Saturday, in company with a friend or two, to some point in Illinois, about 100 miles from here, where somebody or other killed 119 rabbits in one day two or three years ago. It is one of these places where you get there about 3 o'clock in the night, and have to get up at about 3 o'clock the next morning to catch the train back, and 119 rabbits guaranteed wouldn't tempt just everybody to make the trip.

It was Charley Burton, by the way, who first told me about the Fuller Island rabbit story, which is attracting some attention here this week. He said two shooters, whose names he did not know, had been down to Fuller Island—but I suppose everybody knows that Fuller Island is about six miles north of Shelby, Ind., in the middle of the Kankakee marsh. Good snipe shooting on the edge of the marsh about there, in the right season, and good duck shooting all around it, in ordinary duck weather. The island itself is a high timbered ridge, with plenty of short cover, and is much affected by camping parties of hunters. It has a house or two on it. There are a few ruffed grouse there, and a good many rabbits. The marsh runs around the island for miles in every direction. Well, Charlie Burton told me that somebody told him that two shooters were down at Fuller Island last week, and they couldn't get any ducks, so they thought they would try for rabbits. A farmer near by said he would fire the weeds and rushes on his field, at the upper end of the island, and if they would stand at the lower end of the field, where the rabbits would run out, they could shoot them as they ran out. So they did this, and the two men, names not known, shot and shot and shot, and the rabbits came out so fast they just couldn't kill them all, but they got two wagon loads. If I didn't believe this, I could ask Abe Kleinman. It was Abe's story. So I saw Abe and told him about the story, and told him Charlie had credited the bag to two guns.

"Did he tell you that?" said Abe. "Well, he's all off. There was more'n two guns, I don't know just how many, and they burned off a whole lot of the marsh above the island, and not just one little field. But that story about their killing two wagonloads of rabbits is all wrong. They killed a blame sight more'n that. If you want the exact truth, I'll tell you. The fact is, they sent up to the farm for teams, and they hauled off two wagonloads of rabbits; but I never said that was all they killed, I don't care who told you so. They killed thousands of them. The rabbits came out of that marsh in flocks, so thick they often killed five or six at one shot. Dick Turtle told me about it, and he said he heard it over to Hank Smith's. It ain't my story, but if you're going to say anything about it, you want to get it right, and I never told Charlie Burton nor anybody else that they only killed two wagonloads. I said that they hauled off two wagonloads."

So I went over to Hank Smith's, and Hank was there, and I said, "Hank, how about this Fuller Island rabbit story?"

"Oh," said Hank, "yes, I believe some of the boys did get a few. Dick Turtle was saying somebody was telling him about it, I don't know just who. I don't remember who was in the gang that did the shooting, either, but there were seventeen of them in all, and they set the marsh afire for ten miles around. Every rabbit on that whole marsh started straight for Fuller Island. They came out of that marsh like flies. There was a roaring sea of flame came down the marsh, and before it was a gray wall of nearly solid rabbit. The fellows kept on shooting till the fire drove them into the sand hills, and the rabbits were so thick that one follow killed thirteen at one shot. They gathered up two wagonloads of them. I believe Dick Turtle said Abe Kleinman told him about it."

This is the Fuller Island rabbit story or a part of it. It didn't seem best to attempt to run it down any closer, for I should not like to get hold of a story which bore on the face of it marks of improbability. As it is, the unit of measure, viz., two wagonloads of rabbits, seems to be adhered to so closely as to entitle the story to belief as it stands. Of course all that business about the rolling sea of flame and the madly bounding forms of the terror-stricken game fleeing before it could be worked up into a great picture, and some people would seize the chance to exaggerate and color Hank Smith's description into a picturesque but unfaithful account; but I wouldn't do that, so I stopped following the Fuller Island rabbit story any further.

After this rabbit battue the event of next greatest importance for the current week seems to be Charlie Gammon's quail hunt, which certainly is a rather remarkable affair in some ways. Charlie Gammon and Harry Loveday, and Mr. Robbins and Mr. Smith started for Pekin, Ill., where the latter said quail were a nuisance. The train that was carrying them ran out on to a bridge, somewhere above Streator, on the Santa Fé, and the engineer learned just in time that the bridge was on fire. They put the fire out with dinner pails and things, but

couldn't get across the bridge and had to lie there for several hours. Finally another train came up to the other end of the bridge and they transferred to it. This was a slowish sort of train, and at one of the stations Mr. Smith got off to walk around a while, and leaned against something thinking till the train pulled out and left him. He being the only one who knew where the grounds were the remaining two spent about $50 telegraphing for him at every station where they stopped. They got no word till they reached Streator, where they were wired to wait for the next train. The thoughtful man got in about midnight, and they all went up to Alf Kennedy's and got supper. They hadn't gotten to Pekin yet, and finally they concluded they didn't want to go to Pekin, so they took the early morning train back to Chicago. But they didn't like to face their friends so soon after starting on a quail hunt, so they took the next train down to Cumberland marsh on another road and in another direction and went fifty miles on that trip. Everybody knows there are no quail on Cumberland marsh, and so Charlie Gammon didn't see a quail or come anywhere near seeing one on his eventful but not very restful quail hunt. The boys annoy him a good deal about this hunt, and it took a good deal of persuasion to get him to say anything about it for publication.

There are beginning to be a good many indications that the hunting season is about over and the lying season just beginning. Now there's Eddie Price, the gray-haired criminal who told that story about the duck that he filled so full of shot that it sunk. This season Mr. Price has had another singular experience, which goes to show how wonderfully skilled one can by long practice become at shooting, and other things. This is the story of Eddie Price's two teal holes, as now current.

"I was shootin' down on the Kankakee marsh, above English Lake," said he, "an' there was pretty good chance o' teal coming down the river. They would leave the river and skate across one bend, right where the rice and flags were the thickest. I got out in there, me an' another fellow, an' knocked down a few, but we see it was no use, for the cover was so thick no man on earth could find a duck after it was knocked down. Out to my left was two little pond holes in the marsh, 'bout as big as a room, each one of 'em, and 'bout eight or ten yards apart. The teal was a-flyin' right over them little water holes, and I see if I could knock 'em down in there, I could get my birds. So I crawls up so'st I was about 45yds. from the first hole and 50 some from the second. I begun to shoot and the birds begun to fly, and every time a flock flew over them there pond holes I knocks one bird down into the first pond hole with my right barrel and swings on ahead and knocks down a'other one into the second pond hole with the left barrel. By that way I saved most of my ducks, I s'pose, for in the evenin' I picked up 31 teal out of the first hole, 'n 30 out of the second. I allus thought I held a little too far ahead on one teal that was goin' across the second hole. I only shot 64 shots and I got 61 birds, but I hadn't if been particler to drop my birds in them there pond holes, I wouldn't have found two dozen out of all I killed, though mebbe I'd a killed more in the 64 shots, 'cause I could of bunched some as they went over."

Mr. Price has another story about a greyhound of his that used to set prairie chickens, "an' bein' so rangy, you know, was the best chicken dog you ever saw;" but that is quite another story by itself.

Dec. 4.—From the St. Clair Flats Mr. U. G. Huff writes again that last week plenty of ducks were in but were lying out in Anchor Bay and not moving, so that no shooting could be had.

Mr. F. A. Howe and a party of friends will take their regular winter mallard hunt in February. They go to a piece of land near Fountain Bluff, Ill., below Cairo on the Mississippi, where they think they have about as good mallard country as can be found.

At their business meeting Tuesday last the members of the English Lake Club elected the following officers for the ensuing year: President, A. M. Fuller; Vice-President, J. R. Adams; Secretary, A. W. Cobb; Treasurer, R. W. Hosmer; Executive Committee, A. M. Fuller, W. B. Chatfield, Abner Price. English Lake Club had the misfortune to have their marsh burnt off three years ago, killing down the feed badly. This fall they will plant a large quantity of wild rice. John Gillespie tells me that they obtain this rice in Chicago and pay $2.50 a bushel for it. As was earlier announced, this club has had out policemen on their marsh this fall, and these did great service in warning off camping parties and pulling up muskrat traps. Muskrats must be preserved if a good mallard marsh is wanted, for they cut out holes in the dense reeds and give the birds better chances to use on the marsh. There are three natives near the marsh who are the worst troubles in trapping rats. Many of their traps are confiscated, but that won't stop their spearing rats through the houses after the marsh freezes. It is likely that English Lake Club will try diplomacy and hire these men as patrols and guards next season, paying them more than they can make elsewhere.

Mr. Sam Booth, in company with Mr. Alex T. Loyd and a number of others, will spend the holiday season camping out, probably in a cabin boat on the Missouri River, down South, and they should have a very enjoyable time.

We are having snow here now, it has been intermittent for three days, and though the weather is not unpleasantly cold, it would seem that the ducks would largely pass on south from here before long. It has not been much of a duck season. The boys have not gotten excited very much over duck hunting for some reason. There has been an exceptional interest among Chicago shooters in live-bird trap shooting this season. The stir of the Kansas City match has not yet died down. The boys up at "Billy's" talk of it still. A day or so ago, up there, I found a group of them gathered around big Ben Dicks, who had just received from Andy Thomas, his opponent in the Kansas City shoot, an elegant embossed card showing the score, similar to that presented Col. Felton by Jim Riley. Everybody is talking trap, and this saves the ducks, which is all very well. As is known, there was to be an effort made this next session of the Legislature to pass a law prohibiting live bird shooting at the traps, but it is not thought now that such a law can be passed as the Legislature now stands.

The quail also have gotten off easy this fall, and if we do not have so terrible a winter as it is predicted we will have, the stock for next year bids fair to be very good. I do not hear of any very startling bags. A son of Mr. J. J. Jeffreys got 30 on a late trip into Indiana, below Newton, last week.

Some few deer have been killed by Chicago men, doubtless a great many that we do not hear of. I believe I have mentioned that the W. L. Shepard party got two deer in their trip in the North Peninsula in October. Mr. S. B. Chase got a fine buck in early November north of Oconto, in Wisconsin. Mr. Thos. Dennaha also got a good buck in his northern Wisconsin hunt.

Mr. Wm. Mitchell, a druggist of Oconto, Wis., has just sent down to his friend Hank Smith, of this city, a very fine head for mounting. It is a four-year-old buck, and a beauty. Dick Turtle, who will mount it, says it has been skinned in the neatest and most careful way he ever saw. The skin of the head and neck has never been split at all, but just rolled back over the neck. A head for mounting should never be split up the neck for skinning. The best way is to cut up the back of the neck to a point midway between the horns, and then make a cross cut from the base of the one horn to the other. The skin should then be stripped off entirely, and salted well. The bones can then be cleaned more thoroughly than when the skin is left attached at any point. This is what a taxidermist told me, at least, one time when I took a buffalo head in for mounting. This head had been skinned off all except a little strip between the horns, where the salt couldn't get, but the bugs could. In the winter it would not make so much difference.

Dec. 6.—A member of a prominent South Water street commission firm told me yesterday that the receipts of game for this fall had been the lightest known for a long time, if not the lightest ever known. Ducks have come mostly from western Minnesota, and a few from the great freezers around Spirit Lake and other points in northwestern Iowa. The non-export laws of all these northwestern States are simply dead letters. "Last fall," said this gentlemen, "the supply of venison, quail and prairie chickens on the market was the largest for 15 years. Game was very cheap and much of it was put down in the freezers. The deer that you see displayed on the street this fall are nearly all out of the last year's cold storage. We think that last fall's unusual abundance was due solely to the opening up of the Oklahoma territory, at least the bulk of our shipments came from there."

In other words, the game of the Indian Territory is practically gone already.

Mr. T. S. Boykin writes from Arkansas City, on the line of the Nations, to Mr. A. Hirth of Spalding's, this city, that he has within the month of November killed 1,500 quail to his one gun, and states that 20,000 quail have during the past month of November been shipped from that one station to the markets of St. Louis and Chicago. Would all those birds have been killed if they could not be sold? And if they can be sold are they not going to be killed?

The gentleman above named has also a letter from his friend, Mr. Wm. Flaccus, of Pittsburgh, Pa., who is lately back from a very pleasant trip in Germany. Mr. Flaccus has two brothers-in-law, who are both oberforesters on estates, the one in the Rhone district and the other in the Spessart Gebirge, and he writes very entertainingly about the abundance of game in their districts. The deer are so abundant as to cause serious damage to the crops of the peasants, for which the latter always exact payment, both parties resorting to arbitration when the amount can not at once be agreed upon. One keeper had sold 400lbs. of brook trout in one season to a Baden hotel, the trout, shame to say, being taken in nets and sold alive. The system of forestry practiced in Germany, Mr. Flaccus thinks, is admirable, and should be followed by every civilized land.

Ex-Governor Kellogg, of Louisiana is in town this week, and states that himself, Gov. Wade Hampton and Senator Quay, will start shortly for another tarpon trip in Florida. It is to be presumed that Gov. Hampton's recent gun shot accident is not proving so serious as was feared.

Mr. L. D. Webster, of this city, left hastily on Thursday with 500 shells in his pocket, in response to a wire from Henry, on the Illinois River, that ducks were in by the millions, or maybe anyhow by the dozens.

On Thursday also it was that Sam Austin, the new keeper at Mak-saw-ba Club, sent up word to Joel Kinney that the mallards were in on that marsh in very large numbers. There must have been some splendid mallard shooting on the Kankakee and Illinois yesterday and today, but it is too soon yet to hear the results.

Mr. Wm. Werner, chief conspirator in the Possum Club, left last Wednesday for Cedar Lake, Ind., on the Chicago & Erie road after quail, but has not been heard from at this date.

An early meeting of the executive committee of the Illinois State Sportsmen's Association will be called for the purpose of formulating a plan of action in the matter of having some more game laws passed. Incidentally they may say a word or two about the next State tournament.

Speaking of game laws, or thinking of them, or needing to know anything about any of them reminds me of FOREST AND STREAM'S new *Book of the Game Laws*, a copy of which I now carry in my pocket, an action that any sportsman would do well to imitate, if he wants to know he is right to a moral certainty on any game law question in any State of the Union. Some sporting papers, and some sporting goods dealers, and a good many other people have of late been rendering sportsmen very questionable service by putting out what they purport to be tables in condensed form showing the open seasons of all the States and Territories. I have been led by the use of one of these condensed form businesses into making one or two miserable blunders in game law dates, and unquestionably others have also been victimized in that way by "the little cheap slip that a dealer can give away to a customer." It is a sort of "give away," especially to the customer who depends on one of these things. Suppose he wants to get it right and goes to the local statutes. Ten to one he cannot make head or tail out of the enactments, and even a lawyer may err about it. Suppose he wants the law of another State and sends to a friend, an officer in some gun club, for it. The friend may mean well, but be ignorant. I have been through all these stages myself, and until this book was published I was ready to say that a man could not, anywhere in America, get reliable information that would cover all the country in game law matters. But that is just what one can get here, easily and quickly, and in the assurance that the information is absolutely correct. I would recommend law-drafting committees to look through these pages and compare local laws with those of adjoining States and *vice versa*. The total collect of the laws, which must have made gray-haired and bowed down the man who did it, shows a mass of reading which is valuable in a good many ways besides that of telling a man when he may go shooting in such and such a State. I don't believe many people know how verbose, how complicated, how ingnorant and ineffectual *per se* the bulk of our game laws are. May the *Book of the Game Laws*, itself built up by intelligent hard work, begin the millennial work of inaugurating a clearer and more sensible state of affairs. It is a labor done simply for the love of accuracy. Let us hope it may grow into much more than that in the way of its unprophesied accomplishments.

Dec. 7.—The boys have quit shooting and gone to story-telling, I am afraid. I said something about Eddie Price and his teal holes. Now that veracious gentleman is around again to-day, and is once more insisting on the accuracy of his old statement—which I believe was once before published in FOREST AND STREAM—that during a certain hunt on the Kankakee he one day killed so many ducks he couldn't put them all in one pile! This is one of the standard Chicago lies, and any ambitious newcomer is always steered against it.

I suppose no question has agitated the sportsman mind of the whole country so much as the old one of "holding on" and "holding ahead." Many and bitter are the discussions over that old difference, and many the geometrically figured impossibilities which experience says are possible on that topic. Apropos of all this, they tell a pretty good story on Mr. George Smith, a well-known Board of Trade man here. Mr. Smith is a trifle English, very well to do, and much addicted to the vice of buying fine guns. He is said to have $5,000 worth of Purdys, Westley Richards, Lancasters and the like, and couldn't think of wearing the same gun twice in the week. He never shot so very many ducks, however. Mr. Smith was up at Fox Lake duck shooting, once upon a time, and the veteran pusher, George Beckwith, had him out, and got him into a pass where there was good shooting. Mr. Smith had a lot of fun, but he wasn't getting many ducks. "You don't hold ahead far enough," said George; "you want to throw away far ahead of 'em, three or four feet at least, you'll never get any till you do."

"I don't like this way of shooting air," said Mr. Smith, "especially when I'm out shootin' at ducks you know; but if you say three or four feet ahead, here goes!" So he blazed away in the air, and knocked down his next duck. Much gratified at this, he pursued that method further, and before long was getting them down in pretty good shape. "This way of holdin' ahead is a bloomin' success," said he.

By and by the flight stopped and George piled the birds into the boat, and they started home. On the way they passed a big rat house, on the top of which a big muskrat was lying fast asleep. George stopped the boat and pointed out the rat. "Do you see him?" he asked.

"Indeed I do," said Mr. Smith; "see me tumble him!" So he blazed away, and never touched the rat, which jumped off and swam away.

"Well, now, how on earth did you manage to miss that rat," said George, in his disgust forgetting his pusher's discretion. "He was lying there fast asleep and I could have killed him with a club."

"By Jove; I can hardly believe it meself," said Mr. Smith, "but do you know, I'm positive I did just as you said, and held about 4ft. ahead of him, I did really, you know!" E. HOUGH.

[In last week's report of the Possum Club, Col. Felton is made to say that he admired the "brightness of the table talk, the sparkle of the sportsman reporter, etc., etc." Doubtless all sportsman reporters will be pleased at this unconscious tribute from the intelligent compositor, but what was really written was "the sparkle of the spontaneous repartee." Which is a good deal different. As it stands, the statement looks just a trifle remarkable.—E. H.]

NAMES AND PORTRAITS OF BIRDS, by Gurdon Trumbull. A book particularly interesting to gunners, for by its use they can identify without question all the American game birds which they may kill. Cloth, 231 pages, price $2.50. For sale by FOREST AND STREAM.

Sea and River Fishing.

THE FULL TEXTS of the game fish laws of all the States, Territories and British Provinces are given in the *Book of the Game Laws*.

REARING SEA FISHES.

UNDER date of Nov. 27, Mr. Vinal N. Edwards, of Woods Holl, Mass., informs the U. S. Fish Commission that codfish are still abundant in Vineyard Sound. Edgartown boats are taking them in considerable numbers off the mouth of Edgartown Harbor, in about six fathoms of water. From 75 to 90 good-sized cod are taken on a tide. None of the fishermen can remember that cod were ever taken there before and they agree unanimously in the belief that these are the result of the cod planting from the Woods Holl station.

The following important experiment in rearing sea bass and scup is also mentioned by Mr. Edwards:

"In June, 1890, while we were hatching sea bass and scup, I put one jar of young sea bass and one of young scup into the eel pond in this place. There were about 50,000 of each. I think all must have lived, for during the month of November large schools of scup and sea bass have been passing out under the bridge from the pond. Nov. 7 I seined in the pond, and caught thousands of both sea bass and scup. The smallest was 2in. long, the largest 4½in. We have one of our aquaria full of them, but they will die when the water gets down to 40°. I seined day before yesterday, and also found the sea bass and scup plenty in the pond, but not so abundant as the first part of the month. All the young scup I have caught seining in the harbor the last month, no doubt, came out of the pond, for no scup or sea bass are found anywhere else. Spring before last I put in a few young sea bass into the pond, and they lived through last winter and are now 10 and 11in. long. I got some of them a few days since. I also sent two or three by the Fish Hawk to Washington alive; these were taken from the eel pond,

ICE FISHING IN ARCTIC ALASKA.

THE little cod of the polar seas, although a pigmy compared with the true cod of the Grand Banks and George's, stands to the Esquimaux in as important a relation as its bigger relative to the people of New England. As this fish is one of the subjects of a communication—from a valued correspondent, we present first a sketch of its distribution and the brief record of its life history. The polar cod, called in Capt. Herendeen's letter the tomcod, is the polar coalfish of Richardson and the saida cod of the "Fishery Industries." Greenlanders know it as the *misarkornak*.

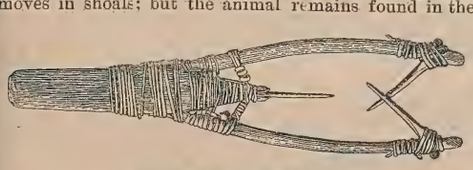
The polar cod inhabits the region around the North Pole. It is recorded from Archangel, Nova Zembla, Spitzbergen and Greenland. In the White Sea it is very abundant, being captured there, according to Collett, in great numbers and sold in Archangel.

This fish does not appear to have been taken in Alaska south of St. Michael's. In Plover Bay, Siberia, we found it sufficiently common in August and September. The species is very common in Arctic waters of the east coast of North America. Mr. Ludwig Kumlien found it in Cumberland Gulf in January, 1878. He states that it forms the principal food of one of the Greenland seals in the winter. On Sir Edward Parry's first voyage it was taken among the surface ice in Baffin's Bay, and on his second voyage multitudes of the fish were collected from rocky pools in Duke of York's Bay, Southampton Island, where they had been left by the ebb tide. In Prince Regent's Inlet Parry found it equally common during his third voyage. Sir John Ross took it abundantly in Batty Bay in July and occasionally in winter in Felix Harbor. Parry found the polar cod as far north as latitude 82¾° in abundance in small bays at the mouths of fresh-water streams. Richardson records it as a common winter inhabitant of the northern bays of Greenland.

Lucien M. Turner, writing of his experience in Alaska, has the following about the species:

"The specimens of Arctic cod collected by me were obtained in the latter part of February, 1877, the coldest month during a nearly four years stay at St. Michaels. Some natives had made holes in the ice in the bay and were fishing through these holes when I visited them and obtained several specimens. This species was not observed at any other than the winter season. The natives informed me that they only occur in winter. They were obtained in about 3½ fathoms."

Mr. E. W. Nelson, who is also a well-known Alaskan explorer, collected specimens late in November on Norton Sound, where it was abundant for a few days in company with the *wachna*, a small cod known in the books as the *Gadus navaga*. Natives told Nelson that the polar cod occurs every year on one portion of Norton Sound, but is rarely taken at St. Michaels.



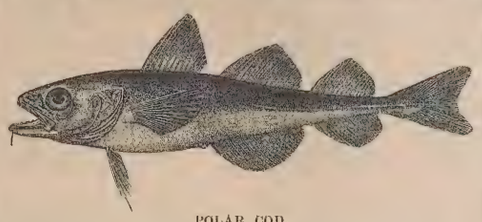
The length of the polar cod is said to reach a maximum of 14in.; the average length, however, is about 1ft., and the weight less than ½lb.

The fish, according to Richardson, spawns on sea weeds along the shores in February and under the ice.

On the 19th of August, a little above the Arctic Circle, not far from the coast of Alaska, while sailing along in the Coast Survey schooner Yukon, Dr. Bean saw large numbers of swimming jelly fishes, very much like the common sun jelly (*Cyanea*) of the Atlantic, and under the jelly fishes were frequently seen small fish, of which we caught a great many with a dip-net. We found these fish to be the young of the polar cod. This little fish was as common under the medusæ as the young butterfish of the Atlantic (*Poronotus triacanthus*) is under the jelly fishes in all the quiet bays of New England.

Prof. Robert Collett, in describing the fishes of the Norwegian deep sea expedition, records the following facts concerning the species:

"The individuals obtained on the expedition, contrary to the experience of former observers, were taken in the intermedial strata of the ocean, having on no occasion been met at or near the surface. In Magdalene Bay seventy-two individuals, all of them young, the total length averaging about 100 millimeters [4in.], were brought up together in the trawl net, showing beyond doubt that this species, in common with its congeners, moves in shoals; but the animal remains found in the



ESQUIMAUX FISH SPEAR.

viscera of the specimens examined belonged chiefly (in some instances exclusively) to *Calanus finmarchicus*, or consisted of fragments of *Themisto libellula*, along with *Calani*, accordingly pelagic forms, occurring at all depths, from the surface to the bottom."

On the gills of one specimen was found an example of a *Hæmobaphes;* two other small parasitic crustaceans had attached themselves to the skin of the same individual."

Richardson mentions the polar cod, or coal fish, as the principal nourishment of the sea fowl which frequent the Arctic regions in summer, its habit of swimming at the top of the water making it extremely easy of capture. He includes the beluga, or white whale, among its enemies, since this animal drives the fish upon the ice in shoals. In summer he found attached to the gills a parasite similar to the one referred to by Collett. "The polar coalfish," he writes, "is of so curious a disposition that it is readily attracted to the surface by agitating the water, especially in the evening. Sometimes it leaps upon the ice, when it becomes the prey of the Arctic fox, which lies in wait for such a chance, and is even

POLAR COD.

said to know how to bring about this desired event by stirring the water with his foot through a crevice. The Greenlanders take it in a similar way with their hands, having learned the art, according to Fabricius, from the fox."

Captain E. P. Herendeen, the well-known Arctic traveler, and member of the Signal Service party at Point Barrow from 1881 to 1883, promised us in the spring of 1889, when he was about to start on a whaling expedition to the mouth of the Mackenzie River, that he would give to FOREST AND STREAM some observations on the animals encountered in his Arctic journeyings. The Captain was at Point Barrow during the winter of 1889-90, but could not remain in the Arctic because of failing health and was obliged to return to San Francisco, from which place he has forwarded the following interesting letter:

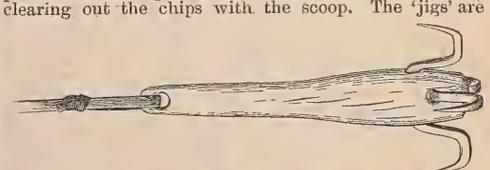
"I am back in San Francisco one year sooner than I expected. My health was not good and I thought I had better return and not hazard another winter in the north. We did not get east to Herschell Island as we hoped to do, consequently I cannot give you any information in regard to the fishes of that region, although I am informed by natives who have lived in the vicinity of the Mackenzie River that fish are very plentiful and of many varieties. They also tell me of a lake that is fed by a stream flowing from a mountain, and that the temperature of this stream is so high that the ice does not freeze to a greater depth than six to ten inches, and often in moderate weather melts entirely. In this lake there are many varieties of fish which can easily be taken there with hook or spear; as many as desired, and, in fact, according to the report, it must be an Indian paradise about there, since fish, reindeer and mountain sheep are very abundant. Ptarmigan are plentiful in winter and ducks and geese in summer. In the sea there are whales and beluga in great numbers, and seals, also, are plentiful. No doubt if I had got there I could have sent you a pretty good account of the fish to be found, together with specimens.

"We were unable to get east of Point Barrow and consequently were obliged to winter at that place, in Elson Bay. No fish are taken there in winter except tomcod. These are jigged along the coast in from 10 to 15 fathoms of water. They are caught mostly by the women and children. Fishing is done through holes in the ice, which is from 4 to 6ft. in thickness. The ice pick represented in the sketch is used for drilling holes. It is a piece of pointed iron fastened upon a wooden shaft. The spoon, about 5¼in. long, made of two thin pieces of reindeer horn, curved into suitable shape and fastened to a wooden handle about 2ft. in length, is used to clear the surface water in the hole of scum ice. The natives use a whalebone line made from strips of baleen, which they are very expert in getting out of the required size. With this line they can fish in any temperature, often 40° below zero. A line made of this material does not ice up like a twisted line of cotton or linen. They never put their hands to the line in cold weather, but haul it in with the stick on which they reel the line and the spoon used for keeping the hole clear of ice. With these two implements they raise the fish and lower the line, and they do this with wonderful rapidity.

"A gill-net used by the Esquimaux for taking small whitefish and salmon trout is very skillfully made by months of hard labor. The net is 12 fathoms long and 1 fathom deep; it is made of strips of bone from yearling whales.

"The fish spear or native grains I was assured is very old. I obtained it from an old doctor, who was very loath to part with it, and I think there is no doubt about the age of this implement, because in these latter days the Esquimaux have plenty of iron and steel, and this spear is made of bone. It was used in the capture of fresh-water fishes.

ESQUIMAUX BOY JIGGING POLAR COD.



"During the past spring whaling was unprecedentedly bad. Only one whale of any size having been taken on the entire coast and none on the Siberian coast or St. Lawrence's Island."

In a paper read before the American Fisheries Society in May, 1884, Mr. John Murdoch gave a description of fish and fishing at Point Barrow, Arctic Alaska, based upon his observations two years preceding among the Esquimaux of the region. In this article he gave a sketch of the fishes used for food and the methods employed in capturing them. After describing the hunting and fishing of the natives, who go off to the large rivers to the eastward to catch whitefish and burbot, he tells in the following language how those who stay at home obtain their supplies of fish food: "In the meantime those who have remained at home have not been without a supply of fish food. There is a small species of codfish, the polar cod (*Boreogadus saida*), which appears along the coast in large schools about the end of January, or when the sun again begins to rise. We were unable to find out whether the fish really leaves the coast to return in January, but at all events the Esquimaux do not fish for them until then and say there are none to be found. They would be likely to fish for them were any to be caught, because just at this season of the year they are apt to be pinched for food, as no deer are to be had, and if the ice happens to be unfavorable seals are very scarce.

"Wherever there is a level field of this season's ice inclosed by lines of hummocks, the fish are sure to be plenty. Such a field as this, about half a mile long, practically afforded a living to most of the people in the village during the season of 1883, because that year the ice was very unfavorable for sealing, and food was pretty scarce in the village.

"The fishing is carried on mostly by the women and children, though one or two old men generally go out, and one or two of the younger men, when they cannot go sealing and food is wanted at the house, will join the fishing party.

"Each fisherman is provided with a long-handled icepick, which he frequently leaves sticking in the snow near the fishing ground, a long line made of strips of whalebone, reeled lengthwise on a slender wooden shuttle about 18in. long and provided with a copper sinker and two pear-shaped 'jigs' of walrus ivory armed with four barbless hooks of copper, and a scoop or dipper made of reindeer antlers, with a wooden handle about two feet long. Hardly an Esquimaux, and especially no Esquimaux boy, stirs out of the house in the winter without one of these scoops in his hand. To every party of two or three there will also be a good-sized bag of sealskin, generally made of a piece of an old kayak cover, for bringing home the fish. Arriving at the fishing grounds each proceeds to pick a hole through the ice, which is about 4ft. thick, clearing out the chips with the scoop. The 'jigs' are

POLAR COD JIG.

then let down through the hole, and enough line unreeled to keep them just clear of the bottom where the fish are playing about. The reel is held in the right hand and serves as a short rod, while the scoop is held in the left hand and used to keep the hole clear of the scum of new ice, which, of course, is constantly forming. The line is kept in constant motion, jerked up quickly a short distance, and then allowed to drop back, so that the little fish that are nosing about the white 'jigs' after the manner of codfish, are hooked about the jaw or in the belly.

"As soon as the fisherman feels a fish on his hook he catches up a bight of the line with his scoop and another below this with his reel and thus reels up the line on these two sticks in loose coils until the fish is brought to the surface, when a skillful toss throws him off the barb-

less hook on the ice, where he gives one convulsive flap and instantly freezes solid. The elastic whalebone line is thrown off the sticks without tangling and paid out through the hole again for another trial. If fish are not found plenty at the first hole the fisherman shifts his ground until he 'strikes a school.' They are sometimes so plenty that they may be caught as fast as they can be hauled up. One woman will frequently bring in upward of a bushel of little fish—they are generally about 5 or 6in. long—from a single day's fishing. This fishing lasts until about the middle of May, when the ice begins to soften. A good many are also caught along the shore in November in about a foot of water when there are no tide cracks in the ice. At this season the Esquimaux use a little rod about 2ft. long, with a short line and a little ivory squid, at which the fish bite."

CO-OPERATIVE PROTECTION.

Editor Forest and Stream:

I read with great interest all your articles on deer hounding and the unsportsmanlike butchery of game. I have observed the course of things regarding these matters for many years and have come to this conclusion. We need an association to propagate right ideas on these subjects, and to develop and direct public intelligence and sentiment regarding them. The work needed would have to be partly the enactment and enforcement of suitable laws, and partly the education of the American people. Neither kind of work would accomplish the object alone. Both are indispensable. It would take money. There would have to be an organization on a simple, sensible plan, and an executive committee of intelligent and public-spirited men who would serve without pay. But it would require one man, an agent or secretary, who would devote his time to the work, and he would have to be paid a competent man's salary and some other expenses would have to be provided for.

There are men who believe in the preservation of game who have money. Well, they will have to go about the business in a practical and businesslike way. They must not give all their money to found miserable little colleges where there are too many now. The preservation of our mountain forests and streams, and of their fish and game, is a necessity of civilization, and it is full time that we should set about it seriously. When men become serious about anything they do something besides talk. We shall have to study the art of getting things done here in America. The method of work for all such objects by means of voluntary associations of citizens, with simple arrangements for the diffusion of knowledge and the propagation of ideas, is a natural product of existing conditions. It is sensible and practical, and yields larger results for the means employed than any other plan that has been tried. J. B. HARRISON.

NEW YORK.

ANGLING NOTES.

AN angler complains in one of the weekly sporting papers that American fly tyers copy only English patterns of flies, whereas our natural insects should be imitated instead.

While undoubtedly many dealers do sell foreign patterns almost exclusively, yet some of the manufacturers of flies make up a number of patterns that are copied from our natural insects. Besides which there are very many fancy flies that are exclusively American.

Among the imitations of our own flies to be had are the following: Bee, Seth-Green or Gen. Hooker, Beaverkill, Abbey, queen-of-the-water, great-dun, Cahill, olive-gnat, claret-gnat, sand-dun, dark-coachman, black-fly, yellow-May, orange-miller, orange-black, red-fox, dark-fox, bright-fox, royal-coachman, etc., etc. Among the fancy patterns the famous scarlet-ibis had a wide reputation. Then there are the dark and light-Montreal, Canada, blue-jay, Romeyn, toodle-bug, Roosevelt, Holberton, Tomat-Joe, Lord-Baltimore, Lottie, Brandreth, Beatrice, Imbrie, Rube-Wood and a host of others too numerous to mention. Many of these have proved to be exceedingly killing.

Some of the Enlish patterns, such as the grizzly-king, professor, gray and green drakes, hawthorne, alder, coachman, March-brown, red-spinner, stone and the various hackles have been favorably known for years and have proved to be great killers from Maine to California.

The list of flies is so great that we doubt if the angler can be benefited by any new designs, and it would be hard to find a natural fly that could not be very nearly duplicated in any of our principal tackle stores.

SCARLET-IBIS.

NEW YORK GAME PROTECTORS.

THE regular monthly meeting of the Commissioners of Fisheries of New York was held last Tuesday, all the Commissioners being present except Mr. Blackford, who has for several weeks been confined to his bed by serious illness.

Memorials and petitions were received from residents of Syracuse and vicinity asking the appointment of George Crownheart as game protector for the Tenth District; and similar claims were preferred by others in favor of Edward Hawn. The Commissioners, however, explained that there was at present no vacancy in that district, F. P. Drew still holding office there; his removal from the office of chief game protector did not affect his subordinate position, he had simply been retired to the ranks, and was still protector in the Tenth District, and until he should resign or should be discharged for cause, the Commissioners could do nothing toward appointing a successor.

A synopsis of the reports of the several protectors was presented, from which we take the following:

Robert Brown, Jr., First District.—"On the 22d of this month I arrested five men for shooting on Sunday. Their trial was adjourned to the 4th of December. On the 29th I caught a fellow selling trapped partridges, at Manhoe, Suffolk county. Their cases will come up next month."

Willett Kidd, Second District.—"Miles Parker paid $50 and costs, Nov. 6, to settle a suit commenced against him for pollution of streams. The defendant Parker owns and operates a saw mill in Ulster county and ran the sawdust into the stream. An action for penalty was commenced in Orange County Supreme Court on the June 18, 1890, and resulted as above stated."

Matthew Kennedy, Third District.—"A suit was commenced in Greene County Justice Court against William Friend, who is charged with shooting birds in closed season. The offences were committed in May and July."

Isaac Kenyell, Fourth District.—"An action was commenced in Warren County Supreme Court Nov. 13 against Randall MacKinn of Hamilton county, killing a deer in July last."

Peter R. Leonard, Sixth District.—On Nov. 8 arrested Abe Davis and Charles Mandigo for illegal fishing. The prisoners were tried in Justice Court, at Pope's Mills, St. Lawrence county, on the 18th, and acquitted. An action for penalty was at once commenced against the parties. Suits were also commenced in St. Lawrence County Supreme Court against Samuel Davis and James H. Mandigo for a like offense."

George Moyer, Seventh District.—"I have five cases to be disposed of at the present term of court, which convenes at Lowville, Dec. 1. Further allow me to say that I have not been idle the past two months. I have picked up ten cases of violations which I hope to be able to prosecute and report next month."

Sherman F. Snyder, Ninth District.—"Nov. 13 at Millsburgh, Schoharie county, seized and destroyed an eel rack. It was of little value. Spent several days on Otsego Lake during the month but discovered no new violations."

Fred. P. Drew, Tenth District.—"Was on duty ten days, four of which was spent in Albany before Codification Commission. Have attended to suits now pending in the counties of Jefferson, Lewis, Herkimer and Oneida."

Daniel Staring, Eleventh District.—"In Jefferson County Justice Court, Nov. 12, David Shannon plead guilty to illegal fishing, and was fined $15 and costs, Moiety received $8. Nov. 12, at Clear Lake, Jefferson county seized and destroyed one gill net valued at $10."

Henry C. Carr, Twelfth District.—"Suits were brought in Cayuga County Supreme Court Nov. 6 against Christopher Peterson, Schuyler Peterson, George E. Peterson and George R. Peterson. All charged with spearing trout on the 8th and 13th of November, instant. Nov. 29 an action was commenced in Tompkins County Supreme Court against Stephen R. Jones for catching game fish with an eel rack. Seized and destroyed two gill nets on Owasco Lake, three fyke nets on Cayuga Lake and two trap nets on Oneida Lake, of the aggregate value of $250. In the past two months I have given all the spare time I had to the waters of Oneida Lake. I have raided every bay and inlet upon that lake and seized many nets and destroyed them. I have commenced several actions in Supreme Court and have many more to commence. While doing the work upon that lake through mud and storm, night and day, and threats of violence, who should have the credit? I, with the good help I received from the oarsmen at South Bay, who stood by me in cleaning out the worst gang on the face of the earth."

John Sheriden, Thirteenth District.—"Seized and destroyed 32 gill nets as follows: Five at Hammondsport, 4 at Gibsons, 2 at Keuka, 4 at Grove Springs, 3 at Bluff Point, 9 at Haddens Point and 2 at Lewis Point, on Lake Keuka; 1 at Dresden and 2 at Long Point, on Seneca Lake. Aggregate value, $1,675."

George M. Schwartz, Fourteenth District—"A suit was commenced in Ontario County Justice Court, Nov. 26, against Dr. Behan for shooting quail illegally. In Monroe County Justice Court, Nov. 29, Charles Loyer was convicted of illegal fishing and fined $8 and costs. Nov. 6, at Irondequoit Bay, seized and destroyed 2 gill nets; Nov. 22, 1 fyke net and 3 leaders at Wide Water; Nov. 24, at Braddocks Bay, 5 fyke nets and 2 leaders. Total value, $140."

Charles Ripson, Fifteenth District.—"The case of the people against the Buffalo Fish Company was settled Nov. 11, on payment of $50 penalty and $17.50 costs. Moiety received $25. This action was commenced in Erie County Supreme Court on the 29th May, 1890. The complaint charged the company with having in possession and exposing black bass for sale on the 3d day of April, 1890.

With respect to the choice of a candidate to fill the place of ex-protector Bradley (who, by the way, was not reappointed at political dictation nor any other), Chief Protector Pond reported that the inquiry on the subject had not yet been completed by him, as his constant attendance had been required at the court terms of Clinton and Franklin counties.

LARGE MUSCALLONGE.—Clayton, N. Y.—I inclose a tooth from a muscallonge I caught here last year, also mail you a photograph of the fish and another caught by a friend (Mr. Solon Johnson) on the same day. My fish weighed 50lbs. when I landed him, and on weighing him on my return from camping, four days later, he weighed 47½lbs. The fish was sent to Mr. Blackford, Fulton Market, and exhibited by him several days. I think it was as large a fish as has been brought in from the St. Lawrence.—J. GRA. FRASER.

A HYBRID SALMON.—One of the State Fish Commissioners of Oregon in 1888 crossed the quinnat and blueback salmon, the former being the largest of the Pacific salmon and the latter next to the smallest. The eggs hatched without difficulty, but all of the embryos were blind. They were kept until the egg sac was absorbed, when all of them died because they could not see the food offered to them.

CHICAGO, Ill., Dec. 5.—They are catching bait and getting ready for the ice fishing up at Fox Lake now. The lake is expected to freeze over and offer a long season this year. This ice fishing destroys more fish in Fox Lake than anything else, and ought to be stopped. The market fishers come from miles around.—E. H.

ANGLING MEMORIES.—Of Mr. Samuels's "With Fly-Rod and Camera" Mr. W. A. Brooks writes: "I cannot say too much of it as a specimen of book-making, and the pictures appeal to me strongly. They bring back a hundred reminiscences from my own experience; and no book in my library will be more highly cherished. Mr. Samuels is a man of probably twice my age, and I only hope that if I live so long I may have as many pleasant days by flood and field to look back on as he has."

Fishculture.

ABUNDANCE OF YOUNG COD.—Mr. Vinal N. Edwards of Woods Holl, Mass., has communicated to the U. S. Fish Commission the following interesting note on the occurrence of young cod in Vineyard Sound and vicinity: Codfish are very plentiful in Vineyard Sound; some are taken also in Buzzards Bay; they are good fish and weigh from 5 to 10lbs. each. One boat went off Nonemessett last Saturday tautogging, and they caught 18 good-sized cod in one hour: they also lost a good many, their hooks being too small. A week ago last Monday, a boat went just outside of Nantucket Bar and drifted 2 hours, and caught 90 cod; this is the first time cod were taken there. All the smackmen from Nantucket Shoals report young cod very abundant; they never saw the like before. They are reported very common off Cape Cod also; the fishermen all seem to think these are the young cod turned lose by the U. S. Fish Commission.

A MAP OF THE UNITED STATES.—A large, handsome map of the United States, showing North and South Dakota, mounted and suitable for office or home use and issued by the Burlington Route, will be furnished responsible parties free on application to the undersigned. PLAYING CARDS.—For 15 cents in postage you can obtain a pack of best quality playing cards on application to the undersigned. P. S. EUSTIS, General Passenger and Ticket Agent, C., B. & Q. R. R., Chicago, Ill.—*Adv.*

FOREST AND STREAM, Box 2,832, N. Y. city, has descriptive illustrated circulars of W. B. Leffingwell's book, "Wild Fowl Shooting," which will be mailed free on request. The book is pronounced by "Nanit," "Gloan," "Dick Swiveller," "Sybillene" and other competent authorities to be the best treatise on the subject extant.

A MOOSE PORTRAIT.

WE have received from Mr. Lucius L. Hubbard, of Boston, a gravure-etching of a portrait of the American moose, by W. L. Taylor. The plate is 24×16in. exclusive of margins, and is intended for framing. Mr. Hubbard writes: "I suppose moose, like other beings, differ a good deal *inter sese*. They certainly do in their bell and horns. I am not surprised then when this man tells me the bell is too scant in my picture, or that man that the ears are not at the proper angle. I have verified both points from nature. My object has been to preserve the moose from the misfortune of being idealized, and if this fate shall have been arrested from him I shall feel well repaid." In this he has so far succeeded that although the pictured moose are legion, in books and magazine papers, we recall none so faithful to nature and on the whole so satisfactory as that now before us. In most respects it is beyond criticism; and those who are so fortunate as to possess copies of the reproduction are under obligations to Mr. Hubbard and his artist for the good work they have done. Without intending in the least invidious criticism we suggest, in response to Mr. Hubbard's request, two or three points in which we think the drawing might have been improved.

The common idea is that a moose stands very much higher at the withers than at the hindquarters, and it is almost invariably so represented in drawings or pictures. As a matter of fact, the difference is very much less than is commonly supposed, and in full grown animals is sometimes scarcely apparent.

Another feature that strikes one at once upon seeing a moose is the squareness of the rump. The animal has no tail, so to speak, but looks very much as if "sawed off." Has not Mr. Taylor drawn his moose with too much droop to the hindquarters, that is to say, both as to general depression of the entire hindquarters and the slope that he has given to the rump, which is now arranged something like that of a horse? As to the bell we suppose the animal from which Mr. Taylor made his studies had simply a long tuft depending from the throat, much in the style of a turkey's beard. Such tufts are frequently seen on moose, but so far as our observation goes, the most of these animals have the pouch extending 6 or 8in. along the neck. Of course where a study is made from life, the animal has to be shown with whatever sort of bell he happens to have, whether the pouch or the simple tuft.

The most noticeable defect, and one which gives to a person who never saw a moose an erroneous impression of his locomotive powers, is in the hoofs. The moose is represented as standing on his heels, and the hoofs are to our notion much larger in proportion than any we ever saw on a moose, being rather over one-twelfth of the animal's height at the shoulders.

Among the measurements of moose, made by our careful correspondent Col. Cecil Clay and his brother, Capt. Clay, and sent to us, were the following:

One moose, height 6ft. 10in., tread of hoof, 5½in.
One moose, height 6ft., tread of hoof, 4½in.
One moose, height 6ft. 6in., tread of hoof, 5 in.
One moose, height 6ft. 1in., tread of hoof, 5¼in.

Showing a tread of hoof running from one-fourteenth to one-sixteenth of the height of the shoulder, with the leaning toward the smaller tread. We suppose Mr. Taylor in making his study from life had for his model an animal in confinement, the hoofs of which were not worn, as are those of a wild moose, by constant travel. To see what effect the feet he has given the animal have in the general impression of the beast, take a sheet of paper and hold it so that its upper edge just covers the hoofs so as to keep them out of sight. Running your eye down the animal's legs, you imagine he is standing on four moderate-sized, firm, well-set hoofs, such as you think ought to belong to that kind of leg; on which an animal could with great facility make remarkable time, especially if he got a whiff of your scent, over anyand every kind of country. Slip the paper down and you will then see what we mean: that he is standing on his heels as though he were trying to imitate a caribou walking on the snow and spreading his toes out so as to us his feet as snowshoes.

But when all is said, the fact remains that this portrait marks the best effort yet made in picturing the moose as he is found in the forest.

Mr. Hubbard in his circular says that the moose is the most uncouth and ungainly member of the deer family in the world. That is in a certain sense true. The more wild moose a man sees, the less uncouth he comes to consider the beast, for the latter very well suits the wild and rugged surrounding of the sort of spot in which he is ordinarily found. There is a sort of weird mysterious aspect about him at all times that makes him very interesting. When he takes a notion to travel, he can often do it with so much dexterity as to almost approach grace, and is, perhaps, somewhat disappointing at times to the man hunting.

The Kennel.

All communications must reach us by Tuesday of the week they are to be published; and should be sent as much earlier as may be convenient.

FIXTURES.

DOG SHOWS.

Dec. 30 to Jan. 3, 1891.—First Dog Show of the Buckeye Poultry and Pet Stock Association, at Canton, O. James Sterling, Sec'y, 39 North Market street.

1891.

Jan. 6 to 9.—Delaware and Susquehanna Poultry and Pet Stock Association, at Binghamton, N. Y.

Jan. 13 to 17.—Third Annual Dog Show of the South Carolina Poultry and Pet Stock Association, at Charleston, S. C. Benj. McInness, Jr., Secretary.

Jan. 20 to 25.—First Annual Dog Show of the Louisiana Poultry and Pet Stock Association, at New Orleans, La. A. E. Shaw, Secretary, Box 1658.

Jan. 20 to 25.—Dog Show of the Georgia Poultry and Pet Stock Association, at Augusta, Ga. A. H. Vonderleith, Secretary.

Jan. 21 to 26.—Dog Show of the Elmira Poultry and Pet Stock Association, at Elmira, N. Y. Carl Hart, Secretary.

Jan. 27 to 30.—Inaugural Dog Show of the South Carolina Kennel Association, at Greenville, S. C. F. F. Capers, Secretary.

Feb. 24 to 27.—Fifteenth Annual Dog Show of the Westminster Kennel Club, at New York. James Mortimer, Superintendent.

March 3 to 6.—Second Annual Dog Show of the Maryland Kennel Club, at Baltimore, Md. W. Stewart Diffenderffer, Secretary.

March 10 to 13.—First Annual Dog Show of the Duquesne Kennel Club, at Pittsburg, Pa. W. E. Littell, Secretary.

March 16 to 19.—Inaugural Dog Show of the Washington City Kennel Club, at Washington, D. C.

March 24 to 27.—Second Annual Dog Show of the Massachusetts Kennel Club, Lynn, Mass. D. A. Williams, Secretary.

March 31 to April 3.—Seventh Annual Dog Show of the New England Kennel Club, at Boston, Mass. E. H. Moore, Secretary.

April 8 to 11.—Third Annual Dog Show of the Mascoutah Kennel Club, at Chicago, Ill. John L. Lincoln, Jr., Secretary.

April 14 to 17.—Fourth Dog Show of the Cleveland Kennel Club, at Cleveland, O. C. M. Munhall, Secretary.

Sept. 1 to 4.—Dog Show of the Youngstown Kennel Club, at Youngstown, O.

FIELD TRIALS.

Jan. 19.—Eighth Annual Field Trials of the Pacific Kennel Club, at Bakersfield, Cal. H. H. Briggs, Secretary.

Feb. 2.—Third Annual Field Trials of the Southern Field Trials Club. T. M. Brunby, Secretary, Marietta, Ga.

CENTRAL FIELD TRIALS.

POINTER DERBY.

Second Series (Continued).

LEXINGTON, N. C., Tuesday, Dec. 2.—I have already given the details of the first day's running at this meeting, and a brief synopsis of this day's work by telegraph. The morning opened as usual, bright and frosty, getting rather warm during the middle of the day. Birds were quite plentiful in certain localities, so that a fair estimate could be formed of the dogs' work. The first brace,

ZIG ZAG AND TRAY,

were put down at 8:18 in high sedge grass, about half a mile out of town. McMurdo handled Zig Zag, and John White Tray. Wind northeast. Considerable ground was covered before any scent was found when Zig Zag pointed in fence side, Tray backed, but nothing came to it. Both dogs then pointed, one each side of the fence. Moving on a bevy

SOME FIELD TRIAL "POINTS."

flushed in woods near Zig Zag. Afterward Tray pointed but no bird was found. Moving on through woods Tray pointed and White flushed a single; dog steady to shot and wing. After some further traveling with no result, dogs were ordered up at 9:23, and Zig Zag won. There was little work done in the way of finding birds by which to decide the heat.

SPOTTED BOY AND MAID OF KENT.

These two were slipped at 9:30 where the others had been taken up, in sedge grass. After working out a lot of ground S. Boy got on to the scent and roaded toward some pines. Then in pines Maid dropped to a point, S. Boy backing stylishly. Buckle flushed the birds and fired; dog steady to shot and wing. Sent on, S. Boy pointed a single which Richards flushed; dog steady to wing. Sent on, Maid moved lame, her foot having been trodden on by her handler, but she dropped as a single flushed. In a strip of woods, Maid pointed a single and Boy backed, Buckle then flushed the birds; both dogs steady. On in sedge, S. Boy soon after got a good point on a bevy at edge of pines. Richards flushed and shot; dogs steady. The dogs were then taken up and heat awarded to Spotted Boy. This was a good decision, for Spotted Boy showed better range and style and found his birds well. In the meanwhile Tyke had run his bye.

Third Series.

TAPSTER AND TYKE.

Cast off in a cornfield both started off well. Working on into young pines Tapster pointed four birds, which Buckle flushed, dog steady to wing. Then in sedge grass Tyke pointed but failed to locate birds. This was followed by Tapster roading to a flush in woods, several birds getting up when dog dropped to wing. Coming to the edge of pine wood Tyke made a good point on a bevy, Tapster backing. Cameron flushed and both dogs were steady. On in woods Tapster roaded to a point on a bevy which flushed wild. Then Tyke got in two more points on scent only and at edge of some oaks Tapster followed suit. Dogs were then ordered up at 12:06 and the heat given to Tapster. Neither showed much merit in this heat, both were equal in style and range, but somehow neither could find the birds. A move was now made for lunch.

ZIG ZAG AND SPOTTED BOY.

After lunch these two were put down in weeds at 1:07. On, in woods, Spotted Boy made game and flushed a bevy down wind. In pines Spotted Boy pointed foot scent only, Zig backing, dogs moved on and some time after, in a corner of woods, near the dogs, a bevy flushed, both steady to wing. Spotted Boy pointed, moved on and roaded to a point again, Zig backing each time. Then Spotted Boy located the birds and pointed, when Richards put up a bevy; Zig backed, and dogs were steady to shot and wing, this being a nice piece of work. Spotted Boy then found a single and bird flushed. Then in pines Spotted Boy pointed, but birds had gone on. Dogs were ordered up at 2:12 and heat awarded to Spotted Boy. He showed the better nose, speed and range. As the next heat in this stake would be to decide the winner it was decided to give Spotted Boy a rest and go on with the first series in the Setter Derby.

SETTER DERBY.

First Series.

GOSSIP AND DATCHA.

The first brace down at 3:13 were Gossip, handled by Stoddard, and Datcha by Smith. Soon after starting, dogs passed some birds in sedge grass which flushed wild. Taken back another bird got up close to the dogs, this may have been excusable, it was quite warm about this time of the day. In edge of corn Datcha pointed, drew on, pointed again, Gossip backed, then drew on and went on in front of the other and a single flushed, this unsteadied both dogs, but they dropped to Smith's shot. On in woods, Datcha on the other side of fence, pointed again and Gossip backing, Smith put up a bevy, to which dogs were steady. Datcha then roaded through a swamp after these birds and soon both dogs pointed, Datcha getting wind first over a dry patch of sand banks, birds were flushed and both were steady to wing. In sedge grass further on, Datcha pointed again, Gossip backing, and Smith shot over single, both steady. This was quite quick work on these birds. Dogs were ordered up at 3:20. Both ranged well, Gossip being an especially active, merry-working bitch, though Datcha had the luck of the birds.

IAN AND OLGA.

These two were cast off at 3:24 in some corn. Soon after, Olga in sedge grass pointed false, Ian backed, moving on Ian almost flushed a covey, but dropped at once to wing. Making for the birds which were marked down in woods, Ian pointed and Olga backed, but nothing came of it. Olga got a single and Ian was brought up to back. Further on Ian stopped again and Olgo backed, but Cameron could find no birds; dog ordered on, he roaded to another point with the same result. After going over a good deal of ground and with one or two more no-game points for Ian, he at the edge of the field pointed again, when Cameron flushed a single, this was no doubt the bird he was making for all the time. Dogs were then ordered up at 4:25 and a start made for town. Neither shows very good work, though Ian is the better, but will have to get on to his birds a bit more confidently.

Wednesday.

POINTER DERBY.

Final Series.

SPOTTED BOY AND TAPSTER.

The first heat this morning was to decide the winner of first place in this stake, and a ride of about four miles brought us to Grimes's place, where game was found in abundance during the day. The wind was east and the morning was raw and drizzling. Dogs were cast off at 9:05. Soon after starting Tapster whirled to a handsome point and moved on. Spotted Boy coming up a moment later pointed same place and got the birds; Richards flushed. At the edge of woods Spotted Boy pointed and Tapster backed, when a bevy flushed. Further on in woods Tapster pointed same birds and Boy backed, when Buckle flushing, dogs then dropped to wing. After working out of woods into some grass Boy came to a point, but did not hold it, roaded on some distance and pointed bird in a ditch. Tapster then pointed and Boy backed and Buckle flushed the birds some distance ahead; both steady to wing. In a patch of corn Boy then came to a stylish point, Tapster backing nicely, Richards put up the birds and shot, dogs steady to shot and wing. This was a very pretty piece of work. On in pines Tapster pointed just in time to save himself, birds getting up all around him. Just before this Boy had flushed a single. Then Tapster in woods flushed a single, and a yard or two further on another flushed just as he came to a point. On, Boy pointed a single nicely, and Tapster coming up did his duty creditably; bird put up by Richards, who fired, and both were steady. Dogs were ordered up and the heat and first prize given to Spotted Boy. He deserved it, as he had better range and style, and had the pull on birds. The first series of the

SETTER DERBY.

ANDY AND ATALANTA.

The Setter Derby was then resumed. Dogs were turned down at 10:30 in weeds. Andy was handled by Avent and Atalanta by Nesbitt. Soon after starting, across a ditch in weeds, Andy pointed and a single flushed wild ahead, Atalanta backing. Moving on, another single flushed wild to Atalanta's point, Andy backing nicely. On, Andy dropped to a flush of birds which Atalanta was pointing lower down. In weeds to one side, Andy pointed handsomely and Atalanta backing. Avent flushed a bevy, fired, killed and both dogs were steady. Further on a single was flushed by Avent. Atalanta roading on, a single got up well ahead of her. Further on Andy flushed a single and chased a yard or so, stopping to order. In thick grass Atalanta pointed a single, Andy backing quite a distance away. At edge of woods Andy whirled to a nice point on a bevy which Avent flushed. On, Andy flushed a single. In corn Atalanta pointed a bird and Andy backed. In ragweed Andy came to a point without result. Dogs ordered up at 11:30. Both ranged well, Andy being a little the speedier.

RUPERT AND TORY LIEUTENANT.

Cast off at 11:35 in open field. Rupert, handled by his owner J. M. Avent, and Tory Lieutenant by John White. Ranging on through woods, Tory was the first to find and pointed a covey. After a good deal of ground had been covered Rupert came to a point but nothing found. Then further on Rupert pointed again and Avent flushed and shot. Working out of woods, Tory pointed at the edge and two birds flushed wild. Sent on in weeds, in the open, singles flushed in quick succession. Dogs were ordered up at 12:30. Both are wide rangers, especially Tory Lieutenant; he has also the speed, style about equal. A move was now made for lunch. Then came the run off for second place in

POINTER DERBY.

TAPSTER AND ZIG ZAG

being cast off in stubble at 1:25, both went off together at a good gait. After some ranging Zig, in the open, came to a point and Tapster backed. McMurdo put up a single close to and fired, both dogs steady to shot and wing. In edge of oaks Tapster pointed a single and further on Zig got on to the main bevy, which was a large one. Tapster backed and both were steady as McMurdo flushed. Coming out of woods Zig whirled to a point in some grass and Tapster, backing prettily, McMurdo flushed a single. The dogs were then ordered up and heat and second prize given to Zig Zag, and Tapster was awarded third. The first series and names of owners have been already published.

POINTER DERBY SUMMARY.

First Series.

TAPSTER (Charlotteville Kennels), King of Kent—Hope,
with
BEACON (A. P. Heywood-Lonsdale), Ightfield Dick—Polly Peach 'um.

ZIG ZAG (Charlotteville Kennels), King of Kent—Hops,
with
RUSH OF LAD (T. H. Gibbs), Lad of Bow—Westminster Gladiola.

PENELOPE II. (Lebanon Kennels), Lebanon—Penelope,
with
TRAY (N. L. Rockwell), Tory White—Lapland Pearl.

NASO BOW OF ELMS (Elms Kennels), Naso of Kippen—Lass of Bow,

with

MAID OF KENT (Charlotteville Kennels), King of Kent—Hops.

SPOTTED BOY (Chas. Proctor), Trinket's Boy—Nellie Bow,

with

TYKE (A. P. Heywood-Lonsdale), Ightfield Dick—Perdita.

Second Series.

Tapster beat Penelope II.
Zig Zag beat Tray.
Spotted Boy beat Maid of Kent.
Tyke a bye.

Third Series.

Tapster beat Tyke.
Spotted Boy beat Zig Zag.

Final Series.

Spotted Boy beat Tapster and won first prize.
Zig Zag beat Tapster and won second prize.
Tapster third prize.

Mr. Chas. Proctor's Spotted Boy, by Trinkett's Bang—Nellie Bow, is a handsome-looking, heavily marked liver and white, is a good and speedy ranger, and is a stylish looking dog altogether. Zig Zag, by King of Kent—Hops, is another handsome liver and white, and is a litter brother to the third prize winner, Tapster, both owned by the Charlotteville Kennels. The Setter Derby was then continued.

SETTER DERBY.

First Series.

SAM R. AND PHŒNESS.

The fifth brace in this stake was cast off at 2:28 in thick grass. Sam R. handled by Titus, and Phœness by Cameron. Both got off well, and a short time after both pointed in rag weed and a bevy was flushed by Cameron, which was marked down in woods. On after the scattered birds, Phœness pointed in the woods, then roaded to several birds; further on Sam pointed and Phœness backed, when a single flushed; then Sam pointed but nothing was found, though a few yards further on a single flushed just in front of him, when he dropped to wing. Sent on, out of woods in sedge and oaks, Sam pointed, roaded on and a rabbit started. Lower down in woods Sam pointed and was backed by Phœness; then in swamp Phœness drew on to a point and a bevy flushed wild. Sent on out of woods, Sam made a fruitless point, Phœness backing. After another no-game point by Phœness, dogs were ordered up at 3:28. Sam R. is a little the wider ranger; style about equal. It is probable both will remain in.

TRAP, JR. AND WHYTE B.

The next brace was put down at 3:30 in corn. W. E. Gray handled Trap, Jr., and W. S. Titus had charge of Whyte B. In edge of corn Trap started his score with a point, to which nothing being found he was ordered on, and roading, pointed again, but no birds were found. Over a swamp in woods Whyte B. then pointed a bevy and Trap backed. On, Whyte B. pointed again; nothing found. In the same field Trap made the same sort of point, when he was taken up to wait for Whyte B., who had ranged off. On, in corn Whyte B. just saved his point as a bevy flushed. Sent on, Whyte B. pointed and Trap backed, when a single was flushed by Tucker. Then a yard or two further on Whyte B. pointed again, Trap backing. Dogs were ordered up after some more ranging at 4:35. Whyte B. seemed to have better range and style.

PEG WOFFINGTON AND MARGUERITE.

Cast off at 4:38 in clover field. Peg handled by S. C. Bradley and Marguerite by D. E. Rose. Peg started off the faster. Soon after starting Peg pointed; nothing found; pointed again and moved on. In sedge grass Marguerite pointed handsomely, and Peg brought up to back, did so, when Rose flushed the birds, shot and killed, dogs steady. On through oak wood, Peg pointed footscent, Marguerite backing. Dogs moved on and Peg repeated her previous performance; and as it was getting dusk, dogs were ordered up at 5:07 to be put down again in the morning.

Thursday.

PEG WOFFINGTON AND MARGUERITE.

The meet this morning was at Grimes's place again, distant about four miles from town. The weather was an agreeable change from that of yesterday, and though rather cold the morning was clear and bright, becoming much warmer toward noon. The undecided of last evening was resumed at 8:49, dogs being put down in weeds. Soon after starting a bevy was flushed by the judges. Outside of pines Marguerite dropped to a flush and another bird flushed just after. Then a false point for Marguerite, both dogs making game, but nothing was found. A good deal of ground was covered, but beyond a point on foot scent by Peg nothing more was done. Dogs ordered up at 9:20, this ending the series. Peg Woffington was the faster bitch and more stylish, but the other had the best nose. The judges then consulted and decided that the following should remain in.

Whyte B. against Tory Lieutenant.
Sam R. against Ian.
Rupert against Marguerite.
Trap, Jr., against Phœness.

Second Series.

WHYTE B. AND TORY LIEUTENANT.

Cast off at 9:26 in open fields. Soon in high weeds Tory pointed and birds flushed wild in every direction, Tory was steady to wing. Then a single got up out of high weeds, where Whyte B. had been roading. On, in corn, a bevy flushed and above where the bevy flushed Whyte B. came to a point and Tory backed, but nothing came of it and dogs moved on; several false points were now scored by each till, after some time had elapsed, Tory pointed a single, which flushed wild, then at the other side of field Tory picked up another single. Sent on Tory pointed another single in thick grass and then pointed the main bevy as he moved across the field to look for Tucker. Dogs were then ordered up and the heat given to Tory, who proved the faster and wider ranges, though the High Point winner did not show the form he is capable of.

SAM R. AND IAN.

Cast off at 10:55 in weeds the dogs made toward the woods, when Ian at the edge of them pointed false; working through the cover Ian came to a nice point, when Cameron flushed a single, Ian steady to wing; further on a few yards Ian again pointed and Cameron flushed the birds. On, through some oaks, and then Ian, going down a grass field, whirled to a point, moved on but could not locate game. Some distance further Sam R. pointed in weeds and Ian backed, but nothing found. After this Ian did quite a pretty piece of work; coming to a point which Sam R. sustained he was ordered on to flush, and roading to game in good style a single flushed, both dogs steady. In woods Sam R. pointed and Ian backed, but nothing came of it; further on he pointed again just in time, Ian backed and birds flushing Titus shot, dogs steady. Sent on Sam R. scored another fruitless point and then moved on. Dogs were then ordered up at 11:56 and Ian was given the heat. Ian showed the best work on birds, Sam R. the wider and faster ranger. A move was then made for lunch at the Grimes farm.

RUPERT AND MARGUERITE.

These two were put down after lunch at 12:52 in sedge grass. Working into woods Rupert pointed and a single flushed wild. On in high weeds at the edge of woods Rupert pointed another single, which flushed, dogs steady to wing. Some open ground was then worked out, and passing into woods by the fence Rupert bagged another single, Marguerite backing him nicely. Further on in sedge Rupert pointed, but no bird was found. This he repeated, and roading on he came up to another single, which flushed wild, at least so it was said. In sedge grass Marguerite then pointed a bird, which flushed ahead, a bevy having previously got up in front; then she bagged another and two birds flushed wild, both handlers claiming a point. Rupert then did a stylish piece of work pointing a single in a thicket in good shape; Avent flushed. Moving on Rupert secured a point on a bevy, Marguerite backing nicely. Avent flushed the birds and both were steady to wing. Dogs were then sent on after these birds, when several singles flushed some distance from them. This was a busy heat, and considering the warm day some good work was done. Rupert showed himself the wider and faster ranger and deservedly won. Dogs up at 1:52.

TRAP, JR. AND PHŒNESS.

Put down at 1:59 in ragweed, they were ordered toward woods, in edge of which Phœness pointed without result; lower down Trap Jr. followed suit. Then Phœness repeated in some corn. Working on Trap, Jr. pointed in some briers, Phœness backing, when Gray shot, both dogs steady. Then near a cotton patch Phœness pointed, but no game was found. Then Trap did the same stylishly, and Phœness backed. Trap, ordered on, a yard or two further he stopped on a point just in time to save a flush. As the bevy rose, Gray shot, both steady. Sent on Trap again got on to the bevy and Phœness sustained him. Then in sedge Trap pointed another bevy, which rose all round, Phœness backing. Sent on, Trap made a stylish point, Phœness backed, and Gray put the bird up some distance away. This was one of the prettiest points yet made. Then Phœness scored a point, Trap doing his duty too. Cameron fired, both dogs steady. Working in open, dogs were ordered up at 3 P. M. Trap showed the best work and was given the heat. This ended the second series.

Third Series.

TORY LIEUTENANT AND IAN.

A good deal of interest was evinced in this heat, as the dog which had shown the best work according to the rules of these trials was to be pitted against the winner of the Eastern Derby and the pronounced favorite among the sporting element. They were cast off at 3:08 and both got off well. After some ranging, Ian pointed by a fallen tree, and repeated in grass with no result, and then Tory did the same. Neither dog ranged far from handlers. Ian pointed false in edge of woods and was followed by Tory, Ian backing, when a single flushed behind them. On in woods Tory pointed and White flushed, shot, and dog steady. Going out into some sedge two birds were flushed by handlers, thus the points made near here had evidently been made on running birds. At the edge of some high weeds Ian came to a good point and Cameron flushed a bevy; going on after the singles he picked one up at the foot of a holly tree, and shortly followed up the good work by another point to a single, which Cameron flushed. Tory had been ranging off to one side and was only brought up to hear the dogs ordered up at 4:17 and the verdict given in favor of Ian. Tory did not show himself at his best by any means; dogs like men have their day, and this was not Tory's day. Ian proved himself under good control, and though he is no ranger he finds the birds just the same.

RUPERT AND TRAP, JR.,

were the next two down and were cast off at 4:30, at edge of oaks. Shortly after starting both dogs got covered with burrs, which took the handlers a quarter of an hour to get rid of. After this crop had been picked, Rupert soon pointed a single in edge of thorns, Trap backed; shortly after several birds flushed and then Trap pointed scent and Rupert backed. In open field Rupert pointed and Trap backing, a single flushed wild some distance behind. Another point by Trap and a back by Rupert, in cotton patch, result nil. In pines Rupert pointed and was backed by Trap, but it proved to be foot scent only and dogs moved on. They were ordered out of woods and after covering some more ground, twilight coming on apace, dogs were ordered up at 5:30 and a start made for home after a good day's work.

Friday.

The same two were put down again about a mile and a half from town at 8:40, in corn. Trap started off at a good gait, but Rupert was the first to get scent and pointed, Trap backing, but nothing was found. Taken out of woods Trap at once walked into a single, dropping to wing. After a while Rupert pointed, Trap backed, and a single got up ahead; afterward Avent put up two more birds, fired, and both were steady to shot and wing. In some thick grass in an orchard Rupert pointed a bevy which Avent flushed, when Rupert broke in a yard or so but stopped to order. On, Rupert roaded to a fence and Trap backed, nothing found, and further on the order was reversed, but with the same result. In pines, Rupert then pointed a single which Avent put up, Trap passing on ahead. In edge of woods Rupert pointed on a bush, and judges ordered Trap to go in and point, which he did ahead of the other dog, and Gray flushed a single; both steady to wing. Avent naturally claimed the point and there ensued a long discussion, in which judges, reporters and Avent took a hand, the rule saying that no dog shall be interfered with on his point. The rule is distinct, and there should be no departure from it. Dogs were then ordered up at 10:28, Rupert winning. Rupert had done the best work and showed himself the speedier and wider range. It was decided to run the heat for first place between Ian and Rupert the next morning, and the first heat in the All-Aged Pointer Stake was proceeded with, the draw for which had taken place the previous evening and resulted in 17 entries filling.

POINTER ALL-AGED STAKE.

First Series.

HICKORY'S STAUNCH AND MOONSHINE

were the first brace to be put down at 10:42 in sedge grass. John Lewis handled Staunch and McMurdo Moonshine. Soon after starting Hickory pointed a bevy, Moonshine backing nicely; Lewis flushed, Hickory a little unsteady to wing. Both dogs marked game at side of woods, but did not strike the bevy, which was flushed by the horsemen a few yards to one side. Then Hickory pointed a single in pines, which was put up by Lewis, another getting up behind. Moonshine went in ahead and pointed, Lewis shot and killed, both steady to shot and wing, Hickory retrieving in good style. Moonshine tried a change and pointed a rabbit outside of woods. Passing through some woods Hickory made game and roaded to a single, which Lewis flushed. Further on he pointed again and Moonshine backed, but nothing found. Some more roading was indulged in, and dogs were ordered up at 11:46. Hickory did the best work; Moonshine showed more style, but neither hunted far from the gun. After lunch

MAID OF KENT AND TRAY OF MONTEREY

were put down at 12:48 in sedge and weeds. C. E. Buckle handled Maid and John White Monterey. A good deal of ground was ranged through, but singularly enough no game was found, and at 1:51 the dogs were ordered up. Maid of Kent had the better range and speed.

KING OF KENT AND DUKE OF HESSEN.

Cast off at 1:57 in stubble. King of Kent handled by McMurdo and Duke of Kent by John White. Both started off at a fast gait. A lot of ground was worked through without result and then in woods Duke repeated his High Point performance by flushing a bevy, dropping to wing. On the scattered birds in woods, King pointed a single at the foot of a holly tree; Buckle flushed and dogs steady. On, Duke pointed in some leaves and White flushing birds, shot and missed, dogs steady to both. Then Duke pointed a single which flushed wild, then dropped to a point again without result. Working out of woods into sedge, Duke struck a stylish point but White failed to find; dog ordered on roaded round for some time but failed to locate his bird. Weather was very warm and bad for scent. Dogs ordered up at 3:10, Duke had the speed, too much if anything, getting beyond his handler several times. Both were stylish workers.

IGHTFIELD GUELPH AND FRANK W.

These two were cast off at 3:19, going off at a good pace. Brailsford handled Guelph and T. Aldrich Frank W. After nearly an hour's ranging, in oaks, in some fallen branches, Guelph flushed a single and dropped to wing. Then Guelph got a good point on a bevy, Frank W. backing. Brailsford flushed, shot and winged the bird; both dogs steady. Then Frank pointed the wounded bird, Guelph backed; sent on to locate, failed, and Guelph pointed it and Brailsford flushed it, when Frank W. chased and caught it, bringing it to Aldrich. Guelph was steady through it all. Needless to say Frank felt the whip. On, Frank flushed three birds. Guelph then pointed and moved on; Frank, instead of backing, drew in ahead of him. Dogs were then ordered up at 4:35. Guelph showed better speed, range and nose.

ZIG ZAG AND TEMPEST.

Down at 4:46 in sedge grass, McMurdo handling Zig Zag and John White Tempest. In about a quarter of an hour Zig, in a field, came to a stylish point, and Tempest coming up did his duty very prettily; McMurdo then put up a bevy, shot and missed; both steady to shot and wing. On, a few yards further, Tempest pointed, evidently where these birds had been, and Zig coming up whirled to a stylish back. Dogs then ranged on for some time, but as it was getting dusk dogs were ordered up and a move made for town and supper.

After supper a meeting of the board of managers was held and a change of rules made. The handlers were requested to assemble in the club room, when President Coleman read the following:

CHANGE OF RULES.

At a meeting of the board of managers of the Central Field Trials Club held this evening (Dec. 5) it has been decided to suspend that portion of the rule which reads as follows: "No heat shall be less than one hour's duration" and to adopt for the remainder of these trials the following: "After the first series in each stake the heats shall be not less than one-half hour's duration.—EDWARD F. COLEMAN, Pres. C.F.T.C.

This met with general satisfaction, as it was thought a great waste of time in the succeeding heats to make the dogs run for an hour whether they showed merit or not. Then Lousiana trials coming on next month the handlers need some little time to get their dogs in shape, but at the former rate of going we should have been still running when 1891 made its appearance.

Saturday.

SETTER DERBY—*Final Series.*

IAN AND RUPERT.

This morning opened cloudy and misty, clearing somewhat toward noon, a good day for scent. The meet was at Grimes's place, which is now looked upon as a sure find for birds, though the distance from town precludes an early start. Dogs were cast off at 9:02 in weeds and sedge grass. This heat was to decide the winner of first money and was watched with renewed interest. Ian was the first to get on to the scent and pointed by a fence, Rupert backing very prettily, a covey was flushed, both dogs steady. On in woods, Ian whirled to a point, when Cameron walked round but could not find, dog ordered on to flush, roaded very carefully and a large bevy flushed a few yards further on; meanwhile Rupert had been brought up to back, both steady to wing. In open fields where scattered birds had gone, neither dog did well, as singles flushed in every direction, which ought to have been picked up. Then a point or two were made by each. In open Ian pointed again, ordered on he roaded some distance but failed to locate. In ragweed Ian stopped on a point and Rupert ordered to back, did so nicely, and Cameron flushed the birds. On, in some oaks Ian pointed foot scent, Rupert backing; roading on, Ian pointed again and Rupert backing. Sent on alongside a stream, Rupert pointed and Ian backed but Avent failed to find. A false point by Ian alongside a ditch and a back by Rupert from the other side was the next work done. At edge of woods Ian pointed and Rupert backed; Ian ordered on he roaded to a point where a bevy flushed wild. In woods Ian pointed a single, then both dogs scored a point on the scattered birds; when dogs were ordered up an 10:02. After a little consultation the judges decided that Ian, the English dog, had won the Setter Derby, and Messrs. Brailsford and Cameron received the congratulations of the company present.

The All-Aged Pointer Stake was then proceeded with.

IGHTEIELD DEUCE AND TAMARACK.

Deuce was the bye dog, but owing to the illness of Devonshire Don, he was moved up into his place. Dogs down at 10:06 where the others were taken up. Deuce handled by Brailsford and Tamarack by Stoddard. Moving on into pines and over considerable ground, it was some time before Tamarack pointed false. Ordered on to find, he roaded for some distance, but birds were not around. In woods he came up with the covey, pointed, and the birds flushed ahead, Deuce backing. Further on Tamarack pointed but failed to score. In pines, Deuce pointed and Tamarack backed, and dogs moving on, shortly after a rabbit was started. Tam in woods, he pointed false, repeating shortly after, Deuce backing. Further on Deuce pointed a single, Brailsford shot and made a neat kill, dogs dropping to shot and wing. Bird was not retrieved. Then in corn, Deuce pointed and Tamarack brought up to back, moved across in front and pointed but nothing could be found. Dogs were then ordered up at 11:18. Deuce had best style, speed and range.

DOCTOR AND SHOT.

Doctor, handled by Anderson, and Shot by Tucker, were cast off at 11:20 in grass field. Both started off fast. Shot in galloping along in high sedge whirled suddenly to a point, dropped, and Doctor coming up went in a little ahead and pointed too. Shot ordered on roaded down the strip of sedge and pointed again, when Tucker coming up he moved on again, finally coming to a point, when Tucker put up a single, killed and Shot retrieved. In stubble Doctor stopped to another point, Shot backing. Anderson then flushed a large bevy, which was marked down in woods, shot and missed. Following birds both pointed, Anderson failed to find and Doctor moved on a yard or two and flushed a single, which Anderson killed and Doctor retrieved in good style, both dogs steady. Near edge of woods Shot pointed a single and Doctor part of the bevy, which flushed wild. Edge of woods Shot roaded and a single got up behind him, he dropping to wing. On, Doctor pointed a single in a strip of brush and Shot backed on the other side. In woods Doctor got another point, Shot backing. Anderson flushed a bevy. Out of woods Shot dropped to a flush of two birds. Edge of sedge grass Shot dropped to a point on a single, then to the left Doctor pointed footscent and Shot backed. Then Shot did good work in pines pointing a bevy, one of

which Tucker shot and dog retrieved nicely. Dogs up after this at 12:21. Shot has best speed and range, Doctor the style. After lunch

LASS OF BLOOMO AND ROCK II.

were put down in stubble. Richards handled Lass of Bloomo and Bradley Rock II. Both started fast, and after working through stubble Rock stopped and winded in edge of thick trees, and Bradley going to him he roaded through the briers to a small pond, through which he swam, his handler following, though the water was almost hip deep, to cornfield and pointed nicely. Bradley flushed, killed and dog retrieved. This was a capital piece of work, and was seen only by Judge Tracy, who followed through the briers. Dogs were then taken to another stubble, where Lass pointed larks, Rock backing. After a long run a bevy was flushed by one of the judges. Birds marked down in woods and followed into cover, where Lass flushed, but stopped to wing. Rock flushed and then Lass flushed the balance of birds. Going on both pointed different birds. Richards flushed and killed, and Lass broke in; she then retrieved. Rock's bird rose at shot. Dogs were then ordered up at 2:08. Rock has the best pace and range, and did some good work. This finished the first series, and the ruling of the judges was as follows: Hickory's Staunch against Frank W., Ightfield Guelph against King of Kent, Zig Zag against Lass of Bloomo, Shot against Rock II., Duke of Hessen against Ightfield Deuce.

Second Series.

HICKORY STAUNCH AND FRANK W.

Down at 2:35. In woods Frank W. pointed false, Staunch backing indifferently. Through woods into a large stubble a single was flushed by Frank W. Then after half an hour's work a creek was crossed and some time after Frank W. was found pointing a bevy, which flushed as handler came up. Dogs then ordered up at 3:35 after an unsatisfactory heat. Frank best in range and pace.

IGHTFIELD GUELPH AND KING OF KENT.

Cast off at 3:38 in stubble when Kent soon pointed a covey which was flushed and marked across the creek. Going back to birds flushed in last heat a number of birds were flushed by handlers and soon after the balance of them were run into by Kent. Sent on Guelph pointed, but no bird flushed. She soon after flushed a bird and then made a good point on another single. Soon after a covey flushed in high sedge but it was impossible to tell the cause. In woods Kent pointed and Guelph passed and located some of the same birds. Then Guelph flushed and Kent pointed bird that flushed wild. Dogs taken up. Down 35 minutes. Judges consulted and dogs put down again. A bird was flushed by handler and Kent pointed nicely where it got up. Leaving these birds Kent soon found another and was awarded the heat. Kent was the best in pace and range, about equal in style.

ZIG ZAG AND LASS OF BLOOMO.

Down at 4:25. Zig Zag was a little wild at first. Lass roaded and flushed a single, then pointed without result, Zig then flushed a single down wind. On, Lass pointed a rabbit, Zag backing. Zag seemed to be fond of fur, for he picked up another, Lass backing this time, and then chased bunnie which was started. They both then received a drubbing. Zig then pointed but failed to locate birds, Lass backing. Zig then moved on to locate, when Lass ran in and flushed ths covey. There was nothing more of any consequence done and dogs were ordered up at 5:12, when the heat was awarded to Zig Zag.

This ended the running for the first week, and now that the new rule has been made it is to be hoped that next week will see us well into the four-hour race at any rate.

Monday.

LEXINGTON, N. C., Dec. 8.—Sunday was a pouring wet day, and every one was content to sit round the stoves and talk dog. The prospect for fine weather for to-day was not very bright. To-day dawned cold and wet, ice hanging from every limb and leaf. A start was made about a quarter of a mile from town in sedge, dogs down being Tempest and Sam R. for second place in the Setter Derby. Both handlers rode, as the woods and grass were covered with ice and everthing was wet and soggy. After going for half an hour without any prospect of game, and as it was beginning to rain, we all returned home. The weather has cleared a little toward evening, and it will very likely be fine to-morrow.

The drawing last night for the All-Aged Setter Stake resulted in twenty dogs filling as follows:

NATALIE II. (Bert Crane), Roderigo—Queen Bess,
with
GENE (Chas. E. Gray), Druid—Barley.

FRED GATES (Hamilton & Jackson), Bob Gates—Lilly B.,
with
CASH BOY (H. A. Waldrow), Cashier—Flake.

EDGE MARK (Francis S. Brown), Skidmore—Flo Maclin,
with
FANNIE M. (Blue Ridge Kennels), Gladstone's Boy—Flame.

HARRY C. (Elmwood Kennels), Roderigo — Countess House,
with
ANTONIO (J. M. Avent), Roderigo—Bo Peep.

NOBLE COUNT (Mrs. S. A. Elliot), Mac D.—Lady Mack,
with
PRINCESS BEATRICE (Frank Windholz), Royalty—Kate Westmoreland.

LILLIE BURGESS (Frank Richards), Gath's Mark—Esther,
with
DAISY HOPE (W. W. Titus), Gath's Hope—Gladys.

BAILIE GLADSTONE (N. B. Nesbitt, agent), Paul Gladstone—Bessie A.,
with
IGHTFIELD ROSA (A. P. Heywood Lonsdale), Ross—Pitti Sing.

KATE MILLER (N. B. Nesbitt, agent), Roderigo—Lufra Cross,
with
REVERDY (P. H. O'Bannon), Gath's Mark—Rosa.

NANNIE B. (J. A. McLeod), King Noble—Queen Vashti,
with
KING'S DAN (Elmwood Kennels), King Noble—Elsie Belton.

IGHTFIELD RANGER (A. P. Heywood Lonsdale), Dick Windem—Fern B.,
with
PRINCE LUCIFER (J. I. Case, Jr.), King Noble—Elsie Belton.

SIMONIDES (D. E. Rose), Gath's Hope—Gladys.
with
SAM R. (W. W. Titus), Dash Bryson—Daisy Hope.

JANE MILLER (W. T. Hunter), Roderigo—Dixie,
with
CASSIO (J. M. Avent), Count Noble—Lizzie Hopkins.

LEXINGTON, N. C., Dec. 9.—*Special to Forest and Stream.*—Judges decided this morning without further running that Rupert wins second and Sam R. third prizes in Setter Derby. Started to-day at edge of town with Ian and Spotted Boy down for absolute winner of Derby Stake. After running an hour and fifty-four minutes, in which Boy made four points to Ian's two points, two false and a single flush, the judges decided Spotted Boy the winner.

Then we proceeded with the All-Aged pointers. Shot against Rock II., down thirty-two minutes, scores were about equal when Shot was given the heat; it ought to have been run longer. Then Ightfield Deuce beat Duke of Hessen in forty-two minutes by two points to nothing. This ended second series.

Third series, King of Kent beat Frank W. in thirty-five minutes; work on points about equal, but Frank made several mistakes breaking in. Then Zigzag beat Shot after running forty-two minutes, getting most points and doing work in better style.

Natalia ran against Gene in first series All-Aged Setter Stake. Neither did very good work but Natalia the better.

Deuce beat King of Kent in pointer stake, fourth series, in thirty-nine minutes, two points to nothing, Zigzag a bye.

Fred Gates and Cash Boy ran in Setter Stake for thirty-five minutes, one point on bevy for Fred, when darkness set in, finishing over six miles from town.

Weather fine and frosty. Zigzag and Deuce run for first place to-morrow.

Mr. Meyer has sold the champion Gordon setter Beaumont and Bellmont to C. M. Hunt, owner Claire-Reeta Kennels, Palmyra, New York. Doctor reserves right to run them in the Gordon trials. H. W. L.

LEXINGTON, N. C., Dec. 10.—*Special to Forest and Stream:* Ightfield Deuce won the pointer All-Aged. King of Kent beat Duke of Hessen and will run for second with Zig Zag. Weather fine.—H. W. LACY.

THEY SAY

That though we are not moving at quite such a high pressure of speed as at High Point, there are just as many birds found by the dogs.

That it is easier to go slow than fast, but that it is very monotonous to follow two "duffers" for an hour; so the half hour amendment rule is a move in the right direction.

That Mr. "Rip Rap" Dexter is a sportsman of the right kind, follows the trials every day, and takes defeat or victory with equal complacency.

That Tom Aldrich must look to his laurels, for another "lawyer" has appeared on the horizon, furnishing the boys with much amusement.

That Frank Richards can handle the violin almost as well as he handled Spotted Boy in the Pointer Derby. That those who forsook the attractions of the club room for the greater charms of the hotel parlor, had no reason to regret it when Frank took up the bow and our genial hostess, Mrs. March, accompanied him on the piano.

That the judges at the Central Trials are painstaking and careful but that toward Saturday there was hardly so much enthusiasm as at the beginning of the week. The novelty and the skin sometimes wear off together.

That the reporters though tired are still in the running.

That the Gordon men are out in force, comparatively speaking, and that Dr. "Beaumont" Meyer and "Bendigo" Hunt are delighted with the condition in which the genial "Billy" has their dogs.

That no one begrudged the Englishmen Ian's win in the Setter Derby, and that this sort of hunting just suits them. That Cameron is a past master at the business and can always put his dog just where he wants him to go.

That there was wailing and grinding of teeth when Tory Lieutenant went down. He was an overwhelming favorite and many pockets are lighter because of their owner's misplaced confidence, and Bendigo Hunt's doggerel scored immensely.

That "Reverdy" O'Bannon, Dr. Meyer, R. H. Hoy, Samuel Crotters, E. E. Cullen and L. Fisher are welcome visitors at the trials.

That the club room at Lexington is just what is needed at a gathering of this sort, affording means for social intercourse that helps to pass what would otherwise be a dull hour.

That the weather Monday morning was enough to daunt the enthusiasm of the kennel sportsman. That a little rain won't hurt any one, but the ice was a little too much.

That W. S. Titus's picture of Smith's "shoo" flush was a great hit.

That S. C. Bradley has no need of a horse to see his dogs work.

That we are all glad of a rest.

That our apologies are due to *Canine World* for this heading, but we could think of nothing more appropriate.
H. W. L.

DOG CHAT.

THERE is little doubt but that with two prominent doggy journals advocating whippet racing that this exciting sport will soon find many friends in England who will raise it to a standing where it will find the indorsement of men of influence and position. From the *Canine World* we learn that a number of gentlemen have an idea of forming a club at once to foster the sport, running the dogs of course among themselves for the time being, so as to keep out the "ringers" and objectionables. There are so many men in this country, and especially in this city and Brooklyn, who are fond of greyhounds and indulge their dogs in a run across field or along a straight bit of road whenever they can get the chance, therefore it would not be much of a step for them to indulge their fancy in this respect, by the training and running of a whippet or two, dogs which can run any greyhound off its legs in a distance of 200yds. The sport is harmless, interferes with no existing laws, and is devoid of the slightest element of cruelty, the dogs themselves showing, by their eagerness to be slipped, their appreciation of the fun. If some one will make the first move there are many, we are certain, who will follow suit.

Referring to Benbow's run against time at London, Ont., last September, in which this dog did the 206yds. in 12¾, "Peto," in *Canine World*, says that this is by no means a world's record, and adds that the owner of Benbow would be surprised to know that his dog would be beaten by about 12yds. by some of the dogs in England, and that 205yds. in 12 seconds must be done before a world's record can be claimed, this being the time made by a big dog, Bonnie Boy. He further states that a dog called Jim that was sent over to this country and did some winning is now back again and doing some winning in the Lancashire handicaps.

This word of recognition of the services of the Spratts people from *Canine World*, is as true of America as of Great Britain: "The growth and improvement of dog shows and of matters pertaining to them have, in fact, been entirely due to individual effort. And among the many factors in the development and improvement of our system of dog shows, one, and perhaps the most powerful of them all, is never, or hardly ever, mentioned in any way. The *Kennel Gazette* in one of the earlier issues of this year did indeed mention this matter, in terms which are as follows: 'Fortunately for our dogs, the work of benching is largely in the hands of one firm—a firm that has done much for dogs and for dog shows, and which will, undoubtedly, as a matter of business, take the necessary steps for proper disinfection, as soon as it is made quite clear what is actually needed.' No truer words were ever written, for Spratts Patent have, indeed, done much for dogs and for dog shows. In fact, when we consider the trouble and expense attached to the proper benching, and feeding, and caring for 1,000 dogs, for three or four days, it is easy to see that average committees would have hesitated about taking on so heavy a task. So that it is but faint praise to say that the firm which, as a matter of business pure and simple, is always at hand, ready to undertake and to carry out this heavy work, has done much for dogs and for dog shows. And it is certain that the assistance thus given has had a great deal to do with the improvement of dog shows."

THE "DEAL" OF THE RUSSIAN WOLFHOUND ELSIE.—*Editor Forest and Stream:* Please allow me to say that the statements of Mr. Huscroft on Dec. 6, as far as they affect the bitch Elsie, Mr. Lloyd and me, are strictly correct, barring a strict interpretation on the word bargain as incorporated in Mr. Huscroft's censure of Mr. Rosseau, there having been absoluteiy no bargain whatever. Having succeeded in demonstrating his ignorance of the breed, and that the progeny of the despised Elsie and Krilutt can beat his pet Zloeem, "the best Barzoi out of Russia" I hope Mr. Rosseau will subside.—W. WADE (Hulton, Pa., Dec. 6).

LYNN SHOW.—The following gentlemen will judge at the coming bench show to be held March 24 to 27, 1891, at Lynn by the Massachusetts Kennel Club, Lynn, Mass.: Mr. James Mortimer will judge mastiffs, St. Bernards, bloodhounds, collies, fox terriers, bulldogs and bull-terriers. Dr. H. Clay Glover, pointers, setters and spaniels. Mr. R. F. Mayhew all other classes.—D. A. WILLIAMS, Sec'y.

NATIONAL BEAGLE CLUB.—Boston, Mass., Dec. 6.—A regular meeting of the National Beagle Club will be held at the Quimby House in Parlor G (annual election), Boston, Jan. 2, at 7 P. M.—F. W. CHAPMAN, Sec'y.

THE PESHALL-VREDENBURGH CASE is set down for Dec. 22.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

☞ **Prepared Blanks sent free on application.**

Sir Rondo and Manola. By Eberhart Pug Kennels, Cincinnati, O., for silver fawn pug dog and bitch, whelped Oct. 14, 1890, by Spokane (champion Kash—Lady Thora) out of Lalla Rookh.

Chappie, Old Boy, and Thora's Daughter. By Eberhart Pug Kennels, Cincinnati, O., for silver fawn pug dog and bitch, whelped Sept. 7, 1890, by Bradford Ruby II. (champion Bradford Ruby—Puss B.) out of Lady Thora (Santa Claus—Almah).

Nixie II. By F. H. Herrick, Detroit, Mich., for black and white and tan ticked English setter dog, whelped Aug. 16, 1890, by Colonel G. (Nixie—Gardner's Nellie) out of Gladys Noble.

Dictator. Mr. H. Pape, Hoboken, N. J., claims the name Dictator for white, black and tan English setter dog, whelped Nov. 10, 1889 (Ben Hill, A.K.C.S.B. 10,158—Daisy B., A.K.C.S.B. 10,244).

Queen E. For black, white and tan bitch, same litter.

Rockhampton. For blue belton English setter dog, whelped April 26, 1890 (Roger, A.K.C.S.B. 8,252—Cora of Wetheral, A.K.R. 3,862).

Chancellor. For blue belton dog, same litter.
Prince Paul. For blue belton dog, same litter.
Stella North. For blue belton bitch, same litter.

BRED.

☞ **Prepared Blanks sent free on application.**

Jean—Roslyn Conway. F. R. Carswell's (Wilmington, Del.) collie bitch Jean (Rutland—Maid) to Chestnut Hill Kennels' Roslyn Conway (Edgbaston Fox—Edgbaston Bess), Nov. 15.

Beauty II.—Roslyn Wilkes. C. H. Akerley's (Tonawanda, N. Y.) collie bitch Beauty II. (Victor Hugo—Gypsie) to Chestnut Hill Kennels' Roslyn Wilkes (Scotilla—Bertha), Nov. 20.

Lady Moll—Roslyn Wilkes. F. R. Carswell's (Wilmington, Del.) collie bitch Lady Moll (David—Jean) to Chestnut Hill Kennels' Roslyn Wilkes (Scotilla—Bertha), Oct. 18.

Roslyn Lottie—Scotilla. J. I. Souther's (Hurley, Wis.) collie bitch Roslyn Lottie (Great Alne Charlemagne—Louisa) to Chestnut Hill Kennels' Scotilla (Dublin Scot—Flurry II.), Oct. 26.

Haidee—Scotilla. Dr. McAlpin, Jr.'s (Littleton, N. J.) collie bitch Haidee to Chestnut Hill Kennels' Scotilla (Dublin Scot—Flurry II.), Oct. 4.

Ailsa—The Squire. Chestnut Hill Kennels' (Philadelphia, Pa.) collie bitch Ailsa (Eclipse—Nesta) to their The Squire (Charlemagne—Flurry), Nov. 24.

Roslyn Gaylass—The Squire. Chestnut Hill Kennels' (Philadelphia, Pa.) collie bitch Roslyn Gaylass (Scotilla—Luella) to their The Squire (Charlemagne—Flurry), Oct. 14.

Ladybird—Roslyn Wilkes. Chestnut Hill Kennels' (Philadelphia, Pa.) collie bitch Ladybird (Shelah—Lady) to their Roslyn Wilkes (Scotilla—Bertha), Nov. 14.

Trusty—Roslyn Wilkes. Chestnut Hill Kennels' (Philadelphia, Pa.) collie bitch Trusty (Metchley Star—Peggy Lass) to their Roslyn Wilkes (Scotilla—Bertha), Nov. 26.

Pitchdark—Roslyn Conway. Chestnut Hill Kennels' (Philadelphia, Pa.) collie bitch Pitchdark (Eclipse—Matchless) to their Roslyn Conway (Edgbaston Fox—Edgbaston Bess), Oct. 19.

Wellesbourne Flurry—Roslyn Conway. Chestnut Hill Kennels' (Philadelphia, Pa.) collie bitch Wellesbourne Flurry (The Squire—Active) to their Roslyn Conway (Edgbaston Fox—Edgbaston Bess), Nov. 26.

Cozzie—Bradford Ruby II. Ben Hey's (Cincinnati, O.) pug bitch Cozzie to Eberhart Pug Kennels' Bradford Ruby II. (champion Bradford Ruby—Puss B.), Dec. 4.

Bonnie—Eberhart's Cashier. J. E. McDonald's (Ligonier, Ind.) pug bitch Bonnie to Eberhart Pug Kennels' Eberhart's Cashier (champion Kash—Lady Thora), Dec. 2.

Jessie Jones—Jerry Jarvis. The Loup Kennels' (Broken Bow, Neb.) Irish setter bitch Jessie Jones (Lee Grouse—Mag) to their Jerry Jarvis (champion Elcho, Jr.—Maid), Nov. 14.

Corrinne—Jerry Jarvis. G. E. Everett's (Grand Island, Neb.) Irish setter bitch Corrinne (Sarsfield—Nino) to The Loup Kennels' Jerry Jarvis (champion Elcho, Jr.—Maid), Nov. 24.

Moera—Doc. F. H. F. Mercer's spaniel bitch Moera to A. C. Wilmerding's champion Doc, Oct. 3.

High Rock Pink—Doc. M. M. Hill's spaniel bitch High Rock Pink to A. C. Wilmerding's champion Doc, Oct. 30.

Daisy—Black Prince. Fred Smith's spaniel bitch Daisy to A. C. Wilmerding's champion Black Prince, Nov. 25.

Rescue—King of Obas. T. H. Doutny's (Minneapolis, Minn.) cocker spaniel bitch Rescue to G. Bell's King of Obos (champion Obo II.—Darkie), Nov. 30.

Madam Obo—Obadiah. G. Beli's (Toronto, Ont.) cocker spaniel bitch Madam Obo (King of Obos—Sensation) to his Obadiah (champion Brant-Bonita), Nov. 30.

Rose—King of Hearts. P. J. Kennedy's (Peabody, Mass.) bull-terrier bitch Rose (Pemberton's Ned—Lill) to North Fields Yorkshire Kennels' King of Hearts (Silver King—Matchless), Nov. 24.

Miss Gladstone—Hinks. F. F. Dole's (New Haven, Conn.) bull-terrier bitch Miss Gladstone (Dutch—champion Maggie May) to his Hinks (White Sam—Duchess III.), Dec. 1.

Edgewood Belle—Regent. F. F. Dole's (New Haven, Conn.) bull-terrier bitch Edgewood Belle (Prince—Nell) to Fred Hinks's Regent (champion Ambition—Queen of Spain), Oct. 15.

Day Venus—Hinks. C. L. Wetmore's (New York) bull-terrier bitch Day Venus (White Sam—Queen Bendigo) to F. F. Dole's Hinks (White Sam—Duchess III.), Nov. 19.

Edgewood Fly—White Duke. F. F. Dole's (New Haven, Conn.) bull-terrier bitch Edgewood Fly (Duke—Alice) to his White Duke (Huss—Nell), Nov. 16.

Venom Queen—Hinks. E. R. Thompson's (Troy, N. Y.) bull-terrier bitch Venom Queen (Trentham Baron—Venom) to F. F. Dole's Hinks (White Sam—Duchess III.), Nov. 2.

White Daisy—Hinks. R. Carnahan's (New Haven, Conn.) bull-terrier bitch White Daisy (Bendigo—Rose) to F. F. Dole's Hinks (White Sam—Duchess III.), Oct. 26.

Royal Rose—Bendigo. C. A. Stevens's (Hoboken, N. J.) bull-terrier bitch champion Royal Rose (Randolph—Nell) to F. F. Dole's Bendigo (Marquis—Kit), Oct. 5.

Grove Duchess—Hinks. F. F. Dole's (New Haven, Conn.) bull-terrier bitch Grove Duchess (champion Baron—Dutch Rose II.) to his Hinks (White Sam—Duchess III.), Aug. 21.

Starlight—Bendigo. F. F. Dole's (New Haven, Conn.) bull-terrier bitch champion Starlight (champion Grand Duke—champion Maggie May) to his Bendigo (Marquis—Kit), Aug. 20.

WHELPS.

☞ **Prepared Blanks sent free on application.**

Lady Nan. Woodward & Herrick's (Chicago, Ill.) bull bitch Lady Nan (champion Harper—Charmion), Dec. 2, five (three dogs), by their Bo'swain (champion Grabber—Susan; one dog and one bitch since dead.

Flossie II. C. V. Griffith's (Anderson, Ind.) pug bitch Flossie II., Dec. 3, five (two dogs), by Eberhart Pug Kennels' Eberhart's Cashier (champion Kash—Lady Thora).

Spinaway II. The Loup Kennels' (Broken Bow, Neb.) pointer bitch Spinaway II. (Winslow's Bang—champion Spinaway), Nov. 15, six (four dogs), by B. F. Seitner's Luck of Idstone (Planet—Lily Bang).

Starlight. F. F. Dole's (New Haven, Conn.) bull-terrier bitch champion Starlight (champion Grand Duke—champion Maggie May), Oct. 18, eleven (seven dogs), by his Bendigo (Marquis—Kit).

Roslyn Eileen. Chestnut Hill Kennels' (Philadelphia, Pa.) Irish terrier bitch Roslyn Eileen (Gilford—Girl), Nov. 15, eight (six dogs), by their Roslyn Murphy (Dennis—Breeda Tiney).

My Lady Betty. Dr. F. W. Kitchel's (Perth Amboy, N. J.) spaniel bitch My Lady Betty (champion Black Pete—Doris), Oct. 7, eight (four dogs), by A. C. Wilmerding's champion Doc.

High Rock Jet. Wilmerding & Kitchel's spaniel bitch High Rock Jet (Pearl Lake Obo—Black Flash), Nov. 9, eight (three dogs), by Mr. Wilmerding's champion Doc.

SALES.

☞ **Prepared Blanks sent free on application.**

Christopher—Active whelps. Sable and white collie bitches, whelped July 23, 1890, by Chestnut Hill Kennels, Philadelphia, Pa., one each to H. Windrim, same place; G. W. Greer, Germantown, Pa., and Mr. Bogen, New Ulm, Minn.

Roslyn Conway—Furry II., whelp. Black, white and tan collie dog, whelped Aug. 26, 1890, by Chestnut Hill Kennels, Philadelphia, Pa., to H. L. Boughton; Catskill, N. Y.

Scotilla—Roslyn Primrose whelp. Sable collie dog, whelped Sept. 18, 1890, by Chestnut Hill Kennels, Philadelphia, Pa., to F. A. Watson, New York.

Roslyn Lottie. Sable collie bitch, whelped Jue 6, 1889, by Great Alne Charlemagne out of Louisa, by Chestnut Hill Kennels, Philadelphia, Pa., to John I. Souther, Hurley, Wis.

Count Howard—Donna Juanita whelp. Blue belton English setter dog, whelped Sept. 23, 1890, by Jas. W. Wood, Poughkeepsie, N. Y., to J. W. Homer, Philadelphia, Pa.

Prince Bendigo. White bull-terrier dog, whelped March, 1889, by Bendigo out of Gipsey, by F. F. Dole, New Haven, Conn. to H. Fred Church, Taunton, Mass.

DEATHS.

Gathlit. Black, white and tan English setter (Gath—Lit). Owned by J. Shelly Hudson, Covington, Ky., Dec. 1, 1890, snake-bitten.

Rifle and Trap Shooting.

RANGE AND GALLERY.

NEW YORK STATE.—The following tables show the record for rifle practice for the entire State for 1890 in comparison with the records for last year:

First Brigade.	No. of Marksmen. 1889	No. of Marksmen 1890

It will be observed that there is a falling off of 639 in the number of marksmen qualified. This decrease is due of course to the more stringent rules adopted this year than those in force last season. The standard has been raised 10 per cent., and the loss in the number of marksmen has been about 10¼ per cent.

BOSTON, Dec. 6.—The Massachusetts Rifle Association held its regular weekly shoot at its range to-day and, as on last Wednesday, the riflemen had to shoot through the falling snow, which at times made it very difficult to see the bullseye, and under the conditions Mr. Wilder's score of 113 at rest was very fine. Following are the best scores made to-day, distance 200yds., Standard American target:

†Record Pistol Match, 50yds.

H Severance.....90 M T Day.....83
A D Stevens.....86 S C Sydney.....74

*Champion Rest Match.

S Wilder.....113 M R Barter.....105

*Champion Off-Hand Match.

S C Sydney.....8 8 9 9 10 7 6 8 9 8—82

(R) All-Comers' Off-Hand Match.

S E Sydney.....80 M T Day.....69 A S Hunt.....66

W C Mackwitz.....5 7 8 4 6 5 9 9 9 10—72
O Waller.....8 5 6 7 6 6 8 6 4 8—64

UNSER FRITZ.

AURORA, Ont., Dec. 4.—The following is the result of the first match of Aurora rifle team for the current series under the Ontario Off-hand Rifle Association, for Association prize, 5 shots at 100 and 200yds. each: Dr. Stevenson 93, E. Braund 90, A. Neilly 82, D. Eade 80, R. Cull 78; total 423. Association practice match: Dr. Stevenson 95, E. Braund 90, A. Neilly 82, A. Love 80, D. Eade 80, S. Tinline 79, H. Ross 79; total 583.

TRAP ARRANGEMENT.—I should like to suggest to trap-shooters a novel method of arranging the traps. How would it do to place the traps at unequal or irregular distances from a path—on both sides of it perhaps—and concealed from the view of the shooter by brush, so that the birds could be thrown from the traps as the shooter walked the path? Would not this plan give the shooter better practice? Would it not approximate more nearly to upland shooting where the quail or partridge springs unexpectedly from under the feet of the sportsman?—RAY SPEARS Northwood, N. Y.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

FIXTURES.

If you want your shoot to be announced here send in notice like the following:

Dec. 16-17.—Union Gun Club Tournament, at Springfield, N. J. Address E. D. Miller.

TRAP QUESTIONS.

In our last issue two contestants from the Chicago-Kansas City shoot presented interesting questions growing out of the circumstances of that shoot. In all such questions it would be easy to reach a fair decision, provided the essential spirit of the rules be kept in view and all quibbling loopholes be disregarded. In a general way a match is a record of shots made or shots missed. To make a record a man must fire his shot or shots depending upon whether it be a single our double-barrel contest, and until he has made his shots fairly and freely, unembarrassed by any balks, his record has not been made. The tendency all along has been to eliminate all the catch clauses from the rules and disregard all but fair open shots.

It has always been the practice to disregard birds improperly trapped or sprung, but the rules formerly penalized the shooter for his failure to have his gun in good order, and this brought into vogue the whole matter of misfires where so many of the misunderstandings now arise. It has long since grown to be the practice except in matches specially shot under the old rigorous rules that misfires do not count against the marksman, but in order to prevent an abuse of the privilege of another shot, the marksman is put back as near as may to the stage of the shoot where the misfire came in. This is the origin of the blank cartridge in the first barrel, though it is a question after all whether with an incomplete shot it would not be better to go back and fire the entire bird over again. Still, be that as it may, when another bird is ordered it is for the purpose of completing the shot, and if the second bird for the same or any other reason does not do it, then another bird is in proper order and so on down the list until the marksman has had what he is entitled to, a fair shot at a fair bird. On this ground it is that the claim of A. S. Kleinman is entirely just. He was entitled to bird after bird provided it should turn out that the same seemingly unpreventable misfires were repeated.

But the query which Mr. W. P. Mussey presented marries this rule past the bounds of reason, and becomes manifestly unjust when he asks: "In case of a bird fired at with first barrel, the second barrel misfiring, and the bird lighting within boundary, has not the shooter a right to claim any action that may be given him by his first barrel, by sending out his retriever to gather the first; and in the event of the retriever failing to gather has not the shooter a right to claim another bird, with a blank cartridge in his first barrel and a loaded one in his second?"

In this case the shooter rests upon the result of his first barrel shot by sending out his retriever to bring in the bird. Most certainly he may not, after the failure to gather, ask to be put back into a position for another go at that bird by placing in a substitute bird. It is not obligatory to use the second barrel. He may use it or waive its use, he cannot do both, as the query of Mr. Mussey would seem to imply, otherwise a match would become a series of one barrel tries, since the shooter has everything to gain and no corresponding sacrifice by holding his second shot through a convenient misfire of the second barrel. As to the entirely anomalous conduct of the referee in asking "what are you going to do" there can be but one opinion. He forgot the propriety and dignity of his position in his anxiety to further the match. Also, the line should be drawn close and sharp as to who may challenge the attention of the referee to what is going on. Only those interested as contestants have a proper right to speak up and be heard, since the moment this door is opened what a chorus of friends, backers, handlers and what not would din above the referee's ears.

RAHWAY, N. J.—The first regular shooting meeting of the Rahway, N. J., Gun Club occurred at Rahway Thursday last. In response to invitations sent out by Dr. Lyman Clark, president of the club, the following enthusiasts put in an appearance: M. Lindley and E. Collins, of Hoboken; Dr. Zigler, of Bocking Ridge; Dr. Hunt "Clarke," of Metuchen; Frank Lamott, Aaron Woodruff, Wm. Dockermann and Charley Dodd, of Elizabeth; Charley Smith, Neph Apgar and the writer from Plainfield, and Jacob Pentz, of Fanwood. The day was raw and cold in the extreme, and no one but a trap-shooting gun crank would have thought of seeking pleasure in outdoor sport. The home contingent, Messrs. Clarke, Daly, Lawrence and Wallace McGrath, endeavored to make things pleasant for their visitors, and fully succeeded in doing so. The forenoon was taken up with the banging away at bluerocks, which were shot from one set of three traps, placed in an open field in front of a cosy little club house. The live birds were shot on the inclosed athletic grounds which had been kindly put at the disposal of the club by Dr. Pentz Daly. The five traps had been brought out by Charley Smith, and with the assistance of Neph Apgar the events were run off. Previous to this occasion the members had never used live birds. They managed, for beginners, to put together a good strong lot of flyers, evidently gathered in the neighborhood, for almost every one of them were off like a flash. As usual, when he is present at a live bird contest, Jacob Pentz acted as referee. In event No. 7 it is worthy of mention that Mr. Lindsley stood at 30yds. rise.

First event, 9 single bluerocks: Tee Kay 7, Smith 7, Greener 5, Wallace 4, Clark 3.

Second event, 9 single bluerocks: Wallace and Smith 7, Greener 5, Tee Kay and Clark 4.

Third event, 10 single bluerocks: Wallace, Clark and Greener 8, Smith 8, Tee Kay 5.

Fourth event, 10 single bluerocks: Wallace and Tee Kay 8, Smith 7, Clark and Greener 6.

Fifth event, 10 single bluerocks: Wallace, Clark, Greener, Smith and Collins 8, Lindsley 7, Tee Kay and Clark 6.

Sixth event, 15 single bluerocks: Lindsley 13, Wallace 12, Smith and Apgar 11, Collins 8, Tee Kay 6.

Seventh event, 10 single bluerocks: Collins and Apgar 8, Smith 8, Tee Kay 6, Lindsley 5, Wallace 3.

Eighth event, 10 single bluerocks: Tee Kay, Lindsley and Clark 8, Wallace and Smith 7, Collins 5, Apgar 4.

Ninth event, 10 single bluerocks: Wallace and Clark 8, Collins and Smith 7, Tee Kay and Lindsley 6, Apgar 4.

Tenth event, 10 single bluerocks: Smith 10, Collins 9, Lindsley 8, Tee Kay 7, Wallace 6, Apgar 4.

Eleventh event, 10 single bluerocks: Smith 10, Collins 9, Tee Kay 6.

Twelfth event, 4 live birds, $3 entry, 2 moneys: Collins 4, Smith 3, Lindsley 3, Wallace 3, Greener 2, Dockermann 1.

Thirteenth event, 7 live birds, $5 entry, 3 moneys: C. Smith 7, LaMott 7, Greener 6, Wallace 6, Dockermann 6, Woodruff 6, Collins 5, Lindsley 5.

Fourteenth event, same conditions: Wallace 7, Lindsley 6, Collins 5, Greener 5, Dockermann 5. Smith 3, LaMott 3, Woodruff 3.

Fifteenth event, 4 live birds, $3 entry, 2 moneys: Lindsley 4, Smith 3, Wallace 3, Collins 3. Second money was shot off, miss and out, Collins dropping his first bird, Wallace and Smith div.—TEE KAY.

TORONTO, Dec. 4.—An enthusiastic gathering of sportsmen met on Stark's grounds on Wednesday and Thursday, the occasion being the second annual shoot of Stark's Eastern Gun Club at live birds. The prizes offered were many and valuable, and the competition very keen. The following are the scores:

First class, use of two barrels, first to score, 25yds. rise:

F Peterson ...1111101011111101—12 G Rennardson 1022012122221222—13
H Page.....1111111010111100—11 A E Dixon ....1122020121121121—13
G Links .....2122111101111121—14 H Herring .....2211113102202202—12
C Ayre.....0100111111110010—10 Jas Blong .....0101202021010010— 8
Geo Henry ....2212211212111122—15 Geo Platt.....0210201012011101— 9

Second class, use of two barrels, 24yds. rise:

C Campwell...1110111110111111—13 W B Poulton..1000110111011111—10
H Hoffman....1110111010101011—11 N Burton.....0010110100111100— 7

Third class, use of two barrels, 21yds. rise:

Ed Harrison.....1001110001—5 Ed Page. .. ..0010001110—4
John Page,.... .....0100100101—4 F Heintzman.....0000110110—4

RED BANK, N. J., Dec. 5.—The Riverside Gun Club held its regular shoot on the new grounds this afternoon. The targets were bluerocks, which were sprung from five traps. A match at 10 live birds for $25 a side, between Albert Ivins, of Little Silver, and Wm. H. Little, of Red Bank, opened the day's sport. Long Island rules governed the match, one barrel only being allowed. The score stood 7 to 2 in Ivins's favor. The second event was a shoot at 10 single bluerocks, John Cooper winning with 9. The final event was also a shoot at 10 single bluerocks. Throckmorton secured first money with a clean score.

TORONTO, Dec. 3.—J. Kennedy, of the Franklin House, at Markham, gave a live bird shoot on Tuesday and to-day. The purses given were liberal and should have called out a larger attendance, but with the assistance of a number of sweepstakes Mr. Kennedy came out about even and those present enjoyed a good shoot. The use of one barrel only was allowed in all events. Scores: First event, sweepstakes, 7 birds:

W McDowall	7	D Grant	5	W Peardon	4
D Blea	6	T Boyd	5	P Wakefield	4
J Bell	6	W Beldam	5	F Andrews	4
H Beatty	5				

Second event, sweepstakes, 7 birds:

P Wakefield	7	McDowall	5	Roberts	5
H Beatty	6	Bell	5	Collins	5
Blea	6	Grant	5	Peardon	4
Beldam	6	Boyd	5	Andrews	4

Third event, guarantee purse, $150, 10 birds each:

Peardon	8	Grant	7	Wakefield	6
Bell	8	Sawdon	7	Beatty	5
Boyd	8	McDowall	7	Andrews	5
Beldam	7	Blea	6	Bennett	5

In shooting off the ties at 8 Boyd won first prize, Peardon second and Bell third.

Fourth event, sweepstake, 7 birds:

Beatty	7	Blea	6	Peardon	5
McDowall	7	Boyd	5	Beldam	5
Wakefield	7	Winfield	6	Mason	4
Reeves	7	Bell	6	Kennedy	4

On the second day the first event was a sweep 7 birds each. Mitchell, Wakefield, Reeves and Beldam had clean scores, while Beatty and McDowall killed six each. Winfield, Kennedy, Singer, Glendenning and Read retired.

Handicap, 10 birds:

Mitchell	10	McDowall	8	Milne	8
Beatty	9	Wakefield	8	Winfield	8
Beldam	9				

Retired—Singer, Glendenning, Reeves, Magill, Kennedy.

Handicap, 7 birds:

Wakefield	7	Miller	7	Beldam	6
Mitchell	7	McDowall	6	Beatty	6

Retired—Glendenning, Reeves, Franklin.

Team match, 10 birds each man.

McDowall	9	Beatty	7
Beldam	9—18	Mitchell	7—14

WORCESTER, Mass., Dec. 6.—At the regular meet this week, at Coal Mine Brook Range, of the Worcester Sportsmen's Club, this was a continuation of the Merchandise Contest. The wind was troublesome and small totals was the result. The work of each man who had a possible 25 clay pigeons resulted as follows: Gilbert J. Rugy 21; W. L. Davis 19; W. R. Dean, M. D. Gilman, E. T. Smith and E. W. Johnson each had 17; A. L. Gilman and H. W. Webber each had 16; A. B. Burbank 12; and Fred Forehand 9. The remaining events were with strings of 10 clay pigeons, the work of each event follows: 1st. G. J. Rugy and A. B. Burbank each 9; M. D. Gilman 8; W. L. Davis 7. 2d. E. T. Smith, M. D. Gilman, W. L. Davis and G. J. Rugy each 9; then followed a shoot-off, Smith and Davis dropped and the three div. first honors; W. R. Dean with 7 was second; while A. L. Gilman, A. B. Burbank and E. W. Johnson held third place. 3d. E. T. Smith 9; M. D. Gilman, A. L. Gilman, A. B. Burbank, W. L. Davis each had 8; and on the shoot off the second place was taken by Rugy and Burbank; while E. W. Johnson was given third. 4th. E. J. Smith and G. J. Rugy each 10; E. W. Johnson second with 9; A. B. Burbank third.

CHICAGO, Ill., Dec. 6.—The Forester Gun Club, of Chicago formally adopted the American Shooting Association rules, *vice* the old-time Illinois State rules. The Fort Dearborn Club will also adopt the A. S. A. rules at their next meeting, and it is thought that all the clubs will follow. It is the old challenging clause of the Illinois rules that causes their abandonment. Chicago is very conservative in trap matters, and the old Illinois rules have had a long vogue. Messrs. W. P. Mussey and C. B. Dicks are matched to shoot Messrs. W. G. Payson and R. A. Turtle a match sometime soon, probably Dec. 14, 50 live birds, $50 a corner.—E. HOUGH.

THE CHICAGO-KANSAS CITY RECORD.

BELOW are the individual summaries in the great contest between Chicago and Kansas City, Nov. 11, 12 and 13. This detailed report is the most graphic presentation of such a contest ever presented by any sportsman's paper in this country. Here is shown every shot, with full particulars as to what trap it was sprung from, its direction of flight, and the shooter's score. Read
